NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Turkish Plot.

So far the reports of the Smyrna trial have not borne out the sweeping charges of the Turkish Public Prosecutor. That a scheme was on foot to assassinate the President of the Republic has been avowed by one of the accused, who frankly admitted his intention to carry it out. His efforts, however, to invest his criminal purpose with the glamour of a widespread conspiracy, in which all the leaders of the parliamentary Opposition were involved, have been singularly unconvincing. Such evidence, indeed, as has been given goes far to identify the whole incident with the stereotyped device so familiar in the East for muzzling political opponents. The real culprits are of a low type—Turkey does not enforce any particular moral standard for membership of Parliament—and, when caught, offer the kind of evidence for which the cue is far too readily provided them. By digging deep enough and indulging in wholesale arrests the authorities hope to produce sufficient evidence to spoil the reputation of their critics, even if they are not able to hang them. Whatever the issue of the trial the proceedings are invariably damaging to the Government and the country, and for this reason the well-wishers of Turkey will regret that Mustapha Kemal Pasha has lent himself to ill-considered action. One statement made at the trial on the authority of General Refet Pasha will be cited in support of rumours that have long been current of the extent to which dissipation is carried on in leading circles in Angora. Moreover, the conduct of the President of the Tribunal will have gone far to undermine confidence in Turkish justice, unless the verdict gives the lie to what both Mustapha Kemal Pasha and Ali Bey have said about the conspiracy before the trial took place.

The Roumanian Parliament.

It would seem to have become an established custom in Roumania that, immediately after the reading of the King's Speech, the new Parliament should settle down to a denunciation on the part of the Opposition of the electoral methods of the Government. Four years ago, it will be recalled, the Opposition were so shocked at the way in which the Liberals had conducted the elections that the Transylvanian National Party refused to recognise the legitimacy of Parliament and even absented themselves from the Coronation ceremonies. This year the followers of General Averescu have been returned to power, and the Liberals claim that he has introduced a system in election-making that is entirely without precedent. Election abuses, it is alleged, were practised on such a scale that it is impossible to regard the results as a legitimate expression of the popular will. Collisions between the electorate and the police or gendarmerie are apparently in the natural order of events; but the Liberals consider that the Government took an unfair advantage in mobilising officers on the active list to command the local forces. The Leader of the Tsaranists, Dr. Mihalache, has refused to take part in the deliberations of the Chamber, because the Government has so far taken no steps to punish the gendarmes who arrested him without any reason on June 23. Finally, the Government is confronted with the action of the official stenographers of the Chamber, who are omitting the names of all the Government supporters from the "Hansard" as a protest against General Averescu's refusal to allow them to use the lobbies of the House. Thus the session opens with the promise of interesting developments, for the Liberals have decided to identify themselves with the Opposition.

Earthquakes and Floods.

A further series of earthquakes has occurred along the earthquake zone that stretches from the Mediterranean to the Far East. Crete has been the chief sufferer, but more or less severe shocks have been felt within Egypt and in Greece. The damage done to the Candia Museum,

Digitized by Google

where many valuable relics of antiquity have been destroyed or broken, will be held by some to reinforce one of the arguments against the restoration of the Elgin Marbles to Greece. On this subject perhaps the most useful suggestion is that casts of the marbles in the British Museum should be presented to Greece to be placed in position as required in connexion with the repairs to the Parthenon now being carried out. Several of the fallen columns which have been lying for many years on the ground as they originally fell have been set up again, and the general effect of the Parthenon has been enhanced, or will be as soon as the scaffolding has been removed. The damage now done to the Candia Museum recalls the serious earthquake that visited Athens in 1894, which was, unless we are mistaken, the last time that the Parthenon suffered any harm. While earthquakes have been taking their toll of life and property in the islands and along the littoral of the Mediterranean, serious floods have wrought havoc to crops in Yugoslavia. Communication between Nish and Sofia has been interrupted, while at various parts of the Danube large armies of men are engaged in strengthening the banks to prevent more serious flooding.

The Elgin Marbles.

Discussions on the subject of the Elgin Marbles are often conducted as though only the fate of the Parthenon frieze were involved. On this point it is recognised in Greece that the plea for restoration is weakened by the fact that there can be no question of replacing the frieze in position. Some objection, it may be stated in passing, would certainly be raised against setting up on the restored Parthenon a reproduction, whether in cement or stone, on the ground of its being at best a cold and lifeless substitute, and also because it would close the door for ever to the return of the originals. Among the marbles in the British Museum, however, are portions of the Erechtheum—a Caryatid and a corner column—and a former Ephor of Antiquities in Greece, M. Alexander Philadelpheus, now appeals through the Greek Press for the return of these two pieces on the ground that they are urgently required for supreme reasons of architectural necessity. The place of the missing Caryatid is taken by a terra-cotta reproduction, but the corner of the East portico, it is pointed out, remains without support. Here Greece can make out a stronger case, although she must recognise that she is urging a point, which, if carried to its logical conclusion, would empty all the museums of the world outside the favoured countries of antiquity.

Towards Balkan Agreement.

Every step which tends to promote the cause of Balkan unity is worth recording. During the last few weeks there would seem to have been a notable improvement in the relations between Greece and Yugoslavia. There is even some prospect of a renewal of the Treaty between them, with a solution of the Salonika question found in the extension of the harbour and a compromise which will facilitate Yugoslav trade through the port without impairing Greek sovereignty. In a letter published in this issue a correspondent, writing with knowledge and authority, throws an interesting light on the Turko-Bulgarian Convention, which was subjected to some criticism in the Bulgarian Parliament before it was ratified. He is able to show that in this agreement Bulgaria deliberately faced sacrifices, in order to remove out of the way once and for all a fruitful source of friction. The Sofia Government preferred to lose on a bargain with Turkey, by setting the more valuable property of Bulgarians in Thrace against the much smaller assets of the Turks in Bulgaria, to having the question of compensation left as an open sore between the two countries. The blow falls heavily on the unfortunate refugees, and for this reason it is to be hoped that in the allocation of the loan funds they will receive special consideration. According to reports at present unconfirmed the Soviet Government has not yet reconciled itself to the elimination of its influence from Bulgaria, and is making a fresh effort to embroil that unhappy country before the movement for Balkan unity has made more headway. It is to be hoped that in the recent conversations in Belgrade between the Yugoslav and Bulgarian Foreign Ministers the latter was able to satisfy his colleague that the closer ties between the two countries are drawn the less the danger from Communism throughout the Peninsula.

ORDER OF ST. JOHN OF JERUSALEM.

It was announced in a recent *London Gazette* that the King has sanctioned the following promotions in and appointments to the Venerable Order of the Hospital of St. John of Jerusalem:—

As Honorary Bailiff.—Lieutenant-Colonel A. C. Yate.

As Knights of Justice (from Knights of Grace).—Colonel E. J. King, C.M.G., T.D., F.S.A.; Major C. W. MacRae, of Feoirlinn, C.B.E.; Colonel Sir Charles Yate, C.S.I., C.M.G.; the Earl of Iveagh, K.P., G.C.V.O., F.R.S., F.S.A.; Captain A. C. Seton-Christopher, J.P.

As Knights of Grace—Strachan Holme, Captain J. W. White, E. Roberts, jun., M.B.E., Captain C. A. Coventon, M.R.C.S., L.R.C.P., R.A.M.C. (T.A.), H. H. Bashford, M.D., Lord Lloyd, G.C.S.I., G.C.I.E., D.S.O., Sir Henry Smith, C.I.E., E. C. Dingli, Lieutenant-Colonel J. C. Strathearn, O.B.E., M.D., F.R.C.S.Ed., Colonel G. W. Heron, D.S.O., O.B.E., General Sir Walter Norris Congreve, V.C., K.C.B., M.V.O., A.D.C., D.L., E. Pirie-Gordon of Buthlaw, M.B.E., W. B. Fisher, General Sir Claud William Jacob, K.C.B., K.C.S.I., K.C.M.G., W. W. Carlile, O.B.E., D.L., Captain L. B. Booty, O.B.E., Sir Cecil Clementi, K.C.B., C.M.G., Lord Irwin, G.C.S.I., G.C.I.E.

As Honorary Knights of Grace.—Signor Mario Lago.

As Ladies of Grace.—Lady Dawson of Penn, Viscountess Dunedin, C.B.E., Viscountess Goschen, Miss Hollins, C.B.E., Lady Plender, Mrs. Stock, Mrs. Strathearn, Lady Storrs, Miss Garford, M.B.E., Lady Lloyd, Mrs. de Grasse Ramsay of Laggan.

As Esquires.—Meredith Young, M.D., W. R. Bates, O.B.E., L.R.C.P., L.R.C.S.I., Major R. Briercliffe, O.B.E., M.B., Major E. Keith-Roach, Major J. A. Henderson, M.B., R.A.M.C. (T.F.), A. P. S. Clark, M.B.E., G. L. Appleton, E. A. Morrison, E. A. H. Cameron, W. H. Ambrose, R. L. Tanner, R. A. Glegg, M.D., Colonel J. J. Pratt, F.R.C.S., H. H. Seed, Major J. S. Mather, M.B., R.A.M.C. (T.).

THURSDAY, JULY 8, 1926.

ABYSSINIA AND THE POWERS.

The publication of the Notes exchanged between the British and Italian Governments last December regarding the economic interests of the two countries in Abyssinia raises the general question of the morality of these agreements between Great Powers relating to the territory of another State that is not a party to the undertaking. On this subject there can be no hard-and-fast rule; all such arrangements must be judged on their own merits or demerits. In an ideal world, no doubt, there would be no occasion for one country to concern itself directly or indirectly in the development of another; but in an age in which countries are sharply divided in respect of their progress on the pathway of civilisation it is impossible for any one to live to itself and for itself. In 1906, when the Tripartite Agreement between Great Britain, France, and Italy was signed, world opinion on the subject of these arrangements was not as sensitive as it is inclined to be to-day; yet the basis of the understanding between the three Powers was that they should pledge themselves to respect the integrity of Abyssinia. However lightly any of the three Powers may have given that pledge, there can be no question that from now onwards it will be held very strictly to its undertaking. The alternative to the agreement twenty years ago was that Abyssinia should be at the mercy of uncontrolled concession-hunters, whose actions sooner or later might embroil the country with a European State. Under the agreement the position was in effect regularised, by the three Powers binding themselves to give some heed to Abyssinian interests and to avoid as far as possible occasion for friction. To this extent no prejudice was done to the Abyssinians. It is certain that, if any two of the three Powers had dissociated themselves from all interest in Abyssinia, their action would have encouraged the third to consolidate its hold on the country. As things are, there is to be no encroachment on Abyssinian territory; but the Powers reserve themselves the right to press their economic interests within certain limits. The exchange of notes between Great Britain and Italy serves to recall the fact that during the last twenty years the spirit of the Tripartite Agreement has not been lived up to in practice. Instead of working in harmony among themselves for the advancement of Abyssinia by foreign agency, the Powers, or one or more of the three, have chosen to see in the grant of a concession to the nationals of one prejudice to the interests of the others. To put a stop to this unsatisfactory state of affairs Great Britain and Italy come to an arrangement over two important matters that are subjects of negotiation with the Abyssinian Government.

The exchange of Notes creates no new set of conditions impinging in any way on Abyssinian rights. Rather has it this advantage for the Addis Ababa Government, that it will be free henceforth, as far as Italy and Great Britain are concerned, to consider the proposals submitted to it on their own merits, without having to give heed to the possible effect of a concession granted to one Power on Abyssinia's relations with the other. From the Abyssinian point of view the best thing that could happen would be that the Anglo-Italian understanding should be extended to include both France and Belgium, the two other countries mainly interested in the economic exploitation of Abyssinia. Hitherto there has been an unedifying rivalry between these Powers in their relations with the Abyssinian Government. When the attention of the League of Nations was directed to the evils of the slave trade, which particularly affected Great Britain owing to the raids carried out by Abyssinians on the Sudan and on Uganda and Kenya territory, France, in acordance with the policy that she has consistently pursued wherever her interests overlap those of Great Britain, endeavoured to put a spoke in the British wheel by "running" Abyssinia as a member of the League. One effect of this policy is that there have been no cessation of the slave-raiding, and no improvement in the general conditions in Abyssinia. Nor, indeed, is there likely to be, until a different school of men and manners reigns at the Quai d'Orsay. In Rome, fortunately, the standard of conduct governing the action of an Allied Government conforms more closely with the British rule, with the result that Italy and Great Britain have arranged to help one another at Addis Ababa in connexion with the economic development of Abyssinia. As an earnest of a possible change in the petty-minded obstructionist policy that she has hitherto adopted, France now seems prepared to admit that the Anglo-Italian arrangement does not infringe the rights that she acquired under the Agreement of 1906 and is reported to have undertaken to instruct her representative at Addis Ababa "to act in complete agreement with his British and Italian colleagues." It is to be hoped that these belated instructions will inaugurate a new and happier era for Abyssinia.

Although the troubles of the Abyssinians are mainly of their own creation, they can claim to have been handicapped by the "pull-Devil, pull-Baker" tactics of the Powers. Starting with a stage of development almost incredibly low, Abyssinia lacks everything that might help her to occupy a satisfactory place among civilised nations. Of national feeling properly so called there is none; a large section of the inhabitants has been regarded merely as potential slaves, to be raided when occasion arose and to have their territory laid waste in the process. The authority of the Central Government diminishes with the distance from the capital and depends on the personal attitude of the provisional Governor. A free Abyssinian has no inclination for work, and the tendency to discourage the export of products which are required for home consumption keeps the country poor; communications are for the most part confined to tracks; the people are priest-ridden and uneducated. Under such conditions, the advent to power of one man who claims to be a reformer with progressive ideas was an occasion of which the Powers interested in the country ought to have taken advantage, by combining to give him every possible assistance. One of the first things, however, that Ras Taffari and his entourage learned was that foreign anxiety for the development of Abyssinia was a useful asset for a penurious Government, and the longer the grant of a concession could be postponed the more lucrative it became to the authorities concerned. A working agreement between the four Powers for the gradual development of Abyssinia on practical lines, and loyal co-operation for the programme agreed upon, would lay the foundation for better things in the country. The Lake Tana barrage is primarily for the advantage of the Sudan and Egypt, but will confer real and immediate benefits on Abyssinia; a railway from Eritrea to Italian Somaliland will provide a useful trade artery and open up a fresh part of a hopelessly backward country. By stopping the arms traffic along her railway to Jibouti and the slave trade through French Somaliland France has to hand her quota towards the rehabilitation of Abyssinia; Belgium may also find a more useful concession than an alcohol monopoly which does not seem to have come up to the expectations of the concessionaires. There is nothing, therefore, in the Tripartite Agreement or in the Anglo-Italian Agreement that is in itself prejudical to Abyssinia; it is only the attitude of one or more of the Powers concerned that has encouraged the Abyssinian Government not to take advantage of the opportunities that these understandings offer for her material progress.

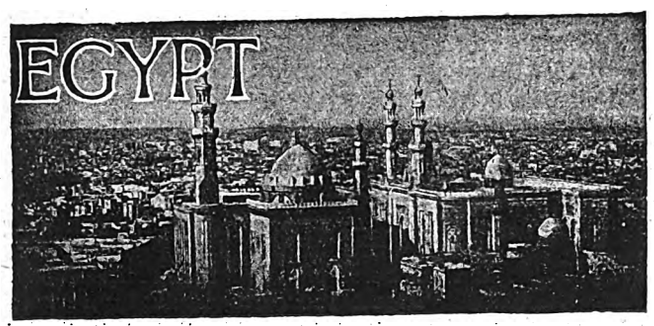
The Near and Middle East*

From Our Own Correspondents.



Cairo, June 26.

Moslem Anxieties.

To-day Government offices reopen after the Courban Bairam holidays. One wonders whether in any other country the transaction of Government business could be stopped without detriment for six days on end, as happens in Egypt in connexion with the celebration of the greatest festival in the Moslem calendar. The week has passed without local incident, but the festivities were somewhat disturbed by rumours, current during the first day, that the Mahmal and its escort had met with serious trouble at Mecca. The official news, which eventually arrived, confirmed that there had been trouble, but not of such a serious nature as was at first thought. The matter has now been satisfactorily settled, and the Mahmal is at present on its way to Medina via Yambo, but Egyptian anxiety will not be set at rest until the caravan with its escort and pilgrims has left Hejaz territory. The fanatical nature of the followers of Ibn Saoud is recognised to be such as to make it dangerous for anyone of less puritanical ideas to remain for any length of time in the sacred territory, and the incident which occurred at Mona came in reality as no surprise.

King Fuad's European Visit.

The visit of King Fuad to London is still much to the fore in the Egyptian Press. It is now definitely settled that, as Parliament will sit beyond the date fixed in July for his visit to King George V, that visit must be abandoned. The proposal at present is that King Fuad, who goes to Alexandria early next week, shall sail for Europe at the end of August or early in September and proceed straight to Carlsbad for a cure. After that he would go to London for the postponed visit to King George with whom he would stay two or three days at Buckingham Palace, transferring for a week or so to Bute House where he would establish contact with non-political English circles. He would then pay official visits to Paris and Rome, returning to Egypt in time for the reopening of Parliament. It is, however, not altogether excluded that the official visits to London, Paris and Rome may, for reasons of convenience, be postponed until next summer, in which case King Fuad would merely follow a cure at Carlsbad and his stay in Europe would be *incognito*. It may be pointed out that King Fuad, who used to take a holiday every year in Europe where he underwent a cure, has not been abroad since before his accession in 1917. In view of the very strenuous political period, through which the country has passed during the last eight years, he fully merits the rest and change from State worries which even a short visit to Europe would afford him.

Parliament.

Parliament reassembles this evening and its first labours will be to deal with the election-petitions on which the sub-committee will report. The most important is that against the election of Tewfik Pasha Doss, who was the only Independent to beat an official Wafdist candidate and whose presence in the Chamber would have tended in time to make the present very weak Opposition something to be counted with. It is stated that the unseating of Doss Pasha has been a pre-arranged thing on the part of the Wafd and he had received much sympathy in the difficult position in which he found himself as a result of what appeared to be a plot against him. Unfortunately at the last moment he tendered his resignation of his seat, an ill-advised step which has, I am afraid, turned against him whatever public opinion was on his side, and has considerably strengthened the position of the petitioner.

The most important business which Parliament will be called upon to handle during the rest of the session, if, as is now asserted, the constitutional questions are to be postponed until the autumn, will be the Budget, the report on which will not be submitted by the committee until the end of next week. Ismail Pasha Sidky is the President of that Committee, and it is, therefore, certain that the report will be an able analysis of the State finances and the manner in which the revenues are being expended.

In the Budget are several important items which could easily become the subject of much controversial discussion, but there seems a general desire to avoid anything of this nature, althought incidents cannot altogether be excluded. Much will depend upon the attitude of Zaghloul Pasha who, although President of the Chamber, still remains leader of the Wafd and takes a very decisive part in the deliberations.

Enquiry Office: CAIRO STATION. Tel. No. 6777.

CYPRUS.

Nicosia, June 22.

The King's Birthday.

The anniversary was celebrated as usual in all the district towns. At Nicosia, besides a Te Deum in the Greek Cathedral Church, there were services in the Roman Catholic and the English Church of St. Paul's. In the Greek Church there were cheers for His Majesty, the British Nation, and "Union with Greece." The Governor inspected detachments of the British Garrison, and of the police. At a dinner given at Government House the Greek Archbishop and the Greek Consul were among the guests. Sir Malcolm Stevenson talked at some length with the former.

A Question of Nationality.

A strong effort is being made by Greek Cypriots abroad, especially in Egypt, for recognition as British subjects. Cypriots who were in the island at the time of its annexation in 1914 became automatically British subjects. But

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

Digitized by Google

others who, living abroad, were, like Cypriots previously, *rayahs*, or Ottoman subjects, were not recognised as such. Many of these had often, generally unsuccessfully, endeavoured to acquire Hellenic nationality, and they could more easily, by qualification of residence, be naturalised in the countries in which they resided. Those living in Egypt are, it is said, submitting petitions to the High Commissioner in Cairo, and to the Governor of Cyprus.

Aeroplanes for Greece.

Active steps are being taken to raise the money needed for the proposed gift of two large aeroplanes for air defence to Greece by the Greek Cypriot community of Cyprus. Various bodies are undertaking the collection from all classes of the people, representing this to be a "patriotic duty." Meanwhile, the poverty of the people, aggravated by a shortage in the wheat harvest, and a slight rise in the price of bread, due to measures following the abolition of tithes, continues to give rise to complaints.

Forestry in Cyprus.

It must be confessed that since the earliest years of the British occupation in 1878, when M. Madon (lent by the French Government), and Dr. Dobbs, from India, (the latter being chiefly occupied with the delimitation of State Forests) held the office of Principal Forest Officer, there has been a long interval during which no official qualified by training in Forestry, was appointed until the arrival of the present chief, Dr. Unwin. Much good work has been done by him. On his advice the Government has wisely, and none too soon, sent two Cypriots to be trained in forestry at the Park-end Forest of Dean School. They have completed their first year with great credit. Dr. Unwin is now on leave in England, and will be able to take back a satisfactory report. Of the many youths who now proceed to England to study, especially for the Bar, none should be better able probably to render good service in the island in the future than these students.

The Greek Patriarch of Alexandria.

At the enthronement of Meletios II. as Patriarch, the Bishop of Papho (a personal friend of long standing) was deputed to represent the Autocephalous Greek Church of Cyprus. Interesting accounts of the ceremony have been received. The Patriarch, it will be remembered, had a distinguished career in the Orthodox Church in Jerusalem, Cyprus, Athens, the United States and Constantinople: and has not a few friends in England.

General News.

Continued dissatisfaction, which is very reasonable, is expressed in the Press, and generally, at the failure of the Government to revert to a weekly mail service to the island.

The usual migration to the hills is being made as the the heat increases. Advice has been given to hotel keepers to abate their charges, which are in many cases considered excessive for Cyprus, and in view of what is provided.

IRAQ.

Baghdad, June 23.

The Ministry of Interior.

The vacancy in the Ministry of the Interior, caused by the appointment of Hikmat Beg Sulaiman as President of the Chamber of Deputies, has been filled by the appointment of Abdul Aziz Beg al Gussab. No Iraqi in public life has a higher reputation for probity and good sense, and none—it may be safely conjectured—has fewer enemies among his compatriots, or more friends among his British colleagues. A man of good general education, he has held many appointments including, since 1921, those of Mutasarrif of Kut, Kerbela, and Mosul. He is now transferred to the Ministry from the last-named, where for two years he has successfully dealt with the many difficulties of that province—League Commissions, locusts, diplomatic observers, warring tribesmen, frontier incidents, Turkish propaganda, and precarious agriculture.

Rising of the Chamber.

It seems probable that Hamdi Beg al Pachachi will retain the Ministry of Defence, which he now holds concurrently with that of Auqaf. There are many rumours about the choice of a Minister for the latter portfolio—the least arduous and not the most popular. Nouri Pasha is back from Angora, bringing the unhoped-for triumph and relief of the Turkish peace-treaty, which the Chamber of Deputies instantly ratified. This most important step—ensuring to Iraq (thanks to Great Britain and perhaps a little to Signor Mussolini) security of frontier and recognition by its greatest neighbour—worthily concluded the first session of the Chamber, which has now risen after several prolongations of life.

Its penultimate act was sanction to proposed amendments of the "d'Arcy Concession," the agreement made between the Anglo-Persian Oil Company and the Persian Government before the War, whereby the Company pursues its operations in Persia. In 1914 territory near Khaniqin, containing the now promising Naftkhanah oil field, was "transferred" to Turkey. The concession thus passed from Persia to Turkey, from Turkey to Iraq: and certain modifications—length of tenure, system of royalties, and the like—were proposed by the Company some months ago. They have been hotly fought by the Opposition (not on economic but purely "nationalist" lines), even including members of the Government which passed the similar but much greater commitment of the Turkish Petroleum Company Concession in 1925.

The Eed.

The Eed al Adhha, greatest festival of the year, falls therefore upon an auspicious season—the Turkish peace, a good harvest, a mild summer, the spirit of holiday. The latter is not confined to the fortunate Europeans whose steady stream homewards has depleted Alwiyah: more and more Iraqis are summering in Syria, for which cars leave almost daily. Nairn is still the mainstay of the desert route, and his new six-wheel monsters have been successfully tried; but lesser rivals, appealing to slenderer purses, are growing in number, and the greater frequency of traffic encourages yet others to try the journey to the Lebanon in their own cars.

King Faisal.

King Faisal is spending the Eed (after this morning's official receptions at his pavilion, now dry again after the flood) at Khaniqin: thereafter, in a few days' time, he is to go to the South of France and possibly to England. He is driven rather by the general need of a change and rest than by such a real health-crisis as sent him to London last year; but the need is very apparent, and his thinness

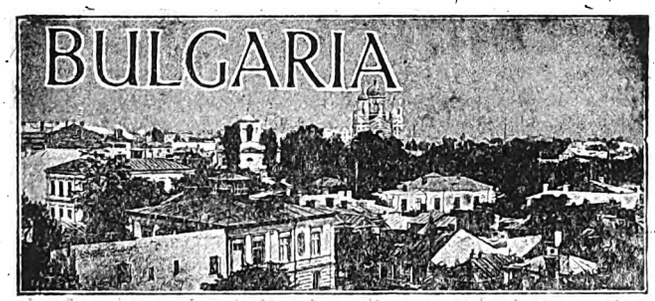
and occasional lack of spirits have been much noticed. He does not appear to have the physique to stand the trying summer of his adopted country. King Ali will probably act as Regent.

The Asfar Concession.

The Asfar Concession—a theme as absorbing to certain circles in the City of London as to others in Baghdad—has entered upon a new phase, about which it would be indiscreet at present to say much in detail. Colonel Stanley, most courteous and successful of negotiators, has returned to London after a series of conferences with the Iraq Government authorities. The common object of all—to make a success of what was too clearly a deadlock, if not a failure—was striven for with unanimity and, it may well turn out, with success. The proposed solution of the difficulties was a clean slicing of the Gordian Knot; it has commended itself to the Iraq Cabinet, and should do so to the Directors. Thereafter there will be details to fix, and a Law to pass in the next session of the Chamber. If Iraq is really free of the terrors, difficulties, obligations, vagueness, and odium of the old Concession, the sigh of general relief will surely waft the necessary legislation through both houses of Parliament, without storm or rocks.

Street Paving in the Capital.

Money is at last to be provided, one hears, for a street-paving scheme in Baghdad. May it be true, and may quagmire give way to concrete; but shall we not half regret the unique mud, the incredible foulness of rainy days in a Baghdad winter?—days when one felt that sense of standing at outposts, of passively deserving one's pay, which comes to those who watch coolies dig out their car from the main thoroughfare of the capital city. We shall lose, even while we gain, now that New Street is to be taken in hand.



Sofia, June 29.

Bulgaria and the Little Entente.

Bulgarian opinion has been deeply grieved by the attitude taken up towards this country by the Little Entente at its Conference at Bled. There it was decided to ask for the nomination of a Yugoslav controller to supervise, in the name of Bulgaria's neighbours, the correct use of the funds of the loan which the League of Nations has just authorised for the establishment of Macedonian refugees; and there, too, the Foreign Ministers of Yugoslavia and Roumania in their public declarations treated the Bulgarians as the disturbing agents of the Balkans. The result is that Bulgaria's relations with her neighbours—which had sensibly improved—will enter upon a new crisis, notably in regard to Roumania and Yugoslavia. But this crisis is probably due to the lively disappointment experienced by Roumania and Yugoslavia at the success of the Bulgarian Government at Geneva in procuring the loan, a disappointment that has induced MM. Nintchitch and Mitilineu to state at Bled that the Bulgarians asked for money to arm their *komitajis* and to impel them on to the borders of Yugoslavia and Roumania. This is an absurd accusation, for the League's decision was taken after a minute inquiry by its agents in Bulgaria.

This attitude has caused surprise here, for it is to the interest of Yugoslavia and of Roumania as much as of Greece to see the Bulgarians of their provinces emigrating into Bulgaria, there to establish themselves definitely and to obtain the means of subsistance and of honest work. Such a return would, of course, render them less liable to listen to the revolutionary agitators of whom Roumania and Yugoslavia have been complaining.

M. Bouroff at Belgrade.

To appease the susceptibilities of Yugoslavia M. Bouroff, Bulgarian Foreign Minister, made a short stay on June 23 at Belgrade, to enable him to have a cordial interview with M. Nintchitch. This meeting was the occasion of frank and very useful explanations, which cannot but help to dissipate the bad atmosphere recently created between the two countries and to prepare a future entente.

Refugees and the League.

The Dobrujan *émigrés*, organised in cultural brotherhoods, held recently their annual congress, at which they passed a special resolution warmly thanking the League and its technical advisers for having lightened the position of the refugees in Bulgaria. At the same time, the Congress expressed the firm conviction that thanks to this humanitarian and impartial activity, a second step will be taken towards the establishment of peace.

A similar resolution has been addressed to Geneva by the Macedonian brotherhoods.

A motor-omnibus carrying 20 passengers while travelling between Nyegush and Cettigne on June 29, crashed into a ravine and overturned, ten persons being killed and ten injured.

Owing to incessant rain the Danube above Belgrade recently rose so high as to cause anxiety. Twelve thousand peasants were working night and day to strengthen the dam which protects the Batchká plains, where the harvest is threatened.

The British Government has deposited with the League Secretariat for registration conventions between Great Britain and Greece regarding the damage caused by British troops in Greece before and after the entry of Greece into the War; and the two Notes exchanged in Rome on December 14 and 20, 1925, between Great Britain and Italy with respect to Lake Tana.

THE CENTRAL ASIAN SOCIETY.

The Central Asian Society celebrated its twenty-fifth year by giving a distinctive character to the Annual Dinner held at the Edward VII. Rooms, Hotel Victoria, on June 29. Viscount Peel, the President, was in the Chair, and the special guests included representatives of societies with which the C.A.S. is linked in handling the problems of Asia. Dr. Hogarth, President of the Royal Geographical Society, was one of the speakers, and the company at the high table included Dr. F. W. Thomas, in his capacity as Honorary Secretary of the Royal Asiatic Society, and Lord Lamington, President of the Persia Society, of whom Lord Peel remarked that he had the further distinction of being a member of the C.A.S. Lord Peel was able to announce that the total membership of the Society has now reached a thousand, a remarkable figure for those who can recall how small the early meetings of the Society were.

The proposal of the toast of the Society fell to Captain R. A. Eden, M.C., the Conservative Member for Warwick and one of the youngest men in the present House of Commons. He paid warm tribute to the work of the Society in the past quarter of a century, and claimed that its service had been of the first value to the Government and to the nation. He referred in a congratulatory tone to the agreement reached between H.M. Government on behalf of the Government of Iraq and the Turkish Republic on the final delimitation of Iraq's northern boundary. He said they must all welcome this happy issue of the controversy, and he thought that the Government was to be congratulated upon the firmness and the fortitude with which it upheld the rights of its youthful ward. There could be no question that we, having accepted the responsibility for Iraq, were in honour bound fully and to the last, to discharge it. The British Empire was not built up of a policy of scuttle, and its future would be jeopardised if such a policy were accepted as a full discharge of imperial responsibilities.

Viscount Peel spoke appreciatively of the presence of Dr. Hogarth and Dr. Thomas, but indulged in some raillery at the expense of the Royal Asiatic Society on the exclusion from its purview both of politics and of modern religious developments. He said that after all the C.A.S. and the R.A.S. dealt with lands in which religion dominated life, and where when one met a stranger the question asked was not "What is your nationality or race?" but "What do you believe?" The C.A.S. shared the interest of the R.A.S. in the antiquities obtainable from the dry climate of Central Asia, in comparison with the moist disintegration which went on in these islands and which had already led to some crumbling of the stones of the Palace of Westminster after a life of only sixty or seventy years. The Society was no less interested in history based on ancient memorials and inscriptions. They welcomed, of course, the traveller, and he noticed that attendance at lectures was specially good when slides were shown of mountain and desert journeys. Their methods were those of Herodotus tempered by the more scientific ways of Aristotle. They studied manners and movements, political and social, war and trade, and the reactions of the West to the East. They had discovered the complete falseness of the old doctrine of the unchanging East. If another Rip Van Winkle went to sleep in these times, he would not need to slumber for several hundred years, for a year or two would in many cases suffice to transform the vision he had seen before taking his repose. Many members of the Society had passed the best years of their lives in the East as soldiers, administrators and travellers, and therefore the papers read by those who were following in their footsteps were presented to well-stored minds. Lord Peel went on to say amid laughter that Captain Eden's references to the fortitude of Government over the question of Iraq's northern boundary had come to him like balm in Gilead. He rejoiced it had been possible to conclude this treaty of peace with Turkey. He admired also the way in which after raising agitation in the whole country and vehemently asserting that not one single inch of what was claimed to be Turkish soil could ever be given up, and arguing that Mosul (although inhabited almost entirely by Arabs) was really a Turkish town—that after all this tremendous agitation, the Turks had concluded so satisfactory a treaty with us. He could not help reflecting how unfortunate it was that there were people in this country who seemed unable to modify other slogans which were bringing upon us so great a handicap in the industrial world. Much had been said in the past of the evils of secret diplomacy, but it was evident from the agitations of certain sections of our own Press that there were weaknesses in open diplomacy. They had discussed this question with a measure of accuracy which reflected great credit upon the imagination of the writers of these articles. It was profoundly interesting to watch the Western orientation of Turkey, which seemed to have a great affection for Western ideas, but not the same affection for Western persons. They were far more ready to carry out Western ideas on their own system than to seek the help of those who were probably more competent than themselves to extend their application. While we in this country were watching the tremendous transformation going on in Asia we heard at the same time of discouragement which was being given to young men seeking occupations in Asia. Whatever our future duties and responsibilities in the East might be, he hoped we would never send any but our best men into those regions. In the rapid changes which were taking place there in the habit, thought and ideas of the people our best brains and strongest characters would be of the utmost value.

Referring in some detail to the work of the Society, he said that in December it would be celebrating its twenty-fifth anniversary, and to mark the occasion it had invited friends of its struggling youth. The mention of the names of its successive Chairmen of Council and of its first President, Lord Curzon, showed the interest it had held for those who knew Asia. The papers read during the past season had been of the most varied character. The Dinner Club had had some excellent discussions under the chairmanship of Sir Neil Malcolm. The Society made steady progress and both the numbers and the interest shown in the *Journal* increased year by year.

Sir Michael O'Dwyer, in a happy speech on the hospitality to be met with in Asia, proposed the toast of the guests.

Dr. Hogarth recalled the fact that in early life from the deck of a vessel in the Red Sea Lord Curzon wrote that before him lay the vast inscrutable immemorial land of Asia; and it still remained inscrutable. Sir Michael O'Dwyer suggested that he would sing them songs of Araby, but his heart was by no means so much in Arabia as Sir Michael seemed to think. He remembered one distinguished desert traveller, Miss Gertrude Bell, saying to him on one occasion: "We all say we love the desert; I hate it." The "Eastern Question" which had been so prominent in the day of his youth had now disappeared, and there were now, so far as the Near East was concerned, four questions on the state and future of four countries there. Kipling's well-known aphorism about East and West was right if he meant a certain incompatibility between them, but not if he meant it in any other sense. The countries to which he referred were confronted with the extraordinary dangers which were identified in unpractised hands with the idea of nationality and the idea of parliamentary institutions. Nationality was capable of very great things in good hands, but it was a question whether it could be effective in a country where it meant free licence to the privileged classes, or at

any rate the division of the loaves and fishes between them. As to parliamentary institutions, he did not think that they were the panacea for all the evils of the State in countries other than those where they took their rise. In Eastern lands they meant very little more than Ali Pasha meant when he sent to Vienna to buy a Constitution. The fact was that in the lands of which they were thinking religion underlay and divided the people on non-political lines, just as in our own eighteenth century the dividing line was between the Catholic and the Protestant. He found it impossible to believe, for instance, that the religious peasantry of Anatolia would continue to accept the existing state of affairs, or that Angora, one of the least desirable places he knew upon the face of the earth, could permanently beat Constantinople as the capital. In Syria they saw a centre of nationalist ferment and apparent solidarity, but there was diversity below. Once the existing foreign power there was withdrawn, that diversity would again be manifested. Similarly in Egypt they saw a self-seeking nationalist movement, but one which would have nothing to bite upon apart from our necessary presence in that country. In Arabia the situation was one not so much of nationality as of religion and individualism. In Arabia it had always been the strong man armed who took and kept the authority. He believed that even there the existing state of things was tranistory. There were broken waters in various parts of the Near East, but the river of progress would flow on.

Sir Ernest Wilton, who also replied, discussed the present position in China. He expressed the opinion that a loyal and lasting alliance between Chang Tso-lin and Wu Pei-fu, the two best known men in China, would go far to bring about a temporary subsidence of the prevailing Chinese unrest.

BIRTHDAY HONOURS.

The following is a selection, likely to interest our readers, of the recipients of honours conferred on the occasion of the King's Birthday, publication having been postponed owing to the General Strike:—

Foreign Office List.

G.C.M.G.

Graham, His Excellency the Rt. Hon. Sir Ronald Williams, G.C.V.O., K.C.M.G., C.B., His Majesty's Ambassador Extraordinary and Plenipotentiary at Rome.

Lindsay, His Excellency the Rt. Hon. Sir Ronald Charles, K.C.M.G., C.B., C.V.O., His Majesty's Ambassador Extraordinary and Plenipotentiary in Turkey.

Marling, Sir Charles Murray, K.C.M.G., C.B., His Majesty's Envoy Extraordinary and Minister Plenipotentiary at the Hague.

Johnstone, Harmood Victor Carruthers, Esq., Resident Enginer, Gezira Canalisation.

Marquand, Reginald, Esq., Controller of European Administration of Ministry of Education, Egyptian Government.

M.B.E.

Bayley, Leonard Bennett, Esq., Divisional Traffic Superintendent, Sudan Government Railways.

Mulla Muhammad Alli Sharaf Ali Harravala, His Majesty's Legation, Addis Ababa.

AL-AZHAR UNIVERSITY.

Address by the Egyptian Minister.

In an address delivered on June 25 before the Société Internationale de Philologie at its house in Taviton Street, Aziz Izzet Pasha traced the history of Islamic learning from the time of the Prophet down to the present day. Speaking of Cairo's celebrated university, he said that the mosque and medressah of Al-Azhar were founded in A.D. 973, or two hundred years before the establishment of the University of Paris. Successive rulers of Egypt had favoured the institution and its buildings had frequently been enlarged, notably by Kait Bey, one of the last independent Mameluke sultans of Egypt. To-day the great hall for instruction and two others of less importance were divided into riwaks, or separate chambers, each riwak being set apart for the natives of a particular country or of a particular province of Egypt. Most of the students were natives of Egypt or of the Sudan, so that the riwaks devoted to those provinces were the largest, each having several hundred students. Before the British occupation the number of students had been 7,700 taught by 280 professors. During that occupation these numbers had sensibly diminished, especially as no student then came from the Sudan. They had again steadily increased since Egypt had acquired her independence, and in the course of a few years to come would probably exceed even those of the period anterior to 1890. To-day Al-Azhar was undoubtedly the largest, as it was also the oldest, university in the Islamic world.

The lecturer mentioned some of the more famous scholars that Al-Azhar had produced in the course of its long existence, and quoted instances where they had anticipated the discoveries of European scientists. Describing the course of study to-day, he said the students usually remained three and sometimes from four to six years in the institution. They paid no fees, but each riwak was supported by an annual subsidy from the endowments of the university. The professors received no salary, but supported themselves by teaching in private houses, copying books or filling some religious office to which a salary was attached. Occasionally they received donations from the more wealthy students. When giving instruction the teacher sat cross-legged on a straw mat, reading from a book placed on a desk before him, explaining each sentence as he proceeded; or he might direct one of the more advanced students to read aloud, while he added his own explanation from time to time. Most of the students, particularly those whose native tongue was not Arabic, began their university education by learning the Arabic grammar. The next branch of study was Islamic theology. Afterwards came Islamic law. Besides these leading branches of instruction logic, rhetoric, poetry and some other subjects were taught. The continuance of Al-Azhar during so many centuries was due, first to the continued existence of Arabic as a living spoken language and, secondly, to the Islamic belief that all knowledge was from God and that to seek, to acquire and to promote learning was the duty of every Muslim.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA

THE TURCO-BULGARIAN CONVENTION.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In the issue of June 10 your Correspondent in Sofia has made a very excellent statement on the Turco-Bulgarian Conventions signed last October at Angora. Having been in position to follow the course of the negotiations between the two countries, may I be permitted to offer some additional remarks?

On initiating the negotiations with Turkey the Bulgarian Government contemplated the possible realisation of two principal aims. In the first place it had to obtain for its citizens trading or working in Turkey the rights indispensable to their commerce and labour. All such rights in regard to settlement and sojourn have been secured by the Convention. For instance, Bulgarian subjects never had the right of buying real estate. Now they are on the same footing in this respect as the subjects of the Great Powers. The second aim was to abolish the Treaty of Constantinople signed in 1913, after Bulgaria had lost the second Balkan War. The annexes of this Treaty accorded to Turkey considerable privileges in respect of the Moslems in Bulgaria and gave to the Turkish Government a legal basis for permanent intervention in Bulgarian internal affairs. The Treaty of Constantinople has been abolished with all its annexes and with it have disappeared the capitulations which Turkey virtually had in Bulgaria.

These two advantages have been excellently emphasised and explained by the Prime Minister, M. Liaptcheff; they have been praised by public opinion. On the other hand very strong criticism has been made from many sides upon the agreement concerning the properties of Bulgarian and Turkish refugees. On the basis of this agreement the real estate of the refugees becomes the property of the State in whose territory they are situated. The Bulgarian refugees claim that their properties are of greater value. So do on their side the Turkish refugees. This discontent was to be expected. In order to avoid it, both Governments at first made a different arrangement. A mixed commission was to be nominated to fix the value of the properties of the refugees, each Government assuming the obligation to pay for these properties. But afterwards, the Governments, having taken into consideration the very unsatisfactory experience of the Turko-Greek and Græco-Bulgarian mixed commissions of that kind, found it more convenient to settle the question by simple exchange of the refugees' properties on both sides of the boundary. The leading motive of the contracting parties was the strong reciprocal desire to give to all differences remaining from the much agitated past a rapid, radical, definitive solution, leaving no space for future controversies and creating at once a firm basis for friendship and economic intercourse. Therefore there can be no question of Turkey having imposed upon Bulgaria an arrangement for the properties of the refugee, inconsistent with Bulgaria's general interests. In fact the arrangement alluded to was readily accepted by the then Bulgarian Cabinet.

Of course this method of liquidating the grave problem of the properties was not likely to commend itself to the refugees as a satisfactory one. They are thus fully entitled to proclaim that friendship with Turkey has been initiated in a certain sense at their expense. There is also some foundation for their protest against a clause which, notwithstanding the courteous form of its wording, makes it actually impossible for them to go back to their homes. As a matter of fact, the Bulgarian Government could not lose sight either of the ideal or of the practical value of the claim of the refugees to return to Thrace, all the more as by the Treaty of Constantinople Turkey had assumed a formal obligation in this respect. But, in view of the ideas ruling at Angora and the inveterate suspicions which leading men in Turkey entertain towards national minorities, it was not possible to settle the matter satisfactorily, and, therefore, it was held to be inadvisable to press the question further. In this matter as in all the subjects of the negotiations the Bulgarian Government was actuated by a sense of proportion, which a French political thinker has expressed by the famous formula: "*Le propre du politique est de savoir choisir entre de grands inconvenients.*"

It is not the first time that Bulgaria has shown since the end of the War great moderation. She has submitted to considerable sacrifices towards all her neighbours. These sacrifices have been made knowingly for the sake of peace and better understanding among the peoples of the Near East. Our hope is that this loyal and unselfish policy of Bulgaria will be fully appreciated by the Balkan States as well as by the Great Powers of Europe, whose help is needed by our nation in so many respects.—I am, etc.,

A BULGARIAN DIPLOMATIST.

The Egyptian Government has appointed a Commission under the Minister of Justice to consider an increase of the number of Chambers in the Mixed Court of Appeal.

To celebrate the anniversary of the Battle of Kossovo, a solemn service was held in Belgrade Cathedral on June 28 in the presence of members of the Yugoslav Government and the Diplomatic Corps.

At the forthcoming meeting of the Assembly of the League of Nations the representatives of India will be Sir William H. H. Vincent, the Maharaja of Kapurthala, and Khan Bahadur Shaik Abdul Qadir.

It is officially announced that at the Imperial Conference to be held in October, India will be represented by the Secretary of State for India, Sir Bijay Chand Mahtub, Maharajadhiraja Bahadur of Burdwan, and Mr. David Thomas Chadwick.

The consecration took place on June 29 in Southwark Cathedral of the Venerable Arthur Leonard Kitching, M.A., Archdeacon of Uganda, as first Bishop on the Upper Nile. The ceremony was performed by the Archdeacon of Canterbury, assisted by several bishops and members of the Chapter and Diocese of Southwark. An address was given by Canon J. O. F. Murray, D.D., Master of Selwyn College, Cambridge.

PALESTINE AND TRANSJORDAN IN 1925.

The annual report of the Palestine Government to the League of Nations has been published by the Stationery Office (Colonial No. 20. 5s. 6d. net). It is divided into five sections, which are named respectively Palestine, Transjordan, Questionnaire of Permanent Mandates Commission with Brief Replies, Reprint of Text of more important Legislation enacted during 1925, and Convention between the United States and Great Britain regarding Palestine.

Generally speaking, 1925 was for Palestine a year of tranquillity, of consolidation of administrative work, and of increased prosperity. In spite of the trouble in Syria, public security was maintained, and there was a satisfactory decrease in crime. Public health was good. Politically, little advance could be made, because of the necessity of concentrating upon public security, and "it is in the organisation of local rather than of central government that real progress towards autonomy can be made immediately." Financially, the surplus balances at the end of the year reached a total of £E1,069,576.185—this despite the important reduction of the tithe to ten per cent. From the points of view of Agriculture, Education, and Immigration there is much said in this Report to interest the student of Palestine affairs.

Immigration in 1925 was, of course, very much larger than in the previous year. There were 34,641 as against 13,553 in 1924. Ninety per cent. came from Europe, forty-nine per cent. from Poland alone; Russia was next with 6,529 Jews; Roumania next with 2,166 Jews; and Lithuania next with 1,747 Jews. From Australia came one Jew and two Christian immigrants; from Canada 21 Jews and three Christians; from India and Iraq 32 and 113 Jews respectively; and from the United Kingdom, 137 Jews, 130 Christians, and 12 Moslems.

In Transjordan satisfactory if slow progress was made. The financial position of the country and public confidence in the Government improved. The Maan Vilayet was brought under the administration of the Amman Government, although the road between Aqaba and Maan was not sufficiently good for much use to have been made of the newly acquired seaport. An improvement in public security was noticeable. Finally, an increased interest was manifested in the conservation of ancient monuments.

The Questionnaire of the Permanent Mandates Commission included queries upon the Jewish National Home, autonomous administration, the Jewish Agency, Immigration and Emigration, Land Régime, Nationality, the Judicial System, Economic Equality, Holy Places, Freedom of Conscience, Military Clauses, International Conventions, Antiquities, Official Languages, Holy Days, Transjordan, Labour, Trade in and Manufacture of Drugs, Education, Public Health, Public Finance, and Demographic Statistics. From these were elicited, among other things, the facts that the Citizenship Order in Council came into force last August, that there was in 1925 a remarkable development of Jewish Co-operative Societies, that 32,500 acres of agricultural land were purchased by Jews in 1925, that there was little change in the relative distribution of Jews in the urban centres and in the rural districts, and that, although the frontier between Nejd and Transjordan was defined by the Hadda Agreement, the southern boundary of Transjordan is yet to be defined For the most part, however, Col. Symes, the representative of the Palestine Government, had little to add to the replies made by Sir Herbert Samuel in 1924.

THE WEEK AT HOME.

London, Tuesday Morning.

Coal: Nigrescent Gloom.

That rift in the clouds over the coal industry of whose possible appearance I spoke last week duly appeared last Thursday, when in the House of Commons the Prime Minister said: "If the Miners' Federation even now can accept the Report, with all that that Report implies . . . I believe a settlement satisfactory to both sides can be arranged." For a moment it seemed that the sun might shine through the darkening banks, and that the men of good will on both sides could go forward to meet the auspicious hour. But it was not to be. The Government were loathe to accept the logical conclusion of Mr. Baldwin's declaration; and the Miners' Federation lost an excellent chance of getting back to the Royal Report.

That the Government should have gone back on, or, rather, disregarded the Premier's statement, which unhappily was as obscure as it was hope-creating, is profoundly disappointing. There has never been, as it appears, the slightest disposition to withdraw the Hours Act, the "permissive" character of which is now seen increasingly to rest on the owners' inclinations. This determination on the part of the Government to stand by their departure from the Report has not only once more consolidated the Trade Union movement against it: it has antagonised the huge mass of non-party opinion in this country. On all sides other than the strictly and uncritically Unionist side the Churchill gloss on Friday of the Baldwin offer on Thursday appears to be deplored, for the conception of the Government as a body holding the scales equally between the mine-owners and the miners is more widely than ever thought to be an empty one. Some indication of what even normal supporters of the Government are feeling is indicated by last Sunday's *Observer*, which declared:—"The 'National Government' of 1924 is dubbing itself an employers' Government, and Mr. Baldwin's excellent and genuine ambition for a new age of peace and efficiency in industry is shrivelling, despite himself, into an employers' policy."

It was impossible, unless one was either already committed to the owners' case or to an unquestioning trust in the Prime Minister's recommendations, not to be impressed with the very remarkable unanimity of opinion which was found in those "conciliatory" Labour members

who spoke last week in opposition to the Hours Act. But a short time ago the glories of men like Mr. Varley and Mr. Hartshorn were being broadcast; yet these and men of their sterling kidney are among the bitterest critics of Mr. Baldwin. Without much question the clouds are rolling up again all round the industry.

Effect of the Hours Bill.

The more immediate effect of the Hours Bill, which is due to receive Royal assent to-morrow, has been the closing of the Labour ranks. Little is being heard now of the "treachery" of the T.U.C., which, indeed, has just issued a manifesto the main purport of which is to represent the Hours Bill as an attack upon Labour standards generally. But what a pity that, in this manifesto as in the Miners' Federation manifesto, no attempt is made to pin the Government down to the Report: we do not know even now whether the T.U.C. and the Miners' Federation would adopt the Report as the basis of peace.

One can, therefore, sympathise with the Labour attack on the Government's policy, which, whether wittingly or not, must obviously have the appearance of forwarding the owners' case, and yet deprecate the method of attack on that policy. Unhappily, certain Labour members chose to break against the one absolutely invulnerable point in the Government's armour: the Prime Minister's personal disinterestedness. Mr. Baldwin, as anybody who knows anything of him can not only testify in the usual political manner but can swear in the man-to-man way, is as indifferent to the claims of class or of interest as Mr. Collins was in the Test Match indifferent to the wiles of Root or the advice of the crowd. But the disastrous effect of the Hours Bill is to make him appear as a villain of the piece. To quote the *Observer* once more: "It is idle for Government spokesmen to deny the intention attributed to them of opening a general assault on hours and wages. One-sided legislation for the repeal of the seven-hour day was one thing certain to re-unite the most diverse elements of Labour in this conviction."

That is the main political effect of the Bill. Its actual effect upon the coal industry remains to be seen. Here opinion is sharply divided. There are those who, arguing on statistics, believe that the average loss on each ton of coal of 1s. 5½d. can, with the use of an eight instead of a seven hours day, be converted into a profit of 6d. per ton. It is no part of their inclination to look at other things than figures, and quite sincerely some of them believe that were only the men to work for the extended period prosperity would once more come to the industry, our exports market would be re-created, and, in short, the main basis of the nation's industries would once more be placed on a first standard. Generally speaking, however, the optimists who hope that the introduction of the Eight Hours Day will, by drawing thousands of men to the pits in defiance of the Federation's advice, split the present Trade Union solidarity, are not numerous.

The Honours List.

There is little to say about the publication of the delayed Honours List, except to say that the extent of the awards in the so-called "Premier's List" is much more considerable than one would have expected from Mr. Baldwin. Those who search the list for scandals, remembering the time when "peerages were for sale," may be disappointed, but not more than those whose quest is distinguished persons. Broadly speaking, the list is hum-drum, one that might have been expected from a generous and perhaps not minutely critical Conservative leader. The only new peer is Mr. H. S. Berry, the coal-owner and brother of the Berry of the newspaper world. The Privy Council becomes enriched with Colonel John Gretton, Chairman of Bass, Ratcliff, and Gretton, Ltd., Sir Halford Mackinder, and Lord Onslow. Similarly with the other awards: although the main tendency is to award merely party service, there is a distinct widening of the eligible classes. It is very good to see, for example, the honouring of Mr. F. E. Lacey, of the M.C.C., of Dr. Henry Coward, and of Mr. W. E. Dudley. There is something to be said, after all, for a list which includes Music and Cricket as qualifications for rewards in this life.

Sport.

In the world of sport, which grows wider and wider as we move, some astonishing things have been happening. For instance, English batsmen in the Lord's Test Match came into their own, although it is shameful to have to confess that England, all out for a win, could on the Monday afternoon of the match, and with Hobbs and Sutcliffe set, score no more than seven fewer runs than those obtained by Australia, all out for a draw, with Collins and Macartney. Collins, by the by, has been rebuked for his refusing to touch balls off the wicket on Tuesday, but what was wrong with our bowlers that they could not keep him playing? (As soon as the game was safe, Collins flicked at one and was caught.) It is rather surprising, therefore, to see that no slow right-handed bowler has been chosen for the next Test, for, although it is manifestly too much to hope that all our first five batsman will come off again, our main job is, patently, to get the Australians out in reasonable time. And if the wicket is soft, there will now, presumably, be three slow left-handers, and three fast or fastish right-handers. Still, as in the mines question, there is much to be said in the policy of trusting "Plum" as trusting "Baldwin."

Henley was a memorable success, both socially and from the point of view of rowing. The crews this year were often very equally matched, and there were some extraordinarily close races.

At the Athletics championship meeting at Stamford Bridge, an amazing sequence of records was broken. A German, Peltzer, did the half mile in 1 min. 51 3-5 sec.! A new English record was set up by Lord Burghley in the 440 yards hurdles (55 sec.), and wonderful performances were achieved in the 120 yards hurdles and in the two miles steeplechase. Really it was a great meeting, and it is good to know that the public recognised its greatness.

From Wimbledon the greatest consolation that we can get is that Mrs. Godfree won the Ladies' Singles, and that she and her husband won the mixed doubles. The men's singles and doubles went to France. Mrs. Godfree would probably be the first to admit that she is again champion for the same reason as she was two years ago—the absence of the still incomparable Mlle. Lenglen. It is something, however, to have beaten so courageously as accomplished and versatile a player as Senorita de Alvarez, whose delicious disregard of all Lawn Tennis conventions, such as making the half-volley a defensive shot, and so on, not only made her extremely popular but is likely to have an important effect on the teaching of the game. Largely owing to her delightful adventuring, Lawn Tennis seems likely to borrow more in the future from the technique of Cricket.

ALTER EGO.

ANGLO-EGYPTIAN STUDENTS' CONFERENCE.

A conference of British and Egyptian students, was held at High Leigh, Hoddesdon, from June 25 to June 29, with Professor C. K. Webster, Woodrow Wilson Professor of International Politics in the University of Wales, in the Chair, for the purpose of furthering friendship based on mutual understanding between British and Egyptian undergraduates. The conference was also attended by Sidarouss Bey, Counsellor of the Egyptian Legation; El-Sadik Bey, Consuel in London; Fikry Bey, Secretary of Legation; Gam-el-Din Bey, of the Egyptian Educational Mission; and Mr. J. A. Spender. It was felt that while, as a rule, the relations between British and Egyptian students were good there was room in many cases for improvement, and with this end in view Anglo-Egyptian committees are to be set up in each university. It was also decided that a similar conference should be held next year.

PERSONAL AND GENERAL

TO-DAY

July 8, 1926 (New Style).
June 24, 1926 (Old Style).
Dulheggia 27, 1344 A.H., of the Moslem Calendar.
Tammuz 26, 5685, of the Jewish Calendar.

Lord Willingdon returned to London on July 4 from China.

Princess Aicha Hassan arrived recently at Claridge's Hotel for a fortnight's stay.

Lady Cheetham has arrived at 20, Launceston Place, W.8, from the British Legation, Athens.

Sir Rajendra and Lady Mookerjee left Queen Anne's Mansions last week for the Trumpeter's House, Richmond.

Viscount Inchcape left London on July 3 for Paris, to attend the Suez Canal Company's meeting, returning to town on July 6.

Ex-King George and Queen Elizabeth of Greece visited the King and Queen at Buckingham Palace on July 4 and remained to luncheon.

Sir Alfred Mond presided at a lecture arranged by the British Indian Union, given by Sir Jagadis Bose at the Royal Society of Arts yesterday.

Among the recipients of Knighthoods in the Birthday Honours List are Mr. Herbert Baker, who, with Sir Edwin Lutyens, was responsible for the architecture of the new Delhi, and Colonel Henry George Lyons, whose work in Egypt is well known.

Dr. Henri M. Léon (of the Société Internationale de Philologie), who was elected Life President of the Oriental Students Society of Edinburgh University, was entertained last month to dinner by the Society. Dr. Shofkat, of Cairo, presided.

At a luncheon party given by Mr. H. Charles Woods at the Carlton Hotel on June 29 in honour of Dr. Weizmann, those present included Sir Davison Dalziel, Sir Arnold Wilson, Sir Martin Conway, Sir John Henry, Mr. C. Sauerwein and Mr. Montague Bell.

Dr. Frank G. Clemow, C.M.G., British Delegate and Secretary-General to the Commission set up by the Treaty of Lausanne to liquidate the affairs of the former International Board of Health in Constantinople, has returned to 32, Hamilton Road, W.5, on the completion of the work of the Commission.

The Aga Khan gave a dinner party on July 1 in the Ritz Restaurant, London, at which the guests included the Maharaja of Alwar, the Maharaja of Rajpipla, the Marquis of Blandford, Marchioness Curzon of Kedleston, the Earl and Countess of Birkenhead, Earl Winterton, M.P., and Countess Winterton, and Sir Robert Horne, K.C., M.P.

The members of the Royal Commission on Indian Currency and Finance entertained the chairman, Mr. E. Hilton Young, M.P., at dinner at the Savoy Hotel last week. A piece of silver was presented to Mr. Hilton Young by his colleagues as a token of their admiration and regards. There were present:—Mrs. Hilton Young, Sir Ranjendranath and Lady Mookerjee, Sir Reginald and Lady Mant, Sir Maneckji and Lady Dadabhoy, Sir Alexander and Lady Murray, Sir Purshotamdas and Lady Thakurdas, Sir Norcot and Lady Warren, Professor and Mrs. Coyajee, Mr. and Mrs. W. E. Preston, Sir Henry Strakosch, Mrs. Ogilvie, Miss Wilson, Mr. G. H. Baxter, Mr A. Ayangar, Mr. G. E. Franey, Mr. A. T. Goldup, and Mr. K. C. Mahindra.

M. Balougtchitch, who was the Serbian Minister at Athens during the War, last week arrived in Salonika.

Sir Arthur and Lady Froom, who recently arrived in London from India, are staying at the Hotel Washington, Curzon Street.

King Faisal, travelling on the P. and O. Maloja, will arrive to-morrow at Marseilles. He is proceeding to Vichy, and after staying there a few weeks will probably visit England.

The King has approved the appointment of Mr. Mirza Ali Akbar Khan, B.L., to be puisne judge of the High Court of Judicature at Bombay in the vacancy created by the resignation of Mr. Abdeali Muhammad Ali Kajiji.

General Pangalos, the President, who returned to Athens on July 1, confirmed the report that the negotiations in regard to the Anglo-Greek war debts had been interrupted.

Lord Lloyd, the British High Commissioner, will start for England, via Venice, to-morrow, on leave, and, according to present arrangements, King Fuad will transfer his Court to Alexandria on July 10.

Sir William Sinclair Marris, Governor of the United Provinces, has been granted leave of absence for urgent private affairs for 3½ months, commencing early in August. Sir Samuel Perry O'Donnell will act as Governor of the United Provinces during Sir William Marris's absence.

Colonel Minchin, of Imperial Airways, Limited, who left Croydon on June 30 for Cairo, landed at Heliopolis on July 2, at 1.45 p.m. and left again for Sollum on his return journey at 4.45 p.m. He delivered correspondence written in London on Wednesday.

Lieutenant-Colonel F. H. Kisch, C.B.E., D.S.O., late R.E., who for the last four years has been a member of the Zionist Executive in Palestine in charge of political affairs, has applied for Palestinian nationality, says *The Times* Jerusalem correspondent. This action followed a meeting of the Jewish National Council in which he had delivered an address urging Jews to take up Palestinian citizenship in order to entitle them to exercise the municipal and other franchises. Colonel Kisch is the first British officer to take this step.

RECEPTION AT THE TURKISH EMBASSY.

The Turkish Ambassador and Mme. Férid Bey gave a dinner party, followed by a reception and dance, at 69, Portland Place on June 29. The magnificent suite of rooms on the first floor, which were profusely decorated with flowers, were used for the reception and for dancing. Three hundred guests were present. On the staircase, in the hall and in the two large refreshment rooms the splendour of pre-War days was recalled by the lordly red and gold uniforms for which the Turkish Embassy has long been famous. But with this grandeur and state there was a marked tone of friendliness and cordiality, for both the Ambassador and Ambassadress, who have now made many acquaintances in London, were mingling freely with their guests.

The company at dinner included Sir Austen and Lady Chamberlain, the Belgian Ambassador, the German Ambassador and Frau Sthamer, the Italian Ambassador and the Marchesa della Torretta, the French Ambassador and Mme. de Fleuriau and Mlle. de Fleuriau, the Earl and Countess of Birkenhead, Sir William and Lady Joynson-Hicks, Sir Philip and Lady Cunliffe-Lister, Sir William and Lady Tyrrell, Sir John and Lady Hanbury-Williams and Miss Hanbury-Williams, and Shevly Pacha.

Among the guests at the reception were:—The Portuguese Ambassador and Mme. Norton de Mattos, the Brazilian Ambassador and Mme. Régis de Oliveira, Baron Hayashi, the Afghan Minister, the Argentine Minister and Mme. de Uriburu and Mlle. de Uriburu, the Bolivian Minister and Mme. Aramayo, the Bulgarian Minister and Mme. Hadji-Mischeff and Mlle. Hadji-Mischeff, the Colombian Minister and Mme. de Cuervo-Marquez and Mlle. de Cuervo-Marquez, the Cuban Minister and Mme. Patterson and Mlle. Patterson, the Czecho-Slovak Minister and Mme. Masaryk, the Danish Minister and Countess Ahlefeldt Laurvig and Countess Ingegerd Ahlefeldt, the Egyptian Minister and Mme. Aziz Izzet Pasha and Abdullah Bey Izzet, the Finnish Minister, the Greek Minister, the Guatemala Minister and Mme. Sanchez-Latour, the Hungarian Minister, the Liberian Minister and Mme. Dresselhuys, the Lithuanian Minister and Mme. Galvanauskas, the Mexican Minister and Mme. Valenzuela, the Netherland Minister and Mme. van Swinderen, and Mlle. van Swinderen, the Nicaraguan Minister and Mme. Perez-Trana, the Norwegian Minister and Mme. Vogt and Mlles. Vogt, the Panama Minister and Mme. Belisario Porras, the Polish Minister, the Minister of the Kingdom of the Serbs, Croats and Slovenes, the Siamese Minister, the Swedish Minister, the Swiss Minister and Mme. Paravicini.

The Archduke Salvator, the Duchess of Norfolk, the Duke and Duchess of Montrose, the Marquess and Marchioness of Huntly, the Earl and Countess of Denbigh, Earl and Countess Stanhope, the Earl and Countess of Bessborough, Viscount Incheape and the Hon. Elsie Mackay, Viscount Cecil, Viscount and Viscountess Astor, Viscount and Viscountess FitzAlan, Lord and Lady Eustace Percy, Lord and Lady Lamington, Lord and Lady Huntingfield, Lord and Lady Oranmore and Browne, Lord and Lady Inverforth, Lord Dewar, Lord and Lady Parmoor, Lord Headley, Lord and Lady Beaverbrook, Lord and Lady Askwith, Sir Samuel and Lady Maud Hoare, the Master of Elibank, Sir Hamar and Lady Greenwood, Sir John and Lady Henniker Heaton and Miss Henniker Heaton, Prince and Princess Wiasemsky, Prince and Princess Nicolas Galitzine, Mr. T. P. O'Connor, Sir Arthur and Lady Steel-Maitland, Sir John and Lady Pretyman Newman, Sir William and Lady Berry.

Sir William and Lady Bull, Sir Denison Ross, Sir John and Lady Gilmour, Sir Park Goff, the Dowager Lady Boyle, Sir Edward and Lady Boyle, Sir John Foster Fraser, Admiral the Hon. Sir Edmund Fremantle, the Master of the Rolls and Lady Hanworth, Sir Hamnet and Lady Share, Count F. A. Oppersdorf, Sir George and Lady Armstrong, the Hon. Lady Barlow and Miss Barlow, Sir Arthur and Lady Benn, the Hon. Dominick and Mrs. Browne, Mr. L. Oliphant, Count and Countess V. Bonde, M. Ghulam Ghaus Khan, Prince Nadir Mirza Arasteh, Lieutenant-Commander and Mrs. Kenworthy, M. Eugène Nelky, Signor Augusto Rosso, M. Stoyan Petroff Tchomakoff, Colonel Ion Antonesco, Comte and Comtesse André de Limur.

Lieutenant-Colonel and Mrs. W. Grant Morden, Baron and Baronne D'Erlanger, Mr. and Mrs. Frederick A. Sterling, Prince and Princess Reginald de Croy, Sesostris Sidarouss Bey, M. Roger Cambon, Professor and Mrs. Arnold Toynbee, M. Laptew, Mr. and Mrs. Boylston Beal, Lieutenant-Colonel and Mrs. Wilfrid Ashley, M. and Mme. Llambi Campbell, M. Karlis Students, M. Manuel Y de Negri, M. Dominguez and Mlle. Dominguez, Commander and Mrs. Locker-Lampson, and Mr. and Mrs. Philip Snowden.

The Turkish Ambassador and the Argentine Minister on June 30 signed a Treaty of Friendship between their two countries, says a Reuter message from Rome.

The British representative at Sofia reports that the quarantine measures against plague imposed on arrivals in Bulgaria from Constantinople have now been removed.

The Holy Carpet has now been ordered to return from Jeddah to Egypt, and will not go to Medina. The reason given is that sickness of a nature not specified, has broken out amongst the officers of the escort.

Floods have recently interrupted the railway service between Nish and Tsaribrod, on the line from Belgrade to Sofia.

Arrangements have been made with the French Government for the body of Sultan Mahmud VI., to be transported from San Remo to Marseilles, whence it will be Mecca. The three wives of the Sultan have obtained permission to return to Turkey.

The Greek Cabinet has decided to draft a measure imposing taxation on celibates of both sexes. It is said that persons between 24 and 40 years of age will pay 3,000 drachmas (£7 10s.); over 40, 1,000 drachmas (£2 10s.)

The Bulgarian Sobranye has been prorogued until September 9, when it will reassemble in order to give immediate consideration to the contract for the loan which the Finance Minister is at present negotiating in London and Paris.

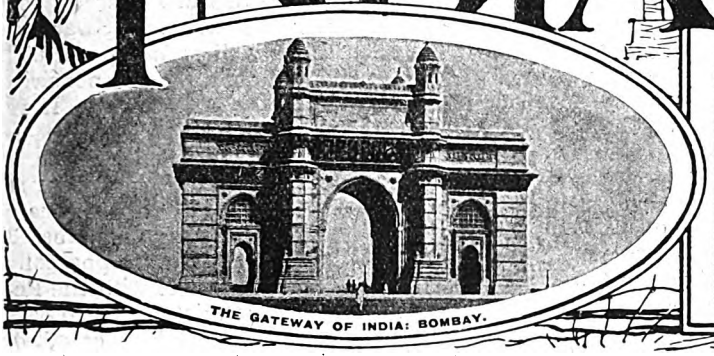
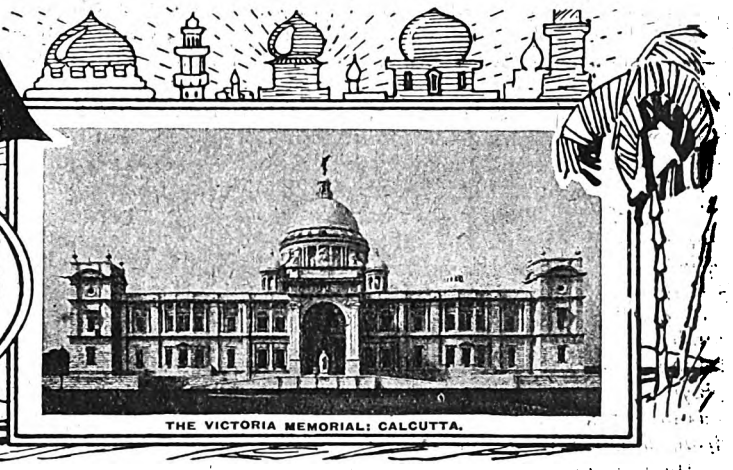
INDIA



THE GATEWAY OF INDIA: BOMBAY.



THE VICTORIA MEMORIAL: CALCUTTA.

HINDU-MOSLEM ILL-FEELING.

The Indian and Anglo-Indian papers are full of the Hindu-Moslem quarrel and apart from the very serious rioting and destruction of life and property that it has entailed everyone now recognises that this relapse into bitterness on the part of the two great religious communities in India must affect seriously the political future of the country. The gradual development of tension into bitter hostility which has taken place in the last three years followed, as everyone knows, a period of unhealthy and unnatural combination and the old question as to whether the two communities can ever play the game of peace with each other without an alien and impartial referee is much less open than it was. Responsible Indians are seriously alarmed not only because they see that the Utopian ideal of a united Hindu-Moslem India has been shattered but still more because they realise that the worst may not yet have come. It is a matter of reasonable dread that at the ensuing elections to the Provincial and Imperial Legislatures the great majority of candidates may have to invite the votes of their constituents on the ground that they will, before everything, champion the cause of the one community against that of the other. This would amount to a real and terrible tragedy, for it would identify politics and administration with religion. Nor would the ill-effects be confined to political and administrative bodies. The whole country would be split by the religious cleavage. It would be a most ungrateful task to attempt to draw a picture of India split in two by religion, but the possibility of such a catastrophe happening is not remote. What can be done to prevent it? One leading Anglo-Indian newspaper says that the only method of preventing the intolerable burden (of communal partisanship) from being laid upon the shoulders of a nascent democracy is for the leading members of the communities to take active steps to assemble the chief of their religious leaders in order to see whether some general enforcement of the habit of tolerance cannot be enjoined on worshippers in temple and mosque. But it is generally recognised that cases of provocation connected with Hindu or Moslem worship are really symptoms of already existing bitter feelings and not the cause of those feelings.

The official historian of current events for the Indian Government has published a very clear account of the growth of Hindu-Moslem tension since the Hindu-Moslem entente received its first serious shock through the terrible Moplah rising of 1921. He explains clearly how the deliberate belittling of Government by Mr. Gandhi led to the weakening of Government authority and impaired the old effectiveness of Government's perpetual efforts to restrain communal discord. It is more than time that the Government in India should shake itself free of that weakening. The communal discord has reached a stage at which the cause of law and order must be preferred to political experiments. If the next elections and the consequent Legislatures are to be a convenient stage for violent communal discord it would surely be better to suspend both temporarily. Government might proclaim a state of emergency and deal with the whole situation on its own responsibility. That might be denounced as going back on the Reform Schemes, but what is the alternative? Can the Legislatures and the system of administration dependent on them function properly when the mainspring of all policy and action is communal partisanship? Would not an attempt to make them function under such conditions do more to discredit and jeopardize the Reform Schemes than a temporary suspension?

One great danger of a system based on communal partisanship would be the difficulty or rather the impossibility for British officials and non-officials to remain neutral. Already there has been some talk of British non-officials in the Legislatures having to join with Moslems because the programme of the Hindu Members is unreasonably and unpracticably anti-Government. It would be a very great pity if non-official Europeans in the new Legislatures had to identify themselves with a party elected and standing on a religious platform.

Further the state of affairs which would apparently result from a complete Hindu-Moslem political cleavage would make the position of all ranks of Hindu and Moslem servants of Government very difficult and invidious. With religious war cries resounding throughout the land is it reasonable to expect our Hindu and Moslem officials of all kinds to remain unaffected? So long as it can be shown that politics and administration are not based on religion the religiously-minded servant of the State can do his duty impartially and serenely. But if the converse were the case the strain on him would be excessive and unjust.

THE TEST MATCH.

It is all very well to pretend that we accept defeat in games with real philosophical resignation but deep down in our hearts that is not quite the case. Recently we have had abundant opportunity for the exercise of all the philosophical resignation we can command. Polo, tennis, golf and cricket, to mention a few outstanding games, have one after the other administered shocks to our national pride which have hurt although there has been no squealing, which would, of course have been both undignified and useless. The Test Match was, however, a soothing and healing ointment and having been able to watch it for at least part of each of the three days, I feel constrained to say a few words about it. The weather was perfect and Lord's at its very best. People of all ranks went there to enjoy themselves and dressed for comfort and not for show. Top hats and tail coats were exceedingly rare and looked very much out of place. Large numbers of people took their lunches with them and I did the same, having come by experience to the conclusion that a lunch at the public bars and restaurants at Lord's is an uncomfortable and sordid affair. The wicket and outfield were fast and true and the ball travelled at a great pace facilitating sure and brilliant fielding. Alas!

Digitized by Google

the wicket was too fast for that splendid veteran Strudwick whom I have watched for so many years, off and on, with such admiration and pleasure. On this occasion he fumbled and missed in a way that showed that he was not seeing the ball properly, and I fear that he will not appear often again as an international cricketer. The pace which beat little Struddie seemed, on the other hand, to suit the Australian keeper Oldfield, whose work was just perfect. The English batting was a delight to watch while that of the Australians was, on the whole, very tedious, not to say boring. Bardsley and Macartney played, of course, magnificent cricket in the first and second innings respectively, but their abstention from the drive takes away a great deal of the spectacular enjoyment of their game. In the second innings of the Australians Collins' display was the most boring thing I have ever seen. He made 24 runs in two hours and thirty-five minutes and took one whole hour to move his score from 14 to 15. Everyone admits he was playing the correct game for his side, but it is sad that at any stage of a cricket match such a dull procedure should be correct The long procession of balls bowled to Collins which he either left alone or blocked was enlivened by some good humoured cheering and laughter from the crowd, which seemed to make Collins more motionless than ever.

The batting of Hobbs, Sutcliffe, Woolley, Hendren and Chapman was quite delightful although when nearing his century Hobbs seemed to become over cautious and Chapman, for once, had a fit of the slows, which was not only exceptional for him but also, apparently, quite unsuitable to the state of the match at the time. The match was really a triumph for the English team. Statistically they had a long way the best of it, having scored 475 runs for the loss of only three wickets, while the Australians made 577 runs for the loss of fifteen wickets. At the same time it did not give me the impression that the Australians are likely to be beaten in a three day's match on a good wicket. It will take, I think, at least two days, and probably more, to get twenty of their wickets and if that is so a draw is inevitable. If the Test Matches were prolonged the rate of the scoring would probably decline still further and stamina would become the real test rather than cricketing ability. On the whole this last Test has heartened us all up. I am sure that I am voicing a very general feeling when I say that the superiority of the English batting which we saw and the equality at least, of the bowling and fielding have made up for a lot of unwilling philosophical resignation in connexion with the results in other international games.

CURRENT TOPICS.

Political Parties in India.

Truth wittily remarks that "though there is no positive evidence of the fact, it is to be presumed that someone in India understands all about Indian politics." It then proceeds to give a remarkable terse and acute summary of the present situation in the following words. "So far as one can judge at the moment, while there is a general election for the Assembly almost in sight, the predominant issues are far less political than communal. In mere politics it looks like being a fight between the Swarajists, who do not want to work the reform scheme, and a sort of alliance of oddly-named Liberals, Responsive Co-operationists, Nationalists and others who in divers ways and sundry places are prepared to work the reforms, if only for the fun of scoring off the Swarajist people, who have captured the Indian Congress—now national in name only." It would be difficult to improve upon the above summary of the situation as it is reflected in the Indian and Anglo-Indian papers of the last mail. Indian politics tend to become like Indian pholisophy, which indulges in distinctions and analyses too fine and subtle for the Western brain. The party label which is quoted by *Truth* as "Responsive Co-operationist" has now been shortened in India into "Responsivist," and a section of this party has recently been holding special meetings to explain its "creed." This particular brand of Responsivist disapproves of the Swarajists, not because it does not want Swaraj, but because it thinks the Swarajists are going the wrong way to get it. It frankly states that it believes in "co-operation" with Government because thereby you can make Government do what you want. "Swaraj is to be won at all costs, peaceful as well as non-peaceful." "Let us go into the Councils," said the Responsivist leader, "and make the minister do as we tell him. If we don't he will do as Government tells him to do. Let us contribute to the material welfare of the people, which in its turn will give us power to fight the Government at every step in the struggle for Swaraj." The ordinary person would hardly expect to find such a policy labelled "Responsive Co-operation," but there it is. Apparently the "Liberals" in India are anxious to unite with the Responsivists in order to smash the Swarajists. *Truth* says that the Indian political squabbles have often been equalled, if not excelled, in England. It is a curious coincidence that both in England and India at the present time the Liberal party, with its great name and fine achievements, cuts no political ice. Alliances, however, do not seem to be the proper cure either in India or England.

Viceroy's Private Secretary.

Lord Irwin has selected Mr. George Cunningham, of the Indian Civil Service, to be his Private Secretary in succession to Sir Geoffrey de Montmorency, whom he took over as a temporary measure from Lord Reading. It is needless to dilate on the importance of the Viceroy's Private Secretary being a first-class man of many gifts and, above all, sterling character. Sir Geoffrey has won golden opinions in many posts and has a great career before him. He has been a very fine Viceroy's Private Secretary, but is probably at his very best, and certainly in his most congenial element, in the rough and tumble of difficult executive and administrative work in times of crisis. He is marked out for the future Governorship of the Punjab in sucession, early or late, to his old friend and "boss" in the administration of the new Delhi Province, Sir Malcolm Hailey. As Finance Member of the Punjab Government Sir Geoffrey will once more work under Sir Malcolm and the combination is extraordinarily strong in ability, efficiency and disinterestedness. The new Private Secretary, Mr. George Cunningham, is a N.W. Frontier Officer, not widely known away from the frontier except in his former capacity as captain of the Oxford University and Scotland Rugby football teams. Mr. Cunningham has certainly plenty of character, ability, and tact. A Viceroy who is absolutely new to India, as is Lord Irwin, must often turn to his Private Secretary for information and opinions. Of all the strange matters which come before him none are probably quite so strange as those of the N.W. Frontier and Afghanistan and intimate first-hand knowledge and experience of these will probably be more useful in his Private Secretary than those of any other matters.

The Imperial Conference.

It has been decided that India shall be represented at the Imperial Conference, to be held this year, by the Secretary of State for India, the Maharajadhiraja Bahadur of Burdwan and Mr. Chadwick. The last meeting of the Conference was in 1923. The Maharaja of Burdwan is one of the greatest landowners in Bengal, but he is not an independent ruler and has no connexion with any Native State.

The Assembly of the League of Nations.

Sir William Vincent, H.H. the Maharaja of Kapurthala and Khan Bahadur Shaikh Abdul Qadir have been nominated to represent India at the Assembly. For the last four years the leadership of the Indian delegation was in the hands of Lord Hardinge of Penshurst (twice), Lord Chelmsford and Lord Willingdon. Before that the leader was the late Sir William Meyer, then High Commissioner for India. The changes in leadership have thus been rung on ex-members of the Indian Civil Service, Viceroys and a Provincial Governor. The selection of Sir William

Digitized by Google

Vincent is a compliment to him personally as well as to the Service. H.H. the Maharaja of Kapurthala is one of the big Indian Princes but at the Assembly he will represent India as a whole and not his brother Princes or the Native States of India as a separate entity from the whole of British India.

Indian Currency Commission Report.

It is announced that the Report was signed on the 1st inst., but it is anticipated that some weeks must elapse before publication, which will be simultaneous in India and in London. An important financial paper reports that the expectation in the City is that the report will be no half-hearted document, content to avoid difficulties by tinkering, but that it will deal with the whole problem of Indian currency in a constructive manner from the foundations upwards.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 17.

The Impotent Leader.

Apparently the meeting of the Bengal Provincial Congress Committee on Sunday last was crowded when it began, and there was much excitement outside the hall even if the reports are silent as to the "scenes" within. In one sense the occasion must be regarded as a triumph for Mr. J. M. Sen-Gupta, for instead of being turned out by the militants, he reversed the position and inflicted a substantial defeat upon his opponents. The result, however, can hardly be considered satisfactory from the point of view of the strength of the party, for on their defeat the minority left the meeting and this minority contains all the active workers. This section includes the so-called ex-revolutionaries, but not only does it contain the remnants of the old revolutionary party, but also youngsters of the same type, recruited from similar sources. These are the believers in violence or the use of any means to gain their end and it is stated in one Indian newspaper that it is members of this section who are at present detained in various parts of the country under the Bengal Ordinance. They are believed to control the greater part of the money which has been subscribed to the party and they have of course a monopoly of certain methods of obtaining further money for political purposes. One of the most significant results of the meeting is that the Editor of *Forward* has resigned his post; he appears to have written an article extolling Mr. J. M. Sen-Gupta, but the Directors forbade its publication; hence the breach. Very obviously all is not well in the Swaraj camp. Mr. Sen-Gupta is still the triple-crowned autocrat, but his party as a party has practically ceased to exist. He has position without power, possibly the logical end of a completely negative policy.

The Democratic Experiment Reviewed.

What are the results of the experiments in democratic government in Bengal? The oldest democratic institution here is the Corporation; under the Act of 1923 this was reconstituted as nearly as possible as a completely democratic body. The Swarajists captured every elected seat and they obtained absolute power, appointing their own Mayor, Deputy Mayor and Aldermen, and filling every new office with friends or members of the Party. This new Corporation has been much more successful than was anticipated, or is generally realised. It is badly handicapped by the fact that the Mayor, who should be prepared to give a substantial portion of his time to his work as Mayor and to the interests of the City, is primarily a politician who spends the greater part of his time away from the Town Hall or the City. The Swaraj Members as a whole are very keen on their work, much more so than the Indians they have displaced, and they are certainly less self-seeking than many of their predecessors. There are many standards of honesty, but taking an average one the present Corporation compares well with the old one, both politically and personally. Petty corruption in the offices appears to be less, but the Indian will never cease to be susceptible to "influence." Much was heard in the early days, when C. R. Das was Mayor, of contractors being called upon to pay sums towards party funds in order to obtain their contracts. Dame Rumour does not always lie, but less is heard of this kind of thing at the present time and, whether it still exists or not, it may be doubted whether it is worse that such payments should be made to party funds instead of to individuals. Where the Swarajists fail is in their reluctance to come to decisions, particularly if they are likely to be unpopular or to affect adversely the supporters of the party. The effect of this and of the type of mind that lies behind it is a general lowering of the standards of municipal work throughout the city. Everything is now done rather less efficiently and much more slowly.

The Political Picture.

Politically, the democratic experiment has been dramatically eloquent. For a time there was apparently a united party in Bangal which obtained universal support and completely crushed every opponent out of existence; it was a personal autocracy, more complete than any Czardom, and so long as C. R. Das was in good health, he maintained his supremacy, his autocracy and his organisation. The moment he died the party began to disintegrate; it had no policy beyond that of hatred of Government and demand of India for the Indians and the clearing of the British out of the country at the earliest possible moment. His policy has been defeated by the hard logic of facts and the return of common sense. His party split and split again, until now its nominal head has again achieved an autocracy, actually one half of the members of the Executive being appointed by him personally; but the party is a personal clique; sections and factions and rival organisations are as innumerable as leaders. The two great communities, Hindus and Moslems, who have lived together in comparative amity for generations, have been roused to bitter enmity and are now busily organising themselves on religious lines, obviously unable to confine the settlement of their differences to the Council Chamber. The experiment has failed in Bengal, completely and absolutely, but it has proved one thing; given the machinery of democracy, Bengal will elect an autocrat, and his success as a leader will be commensurate with his personal capacity to maintain his autocracy.

Councils and Boards.

At last the Moslem Councillors of the Calcutta Corporation have handed in their resignations, though an inspired statement in the Press indicates that they will probably not be accepted. This is one method of complying with the instructions of the mass meeting of the community, and at the same time not losing the fees which are paid for attendance at Corporation meetings. It is also a comment on the recent Congress proceedings.

The Tariff Board is again sitting and listening while the representatives of Tatas urge that steel bounties and protection should be maintained for their benefit for at least a period of ten years. There is no modesty about the big men in Tatas, especially when they are putting forward requests for the nourishment of their bantling.

As the original Tariff Board is heavily engaged, a second Board has been appointed to investigate the demands of the cotton industry on the Bombay side for protection in favour of their indigenous manufactures. Lancashire and Japan will be equally interested; Bombay makes no secret of the delight that it feels over Government's action.

Sir Hugh Lansdown Stephenson, K.C.I.E., C.S.I., I.C.S., was sworn in as Acting Governor of Bengal last week on the departure of Lord Lytton. Educated at Westminster and Christ Church, Oxford, he entered the

Digitized by Google

Indian Civil Service in 1895 and filled many posts until in 1922 he was appointed a Member of the Executive Council. His new appointment brings Mr. Birley, C.I.E., I.C.S., into the junior membership of the Council.

Hindu-Moslem Tension.

Bakr-Id takes place next week and there is considerable apprehension all over India as to the possibility of disturbances. Probably it will be found, in the usual way when this is the case, that the steps to prevent this are adequate and nothing will happen. There is an unpleasant reminder, however, of the reality of the tension that exists, in the communal outbreak in Rawalpindi, a city which has hitherto been singularly free from such troubles; there were 14 deaths and 50 wounded and eventually the Military had to take charge and restore order. The Government of the United Provinces has issued a warning to both communities of the futility of mutual recrimination and attacks and it points out the detrimental effect that disturbances have upon the financial well-being of the Province. The leaders of the Moslem forward party are taking active steps towards improving their political organisation, but in spite of this Mr. Sen-Gupta was able to retain the allegiance of some of his former Moslem supporters at the Congress Committee and was thus able to avoid a discussion of the Hindu-Moslem Pact. In theory, therefore, this still stands, another paradox in this land of paradoxes!

Men and Things.

Sir Samuel Hoare's speech on the progress that is being made with the Indian Air Mail scheme was read with much interest, but we hope that the people who have booked their seats for January have not been too optimistic.

We have been passing through one of the most trying periods of heat within recollection; although neither the temperature nor the humidity appeared to be abnormal, there was no question that the discomfort of the last fortnight was quite above the ordinary, and this week there has been a large number of deaths in the street. Fortunately, as this is being written, the rains have broken and we breathe again.

Government are allowing the trial of the Alipore Jail criminals for the recent murder of a Police Superintendent to take place in public with a full display of counsel and witnesses. Surely it is a mistake to permit the publication of evidence and cross-examination of fellow-criminals in full, especially when the proceedings are conducted on the lines common to Indian Courts.

In view of your discusions on the Betting Tax, its working here may be mentioned. There has been no trouble in collecting it and it has produced a substantial revenue, although the attendances at the racecourse has fallen away considerably. The tax seems to have had nothing to do with this, however; we are all short of money.

Why do Mr. Lansbury and Mr. Johnstone ask so many questions about politically-minded Indians in the House of Commons? Mr. Johnstone at least knows that the Indian political leaders are drawn almost entirely from a class which he and his friends at home are in the habit of describing as bloodsuckers.

The Trivial Round.

The Tollygunge Gmykhana Meeting is due to open on Saturday next; the going has been very hard in spite of the care that has been taken with the course, but now that the rains have come, it will probably be "ponky" on Saturday. Five racehorses have dropped dead this week in their stables.

Soccer is still in full swing and there is an improvement in the military teams. The position is a much more open one now in the League: the North Staffords have played particularly well and no one would object to their coming out on top.

There have been boxing shows in Calcutta and Rangoon this week; boxing in such heat is an awful strain and it was hardly fair on the visitors, most of them from steamers in the port, to pit them against local men who are inured to it.

An American Vaudeville Company at the theatre is doing a particularly good show. The principal picture is the "Light of Asia," which has been very successfully produced at Madans.

Everybody is glad to see that the project for sending an M.C.C. team out next winter is materialising and that probably Lionel Tennyson will be captain. They should get some excellent cricket and have a right royal time.

Markets.

No development in the jute market has taken place during the past week; for new crop business has been negligible and, generally, conditions have been quiet with sellers reserved, especially for near delivery. Hessian prices show little alteration and the market is steady; a fair number of dealings for the far forward positions have been negotiated and at the close shippers have displayed more interest in near deliveries. In heavy goods, apart from a fair inquiry from the Far East, the export trade continues to be slow, but the market closes steady. With orders, both local and from upcountry, few and far between, the piece-goods market has had a very dull week, and prices have continued downwards. The position is so bad that goods falling due have in some cases not been taken up, and sellers have on occasions had to allow one to two months' extension free of charge. The market is beginning to take a somewhat gloomy view of the situation. A weaker and somewhat irregular tea market is reported from London, but the sale here, although slightly below expectations, was quite satisfactory. Quality was not up to that of the former week, but Darjeelings, as previously, commanded good prices; Commons were again the weakest spot.

In the Stock Exchange and in all financial circles the new Loan and its influence upon the money market has been the main topic of discussion. The result of the Loan has caused a considerable amount of surprise in that, out of the 20 crores of 1926 War Bonds which were convertible, under 9 crores only were applied for, the balance of the loan being made up by cash applications. To Government this is a serious matter as it will mean that until September 15, which is the date of the redemption of the 1926 War Bonds, it will have to pay interest to the 1926 holders as well as to the holders of the new loan, while it will be getting nothing on it itself, as the money will doubtless have to remain with the Imperial Bank without interest. Even more serious is the effect on the money market. Large sums of money have been withdrawn from several banks and concentrated in the Imperial Bank, leaving the former banks short of funds, and the Imperial Bank unable to employ its surplus funds. By giving a kind of indirect encouragement to cash applications, the Government has aided and abetted "stagging" and the striking feature of the past few days has been the heavy and continuous selling on the part of banks which were successful in getting their applications accepted. This has led to a sagging in prices, and after there being buyers at Rs.3 premium the rate is now back to its issue price of Rs.88. The 1927 and 1928 Bonds which are also convertible into the new Loan may be transferred up to the 25th of this month, but with the Loan daily going down in price it is unlikely that holders of the 1927 and 1928 Bonds will avail themselves of the opportunity. This is something in the nature of an anti-climax for a loan, which was given such a cordial welcome in financial circles before its issue.

Government Securities generally are lower on balance and buyers are scarce: in investment stocks, railways have been in keen demand. Jutes have on the whole closed easier on the week in spite of a strong market earlier; bear covering continues to influence the market to a great extent. Transactions in the tea shares have been on a slightly smaller scale, but a number of advances in rates have been recorded. Rubbers have passed a week

Digitized by Google

somewhat similar to the previous one, in that transactions have been scarce, but those concluded have been at full rates.

The Exchange Market opened steady with very little business showing, but on advices from Bombay of bullion resales in that market, rates have been inclined to harden and for the last two days 1s. 5 15-16d. has been available for Ready T.T. The Imperial Bank rate was lowered to 4 per cent. on the 10th instant; money has been in better demand with call and short notice quoted nominally at 2½ per cent.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, June 18.

After an absence from Bombay I have returned to find the weather exceedingly bad and unpleasant even for a Bombay June. Some showers did materialise on the 14th and 15th, but in the last three days the weather has cleared again and it seems certain at any rate that this year we shall not have an early monsoon.

Even when the end of June comes without proper rain it is not a final indication of the failure of the monsoon. It is the later rains that count and many a year that has begun unpromisingly has been redeemed by good steady rains in August and September: but the delay is, at any rate, discouraging.

Years ago the Finance Minister, I think it was Sir Guy Fleetwood-Wilson, confessed in his budget speech that the Indian Budget was a gamble on the rain: and that statement is at least as true now as it ever was. The rupee may or may not be stabilised at a given figure: but its maintenance depends on India's balance of trade, which is not nearly so strongly in India's favour now as it has been. Few of our markets are looking very cheerful just now: and if, as I have pointed out before, a large American cotton crop ever synchronises with a failure in the rains of Western India, the loss of export values will be enormous.

Commercially the chief excitement recently has been the flurry in Government securities, which was so strongly marked that a day or two after the announcement of the terms of the new Loan it was quoted at a premium of Rs.3. This premium has long since disappeared and the aftermath of the boom in gilt edged securities is likely to be severely felt among the operators on our Stock Exchange. As I have written often enough before, the stock exchange of Bombay is considered to be purely a gambling house, and the losses of its operators have no serious effects on the more sober-minded inhabitants; but it is always a nuisance and very upsetting to serious trade when large fortunes suddenly change hands, even by gambling.

The page in *Capital* devoted to the state of the Bombay Cotton Mills is very sad reading at present, for the majority of these are carrying forward debit balances. The only real exceptions are the mills upcountry, whose turn of real prosperity came later than that of Bombay, and whose business is always less subject to fluctuation than that of concerns which are in close touch with the world's markets. I had hoped a few months ago that the industry was at its worst, but as long as cotton declines, its manufacture must be uphill work.

American cotton in the far distant future is now quoted at about 8¾d. per lb. This may or may not be an economical price for the growers, but the average price before the War was certainly nearer 6d. than 10d. and cotton is now very nearly the only commodity in the world that still stands well above pre-War figures. One may be pardoned for thinking that the trade of the world is still very largely dependent on the price of cotton and that when once that is stabilised on a safe and reasonable basis, we shall see a great improvement not only in our own local industry but in the general trade conditions of the world.

A recent letter to THE NEAR EAST AND INDIA drew attention to the misconception generally prevailing in England of the work and position of the English in India. It is a great pity that for forty years English ideas should have been influenced so much by Rudyard Kipling's early and immature work. To this day hundreds of thousands of Englishmen and Americans believe that India is colonised only by the characters of "Plain Tales from the Hills," or of "Soldiers Three." Through Mr. Kipling's later and more serious Indian work, "The Jungle Books" and "Kim," the Englishman moves in a very shadowy background.

Some of his essays, in "Letters of Marque" and elsewhere, are a more serious study of the English in India, and just before his death in S. Africa Mr. G. W. Stevens wrote an impression of India which was as brilliant as all his work; but since then the many books and novels on India have done nothing to dispel the idea that Englishmen in India are all of the respectable middle classes, and that those of them who escape from the almost universal career of dissipation sink at a very early age into a condition of senile imbecility.

This sort of thing, though it admittedly is the abnormality that forms the character of a novel, is bound to have its influence on the judgment of Englishmen at Home; and it has probably had very much more effect on the opinions of Mr. H. G. Wells (as expressed in "The New Machiavelli") than that would-be scientific philosopher would like us to believe.

To show the ordinary and rather humdrum life of the average Englishman in the Army, the Civil Service or commercial life would be a difficult task, for, as Horace said, the chief difficulty of a writer is to tell of common things with accuracy. But it can be done, and till we can find a writer of genius to do it, it is more than likely that the Indian careers of Englishmen will continue to be misrepresented and misunderstood at Home.

THE INDIAN MAIL.

The Jains and Palitana.

The whole Jain community of India is deeply interested in the dispute with the Palitana Durbar (Kathiawar Agency, Bombay Presidency) in connexion with its rights to use the sacred Shetrunja hill, which is situated within Palitana territory overlooking the capital town of the State. The case is now being heard by the Agent to the Governor-General in the Western States of India at Mount Abu. The entire summit of the hill is covered with Jain temples, while the hill itself is the most sacred of the five hills of the Jains and is considered to be the first in importance of all the Jain places of pilgrimage. All Jains ought, according to their religion, to visit the Shetrunja hill on pilgrimage at least once in their lifetime. The innumerable temples of all kinds on the hill express the superabundant belief of the Jains in the efficacy of temple building as a means of salvation. The respective rights of the Durbar and the Jain community have before been the subject of elaborate disputes in which the British Government has acted the part of referee. In 1886 an arrangement was decided upon whereby for the next forty years the Chief of Palitana was to receive a lump payment of Rs. 15,000 per annum from the Jains as commutation of the pilgrim tax. The period of that settlement has now elapsed and a fresh settlement will have to be made. Naturally the Palitana Durbar would like to receive rather more contributions from the Jains than the latter care to give. The population of the Jain community in India shows a tendency to decrease and in the census of 1921 appeared as 1,178,000 which was some

Digitized by Google

5 per cent. less than 10 years previously. The British merchants and non-officials in India come into frequent and close relations with Jains whom they habitually know under the generic title of "Marwaris." Jainism and Buddhism were both founded about the same time, in the sixth century B.C., and represented revolts from Brahmanism on cognate lines. The local origin of Jainism was the old kingdom of Magadha, the greater part of which lay south of the Ganges in what is now the Bihar Province. Later on the centre of Jainism shifted to the western territories of Gujarat and Marwar, where it became the state religion of the reigning princes. The "Marwari" has always shown a special aptitude for trade relations with Europeans in India, but the great majority of the community are less affected in their religious convictions and customs and in their private mode of life by modern developments than almost any other people. Their dislike of the taking of all kinds of animal and even insect life, their repugnance from any kind of food not permitted by their old religion, their belief in pilgrimages, the building of temples and in astrology are exceedingly strong and as a community they illustrate the "unchanging East" to a degree that their methods of business, their love of speculation and their wide dispersion in all the trade centres of the Indian Empire would hardly lead one to suspect. The Britisher in India offends against many of the deep ingrained ideals and prejudices of the "Marwari" but nevertheless the common bond of business permits most cordial and pleasant relations between the two very opposite natures. Long may this continue.

Associated Hotels of India Ltd.

It is satisfactory to find that at the recently-held tenth Annual Meeting of this company hopes were held out by the Chairman, Mr. Bevan Petman, of a dividend being forthcoming for the ordinary shareholders within a reasonable period. The managing director of the company, Mr. Faletti, has for many years past set up a high standard of comfort and catering in the hotels under his supervision and has done more than any other individual to remove the reproach from India which the state of most of the hotels in the old days more than justified. There are, of course, special difficulties which militate against a high all-round standard of comfort and food in the hotels of India. A high standard is apt to be too costly for a proportion of visitors while a low and cheap standard does not satisfy the others. The problem is to strike the happy mean.

Free Passages to Europe for Indian Members of the I.M.S.

The Indian Members of the Indian Medical service have individually memorialised the Secretary of State requesting that the concession of free passages to Europe and back, lately granted to the European members of the I.M.S., may be extended to them. The reasons for claiming identical treatment with the Europeans in this matter are (1) the necessity for the Indian members to visit Europe in order to acquaint themselves with the latest developments in their profession: (2) the fact that on their qualifications depend their promotion and appointment to specialist posts: (3) the impossibility of defraying the cost of trips to Europe without the concession: (4) the State will suffer if the Indian members are unable to pursue advanced professional studies: (5) the Indian members require to recuperate their health in Europe just as badly as the European members: (5) the Indian members send their families to Europe for the education of the children: and (7) a similar concession has been granted to Indian members of the Indian Civil Service.

The logic and reasonableness of the claim are apparent but, apart from the consideration of the expense to the State involved in the grant of such a concession, there must be a stage at which the Indianization of the services and the Europeanization of the Indian members must come into conflict. If the latter have to be thoroughly Europeanized in order to acquire a desirable standard of qualifications and efficiency certain arguments which have been held to prevail against the Europeans must be considerably weakened.

The Tata Cotton Mills.

The loss for the year 1925 on the working of these mills amounted to close on 13 lakhs of rupees and the Rs. 500 shares stand now at about Rs. 112. The last year for which a dividend was paid was 1922. A great many of the Bombay cotton mills show somewhat similar failures to avoid losses and a correct diagnosis of what ails the business would be most helpful. For some time the high price of cotton was considered to be a chief contributing cause and when the price fell it was explained that the mills had bought cotton dear and could not turn out their goods at prices to meet consumers, who expected to get the full advantage of cheaper cotton at once. There are many similarities between the state of the cotton mills industry and that of the coal-mining industry in England. The Indian Tariff Board appointed to investigate the cotton mills industry in India will shortly take up its inquiry, as the result of which it will report whether or not the the industry is in need of protection and, if so, in what form and for what period protection should ge given.

The Monsoon.

The latest reports here show that anxiety is still felt over the course of the monsoon. A month ago the official forecast was in favour of a normal monsoon and, happily, no positive proof exists that this may not still be the result. Up to date Bombay has the most reason for anxiety as by June 26 only four inches of rain had fallen as compared with 22 inches by the same date in 1925. Elsewhere the rainfall has been more normal but more rain is required. So far Bombay is the only province in which agricultural operations have been definitely retarded owing to the absence of rain.

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

Palestine To-day.

I have just had a most interesting interview with a consulting engineer who has recently come back from Palestine after a stay of three months there. He emphasised the development that has already taken place, but he was not inclined to underestimate the difficulties that must be overcome before Palestine can be considered to be on a satisfactory economic basis. I give the gist of his remarks herewith, and while I suppose that some of the sentiments he expresses may not meet with general agreement and may possibly invite some criticism, I think it will be accepted that nothing is to be gained by an attitude which fails to take into account the realities of the situation. He commenced by telling me how the appearance of the country struck him since his last visit soon after the War. "The progress that has been made," he said, "is most impressive having in view the short period there has been in which to accomplish it. But it is impossible to restore a country which has been neglected for centuries in a few years. To give only one example, it will be a matter of many years before the necessary afforestation has been completed. The real difficulty with which we are confronted in Palestine is that it is a poor country, and there is little, if one excepts sentiment, to attract people to it from this country. There are no mineral deposits, and while there is a possibility of oil, so far there has been no important discovery. Hopes have been based on the exploitation of bituminous limestone, but in my view it is hopeless to consider the known occurrences from an industrial point of view. It is to be feared that the exploitation of the mineral salt deposits of the Dead Sea will meet with considerable difficulties. Here Continental competition is the obstacle. It would only be possible to export the potash, and there would not, as is the case in Germany and France, be a market for other salts obtained as by-products."

Handicap to Agriculture.

He went on to emphasise the importance of agriculture in the scheme of things in Palestine. "Agriculture is the main thing on which the country must depend. Unfortunately the adequate development of this basic industry is handicapped by the very unfavourable taxation arrangements. There is the antiquated tax of 10 per cent. of the produce of the land, and this simply encourages the bad cultivator and also the speculator who lets the land lie fallow and holds it in order to sell it at a high price. The Government are aware of the unsatisfactory nature of the present system of agricultural taxation, but it has to be replaced by something, and they are waiting for the completion of the survey of Palestine. This will take years, however, and it would seem the most satisfactory solution, that the maritime plain should first be surveyed and the tax altered for that region leaving the unification of taxation to a later period."

The Need for a Harbour.

The question of a harbour was discussed, and he stressed the difficulties of the present position. "There are literally no harbour facilities, and at Jaffa the state of things is very bad. There are no railway sidings and no storage accommodation. Camel loads of oranges arrive and as there is nowhere to put the fruit considerable loss is entailed. The oranges are transferred from the camels to the lighters, and the cost of getting them from the harbour to the ship is a very expensive process—about as much in fact as the whole freight to England. The natural conditions at Haifa are far more favourable for the construction of a harbour than at Jaffa. I was told that steps will be taken almost immediately by the Government to commence with the harbour works at Haifa. The carrying out of this scheme will probably take three years or more, and it has been suggested that in the meantime by dredging the outlet of the Kishon River at Haifa and constructing two short moles, a small harbour could be created in order to alleviate the pressing need for shipping facilities."

Jewish Influence.

He paid a strong tribute to the work already accomplished by the Jews in Palestine. "Were it not for the enormous driving power of the Jews," he said, "I should not regard the outlook for progress as bright, for, as I have already suggested, sentiment is the main attractive force not material prospects. The agricultural settlements are an abiding tribute to their labours. The town of Tel-Aviv, built during the last four years, consists of solid buildings, not interspersed as in other countries that are being developed by huts and empty spaces, but in blocks. They have arisen in a sandy waste because the people have the desire and the determined will to make their homes there. That speaks volumes for the enthusiasm of the race and for the future of Palestine. Jews in England, I think, should do more than they have done for Palestine; the country needs the introduction of a strong element of Western culture. The Jewish schools need masters to introduce the healthy spirit of English school life. The best contribution the Jews here can make is to see that there is the infusion of the right type of young man from this side for the teaching, medical and other services, and it is not too much to say that the accomplishment of this is a patriotic obligation on them."

Phœnix Oil.

The latest report of the Phœnix Oil and Transport Company gives a most encouraging account of the progress of the concern. The production of crude oil rose in 1925 to 267,380 tons as compared with 187,904 tons for 1924, while for the first six months of the current year the output has been 161,478 tons, and if the present rate of progress is continued it is clear that the output for this year will mark a further considerable advance. The

net profits for 1925 amounted to £204,230, an increase of £58,600, and with the balance brought forward the total available came to £505,785. The interim dividend absorbed £206,163, leaving £299,622, and the final dividends now proposed on the £1 and 1s. shares, making 1s. 6d. and about 10½d. respectively, will absorb £103,783, leaving £195,839 to be carried forward. For the current year an interim dividend has been declared of half the amount of the previous period, but it is anticipated that the total distribution for 1926 will be greater than that for 1925.

The Sudan Market.

I have many times emphasised the prospects of the Sudan as a market for British goods and obvious corroboration of what I have said as to the potential trade outlet afforded by that country is to be found in the fact that the Americans are now beginning to pay considerable attention to that part of the world. It need scarcely be said that American traders are not in the habit of displaying interest in unpromising markets, and this development is therefore very significant. In a recent issue of *Commerce Reports* there was an article the gist of which was that the Sudan must be considered as an independent market from Egypt. That is a point which in the past has not been sufficiently appreciated over here even, for the average trader has not realised the meaning of the distance that separate Khartoum from say Cairo. "It should be kept in mind," it is stated in the article in question, "that, although the Sudan is as yet only a comparatively small and undeveloped market, it is nevertheless one with undoubtedly great potentialities for many American commodities in the not far distant future." That means, of course, that the growth of American competition in the Sudan must be envisaged as a development in the near future, and it may be hoped that the knowledge of this fact will act as an incentive in encouraging British traders to pay increasing attention to this market so that the existing proportions of British trade may be maintained as the market expands. COMMENTATOR.

THE TURKISH FLOATING EXHIBITION.

Sunday saw the arrival off Greenwich, in accordance with the re-arranged schedule, of the Turkish ship, the Kara Deniz, of the Seir Sefaine line, which has been converted for a tour of the principal ports of Europe into a floating exhibition of the varied products of Turkey. The initiative which has led the Turks to carry through this undertaking is typical of the new Turkey, and there is little doubt that this tour, which affords an opportunity for the display of the Turkish flag in European waters under exceptionally favourable circumstances, besides offering an unrivalled means of advertising the economic resources of the country, should have a most beneficial effect on the development of Turkey's commercial relations with the West.

The Kara Deniz (the English of which is the Black Sea), makes an imposing appearance off Greenwich, for she lies high in the water and rather tends to dwarf passing shipping. It is much to be regretted that it was not found possible to bring the vessel nearer the centre of London, for the distance to Greenwich is bound to affect the attendance of business men, who would certainly pay the ship a visit were she anchored off London Bridge, but would think twice before taking the time necessary to go to Greenwich. Still, as it is, the ship seems assured of plenty of visitors, judging by the attendance on Sunday and Monday.

For the visitor the Kara Deniz has two main features, a large saloon in which are displayed examples of the country's industries and a smaller room situated some little way from the saloon which is arranged as a typical Turkish bazaar. The exhibits in the saloon are of the most varied character, and tribute must be paid to their attractive arrangement. It is not intended here to give an exhaustive summary of the exhibition; to do so would be to remove the charm that surrounds the unexpected, and there is a good deal that is surprising in the ship. The exhibition shows plainly how far the Turkey of the new era has advanced from the Turkey of the pre-War period.

Taking one of the best known products first there is a good display of the dried fruits of Smyrna—sultanas and figs. Like the Jaffa orange of Palestine this fruit has to meet greater competition in the export markets than was the case before the War, and it is probable that the rivalry will be accentuated in the future, but at the same time these commodities are in increasing demand and when Christmas comes round each year it is difficult to imagine that Smyrna sultanas and figs will fail to play their part in the festival. Great efforts have been made to develop cotton growing in Turkey in recent years, and this commodity, of course, figures prominently among the exhibits. The cotton grown in Turkey is of two types, native and a variety called "de secours" which has been produced from acclimatised American seed, the resultant product being very similar to American cotton. But the native type greatly predominates, though to precisely what extent is uncertain. The production in the Adana district, the principal cotton growing region in Turkey, was estimated at 100,000 bales for 1925, and while this is some way below the best figure reached before the war the rapid progress made in the last few years suggests that the pre-War level will soon be surpassed. The only other important cotton district is Smyrna where the production last year amounted to 40,000 bales.

Some very excellent pottery is on view, also inlaid mother of pearl tables, while some choice rugs are, needless to say, among the exhibits. Mention must also be made of the fancy leather goods, of the harness, of the silks, and the suitings in wool and cotton that are shown. The display of coal from the Black Sea serves as a reminder that Turkey has extensive deposits of this vital mineral. A fair export trade is done, and it is of interest to note that the Roumanian State Railways use coal from Eregli-Zongouldak. Wool is one of the important products of Turkey and, of course, figures in the exhibition. As an indication of the progress of the country it may be pointed out that while three-quarters of the wool crop used to be exported a great part of it is now consumed in Turkey itself. Finally, tobacco and cigarettes with which the country's name is so closely linked play their part in adding variety to the floating exhibition. It is true that a very large part of the tobacco known as Turkish comes from districts now outside Turkey, but the production in the country itself is far from insignificant. The principal districts in which tobacco is grown are Samsoun, Smyrna, Trebizond, and the Marmora Basin, and of these Smyrna produces the finest tobacco.

Such in brief are some of the resources of Turkey which the trade ship is designed to bring to the notice of the European countries. To facilitate business there is a

bank on the ship, while a lighter touch is lent by the bazaar and a band, and no doubt, as suggested, the Kara Deniz would be quite a rendezvous this week, were it a little more accessible.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 6.

In spite of the absence of a reduction in Bank rate the gilt-edged markets have been decidedly firm, but the Stock Exchange as a whole has been quiet owing to the continued coal strike and the combined incidence of the Test Match, Wimbledon, and Henley. The City realises that the half-year ends in a fashion which is very gloomy and contrasts sharply with the cheerful forecasts made at the beginning of the year. When 1925 closed the stage seemed to be set for economic improvement. The Locarno Treaties promised a new degree of peace and confidence in Europe. The world's good harvests seemed to provide a basis for expansion in international trade. At home the inconvenience caused by the return to the gold standard was practically over; prices had been re-adjusted, and a rise in production and trade seemed imminent. All these hopes failed. The Locarno achievement was temporarily annulled at Geneva. The great slump in the franc introduced a new element of anxiety, and finally here at home came the disaster of the general strike and the long coal stoppage. As in so many former years early promise has been followed by acute disappointment in the economic sphere.

Similarly in the Stock Exchange early hopes of a revival of last autumn's boom in rubber shares and industrials failed to mature; and although markets have shown a laudably firm front in the presence of the industrial crisis, here too disappointment is felt. The one outstanding feature of satisfaction with regard to the half-year which has just closed is the firmness of the sterling-dollar exchange, whose maintenance around parity has, by contrast with the instability of Continental currencies, clearly vindicated in the public eye the wisdom of Britain's policy in resuming a gold basis.

The Quarter's Revenue.

The disappointing results shown in the quarterly return of Public Income and Expenditure for the first three months of the current financial year are partly attributable to the general strike and to the two months' coal stoppage, but the extent of the effect upon the figures of these economic disasters cannot be gauged. For while total revenue is £22 millions lower than in the corresponding period of last year, we find that income and super tax, now collected at a lower rate, are responsible for a drop of £15½ millions, while "special" receipts account for a decline of £6½ millions. On the other hand customs and excise receipts show increases of nearly £2 and £1 millions respectively. Total expenditure increased by £4 millions, although the sinking fund payment for the quarter was £4½ millions less, the fighting services having spent £3½ millions more and the Civil Services £4½ millions more. At present the accounts show a deficit of £78 millions, but no useful conclusions can be drawn from this figure at so early a date.

Bank Dividend Prospects.

From a study of the monetary history of the past half-year it would appear that, in spite of the industrial upheaval and slackness of trade in the past two months, the period has been a fairly profitable one from the banking point of view. In the first place the average rate for short loans has been higher than usual, and works out at £1 1s. 2d. per cent. above the average rate paid by the banks on deposits. Then again, Bank rate has remained unchanged at 5 per cent., so that the average rate charged on advances to customers has probably been about 5¾ per cent. Moreover, this is the principal source of the banks' revenue and we find from the monthly statements that the total advances of the English clearing banks have increased from £847 millions in December last to £877 millions in June. Deposits on the other hand have not expanded, and the increase in advances has been made possible by a reduction of bills discounted and sales of investments. The figures for June are not yet available and until they appear it is impossible to tell how far advances may have been reduced as a result of the paralysis of industry in consequence of the coal stoppage. The present dislocation of industry may be expected to cause a general falling off in the demand for accommodation, and on that score alone the directors of the banks will undoubtedly adopt a conservative dividend in the forthcoming interim dividends in comparison with those paid at this time last year. Those already announced are at the same rates. At present prices the yields obtainable on British bank shares are low, but there is a growing tendency on the part of the banks to increase their capital by the issue of shares to shareholders on favourable terms.

Nitrate Outlook.

An event of no small moment to holders of nitrate shares is the publication of Messrs. Aikman's half-yearly review. It is obvious, from the latest issue, that the outlook for Chilean nitrate is far from reassuring. There has been a notable increase in the consumption of the synthetic product, the figure being put in terms of pure nitrogen, at 1,187,600 tons, against 1,088,000 tons for the previous year. The consumption of Chilean nitrate, on the other hand, shows a large fall, the drop being from 363,000 to about 324,000 tons. During the past year, and especially during the past six months, the production of synthetic has increased at an even greater rate than was anticipated. There is, moreover, a possibility of a further considerable increase during the next six months. Clearly the prospects for nitrate are, as Messrs. Aikman point out, uncertain, and the advisability of the Chilean Government assisting the producers to place the national commodity before consumers at a competitive price is all the more urgent. A reduction in duty of 1s. per metric quintal would probably meet the case, and if combined with an improved and reorganised method of marketing, the prospects for consumption of nitrate during the next twelve months would be considerably better.

The directors of the P. and O. Banking Corporation announce that, after placing £20,000 to reserve, writing £5,000 off premises account, and leaving £19,042 to be carried forward, they will recommend a dividend of 5 per cent., less tax, for the twelve months ended March 31 last.

Motors and Motoring

By G. B. B.

We have just completed what is one of the most wonderful, and at the same time one of the least known, runs in all England. We have traversed the entire length of the Roman Wall on a magnificent but almost deserted road; we have passed by giant basalt cliffs and crags, we have passed by tiny lakes set like jewels in the distance; we have passed larch and pine forest and great patches of purple heather and great clumps of flaming foxgloves and gorgeous blue patches of wild pansies, and over head have been circling continuously hundreds of curlews, and the snipe were in numbers. Although the great iron crags frowned on us, the lakes smiled and the noisy mountain rills, in thousands, made us welcome with their rippling laughter. And we saw the hills that are miles long and curiously tip-tilted and that have their upper heights broken away into great precipices, and we traversed great moors with thousands of half-wild sheep, and all this and the gorgeous sunshine made this a day of days. And all around us the glory that was Rome. There, above us on the heights was their mighty wall. All along the wall line were the forts and cities they raised, and the sinking sun, slanting its rays, threw up in bold relief every impression on the heights and there, clearly outlined were the thousand villas and gardens and promenades, that lay outside each mighty fortress; now shown only by the tiny ridges in the ground thrown into chiarosuro by the mid-summer sun. There, on that hill is the wall they manned the fort they held, there the garden they tilled, and, by the mountain road, now merely a track, the stone seats on which they rested awhile from their work or stopped for rest as they climbed to their stations on the wall.

Old Cars.

From which it will be seen that I am not only in holiday mood, but actually on holiday, and for some glorious days I shall not see London. I do not care; I am revelling, unashamed, in blinding sunshine. I see all manner of things that are new to me. I see miners who are either on strike or locked out—neither they nor I know which—and we chat about all things in the world except politics, and I have learned much that I did not know and much that I must not touch on here. And incidentally I have learned, as a colleague of mine learned before me a few weeks ago, what becomes of old cars when they are worn out. "Breaker-up of old cars" reads the legend on the wall not far from where I am writing, and they bring here old cars—on tow—and they are dismantled and torn limb from limb and in the yard are heaps of parts; cylinders, radiators, axles, gear cases; heaps of brass and aluminium and of copper piping and springs. I suppose the scrap iron merchant buys all this junk and that it goes into the furnace to be melted down into pigs and ingots, and so the graveyard of old cars leads to the crematorium from which the ashes of dead live again as new metal to enter on a fresh new life. I wonder if, in this utilitarian age, anything is ever wasted. It certainly is not in this wonderful land of the North Country.

PROMISING BULGARIAN HARVEST OUTLOOK.

(From a Bulgarian Correspondent.)

Sofia, June 28.

The harvest has begun, and, owing to the adequate rainfall, promises to be satisfactory almost in all parts of Bulgaria In some regions in Northern Bulgaria the grain harvest should be better than last year's both in quality and quantity. In southern Bulgaria, where the rains came later and the danger of drought was greater, the outlook for the harvest is average. It is too early to speculate yet on the ultimate results of the spring crops, especially such as maize, sunflower, beans, beetroot, etc., although for the present they are in good condition.

The favourable outlook for the crops constitutes a most important factor in the economic situation of Bulgaria, which is mainly an agricultural country. The geographical situation of Bulgaria is such that she is often exposed to droughts just at the most important period of vegetation.

The Third International Near-East Fair and Ideal Home Exhibition at Tel-Aviv will be held from September 23 to October 17 next.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, July 22). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Anchoria for Port Said, Colombo, Madras, and Calcutta (London, July 10).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (London, July 14).

British India Line.—S.s. Domala for Colombo, Madras, and Calcutta (London, July 17); s.s. Treloske for Bombay and Karachi (London, July 17).

Cunard Line.—S.s. Tyria for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, Trieste, also Algiers, Corfu, and Gruz if inducement offers (Liverpool July 29, Swansea August 4); s.s. Cypria (Liverpool, Glasgow, and Swansea, July 10) and s.s. Brescia (Liverpool, Glasgow, and Swansea, August 14) for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Algiers, and Volo if inducement offers.

Johnston Line.—S.s. Quernmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 17); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 24.)

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, July 23); s.s. Nellore for Colombo, Madras, and Calcutta (London, July 24).

British Consular Reports

I.—BULGARIA.

The following extracts are taken from the report of Mr. Geoffrey Herbert, Secretary in Charge of Commercial Affairs at H.M. Legation, Sofia, dated March, 1926, on commercial, economic, and political conditions in Bulgaria:—

A shadow of almost unrelieved gloom was cast over the economic and industrial life of Bulgaria in 1925 by the political events of that unfortunate year. Business was already in an unhealthy state at the beginning of the year, and was suffering from the cumulative evils of dear money and overtrading. Thereafter came the cathedral outrage of April and the prolonged period of depression which followed that crisis, a momentary lifting of the skies with the good harvests of August and September, followed by a severe economic crisis when it was found that the export of grain and tobacco was not proceeding as had been anticipated, and a trade depression which lasted through the political crisis of October to the end of the year, injuring still further the generally unfavourable balance of Bulgarian foreign trade and payments.

In these circumstances the all-important policy of currency stabilisation pursued by the Banque Nationale could only be continued at the cost of severe restriction of credits and dealings in foreign exchange, and, on account of the latter, of importation from abroad, which involved in turn the prolongation of the Law for the Prohibition of the Importation of Articles not of Prime Necessity. That the currency was maintained speaks much for the tenacity of the directors of the financial policy of Bulgaria and for the powers of resistance of her people.

Under a Government whose avowed policy is conciliation and appeasement it may be hoped that Bulgaria will enjoy greater prosperity in the present year. In the absence of foreign credits money is still scarce and dear, and it is the intention of the Minister of Finance to restrict imports still further by increases in duties. There are, however, elements of strength in the economic position of the country, and the exportation of the surpluses of cereals and tobacco may serve to ease a situation which is still depressed and difficult.

The financial year 1924-25 was the first since 1916 in which Bulgaria successfully balanced her budget; the revenue in that year amounted to 6,857,000,000 leva, and net expenditure to 6,546,700,000 leva. This satisfactory achievement was made possible by the exercise of severe economy in expenditure (resulting in an actual saving on the ordinary and extraordinary credits accorded to the various government departments) by the increased pressure which was brought to bear on defaulters for the recovery of arrears of taxation, and by the general improvement of the organisation for its collection.

The budget for the financial year 1925-26 was voted by the Sobranje at the end of May, nearly two months after its provisions had entered into force, and the estimates for revenue and expenditure were balanced at 6,875 million leva, representing a fiscal charge of about 50 gold francs per head of the population. Charges proceeding directly from the Treaty of Neuilly amounted to 251.15 million leva or 3.94 per cent. of the total, a figure which by the inclusion of charges indirectly proceeding from this Treaty, and the payment of foreign bondholders under the old agreement, would be raised to 821.6 million leva, or 11.93 per cent of the whole. (The convention concluded in 1925 with the foreign bondholders, which has retroactive effect as from April 1, 1924, has increased the charge under this head.)

Although the estimates for this budget were not unduly optimistic at the time when they were framed, subsequent events lent grounds to a certain anxiety which was felt on their account. The Minister of Finance has, however, recently (March 5) expressed a belief that the period will end satisfactorily.

Receipts up to January 31 had amounted to 5,299,810,000 leva, and expenditure to 4,603,152,460 leva.

The estimates for revenue and expenditure for the financial year 1926-27, which balance at 6,924.5 million leva, are largely based on those of the previous year. M. Molloff (Minister for Finance) has declared his intention of abandoning as far as possible the principle of charging extraordinary expenditure on the ordinary budget, of pursuing a policy of stringent economy and of gradually repaying the State debt to the Banque Nationale. A clause in the Bill for the Budget authorises him to take advantage of any opportunities offered, by administrative reforms or otherwise, to effect still further reductions on the estimates in the course of the period itself.

Finance.

Whereas the Banque Nationale has been inclined to view every economic question in the light of its bearing on currency stability, the banking system as a whole has been mainly occupied with the difficulties involved in the provision of credit facilities adequate to the needs of industry and commerce. It is officially estimated that the events of the last decade have reduced the combined lending capacity of state and private banks from 300 million gold leva (equal to about 17 milliard paper leva) to about 5 milliard paper leva, and at the same time the demand for credit facilities has largely increased. In the result, the small amount of credit available and its very high cost have combined to hinder the operations of commerce and to cripple industrial development.

On November 30, 1925, facilities granted by the Banque Nationale amounted to 1,445 million leva, as against 3,500 million granted by private banks. Of the latter sum, 2,500 million was contributed by the large Sofia banks, whose capital is mainly of non-Bulgarian origin. It appears therefore that the Banque Nationale which provides relatively cheap money for the use of industry at 10 per cent., has played but a secondary rôle in the general provision of credit. The private banks

are able to obtain from 16 per cent. to 25 per cent. on their loans.

Trade.

While the figures for both imports and exports in 1925 show an increase on those for the previous year, the unfavourable balance, moreover, is not, so far as can be ascertained, off set by any adequate compensations in the total balance of payments. Bulgaria's receipts from abroad have tended, lately, to diminish, on account of the reduced emigration to the United States and consequent falling off in the volume of remittances from that country, as well as from a reduction in the number and earnings of seasonal workers leaving Bulgaria to work in Russia and Roumania. State expenditure abroad, however, mainly on account of the Ministry for Foreign Affairs and Bulgarian students at foreign universities, remains at a high figure, and private expenditure abroad has increased since the War.

The ultimate remedy for this situation lies, of course, in the fuller development of the natural resources of Bulgaria and in the intensification of her export trade. In view, however, of the immediate difficulties in the way of the continued stabilisation of the currency presented thereby, the intention of the Minister of Finance to restrict still further the volume of imports by an increase in the tariffs can hardly be regarded as surprising.

It is shown in an appendix that, whereas Germany (since 1922, Bulgaria's chief supplier) has suffered a setback relatively small in proportion to her loss of territory and industrial area consequent upon the War, the United Kingdom has done little more than mark time. Indeed, the fact that Bulgaria became overstocked with textiles at the end of 1925, in unfulfilled expectation of a good season, following upon a fine harvest, points to the probability of a positive decline in imports from the United Kingdom in 1926. This is the more to be regretted, as the textile trade of the United Kingdom in Bulgaria has already felt in an increasing degree the competition of an advance due, on the one hand, to lower prices and, on the other, to their close attention to the requirements and possibilities of the market; whilst in common with her rivals the United Kingdom must be prepared to face the growing competition of the Bulgarian textile industry which arose out of, and still operates side by side with, the peasant industry of the hand-loom.

France, Italy, Austria, and Czecho-Slovakia all have Chambers of Commerce established in Bulgaria, and Germany is likely to have one shortly. Further, our principal competitors have an additional advantage in the possession of a controlling interest in one or other of the chief Bulgarian banks. A British Chamber of Commerce was formed some years ago, but ceased to exist in 1923. This is to be regretted, as such organisations undoubtedly prepare the way for commercial and economic enterprise and help to create a favourable atmosphere.

It is probably true that United Kingdom manufacturers and exporters have not hitherto taken full advantage of the opportunities for business in Bulgaria. "British" is still a synonym for excellence of quality in that country, and tradition has established a psychology primarily favourable to the United Kingdom. But sentiment alone is not enough. It requires to be reinforced by energy and enterprise, and backed by prices and conditions of sale within the means of a country that has fallen on hard times and must live from hand to mouth, while struggling to recover her lost prosperity. Too much stress cannot be laid on the necessity for persistent and judicious activity on the part of United Kingdom manufacturers themselves.

It is unwise to rely entirely on correspondence, for foreign firms have their direct representatives on the spot, studying the market, and keeping in touch with government departments. Nor can United Kingdom firms expect to make profits, especially in the early stages, if they employ representatives with expensive tastes and social ambitions. They need energetic men of sound technical knowledge, prepared to do the inevitable spade-work, and not to be deterred by discouragement or even by snubs. Instances could be given of such men securing business in spite of cold water thrown upon them by pessimistic or less enterprising fellow-countrymen. In the matter of agents, the present dearth of British firms in Bulgaria renders the employment of Bulgarian or other non-British agents inevitable; but a reasonable safeguard exists in the Department of Overseas Trade and the Consulate, to either of which preliminary inquiry can always be addressed. In the post-War trade boom some British firms formed hasty and ill-considered connexions under terms of payment which could scarcely fail to result in unpleasant experiences; and even during 1925 such cases have come to light which could scarcely have occurred if this elementary precaution had been taken. They are all the more regrettable, as they acquire notoriety in the United Kingdom and tend to give an entirely erroneous impression of Bulgarian credit and business morality, to which the large majority of British commercial travellers give favourable testimony. On the other hand, Bulgarian firms and Chambers of Commerce would do well to bear in mind that a high standard of credit and commercial morality is particularly desirable for a country which suffers from the general tendency in the United Kingdom to regard the Balkan countries as a doubtful commercial risk. Again, it is, generally speaking, a waste of time for United Kingdom firms to invite business on cash-against-document terms. It may well be that the credit system has passed all reasonable bounds: but as long as our trade competitors give credit, United Kingdom firms must conform or lose the business. It can be given with relative safety in carefully selected cases; and connexions with the strongly developed co-operative societies might be extended with advantage.

The "natural" factors—soil, climate, physical features, and a sturdy and industrious peasantry—are all in favour of sound economic delevopment; and those who may feel disappointment at the relative slowness of Bulgaria's advance, or impatience with some phases of her life, should bear in mind that scarcely half a century has elapsed since she acquired national liberty, and that the transition from an oppressed peasant community to a political and economic State cannot be accomplished by a restless and ambitious people without mistakes. Although Bulgaria has her eyes turned towards the West, her psychology has evolved from the East; and those who would do business with her must adapt themselves to local conditions and acquaint themselves with the local psychology.

(To be Concluded.)

Cotton and Cotton Goods.

LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 1 :—

Egyptian Futures.—Sakel Contract.—During the past week we have experienced a series of quiet markets; minor reactions have taken place from time to time, but the general tendency continues to incline towards a lower level.

There is little to be said regarding the local trade situation, spinners' operations continue to be rendered increasingly difficult by the coal deadlock, and purchases of actual are only made when it is absolutely imperative to keep the mills running; no doubt the majority of concerns are practically bare of cotton, but even if they were working on normal lines supplies appear sufficient to justify this policy. Only minor alterations in the old and new crop differences have been witnessed. Julys have narrowed somewhat with the more distant options on account of the poor spot demand, but as, apart from Sudans, there is no great weight of tenderable in the local stock, we are quite prepared to witness a hardening in the premium of the above-mentioned month once the early tenders have been absorbed. The Egyptian/American straddle difference has tended to close in during the week, November/October in the respective markets now standing just below the 600 point mark. A continuance of ruling conditions will probably prove this excessive, especially as consumers incline to substitute other varieties for Sakels at the present stage. We fail to see any reason to change the "bearish" attitude we have adopted during recent weeks, and should the market develop a reactionary tendency would advise sales. Values since our last report have declined 33 to 35 points for near, and 18 to 25 points for more distance options.

Upper Contract.—Under the influence of declining American markets and trade selling, prices in this market have shown easiness throughout the week. Spot values, despite the lack of demand, have not declined in ratio, but there is no doubt that stocks at the moment are weighing heavily on the market. Values on the week have declined 30 to 45 points for near and 25 to 30 points for new crop options.

Egyptian Spot.—Only a very moderate inquiry for straight Egyptian cotton has been witnessed during the past week. Buying has been of a strictly hand-to-mouth character, and at the moment there seems little likelihood of any immediate improvement; in fact, if we are to take to-day's official Manchester report as a fair indication of the state of trade in that centre, things are just about as bad as they can be. Under the circumstances, it is hardly surprising that prices have eased again. Only two bright spots have stood out as a relief. The first is the steady business which has continued, mainly for export it is believed, in Sudan cotton, and the second is that 8,235 bales of Egyptian and Sudan cotton were forwarded to the mills during the week ending 25th instant.

The daily demand has presented no special features. Sakel at from 14½d. to 15d. has been in fair request, and an isolated inquiry has appeared from time to time for the better cotton at from 16½d. to 17½d. The Upper Egyptian market has been weak, and a fairly good selection of Fully Good Fair cotton is now available at from 11½d. to 11¾d. Business, however, is far from lively. A small but steady demand for low cotton of all descriptions continues, but buyers are shy of bidding, and it is the exception to find a sale at anything over 6½d. Pilion, Brown and White cotton have been entirely neglected, but a good offtake has continued for Sudan cotton, particularly in the Sakel growths; up to 19.20d. has been paid during the week. A good inquiry has appeared this week for Tokar Sakellaridis (again for export), and fair sales have been recorded at somewhat irregular rates.

C.i.f. business has been stagnant. Estimated sales, 1,200 bales Egyptians and 4,250 Sudan. Quotations of Sakel have been reduced to 20 to 35 points, and those of Upper 35 points all round. F.G.F. Sakel to-day 16.05d. F.G.F. Upper to-day, 11.95d.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report dated June 24, state :—

Since our last report the futures market has been quiet but, on the whole, the tone has been distinctly heavy. The week's summary of price movements is as follows:—July, 29.73 dollars, 0.82 dollars down; November, 29.31 dollars, 0.77 down; January, 28.81 dollars, 0.87 dollars down; March, 28.56 dollars, 0.87 dollars down. Ashmouni: August, 20.82 dollars, 0.48 dollars down; October, 20.78 dollars, 0.57 dollars down; December, 20.93 dollars, 0.54 dollars down.

The speculative position in Ashmouni is not by any means as large as that in Sakel. The price of this variety is more or less governed by that of American and price movements to a large extent coincide with the movement of prices in New York. The recent drop in American prices has had its counterpart in the drop in Ashmouni prices here, but it is as well not to lose sight of the fact that prices are based on crop reports which, up to the present, have been uniformly good and any setback of the crop in the staple districts of America might easily produce a sharp advance in Ashmouni prices.

The demand from abroad during the week has been poor. The continuation of the coal strike in England and the consequent enforced reduction of working hours in the Lancashire mills has further reduced the figure of trade takings. America does not seem willing to take Sakel at present prices, whilst monetary stringency in the Central European countries restricts the demand from that quarter.

At the third June tender 27,250 kantar dockets were issued and readily taken up, the one object of the receivers being to pass the cotton over to the Government. The week's receipts amount to 62,489 kantars against export 39,695 kantars; the stock stands at 1,843,126 kantars.

Spot.—The market was open on Saturday last exceptionally and was closed on Monday and Tuesday for the Bairam holidays. Total sales amount to about 4,400 bales, of which we estimate 2,300 bales Sakellaridis, 1,700 bales Ashmouni, 300 bales Zagora, 50 bales Pilion and 50 bales White.

Sakellaridis.—The turnover of business has somewhat fallen off but is still centred on the medium grades; good style cotton of these grades is not too easy to find. Spot differences remain more or less unchanged.

Ashmouni and Zagora.—In these varieties also there has been a somewhat reduced demand during the week; the fact that buyers were not prepared to continue buying on the basis of June contracts helped to restrict the turnover. All grades have been dealt in without much change in spot differences. Pilion.—One or two lots of Good Pilion have changed hands, premiums paid being about the same as last week.

Brown.—No transactions have been recorded.

White.—A very small business was done in the medium grades at last week's differences.

Crop 1926.—Crop reports continue to be good and the plant is everywhere progressing normally. Zagora fields in the South and Central Delta are flowering freely, and flowers are also making their appearance in the Sakel fields. Temperature has been about normal, except for Tuesday and Wednesday of this week when it was distinctly hot. Leaf worm attacks have not caused any appreciable damage and the danger from this pest may now be considered to have passed. Water is plentiful everywhere but the distribution in the North Delta has not been regulated as well as it might have been, so that complaints are heard from these districts.

Company Meeting

IMPERIAL BANK OF PERSIA.

Record Net Profit.

Sir Hugh Barnes's Speech.

The thirty-seventh ordinary general meeting of the members of the Imperial Bank of Persia was held on June 30 at the Cannon Street Hotel, E.C. Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., chairman of the company, presided.

The Manager and Secretary (Mr. Sydney Rogers) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—Before I deal with the report and accounts which I presume you will take as read, you will, I think, expect me to refer to the important event—the dynastic revolution—which has taken place in Persia since we met together a year ago.

From time to time in my annual addresses during the last five years I have told you something of the career of the remarkable man who has now become the Shah-in-Shah of Persia. To recapitulate very briefly, you will recollect that early in 1921, when orders were issued for the withdrawal of the British brigade which had been stationed since the latter years of the War in Northern Persia, some anxiety and alarm was felt as to what would happen in Persia when the troops left. The situation certainly did appear somewhat critical at the time, owing to the persistent Bolshevist pressure from the north, the obvious weakness of the Central Government, and the fact that a rebellion of a rather serious character had taken place in Mazanderan.

Fortunately the occasion produced the man, and it was in February, 1921, that Reza Khan Pehlevi, the commander of the Persian Cossacks, recognising the emergency and the need for immediate action, marched his men from Kazvin to Teheran and induced the Shah to appoint him Minister of War. He at once proceeded to reorganise and improve the army, to put down with a strong hand the trouble in Mazanderan and several other local disturbances, and gradually with much wisdom and moderation, to make his influence felt in every branch of the administration. In short, first as Minister of War and later as Prime Minister after the Shah's departure for Europe, he ruled the country with such success, and his personality appealed so strongly to the imagination of the people, that at last, a few months ago, after the Mejliss, or National Assembly, had formally recorded a vote deposing the absent Ahmed Shah, a Constituent Assembly called together to consider the position decided by a practically unanimous vote to invite Reza Khan to assume the Crown in his place.

What has occurred, you will perceive, is not merely the deposition of the ruling sovereign, but the overthrow of a dynasty. To anyone acquainted with the history of Persia, I think the astonishing thing is the orderliness and quietude with which this momentous change has been accomplished.

More than one factor has, I think, contributed to this result. The Shah, of course, had the support of the army, which is largely his own creation but some credit must be given to the reforms of 1906, and to the creation of the National Council, or Mejliss, which has enabled the people to express their wishes by votes instead of by recourse to arms. Also in Persia, as in other countries nearer home, the stirring events of the Great War seem to have exercised a tonic effect on the population, and to have made them impatient of slack and inefficient government, intolerant of subversive tendencies, and ready to welcome the guidance of a strong and able leader who has shown that he has the true interests of the country at heart. Such a leader Reza Shah has proved himself to be during the past five years. He has given the country internal peace and just government.

Persia's Improved Financial Position.

With the aid of the American advisers he has greatly improved its financial position. He has displayed great energy and enterprise in developing its resources and, as I told you last year, he is now giving his serious attention to the improvement of the means of communication by railways and roads, which is one of the crying needs of Persia. Even the improvement of the coinage has been included in his programme, and this will facilitate financial and trading transactions.

The Shah's coronation, as no doubt you have heard, took place with great *eclat* on April 25, and I am sure you will wish on this occasion to join the board in expressing very respectfully our earnest hope that His Imperial Majesty may have a long and prosperous reign. (Hear, hear.)

At one time during the year, owing to the failure of the crops, severe scarcity—in some places approaching famine—prevailed in the Northern Provinces of Persia. The Government displayed much energy in meeting the crisis, and a large number of motor-lorries was ordered from England for the conveyance of food. It was mainly owing to the prompt manner in which arrangements were devised by Dr. Millspaugh's administrative assistants and the excellent organisation they built up to meet the exceptional needs of the moment that the country, which, as you know, possesses no railways, was in a great measure saved from the full effects of the drought.

It is satisfactory to learn that the crops this year are expected to be abundant in all parts of the country, so that there will be no fear of a shortage of food.

In spite of the famine, and notwithstanding the fact that some disorganisation of business and loss to traders resulted from the embargo imposed by the Soviet Government on all exports of produce from Persia to Russia except cotton, owing to a diplomatic dispute concerning the Caspian Sea fisheries, trade, on the whole, has been well maintained, and the business of the bank has expanded in a very satisfactory manner. As a consequence, we have found it desirable to open new branches at Birjand, Burujird, and Pehlevi (Enzeli) in Persia and also at Kirkuk in Iraq, and these will, we hope, add to the volume of our business.

We have just received by telegram the bare totals of the trade figures for the year ended March 20, 1926. They are:—Imports, Ts.88,000,000; exports, Ts.104,000,000. Last year's figures were:—Imports, Ts.77,000,000; exports, Ts.100,000,000; and in the previous year:—Imports, Ts.69,400,000; exports, Ts.76,700,000. There has therefore been a steady improvement during the past three years.

The Balance-sheet.

If you will now turn to the balance-sheet you will see that the increasing prosperity of the country is clearly reflected in the bank's position, and I think we may claim that the statement of accounts is very satisfactory. (Hear, hear.)

Our note circulation has increased by more than £540,000 and our deposits by no less than £946,000, while on the assets side, compared with last year's figures, "cash in hand, at bankers, and at call" has risen by over £1,500,000 to the sum of £4,243,971. There is a small decrease of £45,000 under investments, but you will notice that if you take the two items of cash and investments together we are in possession of readily liquid resources to the amount of no less than £5,897,955, a figure which I think will leave you in no doubt as to our ability to deal with any fresh business that may arise.

The profit and loss account is, I think, equally satisfactory. The net profit at £129,401 is a record in the history of the bank and it enables us to increase our annual transfer to the reserve fund from £30,000 to £50,000, to write £30,000 off the bank premises account, to raise the final dividend to 6s. a share, making a total of 10s. per share for the year, and to carry forward a sum of £33,967 14s. 1d.

I need hardly say that it is a great satisfaction to the board that we are at last able to pay you the same net dividend, free of tax, as you received in the year before the War, but you will, of course, realise that owing to the rise in income-tax this requires a larger sum than was necessary in 1913.

I am sorry to have to tell you that Mr. McMurray, our chief manager at Teheran, felt compelled to resign his appointment last October on the ground of ill-health. I am sure you will share our regret at the loss of his valuable services. Mr. McMurray has been with us for 28 years, the last five as chief manager. The years he spent in that post covered the very difficult transition period from war to peace, and the board greatly appreciate the very able manner in which he dealt with the many difficult problems that presented themselves for solution.

He is succeeded by Mr. E. Wilkinson, our late deputy manager at Teheran, who, we are confident, will bring to the labours of the higher post the same keenness, energy, and ability which have distinguished him through his service. Mr. Wilkinson has been with us for 23 years, and has had many opportunities to study the particular requirements of the post.

In conclusion, gentlemen, it merely remains for me to express the board's very hearty appreciation of the excellent work of the management and staff, both at home and abroad, during the past year. We propose, with your approval, to grant them the usual annual bonus of 10 per cent. on their salaries, which I think you will agree with me is well deserved. (Hear, hear.)

I have now to move: "That the report presented be adopted; that the acounts to March 20, as rendered, be accepted, and that the final dividend of 6s. per share, payable free of income-tax, be and is hereby confirmed." I will ask Sir Henry McMahon to second this.

Col. Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., seconded the resolution.

Colonel G. R. C. Westropp, C.B., thanked the chairman for his interesting and illuminating address. Shareholders who had been accustomed, year after year, to come to these meetings could realise that the bank had been making a steady progress and getting into a stronger and stronger position. He hoped that now that there was a stable Government in Persia under a strong Shah, they might see the bank continue to grow in prosperity and its profits to increase.

The resolution was carried unanimously.

Mr. W. A. Buchanan proposed the re-election of the retiring directors, Colonel Sir A. Henry McMahon and Mr. D. Gubbay.

This was seconded by Mr. V. A. Cæsar Hawkins and unanimously approved.

The auditors, Messrs. Kemp, Chatteris, Nichols, Sendell and Co., were reappointed on the proposition of Colonel Westropp, seconded by Mr. Turton.

Digitized by Google

Mr. Vere Herbert Smith proposed a vote of thanks to the chairman and the directors and the staff in London and the managers and staff in Persia and at the branches. The resolution was seconded by Mr. Joseph Nissim and was unanimously accorded.

The Chairman, in acknowledging it, thanked the speakers for their appreciative remarks, and added that he would like to pay a very warm tribute to their London manager, Mr. Sydney Rogers, and the sub-manager, Mr. E. M. Eldrid, for the unremitting and unwearied attention which they gave to their duties. Their experience and wise judgment had always been of great value to the bank. (Cheers.)

The proceedings then terminated.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

TURKEY.

Iron Picks.—The Anatolian Railway Administration invites tenders for the supply of 100 tons of iron picks. August 9. (D.O.T.)

EGYPT.

Electric Power Plant.—Tenders are invited by the Egyptian Ministry of the Interior for the installation of electric power station equipment at the towns of Keneh and Luxor, for the production of three-phase alternating current, at 3,300 volts, 50 cycles per second. Tenders will be received by the Section des Municipalites et Commissions Locales, Ministere de l'Interieur, Savoy House, Cairo, up to noon on August 1 and must remain firm up to October 15. (D.O.T.)

COMPANY NOTES AND REPORTS.

AFRICAN AND EASTERN.

The report of the African and Eastern Trade Corporation, Ltd., for the year ended December 31, 1925, states that the profit and loss account shows a credit trading result, after providing for the usual depreciation on stocks, of £501,815, which, added to the amount of £319,870 carried forward from the previous year, gives an available balance of £821,685. After payment of preference dividends for the year, amounting to £141,284, and making provision of £91,000 as follows, viz.: to depreciation fund £60,000; to income tax reserve £20,000; to superannuation fund £10,000; to office furniture and fixtures £1,000, the credit balance remaining is £589,401. Out of this sum in April last an interim dividend of 4 per cent. was paid on the ordinary shares, thus leaving available for further distribution £476,360. The directors now recommend a final dividend for the year of 4 per cent., less tax, payable August 6, which will absorb £127,000, leaving a balance to be carried forward of £349,360. The directors are able to report that the gradual improvement in trade referred to last year has been fully maintained during the period under review.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Greece and Constitutionalism.

Greece's return to Constitutionalism is proving more difficult than General Pangalos would seem to have anticipated. The politicians are unwilling to meet him half-way, and insist that the restoration should be effected in one single step rather than by stages, as the President desires. The second attempt to form a Coalition Government which would have merged the Venizelists and anti-Venizelists more completely into a single organisation working for the common good has broken down. M. Kyriakos Venizelos, who was to have co-operated in the task, has returned to Paris, and M. Zavitzianos, the Prime Minister-elect, has resigned his mandate. General Pangalos, accordingly, has abandoned the politicians for the moment and turned to the President of the highest Court of Justice. The latter is invited to form a non-political Administration, with authority to arrange for a General Election. To the foreign observer it is not apparent why General Pangalos should be so anxious to "scrap" his present Cabinet. The main difficulty in connexion with it was that he himself combined the office of Prime Minister with that of the Presidency. It should have been possible to find another occupant for the former post, without the necessity for a complete change of Ministry. The present Government was understood to be a "business" Administration; it also represented the first steps in bringing together Venizelists and anti-Venizelists in harmonious co-operation. To supersede it now by another "business" Government suggests a superfluous dislocation of public affairs. It would at least have been worth while making the experiment for General Pangalos to confine himself for a season exclusively to the affairs of the Presidency, so as to see what the Ministers would have made of their Departments when allowed to administer them "on their own."

King Boris's Tour.

Into the brief notice that King Boris is leaving for a holiday abroad may be read a satisfactory commentary on present conditions in Bulgaria. No Sovereign in Europe has had a more exacting time during the last eight years. Called to the Throne in circumstances that left him a very lonely figure in Bulgaria, he has had to maintain a difficult position with no other resources than those with which a charming personality, unaffected loyalty to his country and devotion to his people equipped him. Most of the ills through which Bulgaria has passed of recent years are attributable to her defeat in the Great War: they have reacted in a very direct way on the Head of the nation. The attempt on his life King Boris is probably far from regarding as the worst of his experiences. Thanks, however, to the simple worth of his character he has won through, and can take his first holiday abroad with the knowledge that conditions at home are steadily improving and under the conviction that every section of the Bulgarian people, whatever their political views, will have a genuine welcome for him when he returns. We could wish that, as soon as the requirements of rest and recreation have been satisfied, an invitation could be extended to the King to visit England. Such an invitation, conveyed officially, would be a contribution on Great Britain's part to the future welfare of South-Eastern Europe; for it would be an indication that all War effects had been finally liquidated, as far as Great Britain was concerned, and that any influence she may have in the Balkan Peninsula must henceforth be exercised in favour of a whole-hearted co-operation on equal terms among the different States.

Communications in Persia.

The speech from the Throne with which the new session of the Persian Mejliss has been opened commended to that body a programme of perfection. Road construction is to be extended and legislation is to be passed for the building of railways, the working of mines, the improvement of agriculture and the development of the country

Digitized by Google

in general. Without doubt, one of Persia's most pressing needs is communications. With road construction the Government cannot go far wrong; but it is to be hoped that before ambitious railway schemes are launched there will be a careful inquiry into the financial prospects of these undertakings. Persia cannot afford the luxury of railway lines that do not pay. There is sufficient divergence of opinion in regard to the suitability of the country for any extensive railway system to make it worth the Government's while to proceed very cautiously in this direction. To the cost of construction have to be added maintenance charges, and it should not be difficult to gauge the probable proceeds of any line in the present state of Persia's development. Ultimately railways must come; in the meantime the question for the Persian Government to decide is whether, with the limited resources at its disposal, it will be better advised to concentrate on opening up the country during the next few years by means of roads and the encouragement of motor transport. At the moment the smooth course of Shah Pahlavi's rule is being challenged by military risings in various parts near the northern frontier. Soviet activities are considered to be behind the movements, and if this should be the case, Persia has another object lesson of the value of Moscow's protestations of friendship, on the strength of which she has not hesitated in the past to weaken the ties which have bound her with Great Britain.

The Late Miss Gertrude Bell.

It is with profound regret and a sense of personal loss that THE NEAR EAST AND INDIA records this week the death of Miss Gertrude Lowthian Bell. With her passes a very notable Englishwoman, talented above her peers, keenly studious, her whole being engrossed in world affairs, yet essentially feminine, by nature as well as by conviction and on principle an anti-Suffragist. To few of her sex has it been given to apply her special knowledge in such a practical way as Miss Bell did in her work in Iraq. On the outbreak of the Great War she turned naturally to a woman's part in France. The first failure at Gallipoli caused her to be consulted by those in authority as one personally acquainted with the Peninsula, and by this means her exceptional knowledge of the Near and Middle East obtained official recognition. At an early stage of the campaign she was sent to Mesopotamia, where she was destined to spend with few intervals the remainder of her life. Her exceptional knowledge of and insight into the Arab character, her keen sympathy with the people and their aspirations made her an invaluable asset to the British régime, as things have gone in the Arab world. Iraq, it is certain, could have had no greater friend for its early days, and the progress that it has already made is a fitting memorial to the devotion and understanding with which Miss Bell has so strikingly served its cause.

Turkey's Exhibition Ship.

A Turkey in miniature in more ways than one visited London, or rather the Thames, last week. In the Kara Deniz itself and the idea behind it could be recognised the forceful and resourceful Turkey with which the world has become familiar since the inauguration of the Republic; by staying at Greenwich instead of coming up to London Bridge, the ship reflected something of the failure of the Turks to give the world their whole confidence, which is responsible for the transfer of the capital from Constantinople to Angora. In the setting out of the exhibition, as in regard to the main theories of business, Turkey obviously had nothing to learn; yet the matter-of-fact business man, while struck with all that he saw, must have come away with a feeling of regret that he had not had an opportunity of indicating a few of the unconsidered trifles that distinguished the expert taught in the hard school of experience from the man who has absorbed all he knows from books or hearsay. In this connexion he will be reminded of the contrast between the eagerness with which Turkey sets out to absorb Westernisation, while resolutely debarring those who alone can show her what Westernisation really is. The visitor to the Kara Deniz could hardly fail to be impressed by what he saw; but if he was on business bent, he was called upon for a special effort to find out about the goods in which he was particularly interested and in the end might learn that he could not be supplied with samples. The point is, perhaps, a small one; yet the promise contained in the Kara Deniz is so considerable that it will be a pity if the cost of the tour is not more than covered by the orders booked. In any case the Turkish Government is to be congratulated on the enterprise, which will have gone far to remove from the minds of any of those privileged to see the ship who are not personally acquainted with modern Turkey lingering prejudices on the subject of the unchanging East.

SERVICES IN KURDISTAN.

The King has approved of the following awards of Military Crosses in recognition of valuable and distinguished services rendered in connexion with operations in Kurdistan in May, 1925:—

Zabit Class III. Abid Abdullah Effendi, 2nd Cavalry Regiment, Iraq Levies; and Zabit Class III. Majid Moosa Effendi, 2nd Cavalry Regiment, Iraq Levies.

NEWS IN BRIEF.

Professor Bockh, formerly Hungarian Minister for Mines, and at present Geological Administrator of Turkish Petroleum, left Baghdad for London on July 6 at the conclusion of an intensive geological survey of the oilfields.

King Boris, attended by an Aide-de-camp and a Secretary, left Sofia on July 10 by the Simplon-Orient express for a holiday abroad under strict incognito as Count Rilski. Princess Eudoxia, the King's sister, is travelling with her brother.

Mr. Alan Cobham, having received permission from the Air Force authorities at Basra for the loan of a mechanic to accompany him to Australia, left at dawn on July 13, accompanied by Sergeant Ward, who is attached to the bombing squadron at Shaibah.

The Air Ministry announces that as the result of an accident at Razmak (India) to a Bristol fighter of No. 5 Squadron, Risalpur, on July 6, Flying Officer Clement Conrad Harris, the pilot, was killed and Leading Air Craftsman Cecil Robert Avery died of his injuries.

It is announced from Teheran that there have been mutinies among some of the troops in Persian Azerbaijan and the province of Khorassan, the men alleging that they had not been receiving their pay. In the former case the trouble was suppressed, and active measures are being taken to cope with the situation in Khorassan.

The Shah opened the Persian Mejliss on July 11 with great ceremony, and in the Speech from the Throne expressed the hope that road construction would be extended and that the Mejliss would legislate for the construction of railways, the working of mines, the improvement of agriculture, and the development of the country in general.

In view of the economies which have been effected in the Army estimates owing to the reduction of the period of service to 18 months, the Greek Government is considering the possibility of increasing the pay of officers.

In reply to a question in the Egyptian Chamber of Deputies, Sarwat Pasha, the Minister for Foreign Affairs, stated that the text of the Anglo-Italian Agreement about Abyssinia had been communicated to him, and contained nothing which could be interpreted as meaning that Great Britain was protector of Egypt and the Sudan.

GREECE AND CONSTITUTIONALISM.

For the second time within the three months that have elapsed since his election to the Presidency of the Republic General Pangalos has endeavoured unsuccessfully to advance Greece on her return to normal political conditions by finding someone to accept the post of Prime Minister. The first attempt, when General Paraskevopoulos was entrusted with the formation of a Cabinet, broke down on the question of the President's powers and the status of the Constitution as promulgated by Decree by General Pangalos. Last week the President called to his aid M. Zavitzianos, who seemed disposed to allow the anomalies of the Constitution to stand over, provided that Parliamentary elections were held without unnecessary delay. It was, however, essential to his plans that he should secure the support of the different parties for his Ministry. Their terms would seem to have been higher than those of M. Zavitzianos, for he has now had to admit his inability to form a Government. The reason given, that, after careful consideration of the financial situation and the condition of foreign relations, he finds that he would be unable to carry out his programme in full, is not convincing, and in view of this second failure it would seem as if the differences of opinion regarding Greece's political needs between the President and the politicians are at present incapable of being adjusted. In addition to the holding of early elections the politicians urge that the complete freedom of the Press must be restored. General Pangalos's attitude is based on his conviction that there must be no return to the old system of party politics, with its attendant evils of the unbridled licence of the party newspapers, and he is unwilling to release his hold on what he regards as agents of mischief until he is satisfied that they have abandoned their old methods. He insists that the new Government must be a Coalition one, embodying the formal reconciliation of at least the two main political camps, Venizelist and anti-Venizelist. To overcome the difficulty centring in the person of M. Eleutherios Venizelos, the President recommended M. Zavitzianos to come to an agreement with M. Kyriakos Venizelos, a son of the veteran statesman. The negotiations which were in progress the whole of last week with the representatives of the different political parties turned on the extent to which the latter would acquiesce in the arbitrariness of the President. General Pangalos's régime has conferred upon Greece far too many obvious advantages to offer any prospect of success at present for a challenge to the dictatorship *per se*; and the rallying cry for opposition has to be directed against General Pangalos himself. In these circumstances it will be tragic for the country if the politicians do not succeed in suppressing their personal ambitions for the good of the people.

The President has shown that his original diagnosis of Greece's ills was accurate; no one disputes his patriotism or his good intentions, and where he has failed it has been as a result of the attempt to rely upon the instinct of a single mind for the complicated task of administering a country. His failure may have been due to too much insistence upon keeping all the reins of government in his own hands; but General Pangalos has been able to urge in extenuation of this weakness that only by such means could he be sure of preventing them from falling again under the domination of party politics. If it is admitted that the dictatorship has conferred conspicuous benefits upon Greece, it is the duty of patriotic politicians to combine for the maintenance of its good points, while contributing by co-operation their quota to the expert knowledge which the Government ought to command, and gradually assisting in the country's return to normal political conditions. Accordingly the genuineness of the patriotism of the political leaders will be judged more by the sacrifices that they now make to broaden the basis of the Administration than by any insistence upon constitutional theories. Having dispensed for some time with constitutional government Greece is under no necessity to hasten its restoration at the expense of administrative efficiency and political tranquillity. The holding of parliamentary elections is admittedly a necessary beginning to normal conditions; but if the President considers that he must be allowed to dissolve Parliament whenever he likes, it will be much better to challenge that right when he has abused it and when the feeling of the country is behind the challengers, than to advance academic arguments at this stage, when the nation is inclined to agree with the President that the politicians ought to regard themselves as coming back into their own only on sufferance.

To General Pangalos's credit stands, apart from the cleaning of the political stables, a successful programme of badly needed public works inaugurated or carried into execution at his initiative. His foreign policy, in which he has been ably assisted by the Foreign Minister, M. Rouphos, has also been responsible for a welcome improvement in the general situation in South-Eastern Europe. Where Greece has failed to make any headway, but has steadily lost ground is in the sphere of national finance. Her Budgets have not balanced, the floating debt has been steadily increased and she is confronted with an adverse balance of trade. At the same time the President has shown little inclination to curtail expenditure on the Army, and it is this side of his general policy which has reacted unfavourably, as far as foreign opinion is concerned, on Greece's financial standing. It may even have been the real stumbling-block in M. Zavitzianos's way. In common with other countries Greece has appreciated the necessity of settling her War indebtedness as a preliminary to a return to more healthy financial conditions. To this end she has to arrive at a satisfactory arrangement with Great Britain. It is not surprising that the Greek Government on finding that Great Britain had agreed to remit more than forty per cent. of Italy's War debt should expect to receive equally favourable treatment. From Great Britain's point of view it is not an encouragement to generosity to find that leniency is taken advantage of by one country in the furtherance of imperialistic designs and is claimed by another to enable it to spend money on armaments. The Greek reference to the Italian precedent is, under such conditions, unfortunate. Great Britain's refusal to meet the Greek Government's wishes in this matter implies no lack of sympathy with Greece; it should not fail, however, to remind the Greek Dictator that petty economies in one direction are incongruous with heavy and superfluous expenditure in another. We regret that the negotiations in London over the settlement of the Greek debt should have been broken off; but it may be in the interests of Greece that General Pangalos should have an opportunity to review his fianancial policy from another angle, and to realise that Greece, having gained much from his dictatorship, has still something to gain from a return to constitutionalism.

The Near and Middle East*

From Our Own Correspondents.

Jerusalem, July 2.

The Jaffa Agricultural Show.

The Agricultural and Horticultural Show at Jaffa at the end of June was in itself an interesting event, but its significance was enhanced by the fact that Arabs and Jews took almost equal part. Organised under official auspices and held under the patronage of Lord Plumer and of Sir Ronald Storrs, the District Commissioner, with Mr. J. F. Campbell, the Assistant District Commissioner, as President, the Show attracted donors and exhibitors from practically the whole of Palestine. A perusal of the list reveals nearly every prominent person in any way associated with agriculture, just as an examination of the exhibits showed nearly every colony, village and hamlet. Chief among the contributors was the Department of Agriculture of the Palestine Government, which donated £E200, and the list covers the Councils of Jewish settlements and of virtually all Arab villages, including those unable to contribute more than 10s.

Cereals, forage, tobacco, vegetables, fresh fruit, dairy and beekeeping produce, preserved fruits and vegetables, oils and soaps, vines, flour and poultry were the divisions, all of which drew a large number of competitors. Another section, was divided into horses, mules, donkeys, sheep and goats. Arabs of Hebron took a prominent part in the woolskins and hides section, Jews of the Judaean colonies were exclusive exhibitors of wine and silk. Numerous foreign machinery companies displayed samples of their manufacture in the commercial exhibit, although as usual, British industries were conspicuous by their absence. Colonisation agencies erected their own booths, as did also the Jews of Rishon-le-Zion, the Germans of Wilhelma and Sarona, the Jewish Agricultural School of Mikveh Israel, in addition to the Government Department of Agriculture and Forests, the Colonisation Department of the Palestine Zionist Executive, the Shemen Oil Company, and the Zionist Agricultural Museum.

The most striking collective agricultural exhibit, which won the first prize, was that of Mikveh Israel, whose produce was tastefully arranged in a small pavilion in a little garden laid out in front of it. An artist, who is also an accomplished gardener, living at Herzliah, was among the prizewinners. In general, the prizes were about equally divided between Arabs and Jews, and the spirit of co-operation and friendly rivalry was conspicuous and satisfactory.

Among the spectacular events was an item not shown on the programme, but which caused much amusement, namely, the climbing of a greasy pole, for which a number of boys entered. None of them succeeded in reaching the top where the prize was fixed, and eventually it had to be hauled down. The bag contained a scarlet *abaya*, and the young Arab who won it walked off among the crowd as proud as a peacock.

The site on which the show was held is perhaps of interest. A large area, formerly swampy, was acquired by the Jaffa Municipality with the aid of an appropriation, and has been drained and converted into a municipal park. It will be permanently retained and developed as such. This park may compete somewhat with the Near East Exhibition at Tel-Aviv, although it depends on how it will be used in the future.

Unfortunately, the orange exhibition could not at this season be very representative, but enough was shown to lead hopeful planters to believe that the time may come when of the 70 oranges which the Imperial Economic Committee reports every person in the United Kingdom consumes on an average during the year, Palestine will supply more than seven. So far, the findings of the Committee show 57 of the 70 oranges to have been supplied in 1924 by Spain, 3 by South Africa, 1 by the United States and 7 by Palestine.

Tourist Season.

The tourist season, though fair, was not so good as to cause general improvement in the commercial situation in Jerusalem. There was no diminution in the so-called world-cruising tourists, but the commercial community gained little from this class of visitors, whose itinerary is so crowded that it allows practically no time for shopping, or indeed for anything but the standard sacred and historical sights. Of the independent class of traveller, there were rather fewer this year than during previous years, owing perhaps to the disturbances in Syria which must have caused many a prospective visitor to hold his programme in abeyance.

Shopkeepers' Rents in Jerusalem.

The shopkeepers of Jerusalem, the first to feel the pinch of the reduced revenue from tourists, have been long complaining against high rents. Dissatisfaction came to a head a short while ago when the Moslem Wakf, the Greek and the Armenian Church authorities notified shopkeepers of their intention to raise rents. This announcement precipitated a veritable storm, upon which Sir Ronald Storrs did his best to pour oil. He informed the merchant's deputation that he would represent to the admin-

istrators of the religious trusts, who own nearly all the business premises, that this was hardly the time to contemplate excessive increases. It appears that the merchants, impatient of the delay, decided to take things into their own hands, and a committee of Moslem, Jewish and Christian shopkeepers was formed—authorised, so they declared, to speak on behalf of no less than 1,100 shopkeepers. This committee notified its intention of calling a general shop strike on June 3, but postponed it for June 7, when the inappropriatness of striking on the King's birthday was pointed out to them. On the evening of June 7, the strike was called off or suspended following assurances from the Mayor of Jerusalem that the landlords had been brought to reason. Negotiations appear to have reached so satisfactory a stage that the Merchants' Committee is now urging shopkeepers to sign leases where rents have not been raised or where the increase is under 10 per cent. As the time is short between now and Muharram—that troublesome Turkish institution which compels nearly every movable household to move on the same day—it may be assumed that the dispute will blow over by that crucial day, and merchants who complain that, by pre-War standards, their rents have been raised from 10 per cent. to 1,000 per cent., will no doubt settle down in their present premises undisturbed and unagitated for another year at least.

Transjordan's Prime Minister.

A Cabinet crisis in Transjordan appears at the time of writing to have blown over with the resignation of Ali Rida Rikabi Pasha, the Prime Minister, and the appointment of Hassan Khaled Pasha Abu Huda. Rikabi Pasha's going seems to have been arranged by common consent, he having been granted two months' leave on June 16, and shortly after sending in from Haifa his resignation to the Emir Abdullah. Of his successor there is not much to be said, except that a semi-official announcement had it that he enjoys the "full confidence of the Emir Abdullah" and that he is "in accord with the British Representative." The conclusion may be drawn that Rikabi Pasha had neither the confidence of the Emir, nor was he in accord with the British policy. The Arab Press took altogether disproportionate notice of this event, and among the numerous theories advanced for his resignation was that Rikabi Pasha was anti-British. From another source it was hinted that his downfall came because he was anti-French, and that the suggestion had been made to Lord Plumer from French sources that the removal from Transjordan, a territory marching with Syria, of a Prime Minister who had reason to sympathise with the rebels more than with the French, would be welcome in Beyrouth. The suggestion that Rikabi Pasha was a dictator is scarcely tenable, since it is generally felt that neither the Emir nor his Cabinet exercised very great influence over the administration of Transjordan. The change in the Premiership has given rise, however, to the usual crop of rumours about overhauling the administrative machinery which, as far at least as the British part is concerned, always has been controlled from Government Offices in Jerusalem.

ALBANIA.

Tirana, July 3

Treaties with Neighbours.

Albania is now making efforts to regularise her position with neighbouring countries by the conclusion of treaties. As things stand at present she has only one treaty of commerce (it deals also with navigation and consular matters) with Italy. A mission was sent to Belgrade last April, and has just returned to Tirana after having signed with Yugoslavia a Treaty relating to commerce, consular matters, navigation and extradition. These treaties will be presented for ratification by Paliament when the Chambers reassemble.

The signatures had scarcely been made at Belgrade when a Treaty of Extradition was concluded at Tirana between the Albanian Government and the Greek Minister, General Kondylis. Then, immediately afterwards, on June 30, a Mission, consisting of four members, left for Athens, with the intention of bringing about a treaty pertaining to friendship, settlement, nationality, extradition, navigation, and consular matters; this deputation has also to regularise the question of the properties of Albanians in Greece.

The Albanian Church.

The Metropolitan Chrysanthos, sent by the Patriarch of Constantinople at the instance of Greece (I mentioned this matter in my letter of May 20) has ended his mission and left for Constantinople. The Orthodox Church of Albania is recognised as autocephalous, with certain guarantees for the Orthodox Greek-speaking element in Albania—this has aroused criticism from the journals *Dajti* and *Koha*. It appears that Greece, at the wish of the Tirana Government, undertakes not to tolerate in her territory the actions of the opposition against the present régime of Ahmed Zogu.

Yugoslav-Albanian Relations.

In the treaties signed with Yugoslavia there is no question of a trans-Balkanic railway, as has been announced in Italian journals. Mention was made only of future works to be undertaken in the Lake of Scutari, to deepen the Boyane and to reclaim a part of the coastal territory. The privilege has also been accorded to the Albanian population for a distance of 15 kilometres on the frontier of provisioning themselves in the frontier towns of Yugoslavia, such as Yakova and Dibra.

The nomination may be noted here of Ceno Beg to the post of Albanian Minister at Belgrade, who succeeds Starre Stavrou, transferred to Athens. Ceno Beg is a Yugoslav subject and ex-Mayor of the town of Yakova, where in fact he was born. He is the husband of Ahmed Zogu's sister, whom he helped considerably in his return to Albania in December, 1924. The nomination of Ceno Beg, who is very young, puts an end to an internal difficulty of Albania, for an emnity and a distrust had grown up between the two brothers-in-law.

Decorations.

On June 28 M. Begum Billecoq, Chargé d'Affaires for France, presented Ahmed Zogu with the Grand Croix of the Legion of Honour, and received from the President of the Republic the Class of Commander of the Order of Scanderbeg, the new Albanian decoration. This ceremonious act has this importance, that Ahmed Zogu receives for the first time a foreign decoration, and it is the first Albanian decoration that has been awarded.

"Save the Children Fund."

Mr. H. W. H. Sams, the administrator of the "Save the Children Fund" has just arrived in Albania. He has worked for the last three years in Greece, where thousands of houses have been built, owing to his energy, in Macedonia and in Thrace. In Albania he is again to be occupied with the problem of refugees. He has just contracted with the Government of Tirana for the construction of small quarters for refugees, each composed of 25 houses, and binding himself to furnish each family with the means of livelihood until the first harvest, also with cattle and the necessary implements for agriculture. On its side the Albanian Government provides four hectares of land for each family.

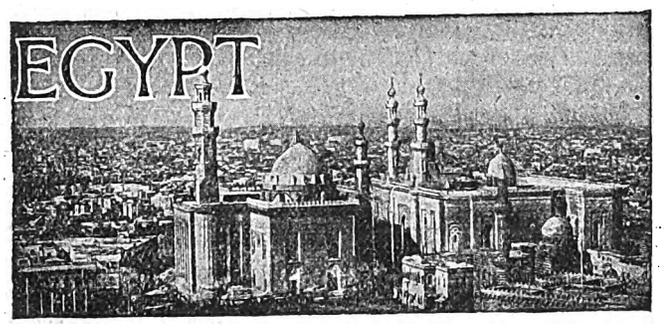
The arrival here of this English mission is considered as a stroke of Providence.

Rain and Crops.

When the month of July arrived, Albania had not yet experienced the heat of spring, and the rains ceased for a day only to begin the next. The crops, therefore, are gravely compromised, and a partial dearth is feared.



Cairo, July 3.

The Earthquake.

Last Saturday's earthquake is still the talk of the town, in fact, of the country-side. And now that the first effect of the shock is over, innumerable humorous stories are going the round. Perhaps the best are the following.

The Director-General of Public Security was summoned from his bed to the telephone at about midnight, i.e., two hours after the earthquake, to answer an urgent call from the Commandant of Police in one of the provincial towns, who inquired, in an excited state of mind, whether it was true there was to be another earthquake that night and could he be informed of the hour at which it would take place!

Shortly after the earthquake a journalist rang up the Helwan Observatory and said: "There's been an earthquake, has not there?" The clerk who answered the call regretted that he would not be able to tell him until the next morning, and proceeded himself to ring up the Public Security in Cairo to know whether there had been an earthquake!

In one case there was nearly a tragedy, as a European lady was so frightened that she jumped into the Nile and was only rescued in the nick of time. Another instance was that of a man in his bath, who got such a shock that like Archimedes he rushed down into the street with the rest of the tenants of the house and all were so frightened that it was some time before any of his companions or the man himself noticed his lack of clothing.

In one quarter the front of a house fell out, carrying the staircase with it, and leaving the tenants to get away as best they could. Eventually ladders and the fire-escape had to be brought, thus completing what was a quite cinematographic episode. There was also the case of the circle of friends who were having the penultimate "doch and dorris" and none of whom, seeing the pictures sway suddenly outwards from the walls, dared at first say anything to his companions.

But, joking apart, this earthquake was very serious and in the opinion of experts, so great was the angle of oscillation, that if the vibration had lasted half a minute longer, numbers of houses, particularly those of the sky-scraping variety which are springing up all over the place, would have fallen.

In consideration of the duration and the severity of the shock, it is indeed surprising that more damage was not done. No credence should be put in the figures cabled home of deaths caused and houses destroyed, as these refer to the 1846 earthquake. The figures for the latter were quoted by the *Siassa* as an illustration of what could happen in Egypt. The *Journal du Caire* translated the article but omitted mention of the date to which they referred and the cables sent to London were based on the French version!

Parliament.

Parliament sat only one day last week—just time enough to declare invalid the law by which the Ziwar Cabinet had reduced to £E360 per annum the salary of £E600 per annum, which the first Parliament had voted should be paid to Senators and Deputies. This, it may be remarked, is the first decision which either Chamber has taken this session, just as the original vote was the first decision taken by the 1924 Parliament. So far every proposal affecting legislation or finance has been systematically referred to one of the committees. The explanation given for dealing forthwith with this proposal is that the end of the month had come and payment could not be made to the members on the basis of a law, i.e., the one fixing the lower salary, the validity of which was in doubt.

In this connexion it is interesting to note that a proposal made immediately afterwards to reduce the £E600 to £E480 was referred to a committee although, while they were about it the Deputies could easily and most regularly have dealt *séance tenante* with that proposal. Incidentally, as regards the Senate, the decision gave to each member a lump sum of £E300 back-pay based on the difference between the "Ziwar" and what one may call the "Zaghloul" figures for the non-Parliamentary period since the March 1925 dissolution, which, of course, did not affect the Senate. This alone involved approximately an extra credit of £E30,000. Parliament's action in giving priority to the salaries of its members has aroused criticism on all sides, particularly in Egyptian circles, and has made a very bad impression.

Judge Kershaw's Resignation.

The resignation of Judge Kershaw has again been the subject of comment in the local, particularly the Wafdist, Press. The occasion has been the publication of the decision taken by the General Assembly of the Native Court of Appeal to which the Minister of Justice referred Judge Kershaw's letter and the report on the case which he had written at his request.

The Press accompanied these decisions by an account of the deliberations, which made the most disgraceful insinuations in regard to the motives that had prompted Judge Kershaw's action and the part which the British Government had played therein; and in addition it published a statement to the effect that the British Government had declared that what the Court of Appeal had done was a challenge to the Note it had delivered to the Egyptian Government on the day of Judge Kershaw's resignation and had demanded that, although he had thereby forfeited his pension, the Egyptian Government should grant him a special pension.

These statements have turned out to be a tissue of lies from start to finish. All that had happened was that the High Commissioner, on seeing this account, inquired of the Prime Minister whether what had been published represented the opinion of the Court of Appeal, and the Prime Minister had replied that the minutes of the General Assembly meeting contained no such expression of opinion as published by the Press and that the statements attributed to the Court were merely the personal views of

Digitized by Google

the papers concerned. No criticism of the Court of Appeal decision has been made by the Residency; nor has any demand been put forward to a pension.

The whole incident has indeed revealed the Wafdist Press at its worst. They complain that the British papers have been carrying on a campaign against the Wafd, and that they have been incited thereby to retaliate. But what has appeared in the British Press has throughout been based on facts and on the reasons that prompted the refusal of the British Government to tolerate Zaghloul Pasha in Office. On the other hand, the Wafdist Press in its "retaliation" has gone out of its way to fabricate and to attibute to Judge Kershaw and the British Government actions and intentions that have never been present to their minds, and this attitude has been all the more serious since its tendency has been to work up a xenophobe and anti-British wave of feeling in the country that otherwise would not exist. In his *communiqué* contradicting the information published the Prime Minister administered a well-merited rebuke to this irresponsible section of the Egyptian Press.

Sofia, July 7.

The Floods.

The storms and torrential rains which have during these last few days afflicted all Central and Eastern Europe have not spared Bulgaria and have caused various floods which, happily, have been only local and not catastrophic. South-West Bulgaria has been most hardly hit, notably in the basin of the Struma, the Macedonian stream which rises at Rilo and debouches on the Ægean, after crossing the whole of Eastern Macedonia which, moreover, it separates from Western Thrace. All the bridges on this river were washed away, and the population of Petritch remained for some days completely deprived of communication with the rest of Bulgaria. Floods also resulted from torrential rains in the neighbouring regions of Yugoslavia, from Vidin on the Danube as far as Kustendil, opposite Kumanovo.

Parliamentary Recess.

The Chamber, after sitting for six months, has just broken up to take a well-deserved holiday. But the session has not been closed; on the contrary, it has been nominally prorogued until September 5. This is because of the conclusion of the Refugee Loan which the Finance Minister, M. Molloff, is negotiating in London and Paris, and which the deputies will have to ratify as soon as the contract has been signed with the Banks so as not to retard the installing of the refugees, for the quick rush of whom the League of Nations Council has provided an advance of £400,000.

THE ARAB HORSE SOCIETY.

A Council meeting of the Arab Horse Society was held on June 30, at the Grosvenor Hotel, London, Lt.-Col. P. D. Stewart, D.S.O. (Past President) being in the Chair. It was decided to issue volume III. of the Arab Horse Stud Book this year. The following new members were elected:— Gibson, J. W., Stanwell Lodge, Stanwell, near Staines; Sinclair, A. F., 3rd Bn. Coldstream Guards, Guards' Club, Brook Street, London; Usborne, Miss E. M., Thurlestone, nr. Ipswich, Suffolk.

BOOK REVIEW.

SIR MORTIMER DURAND.

"SIR MORTIMER DURAND." By Sir Percy Sykes. Illustrated with Plates and Maps. (London: Cassell. 25s. net.)

In writing the volume under review, Sir Percy Sykes had the good fortune to have access to the diary of Sir Mortimer Durand, and is thus able to give the story of his life mainly in his own words. As a background, and to indicate the steps taken to safeguard British interests in Central Asia the biographer has added Chapters dealing with the First and Second Afghan Wars, and has throughout added notes and commentaries of his own to illustrate and supplement Durand's own words. He leaves Durand as far as possible to tell his own story in his own way; and in so doing has given real value to the Biography. The reader is thus in a position to form his own opinion of the events recorded in so far as they affect Durand's own life story, instead (as so often happens) of having opinions fabricated for him by the biographer. For this we are grateful.

During the Second Afghan War, Durand as a young man served as Political Secretary to Sir Frederick Roberts, in which capacity he accompanied that officer to Kabul. The honourable part played by him during the fighting on the march to Kabul and the subsequent investment of Sherpur are woven into the story, the whole of which, including the political work following on the successful operations of Sir Frederick Roberts, is set forth in detail. These Chapters, interesting as they are, somewhat arrest the course of the narrative and might perhaps with advantage have been reduced to more reasonable dimensions.

Durand deals with the difficulties of his postion as Political Secretary in a letter to Sir Alfred Lyall, in which he indicates that the views of the soldiers were absolutely predominant, the counsels of the Political Officers having no chance, so much so that the most important matters were finally decided without the knowledge of the Political Advisers. It was, therefore, a relief to him when he received orders to return to India to take up the appointment of Under-Secretary in place of Sir Trevor Plowden. In this capacity he was brought into official touch with Lord Lytton, whose character was distasteful to him. The biographer tells us that "he certainly found no reason for modifying his opinion on a closer view." However this may be, friends of Durand have often heard him say in later life that Lord Lytton possessed a clearer insight into the intricacies of the Eastern problem than had any official with whom he had to deal during the long years of his service.

Not the least interesting part of the Biography will be found in the views held by Durand of the various Viceroys under whom he served. Of Lord Ripon he writes: "He is, I believe, really most well disposed towards me, but I cannot help feeling that he has done immeasurable mischief." Durand's soundness of view, and impartiality of judgment in dealing with questions of foreign policy earned the high appreciation of Lord Ripon, to which he gave very generous expression. These qualities were clearly shown in Durand's summing up of the Panjdeh incident. He writes: "The Afghans were technically wrong at Panjdeh. The Panjdeh fight was a bad business and nearly brought on war with Russia."

The arrival of Lord Dufferin in India was coincident with the Panjdeh trouble, and the question of peace or war trembled in the balance. Much depended on the attitude of Abdul Rahman, and when that Potentate was invited to meet the Viceroy it was indicated that Durand would play an important rôle in the negotiations. This was so, for on the day of the Durbar at Rawal Pindi he was appointed to the post of Foreign Secretary.

It would appear that Durand was one of the first to realise that the advance of Russia towards the frontiers of Afghanistan was not necessarily in itself a movement aimed at India, and was just as clearly forced upon her as the advance of India towards her mountain frontiers,

Digitized by Google

Burma, Sikkim, was forced on that country; the absorption by a civilised and powerful nation of the weaker barbarous elements on her frontiers having almost the value of a natural law. Later he had many opportunities of seeing this law in operation. In 1885 he wrote: "The season has ended with an ultimatum to Burmah. I have advocated annexation and this is agreed upon." The Burmese War and annexation were followed by troubles in Sikkim and a meeting to settle matters was arranged. Durand was detailed for the purpose, and a satisfactory convention was finally negotiated with Chinese representatives in Calcutta.

As regards schemes of reform in India Durand also played his part, and his views of the great value of the Imperial Service Troops as an Imperial asset have now long since been recognised.

The Kabul Mission of 1893 was the culminating point of Durand's Indian career. It rounded off his frontier work, and set its seal on him as a public servant of exceptional merit. It also brought him prominently to the notice of the British Public, which had taken a lively interest in the final settlement of the Indian and Russian frontiers in relation to Afghanistan.

This work accomplished, he took leave to England. Few officials can have received such a striking and generous recognition as that given to him by Lord Elgin on his departure. *The Times*, commenting on this recognition, wrote: "Lord Elgin records a series of public services rarely equalled, and never excelled during the first 20 years of a modern Indian career."

Durand never returned to India, for Lord Rosebery, desirous of utilising his services on another Frontier, invited him to take up the appointment of Minister at Teheran. He accepted the post, but not without misgivings; an echo of which was to be found in a letter of Lord Roberts, who was of the opinion that India could not spare him, and begged him to consider the matter carefully before deciding on so vital a change.

There was much to be said for Lord Roberts' view, for Durand's future in India was one of assured promise, whereas he had no experience of European Diplomacy. He was exchanging a certainty for a great uncertainty; more especially as he could not expect his transference to the Diplomatic Service to be well received by those who were to become his colleagues in the future. As a matter of interest it may be stated that considerable resentment was felt in certain quarters at home which were to have their effect in years to come.

Durand arrived in Persia during the latter years of Nasr-ed-Din Shah, whose time of life made him averse from any changes of a serious nature; whilst the acute jealousies caused by the political struggle between Great Britain and Russia served both to block any and every effort at reform, and to keep men's minds in a state of confusion.

His promotion to Madrid in 1900 served as a stepping-stone to Washington, where he was appointed as Ambassador in 1903.

Washington had been the goal of his ambition, and he left England to join his post with high hopes of service both to his own country and to the United States. His Diary shows that he was never able to establish cordial relations with President Roosevelt. The reasons for the coldness of their relationship were probably temperamental—Roosevelt was heard to complain that he could not find time to penetrate Durand's reserve, and Durand seems to have discovered in Roosevelt an insincerity which rendered understanding of great difficulty.

In the outcome Roosevelt practicaly asked for Durand's recall. An extract from the pages of *Harper's Weekly*, to be found on page 309 of the Biography, which was described by Durand as extraordinarily accurate, is probably as enlightening as anything written on the subject. Roosevelt is not spared in this article; and it is stated that "it was characteristic of the British Foreign Minister (Sir Edward Grey) to give way to American pressure." The writer doubtless had in mind similar action by Sir Edward Grey when Sir Frank Swettenham was recalled under American pressure, also in Roosevelt's time.

Other influences, about which Sir Percy Sykes maintains a discreet silence, are said to have aided and abetted Roosevelt. As a matter of fact, Durand's star rose unclouded so long as his great abilities had free play; and it was not in his chivalrous character to appreciate the potency of the jealousies which his transference to the Diplomatic Service would create.

Sir Percy Sykes in the concluding paragraph of his work writes that he has to the best of his ability drawn the portrait of a "great English gentleman and official with its lights and shades," and one cannot read the Biography without realising that he has done so with complete success.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

THE DOFFING OF THE FEZ.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is rather difficult to define why the Turk took off his Fez after the Battle of Gaza, showing some ill feeling towards all politicians. In that particular case, the soldier may have been too hot to observe any etiquette after the battle.

My own opinion in this respect, is that a Moslem, in keeping his head covered, to this day means to show respect to those in whose presence he may be. On extraordinary occasions, when he wishes to address Allah a very humble prayer, and begs Him obsequiously, he as a rule uncovers his head to be as simple and humble as possible, so that he can concentrate his whole soul on his prayers.

On the day of Pilgrimage in Mecca many thousands of pilgrims from all parts of the world gather around the "Kaaba," dressed in the simplest possible manner, and keep their heads uncovered—the object of which is to show perfect equality and extreme submissiveness towards Allah, in whose presence rulers, princes, and peasants, are all on an equal level.

The Turk, in addressing his well-worth prayers, to curse the politicians who caused the War, must have sincerely wished to make himself heard by God.—I am, etc.,

M. ABDUL MEJID.

June 30, 21, Rue Sarkis, Beyrouth.

The King of Iraq, attended by his Aide-de-camp and Private Secretary, landed at Marseilles on July 9 from the Maloja, on his way to take a cure at Vichy where he arrived on July 11. His Majesty is expected to proceed to London before returning to Baghdad.

It is stated from Athens that the monument to the British soldiers who died in Macedonia during the Great War will be unveiled at Doiran on September 25 by Lieutenant-General Sir George M. W. Macdonogh. General Pangalos, President of the Greek Republic, will attend the ceremony.

Subih Beg al Nashat, the Iraqi Minister of Finance, arrived in London last week to arrange with the Treasury for substituting sterling for rupees as the basis of the Iraqi currency. The Minister hopes to provide for the establishment of an Agricultural Bank and to settle a variety of questions concerning the railways of his country and their development.

A STRANGE TRIBUNAL.

BY E. DAVID GOITEIN.

An Arab with a turban that would have delighted Aladdin; an Englishman, young, clean shaven; and a Jew with a black beard and tortoise-shell spectacles. These are the three judges who sit perched on a raised platform in a tiny room with a malodorous atmosphere. Outside, the sun beats down from a cloudless sky. Inside, dust and dirt. Three backless benches run down the middle of the room. Against the wall are two other benches for prisoners and witnesses. There is a raised stand for a witness box and facing it a place for the interpreter. This is the Criminal Court.

The prisoner, an elderly Arab with one eye, is brought in, chained, by two khakied policemen. Both of them Sudanese, with faces like burnished copper. They remove his chains and seat him between themselves against the wall. The Arab judge stares at the prisoner and frowns, the Jewish judge leans forward and balances his glasses on the tip of his nose. The Englishman sits there unmoved, indifferent, unconcerned. He is there to represent the Mandatory Power. It is difficult at first to follow what is happening. What is the charge? Who is prosecuting? Who is defending?

"What is the charge against the prisoner?" I ask a well-dressed young Arab who sits next to me taking notes.

"You must not speak to me," he replies in a strangely accented English. "I am making notes. I am a law student. I soon have my examinations. Is it not so?"

And he went on writing more rapidly than ever. Behind me sat an old man who from time to time emitted a grunt or called out loudly "La! La! (No! No!) when something displeased him. I thought he might be able to inform me what was going on.

"Excuse me, sir," I said in English, "What is the charge against the prisoner?" and seeing he stared at me, I added: "What has that man done?"

"I do not understand French," he answered in Arabic.

"What crime has this man committed?" I repeated in the little Arabic I had at my command.

"Yes, you may stay and listen?" he replied, and a few moments later: "Allah is merciful! He will save him."

Thus I was forced back on to the proceedings. My neighbours could not help me. At last the charge became clear, and a curious one it was. Khaleel was a respected man in a village a stone's throw from Nazareth. One day he disappeared. No one knew whither he had gone. Three weeks later he came back with a grubby boy six or seven years old. His sister had died, he said, his brother-in-law was a wicked man and there was no one to look after the boy but himself. That was two years ago. After two years the police came to the village, made inquiries, arrested Khaleel on a charge of kidnapping the boy. On that charge he was now before the Court. The name of Moustaph Sheikh is called and Khaleel's brother-in-law goes into the witness box.

The Arab judge stands up, hands the witness a Quran and all the Court rises while the oath is being administered. The judge recites the words in a reverberating voice and the witness repeats them after him. If he swallow or mispronounce a word the judge is down upon him at once and forces him to repeat the word or phrase. The oath is over, the Court sits and my friend behind grunts louder than before. It is the judges who put the questions and the witness speaks as if he were a machine. He must have learned by heart what he was going to say.

"My name is Moustaph ibn Wadiya, I live in the town of Afuleh, which is in the district of ——"

Before he has been able to finish the name of the district the Interpreter's hand has fallen with a bang on to the desk in front of him and the Interpreter repeats the witness's words in stilted English for the benefit of the English judge. Then the witness goes on with his story without a break.

"It was in July when my brother-in-law Khaleel came to Afuleh and he stayed in my house and my wife had just died—may she now be resting in Paradise . . . ."

And from all side of the Court, and from the prisoner, came the exclamation:

"Yes, may it be so."

While some more politely said: "So may she be resting."

When the Interpreter had translated this, the witness continued: "I thought Khaleel was a friend but he proved false to me and he did not remember what was due to one who was his brother he took my only little boy away and I loved him like myself. . . ."

At this point a strange thing happened. To add a little dramatic intensity to his tale the witness burst into tears and in this he was supported by other people in the room who wept so suddenly and so bitterly that the policemen threatened to turn them all out of court if they did not keep quiet, "and have respect for their Excellencies." I thought I traced a shadow of a smile on the face of the English judge. Then the crying fell to sobbing. The story continued:

"I did not see him again and I swear . . . ."

But the Jewish judge interrupted. He took off his glasses and pointing them at the prisoner asked him in Arabic: "Tell me this, did not Khaleel ever say anything to you about the boy staying with him?"

My neighbour stopped taking notes, turned to me and said angrily: "He is not right. A judge may not ask questions in the midst of a sentence. It is not the law. Is it not so?"

I nodded.

The witness did not like being interrupted and tried to avoid answering by carrying on with his tale. The tale he knew by heart, the facts . . . . ! But the turbanned judge would not let him off so easily.

"Answer the question!" he said gruffly.

"I did not understand."

The question was repeated.

"No. It is not so. He did not speak to me that way."

The tale draged itself out at length and when all had been said there was very little to support the charge of kidnapping.

"Why did you wait almost two years before informing the police?" the English judge asked, looking at the witness, but addressing himself to the Interpreter. But the Interpreter had fallen asleep, his tarbush fallen over his eyes. The policeman who stood a step away gave him a prod in the back and he sat up with a start, pushed his tarbush back, and with amazing sangfroid addressed the witness with "Why don't you answer his Excellency?" The true answer was that he had not understood his Excellency's English, but instead of saying so he merely said:

"No, not at all, your Excellency."

The judge wearily repeated his question.

Judge: "Why did you wait almost two years before informing the police?"

Interpreter: "Why did you wait more than two years before informing the Government?"

Witness: "Allah willing, I did not wait at all."

Interpreter (to judge): "May it please your honour, I did not wait so long."

Judge: "When did you first tell the police?"

Interpreter: "Why did you tell the police?"

Witness: "Because I loved the boy like my own eye, he was bone of my bone and . . . ."

Jewish judge (interrupting): "When—do you understand—*when* did you tell the police?"

The poor witness soon got himself tied up; he contradicted himself, he repeated himself, he pretended not to understand, he lied wildly, he snapped his replies to the judge, he insulted the Interpreter and calling Allah to witness that there was no justice left in the country, he stepped out of the witness box, wiping the beads of perspiration from his brow.

Other witness—all more or less incoherent—came and went, all had been carefully trained and all—so long as they were not interrupted—did well; but no sooner were

Digitized by Google

they asked a question outside their "brief" than they became confused and contradictory. The last witness was a dapper little Arab in a well-pressed European suit, with neither tarbush nor turban on his head, his hair well polished and who proved to be—when the oath was administered—a Christian. He entered the witness box, bowed to the judges, bowed to the body of the court, and lastly bowed to the Interpreter. He spoke Arabic, but when the judge put a question in English he answered in the same language—or rather in a travesty of it. My friend, the law student, was angry at this.

"He speak no good English. He think he is clever. It is better he speak Arabic, is it not so?"

Again, I nodded.

The witness had a fine flow of words.

"I was sitting in my house," he said, "and I was teaching my little brother how to read when Khaleel came into my house and he bowed low before me and I greeted him as a friend. He asked me how I fared and . .

Arab judge: "Never mind all that. What did he say about the child?"

Witness: "I am with your honour to do or say whatever you wish. He said to me: 'Matthew,' he said, 'your father—and may there be abundant peace upon him—was always a good friend of mine, be, therefore, also, you a good friend to me.' And I said: 'I am always faithful to my friends.' Then he said: 'I want to kidnap Said, for his mother is in Paradise and his father is a drinker. Be you, therefore, with me and help me to . . .'"

"You Christian liar!" shouted the prisoner. And the policemen on either side of him gave him a good kick to keep him from making these unseemly outbursts.

Jewish Judge: "Was there anyone else present when this conversation took place?"

Witness: "Yes, a friend of mine."

Judge: "Who was it?"

Witness: "Djamal Walid abd-Allah."

At this the old gentleman behind me jumped up and waved his hands about excitedly and called out: "It is a lie. I was not there. I would not go into your house."

Witness: "Yes, my lords. It was not this Djamal." And the judges laughed.

I do not know whether this witness was lying, but it is sufficient for an Arab to have been converted to Christianity to brand him as a liar. My own experience of them is too small to say, but I heard it repeated by Christians, Jews and Muslims alike that converted Muslims are certain to be liars!

The case for the defence was threefold. In the first place it was denied that the prisoner had ever seen the boy, in the second place it was alleged that he had been asked by the child's father to look after him, in the third place it was declared that the boy in question was his own son who had merely gone to live for a short time with his brother-in-law. That the defences were contradictory was no proof of their inadequacy. The best witness for the defendant was my friend who had punctuated the whole of the case for the prosecution with his grunts. He was the only witness who did not boggle over the oath.

"He is a paid witness," said my neighbour and did not trouble to takes notes.

"In the first place, my honourable sirs," said the witness when the preliminaries were over; "I should like to say that I have known Moustaph for a very long time and I know his word is not to be trusted. He drinks wine and other forbidden drinks and I have, with these old eyes of mine, seen him eat on Ramadan. . . ." He continued bringing innumerable charges against the unfortunate Moustaph, and to my surprise none of the judges stopped the flow of his entirely irrelevant eloquence. When he had torn Moustaph's character to shreds he started praising the saintliness of the prisoner. "I knew him, highly respected sirs, when he was a boy, I have watched him through life. I have never seen him do a despicable act. I have never heard him say a despicable word. He is generous to his friends beyond what is needed. He is kind to his neighbours. He is a loving father—just as in earlier days he was a respectful son."

So he went on and on, giving him all the copy-book virtues which a Muslim paterfamilias is supposed to possess. Only once was he interrupted and that by a hideous and piercing wail from outside the Court where all the women of the prisoner's village were sitting huddled together awaiting the verdict. The wail was meant to impress the judges. It was soon silenced by the threats of a policeman who had been aroused from his reverie by these thoughtless sirens.

Everything is in the hands of Allah and to all things Allah maketh an end—even to a law case. So, at length, the last witness had stepped out of the witness box and the Counsel for the defence stood up to address the Court. He was a short, round-shouldered, Arab, with a tarbush balanced sideways on his head. He spoke in a monotone, treated the prosecution with deserved contempt, and declared roundly that never had he heard so flagrant a case before. There was no evidence, no evidence, no evidence at all against the prisoner who was a God-fearing man and who had suffered the indignity of chains to satisfy the malice of his sister's husband. He worked himself up into a fine frenzy, then cooled down again, then grew excited, each by turns. The Arab judge appeared to be asleep, the Englishman sat like an idol, without a modicum of expression on his sun-tanned face. The other judge appeared to be taking notes. The counsel then quoted some law from memory, and at last appealed to the fine humanity, the noble disinterestedness and the supreme impartiality of the Court and asked that the prisoner should be acquitted of a crime that he had never contemplated, let alone committed.

It is was a rhetorical-enough speech, but it sounded rather well after what had gone before, and it was with obvious self-satisfaction that counsel resumed his seat.

The judges discussed the matter among themselves.

"He will surely not to be found guilty?" I said to my neighbour who had put his note-book away.

"It does not matter which way it is," he said; "because I come for the law. It is not interesting to me what it is to the old man. The lawyer there is my friend."

After he had spoken these disjointed sentences he stood up and left the court, his pockets bulging with notes, his head with law.

Then the judges gave their verdict. In short, they found the prisoner not guilty of kidnapping, but they ordered Khaleel to return the boy to his father, on the ground that Moustaph had allowed the child to go and live with his uncle only for a short time. But this decision pleased nobody. Moustaph was furious, challenged the judges, called the prisoner a thief and a liar, threatened the vengeance of Allah on the doers of injustice until he found himself being marched out of the court by two very determined policemen. The prisoner burst into tears, begged the judges to have mercy on an old man and not to rob him of the child who was dearer to him than life itself. The women outside hearing Khaleel's complaints and imagining the verdict had gone against him yelled and shrieked in the most barbarous fashion. And the policemen swore and argued and threatened and pleaded . . . . The judges made some inaudible remarks to the prisoner which seemed to soothe him, quiet was restored, the court was cleared and the next case was ready for trial.

As I left the hot close room and went into the hall I found it packed with a seething, groaning, laughing mass of Arabs. The prisoner's tears were soon wiped away and he was telling everyone what had been said and done. To my surprise Moustaph was as friendly as he could be. He told the listeners what he had said and what he had not said, he called Khaleel his brother, Khaleel in his turn told him that he was a good speaker and that he had impressed the judges; they wished each other the blessings of Allah, then they both cried and the women wailed, and at last in one thick mass all forced their way through the narrow doors into the street. The hall was left empty but for two woe-begone prisoners in chains who were next to be tried. They begged for a piastre for "their innocent wives." I went out and threaded my way through the crowd.

"Sir!" and someone pulled my coat.
"What is it?-"
The young man who had been taking notes was standing there; evidently waiting for me.
"Sir, you are from England?"
"That is so."
"I will ask you a question."
"Please do."
"I go to London."
"Really?"
"That I may become perfect in law."
"I see."
"I will ask, sir, my question. Is it better I go to Middle Temple or that I go to Lincoln's Inn? . . . ."

THE WEEK AT HOME.

London, Tuesday Morning.

The Eight Hours Act.

That Eight Hours Bill which the Conservative Prime Minister endeavoured to recommend in the House of Commons and which Mr. Stanley Baldwin at one time seemed to offer to withdraw is now on the Statute Book. The die is now cast; or, as the others say, the stone is now thrown, the gauntlet laid down. For the passing of this Act has done nothing to appease the situation; rather, it has aggravated it. True, the mineowners in nearly all districts have offered temporary wages on the April basis (Yorkshire owners, at first defiant, sulkily bowed to the presumably pre-arranged scheme when the Government whip cracked), but the refusal of the miners to entertain the eight-hour day seems to be absolute. Unless, therefore, the Government is content to allow the contest to drag on for another odd three months, by which time the miners may be without any means of subsistence, it must try again.

It appears to the spectator that too much stress has been laid on the dissatisfaction which the men feel with the Miners' Federation as negotiators. That such dissatisfaction exists, and is, indeed, well founded, is true, but a mistake (at least to my mind) has certainly been made in the pyschological diagnosis of this problem. The ordinary middle-class man (and, for that matter, the Government) is apt to think that when a worker is offered the choice between lower wages and longer hours he will every time choose longer hours—the conception of working overtime for what is one's personal gain, or gain for one's family, is grown deep in the middle-class mind. But to the working-classes the length of the working-day represents a social symbol: the man among them who works harder than his colleagues in order to "get on," who sacrifices his very hardly-won leisure and pleasure in order that he, too, may one day employ the machine which now employs him, is a phenomenon which appears in books but not very often in everyday life. Carnegies and Fords fall from our industrial system about as abundantly as Australian Test batsmen before our bowlers. It may, of course, happen that a sufficient percentage of miners will have tired of their anxious inactivity and will accept the owners', or the Government's, terms: all one can say is that that surrender is not yet visible.

And in all this imbroglio the nation itself is sorely puzzled. It is difficult to discover any sort of unanimous feeling, although naturally the tendency to support the Government is the most noticeable one. But the fact that it has so strangely departed from the express recommendations of the Royal Commission, which at least offered the miner a choice between lower wages and longer hours (whereas the Government in effect, i.e., through the medium of the owners, offers them both) is causing very considerable misgiving. People are being impressed with those large advertisements in the newspapers which advocate the imposition or acceptance of longer hours. No one knows, but everybody guesses, who is paying for those advertisements. Similarly, no one knows, but everybody guesses, who is behind the Conservative Government in its refusal to entertain the recommendations of the Liberal Coal Commission. The honesty of Mr. Baldwin and his manifest attempts to escape from the policy which it was decided that he should impose have caused men, thinking and reasonable men, to wonder. It was not in a fit of petulant temper that Mr. Hartshorn stated that the Prime Minister was the worst enemy of Labour; and it was with the friendliest feelings possible that Mr. G. K. Chesterton could say, in words that may be historic:—"There is no Prime Minister; there are no Ministers; there is no Cabinet; in that docile traditional conventional sense in which simple Socialists and others still accept it. There is an exceptionally reasonable and good-natured gentleman named Baldwin, who is the bearer of this official name, as many other decent English gentlemen consent to be called grotesque names like Red Dragon and Blue Mantle. But the leadership once implied in such titles has stiffened like heraldry. The thing that rules England to-day is the banker who is at the back of the Industrial Group; and even that only rules so long as the Banker is at the back of it."

A Parliamentary Row.

To what a heat of indignation this passing of the Eight Hours Bill brought those who felt that it was a slight upon their class (there is no other explanation of their unusual conduct) could be seen in the unwonted violation of the peace in the House of Lords. Just before the Bill reached its final stage the closure was applied—an application so rare that many Parliamentarians were not aware that the closure existed in the Lords' Standing Orders. The Labour Peers being thus thwarted in their opposition to the Hours Bill, a row was commenced by Labour Members of the House of Commons standing at the Bar. First of all they objected strongly to the closure on Lord Arnold; then they mocked the statement of the King's assent; and then they succeeded in inducing a Conservative Member to lose his temper, and, emulating Mr. Amery's attack on Mr. Buchanan last year, to strike a blow. However, being Britons, the hitter and the hit had a moment later made it all up, and entered the Commons together to be greeted as only Englishmen could greet them.

All this row is considered lamentable or hysterical or degrading, but the real adjective to describe it is futile. It really does not do the Labour Party much harm, for that Party is recognised as being too young and too composite to be cognisant of all Parliamentary proprieties, and

it may serve to show the Government what pyschological forces the imposition of the Eight Hours Act may conceivably let loose.

Ministers and Business.

Not this row, but the more persistent attack by Labour Members on the personal reputations of various Cabinet Ministers is what is causing severe comment and, possibly, some anxiety. From the Olympian point of view it is amusing to have these attacks from a Party whose leader once was given a certain motor-car the source of which was the quest and examination of none too friendly disposed publicists. It is, of course, when the integrity of one's own side is impugned that these attacks become so obnoxious. In this case, for instance, one finds the Conservative Press deploring these baiting questions, the Liberal Press deprecating any attempt not to answer them fully and civilly, and the Labour Press supporting them.

As a matter of fact, the Labour Party has timed its attack poorly. If only it had thought of this scheme a few years before the War, at the time of the Marconi scandal! It could then have driven for ever out of public life some of the men who yet are troubling it. To suppose that the present Cabinet is composed of men who would abuse the position of Directors of companies enjoying Government contracts is naïve in the extreme, and shows a sad want of perspicacity. If they persist in these tactics, the Labour Members will be doing the very thing to raise the prestige of the Baldwin Government. This Conservative Administration has in no way departed from rules set up by previous Administrations in this question of Ministers as Directors. Whether those rules were the wisest possible is a problem the answer to which depends on the degree of your partisanship.

Mr. Thomas's Permanence.

Mr. Lloyd George is not the only wizard from Wales: he is fully matched in the art of bamboozlement by Mr. J. H. Thomas, whose confirmation in his office by the N.U.R. at their meeting last week at Weymouth really astounds those who have watched the annual efforts of certain sections of the railwaymen to get rid of him. Yet his re-establishment has come as a relief to those who unceasingly applaud his "safe" qualities. No doubt Mr. Thomas is a charming man, but to admit that he "grovelled for peace" on the failure of the General Strike was hardly, one would have thought, the way to unlock the door to the disillusioned railwaymen's hearts. The ex-Colonial Secretary, however, knew better; and he is now secure in his office—until the inevitable attack on him next year. I headed this note "Mr. Thomas's Permanence"; but really it would have been more accurate to write of his chronic impermanence.

The League and British Feeling.

A picturesque incident happened a little while ago at a League of Nations meeting at Aberystwyth, at which Count Bernstorff spoke, who by some people is now considered to be one of this country's most considerable friends. To some folk in the audience, however, the presence of this man, once "notorious" and now "notable," was a little too much, and the unwilling Leaguers were reminded of the "Lusitania" and of the fact that the Germans were a people who once declared war on the world. This remote fact, so ridiculously inapposite, also was too much for the Chairman, who immediately and emotionally called for and received cheers for Count Bernstorff.

Perhaps the incident would have been forgotten (and perhaps not)had not it impelled Lady Askwith to resign membership of the League of Nations Union. It happens that Lady Askwith is possessed of certain memories and has a sense of certain realities, and no amount of pleading from or sympathy with an international body like the L.O.N. could induce her to forget that it owed its formation ultimately to the fact that Germany invaded Belgium. For this unfashionable retention of facts she has been loudly blamed, and gravely rebuked.

There are, of course, some people, like her, who obviously are unmoved by the Locarno injunction to forget our friends and remember our enemies. These stolid ones are the despair of our progressive politicians, the curse of our Communists, the obstacle of our opportunists. For the most part they are silent: and one hardly dares to mention that they happen to be those who once saved England and are yet her backbone.

Athletics and Cricket.

It was heartening indeed to see Oxford and Cambridge (though this time at least their traditional order should be reversed) holding their splendid own against the American Universities, Princeton and Cornell, last Saturday at Stamford Bridge. By seven events to five the sporting visitors were beaten. As in previous years, the Americans had most of the sprints, whereas the British excelled in the longer races. Of the three jumps, long, high, and pole, Great Britain gained the high. It was a magnificent meeting, very well attended. Athletics seem completely to have recovered their general popularity.

Eton by no means had it all their accustomed way against Harrow at Lord's; they were, in fact, beaten on the first innings. This level draw should do immense good to Harrow, who need some luck to break an uncomfortably and perhaps unjustfiably long spell of defeats.

One of the saddest and most reflective men in England during the week-end must have been the English skipper, Mr. A. W. Carr. Nor should those escape hours of troubled pondering who supported his plan of putting the Australians in. It is the easiest thing in the world—and there is no sense in it—to point out the danger of putting a strong batting side in first in the hope of the English weather's coming up, or perhaps down, to expectations. He who won the toss knows as much about the game as anyone: and it is best to leave it at that.

It is all extremely sad. Yet the praise that is their due should most handsomely be given to the Australians. Macartney's innnings at Leeds is said to have excelled his effort (how wrong a word!) at Lord's. And if that is so, it must have been one of the innings of which in the cricketers' Valhalla they will yet be talking when the Turk is completely Westernised or Abyssinia is become a free country—and even after that.

PERSONAL AND GENERAL

TO-DAY

July 15, 1926 (New Style).
July 2, 1926 (Old Style).
Muharram 4, 1345 A.H., of the Moslem Calendar.
Ab 4, 5685, of the Jewish Calendar.

The Raja of Pudukota left London on July 6 for the Continent.

The Aga Khan, who has been on a visit to London, left the Ritz Hotel last week.

The Prince of Wales received Major F. M. Matthews and the King's Indian Orderly Officers at St. James's Palace on July 9.

The Bishop of Nagpur, India, who is shortly resigning his See, recently underwent an operation for appendicitis in a nursing home in London.

The Earl of Lytton (Governor of Bengal) had an audience of the King at Buckingham Palace on July 8, and Mr. Surendra Nath Mullik (upon his appointment as a Member of the Council of India) had the honour of being received by His Majesty.

Before the Court held at Buckingham Palace on July 7 the King received his Holiness Maharaja Yeshwant Rao Holkar and the Maharaja of Mayurbhanj. Colonel A. D. Bannerman, Political Aide-de-Camp to the Secretary of State for India, was in attendance.

Sir Arthur and Lady Crosfield were at home yesterday at 41, West Hill, Highgate, to members of the British Indian Union, when exhibition lawn tennis matches between members of the Indian Davis Cup team and some international lawn tennis players were given.

The King has approved of the appointment of Colonel C. A. Milward, C.I.E., C.B.E., D.S.O., Indian Army, as Aide-de-Camp to the King, with effect from March 27, 1926, in succession to Colonel F. P. C. Keily, C.B., C.M.G., D.S.O., Indian Army, promoted Major-General.

Mr. Charles Bentinck (His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Addis Ababa) had an audience of the King at Buckingham Palace on July 10.

Judge Bernard Platt, of His Britannic Majesty's Supreme Court in Egypt, has arrived in England on leave of absence.

The Maharaja of Alwar gave a dinner party at the Hotel Cecil last Thursday evening in celebration of his 44th birthday. Among those present were:—The Earl and Countess of Birkenhead, the Maharaja of Rajpipla, the Aga Khan, the Earl and Countess of Lytton, the Countess of Minto, Viscount and Viscountess Inchcape and the Hon. Elsie Mackay, Viscount and Viscountess Dunedin, Viscount and Viscountess Erleigh, Viscount and Viscountess Lee of Fareham, Lord and Lady Dawson of Penn, Lord and Lady Swaythling, Lady Meston, Lieutenant-Colonel and Mrs. Wilfrid Ashley, Mr. Ramsay MacDonald, Sir Louis and Lady Dane, Lady Melliss, Sir Robert Holland, Lady Semon, Sir Alfred and Lady Mond, Sir Warden Chilcott, Sir Muhammed Rafique, Sir Syed and Lady Ameer Ali, Sir Mancherji Bhownaggree, Sir Dadiba and Lady Dalal, Lady Maffey, Sir Godfrey and Lady Fell, Sir Abbas and Lady Beg, Sir Atul and Lady Chatterjee, Sir Wolseley Haig, Colonel Sir Charles Yate, Colonel Clive Wigram, Major and Mrs. Godfrey Haseltine, Captain Guest, Mr. Vincent Cottrell, Colonel and Mrs. and Miss Stratton, Captain Sydney Goltray, Major J. Barber, Mr. and Mrs. Parish, Miss Sen, Mrs. Ogilvie, Major Barret, Captain Cockayne, Mr. and Mrs. C. W. Waddington, the Raja of Limdi, Colonel E. A. Kettlewell, Colonel and Mrs. Bannerman, Colonel Impey, and Mr. F. H. Brown.

Field-Marshal Viscount Allenby and Viscountess Allenby have returned to Deal Castle from London.

Sir Percy Loraine, the British Minister to Teheran, last week arrived in Cairo, staying at the Residency.

Lord Lloyd, the British High Commsisioner in Egypt, sailed on July 9 from Alexandria on board the s.s. Helouan for Venice. Mr. Nevile Henderson is acting as High Commissioner during Lord Lloyd's absence.

Dr. W. Corner, Iraq Health Service, has been awarded the North Persian Forces Memorial Medal for the year 1925 for his paper, "Malaria in the Kirkuk Division of Northern Mesopotamia during 1923," published in the "Transactions of the Royal Society of Tropical Medicine and Hygiene," 1925, Vol. 19. This is the third award of the medal, which, in accordance with the terms of the trust deed of the Memorial Fund, is awarded annually for the best paper on tropical medicine or hygiene published in any journal during the preceding 12 months by any medical officer, of under 12 years' service, of the Royal Navy, Royal Army Medical Corps, Royal Air Force, Indian Medical Service, or of the Colonial Medical Service.

Among recent changes in the flag list are the following:—

Rear-Admiral Cyril S. Townsend, C.B., on return from service under the Greek Government, is absorbed into the Rear-Admiral's list in the vacancy.

Rear-Admiral Aubrey C. H. Smith, C.B., M.V.O., has been promoted to the rank of Vice-Admiral in His Majesty's Fleet; to date July 6.

The new Vice-Admiral has been the British Naval Representative on the League of Nations since 1923. He was Naval Attaché in Russia, Sweden, and Norway during 1908-12, and Commodore 2nd class on the East Coast of South America from 1916 to 1919. He commanded his Majesty's ship Ramillies in 1920-21, and for the following two years was head of the British Naval Mission to Greece.

MISS GERTRUDE BELL.

We much regret to announce the death of Miss Gertrude Lowthian Bell. The news reaches us from Baghdad just as we go to press, and we hope next week to publish a memoir of one of the most notable of British Arabists.

DR. ANNIE BESANT'S OCCULT PROPAGANDA.

Mrs. Besant is continuing in England her addresses on the subject of the coming of the "World Teacher" and although her doctrines in this matter are not supposed to be an integral part of the creed of the particular Theosophical Society of which she has been the President since 1907, yet the official publications of the Society obviously endorse her propaganda. It may be of interest to examine her theory about the coming of the "World Teacher" and to see what it is that she has evolved in India for introduction in England and elsewhere. The Theosophical News Bureau of London has recently published a leaflet contradicting the statements wrongly attributed to her that Mr. Krishnamurti is either the "World Teacher" or the "New Messiah." The term "Messiah" is particularly objected to by Mrs. Besant, because it is, she says, a term of Jewish origin with a special and very limited meaning. The Messiah, from the Jewish point of view, only comes once for the salvation of his "Chosen People," whereas the World Teacher, according to theosophical conceptions, is at the head of every religion; just as much that of the Hindu and the Buddhist as the Christian. Mr. Krishnamurti, Mrs. Besant states, is the chosen vehicle through which the World Teacher will speak when He comes again, "just as He spoke through the body of Jesus two thousand years ago." According to her, "when the World Teacher manifests Himself He takes possession of Mr. Krishnamurti's body and Mr. Khristnamurti goes out of that body."

It does not appear to be claimed that up to now the voice of the World Teacher has spoken out of Mr. Krishnamurti's mouth; that is yet to be. But miracles have, it is said, already occurred. Mrs. Besant and her associates began the preparation of the body of Krishnamurti, the son of a Madrassi Hindu, a retired subordinate Government official, for the occupation of the World Teacher in 1910 and in January 1911 the empty body of Krishnamurti, according to the *Theosophist*, lay at Adyar, while he himself was taken away to Tibet for his mystic initiation, after which he returned to his body at Advar to live under the guardianship of his elder brothers, until the time should be ripe for the ending of their trust. At about this time Mrs. Besant established a new Order called the Order of the Star in the East, the head of the Order being Krishnamurti. At a ceremony of this Order in 1911 Krishnamurti presented certificates to the members of the Order and the occasion was marked by the appearance of "a great coronet of brilliant shimmering blue, which appeared a foot or two above the young head and from this descended funnel-wise bright streams of blue light till they touched the dark hair, entering and flooding the head. The Lord Maitreya (the World Teacher), embodying Himself in his Chosen." Apparently the final coming of the World Teacher was expected almost at once after that, but a good many years passed by during which many things happened which may well have contributed to the postponement of the incarnation, which Mrs. Besant now again says is imminent. In 1912 the father of the minor boy Krishnamurti brought a civil suit against Mrs. Besant to recover his son from her. The Original and Appellate Courts in India found in favour of the father, but, on a special appeal to the Privy Council, the decision of the Madras High Court was reversed on a technical point of jurisdiction. Other lawsuits also arose in connexion with Krishnamurti, and the Theosophical Society with its adjunct, the new vehicle of of the World Teacher, went into the shadow of an eclipse. During the next few years Mrs. Besant, carrying the major portion of her Society with her, threw herself into schemes for social and educational reform and then plunged deep into Indian Politics, forming a special Home Rule League and acting as President of the National Congress in 1917. At this critical time of the Great War she was a great power in India and a source of extreme embarrassment to Government.

Her political activities in India need not be dilated on, and they are only mentioned as a possible explanation of the delay in the materialisation of the fifteen-year-old scheme for the incarnation of the World Teacher in Krishnamurti. The latter is now about 30 years of age and his individual personality seems to have been kept in the background. We have been recently told officially by the Theosophical News Bureau that "Mr. Krishnamurti shuns publicity and it is distasteful and in fact very painful to him to have things, which to him are sacred, spoken about in the way some have spoken of them recently." It appears from this statement that Krishnamurti desires no personal responsibility for his selection as a vehicle. Presumbly, if and when the World Teacher supersedes Krishnamurti's personality in the latter's body, Krishnamurti himself will be entirely irresponsible for anything said or done by his own body as it will be under occupation by a stranger. That might lead to very curious positions both in ordinary life and in the Courts of Law.

Theosophists have a name and high ideals to take care of. The objects of the Theosophical Society are defined by the Society itself to be

(1) To form a nucleus of the Universal Brotherhood of Humanity without distinction of race, creed, sex, caste or colour.
(2) To encourage the study of comparative religion, philosophy and science.
(3) To investigate unexplained laws of nature and the powers latent in man.

Everyone of these subjects is praiseworthy and, indeed, noble, if kept within the rational spirit of the words used. The misfortune is that the investigation of the unexplained laws of nature and the powers latent in man has been manipulated and misused by some of the leaders over a very long series of years, and the wonder is that the manipulation and misuse, though exposed over and over again, seem still to be not only tolerated but enjoyed by Mrs. Besant and some of her associates. Madame H. P.

Digitized by Google

Blavatsky, from whom Mrs. Besant learnt and inherited the system of communication with supernatural beings in a supernatural world, was exposed and discredited. The education of Krishnamurti as a boy was in tainted hands. Yet in spite of all this and much more the public is now being asked by Mrs. Besant to accept as the chief ground for belief that the World Messenger, i.e., a repetition of the Divinity in Buddha, Zoroaster, and Jesus Christ, is about to occupy the body of Krishnamurti, her statement that she and some of her associates have been told by supernatural beings that this is the case. She is very eloquent in describing the recent developments of the world and in comparing them with those that preceded the advent of former founders of some of the great religions of the earth. The resemblance, she says, justifies the anticipation of a new advent, but she tells the public frankly that above and beyond this it is the message she has received from the supernatural world that is really convincing. "I should be acting unjustly," she has said recently, "I should be untruthful to myself, if I pretended that my belief in the coming of the Christ rested on all the arguments that may be put forward to convince those that know it not. For it is possible to come into the closest touch with the World Teacher: possible to listen to what He says, and to know from His own lips the reality of His approaching coming; possible to learn from Him that the condition of the world again demands His presence: possible to know from Him that not a very long time will pass away before He will again tread the streets of our towns, the roads of our villages. It is from Him that some of us have learnt the lines of preparation for that coming."

The above is a quotation from a lecture given at the Queen's Hall on November 1, 1925, by Dr. Annie Besant, according to the version of the lecture published officially by the Theosophical Publishing House, Ltd. Similar words were used by Mrs. Besant in recent lectures in London. H. P. B. (Madame Blavatsky) is frequently mentioned by Mrs. Besant in terms which leave no doubt that she regards her as having been in close communication with the supernatural world in her lifetime and as their messenger to the experts of the Adyar community since her death (1892). Mr. Leadbeater who, so unfortunately in the eyes of the world, was the guide and teacher of Krishnamurti's youth is advertised as joint author with Mrs. Besant of such books as "The Masters and the Path," "Lives of Alcyone" (Krishnamurti is said to have been called Alcyone in his existence on earth in prehistoric ages), "Man—Whence, How and Whither," etc., etc. The whole propaganda for the coming of the World Teacher as devised and carried out by Mrs. Besant and her associates is rooted deep in all the old scandals and disclosures of the early days and doings of Madame Blavatsky and others.

It may be asked is there any danger in this propaganda? We think probably there is no serious danger. Cranks there will always be, also ordinary persons with a cranky side to their brains or characters. In India Mrs. Besant was at one time dangerous. In England the whole atmosphere and conditions, outside certain limited circles, are not so sensitive to fantastic propaganda, particularly when they touch very serious and solemn subjects. People here are quite capable of thinking for themselves. We hold, however, that Mrs. Besant and her friends by her present World Teacher propaganda are doing harm to India. The coloured candlelight of Adyar ought not to be misrepresented as the sun of India. India ought not to have to share any responsibility for the Krishnamurti legend. We are indeed sorry that a harmless Indian young man has been selected for the impossible rôle that Krishnamurti may well feel diffident about playing. In a recent London paper the fact that the new incarnation was an Indian was made the subject of a jesting protest against any assumption of superiority for India as a universal spiritual home. Mrs. Besant begs the public not to ridicule her propaganda. It would be most satisfactory if she and her associates would cease from bringing ridicule upon India.

CURRENT TOPICS.

The Birthday Honours.

The postponement for one month of the issue of the Birthday Honours List owing to the General Strike is one more reminder of the far-reaching effects of that momentous phenomenon. We are only now beginning to hear of the real genesis and exodus of the General Strike, but it is rather terrible to have to contemplate the possibility of the recent Honours List having to be held up—for ever. Fortunately this has not been the case.

Before I proceed to the contemplation and discussion of a new list of Indian Honours, I cannot help recalling to mind a note I once saw written in the P.W.D. Secretariat of the Government of India. A Secretary, who had just been appointed to Simla after many years in the plains, "ventured" to point out that he had worked out statistics of the Honour-bearers in the various departments of Government service and had found that the Foreign Department had Honours in the ratio of 115 per 100 officers, while in the P.W.D. the figures were 2 Honours per 100 officers.

In the recent list there are no names of Indian interest among the peerages or baronetcies. This seems a pity. The Oriental Club contains more likely looking baronets than any institution I have ever seen and considering the call now made on our active merchant princes for political work in connexion with the Reform schemes, it seems to be time that the geographical limits for baronetcies should be extended in the Indian direction.

Thirteen Knights Bachelor, one K.C.S.I., three K.C.I.E.'s and two K.B.E.'s have come forward from India. These may be analysed as follows:—

Executive Council work	3
Judges	2
Government Service	4
Indian States	1
University	1
State Council and Legislative Assemblies ...	2
Railways	2
Port Trust	1
Commercial	1
India Office	1
Total	19

Six out of the nineteen are members of the Indian Civil Service, the most prominent of these being Sir Alexander Muddiman, the Member of the Home Department of the Executive Council of the Governor-General. The Home Membership has always been one of the most difficult and important posts in India, but since the introduction of the Reform Schemes the difficulties have been greatly increased by the addition of a mass of debating work to really heavy consultative and administrative duties. The K.C.S.I. comes automatically to the Home Member, but it is nearly always deserved and Sir Alexander has been a real success.

It is a pleasure to see, at last, the name of J. P. Thompson, C.S.I., I.C.S., among the recipients of the K.C.I.E. Sir John Thompson is one of the most brilliant intellects ever produced by the I.C.S. and has too long been prejudiced by the fact that he was Chief Secretary to the Punjab Government in the black days of Amritsar. Whatever may have been the merits or demerits of the Punjab Government over the Amritsar affair, the Chief Secretary should not be held accountable; but there can be little doubt that this has been the case and that Sir John Thompson has been kept back because of the odium cast by certain political parties on Sir Michael O'Dwyer.

Both in the selection for the Orders of Knighthood and in the lesser Honours the recent lists seem to show a genuine desire on the part of Government to distribute Honours to a wide circle. Most of the important services, the Legislatures, the Indian States and non-officials all get a share.

Lord Olivier and Bias.

Lord Olivier has written to *The Times* giving his opinion that until the communal principle for electoral franchises is eliminated, ordered progress in constitutional government will be impossible. He also declares that on the whole there is a predominant bias in British officialdom in India in favour of the Moslem community, partly on the ground of closer sympathy, but more largely as a make-weight against Hindu nationalism. Mr. Churchill, when recently pressed in the House of Commons to explain and defend, if he could, the obvious bias of the *British Gazette* against the strikers during the General Strike, declared that under the circumstances he had no hesitation in showing himself on the side of the Fire Brigade and not on that of the fire. The fact that the Hindus have, on the whole, been much more prominent in attacking the whole position and prospects of the British in India than Moslems has, no doubt, to some extent created a bias of feeling aginst the former, but not because they are Hindu. Hardly anyone with knowledge and experience of India would question the fact that of all Indians the Rajputs are the people with whom individually and collectively British officials and non-officials in India are habitually on terms of the closest political and social intimacy and friendship. The great majority of Rajputs are Hindus but this fact raises not an atom of prejudice aginst them in the eyes of the British in India. Lord Olivier is doing a great disservice to India if he really attempts to persuade people that British individuals, or the British community as whole, have ever taken sides with one religion against another. On the other hand, there does come a time when a Government has to come down on the side of a Fire Brigade rather than on that of the a fire. Lord Olivier might consider the absurdity of his theory of a pro-Moslem bias in view of the fact that a very large proportion of the work of Government in India is carried out by Indians. Does he think that Hindu Government servants would work for Government as they do if they felt that British officials were biased against their religion and unduly favoured Moslems because they were Moslems? Whatever faults the Indian Government and its British staff may have had and shown, the charge of partiality to any one religion is not one that can fairly be brought against them. Not only would such partiality be wrong, but it would be extremely foolish. It may be conceded, however, that an appreciation of the British mentality in India as regards religious differences requires more first-hand experience of India than Lord Olivier has had.

Lord Birkenhead at the Birthday Banquet of the Maharaja of Alwar.

H.H. the Maharaja of Alwar gave a banquet on the 4th instant to celebrate his 44th birthday and the occasion elicited a very important speech from Lord Birkenhead, one outstanding item of which was that there would be no going back on the treaty obligations with the Princes of India, which would never be construed in any spirit of legal pedantry but in a spirit of gratitude and remembrance of the service and fellowship faithfully rendered by the Princes for generations. Neither the Maharaja nor his successor would ever have reason to complain that the British people had failed in any direct assurance given to the Princes, or in the implications that could be based upon such assurances. It may be thought that these words from the Secretary of State are a mere repetition of conventional good faith and good feeling. They are, however, very much more than that. The wholesale changes in the constitution and position of India as a whole, which are demanded and spoken of by many Indian politicians as if they were within the scope of practical politics, would be quite inconsistent with the maintenance of the spirit and letter of the treaties, mostly made over 100 years ago, on which are based the relations of the British Government with the Rulers of the big and small Indian States. Lord Birkenhead also stated emphatically that the recrudescence of communal strife made it impossible to conceive of a day approaching when every Englishman in the country would leave India. There was, he said, not the slightest intention of such a desertion. He also referred disapprovingly to that very clever but pessimistic book "The Lost Dominion" and stated that there was no lost dominion and there never would be a lost dominion, in fact there was no desire to talk any longer in terms of a dominion. All this is very encouraging and if similar intentions had been expressed and acted on a few years ago a lot of trouble might have been saved to India. It is only right that the Home Government should make it abundantly clear that it is possible to wish to give the Reforms in India a fair trial without at the same time intending or permitting foolish excesses far beyond the plan of the Reform schemes.

Lord Lytton in England.

Lord Lytton lost no time in contradicting the rumour that he did not intend to return to the Governorship of Bengal on the expiry of his four months' leave. We are glad of this. Lord Lytton is by no means the first British Statesman to discover that the views he held before coming to close grips with Indian politics and administration on the spot have to be modified very considerably in the light of practical experience. The five years' period for Viceroys and Governors may, not infrequently, be divided up as follows. In the first year preconceived ideas prevail and are, to some extent, acted on. In the second year doubts as to the correctness of the preconceived ideas begin to assert themselves and action is cautious and wavering. In the third year the statesman begins to find himself and to form views for himself in accordance with his much increased knowledge and experience. In the last two years he is concerned with retrieving his early mistakes and in shaping the final record of his administration so that it may stand as a lasting expressoin of his policy and rule. To cut off the final period would be a very great pity. Lord Lytton became Governor of Bengal in 1922 and it should be of great advantage that before entering on the last lap he has been able to come back to England and have a look at India from the other end of the telescope.

Mr. Gandhi's Vision.

Mr. Gandhi has been drawn into a contradiction of the views put forward by Mr. J. A. Spender in a recent article as to what he, Mr. Gandhi, would do if he were Emperor of India. Mr. Gandhi was chiefly concerned to deny emphatically the suggestion that he would impose regulation against the admission and settlement of Europeans in India, not greatly different from those in force in South Africa. Mr. Gandhi outlines a policy of peaceful and universal friendship with all, irrespective of class, creed and colour. He would disband practically the whole army of occupation, retaining only the police necessary for the protection of citizens against thieves and robbers: he would guarantee the fullest protection to every European living in India and also to every honest European enterprise, but would put a prohibitive tariff on foreign cloth: he would prohibit the importation of intoxicating liquor, close down distilleries and confine the manufacture of alcohol to proved medical necessity: he would guarantee the fullest protection to all forms of religion and throw open to the untouchables every public temple and school. Finally Mr. Gandhi has told how he would deal with the problem of Hindu-Moslem antipathy which is at the present time baffling Indian political leaders as well as Government. Mr. Gandhi gives his solution in the following words: "I would summon the leaders of both communities, search their pockets, deprive them of lethal weapons and eatables, and lock them together in a building, refusing to open the door until they had settled their quarrels."

The above sketch of Mr. Gandhi's policy reminds the writer of an experience he himself had many years ago when holding charge, as a young and inexperienced Deputy Commissioner, of a district in which there was a town of some importance because of its pristine Moslem grandeur. A Moslem festival was approaching and Moslems and Hindus came to demand special police pre-

Digitized by Google

cautions owing to the alleged imminence of hostile demonstrations from the other side. The accounts given by these deputations were most alarming. The writer luckily had at his side a wise and experienced Superintendent of Police who was strongly in favour of leaving the quarrel alone, as he thought that it would be minimised if taken no notice of. The writer decided to follow this advice and when pressed by the deputations to take action told them a story of two quarrelsome dogs whose continual fighting became a perfect nuisance and was only stopped when the two fighters were locked up for a day and a night in a room by themselves with no one to interfere whatever happened. No special precautions were taken and nothing untoward happened, but to this day the writer has had twinges of conscience over the affair and has often wondered what would have been his official fate if the Police-officer's advice and forecast had not proved correct. Even at this distance of time to find that Mr. Gandhi would have approved is decidedly heartening and the twinges of conscience will occur no more.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 15.

East is East.

On Tuesday evening the Calcutta Football Club played Mohan Bagan a return and lost—their first defeat this season—by 2—1. Half-way through the second half Dubuis, ex-Corinthian and Casual, broke his leg badly and obviously, and the greater part of the Indian crowd cheered wildly; when the stretcher was brought on it was greeted with a storm of booing and laughter which only died down when the Mohan Bagan players rushed at the crowd and begged them to stop. The English papers say it was a section of the crowd but this is not the fact; the jeering was almost as loud as the yells when a goal was scored. Frankly, the English crowd was shocked, and at the time it was difficult to remember that the Indian crowd was within its own definition of "playing the game." To a Home reader probably nothing could bring out more vividly the difference in outlook between east and west. Here, where animals are ill-used horribly every day, where human lameness and deformity are amongst the principal elements of the comic, the disabling of an opponent is a gift of the gods towards victory. Jungle law perhaps, but the jungle is less than 50 miles from Calcutta.

Cruelty in the Streets.

Cruelty to animals is the subject of correspondence in the Press this week. In spite of the greatly increased efficiency of the Society for Prevention of Cruelty to Animals, there are times when a wave of fiendishness seems to seize cart drivers in the city. It is of course very trying to have to carry on in weather such as we are having, but this is no excuse for the treatment meted out to the wretched draught animals that have to drag their overloaded carts through the streets during the hottest portions of the day. The heavier goods traffic in the city is drawn almost entirely by water buffaloes, whose natural habitat throughout the hot weather is the beds of streams and ponds, where they lie throughout the day covered in water. Now that the thermometer is at 106, one sees them staggering through the streets, hardly able to stand, but being thrashed forward without cessation with the butt ends of heavy whips. There is no Indian public opinion on the matter at all and cart traffic is entirely in the hands of Indians; mercifully, motor transport is increasing.

The Asiatic Society.

Dr. Van Manen, the energetic Secretary of the Asiatic Society, has been lecturing at the Rotary Club in Calcutta this week on the Institution which has expanded so considerably under his administration. The Asiatic Society was the first body to undertake scientific research in India and the great Indian Museum in Chowringhee is only an enlargement of its original collections. It is the oldest Institution of its kind in India and it is justly proud of its record and of its high position amongst the learned societies. It is good to learn that its membership has now reached record numbers and that it has never been more flourishing than it is to-day, another reminder of the fact that the new Anglo-India is more serious-minded than the old.

Falling British Trade.

The publication of the Annual Volume of Statistics in regard to the Seaborne Trade of India calls attention to the decrease in the proportion of the total imports of the country which comes from the United Kingdom. Three years ago these amounted to 60 per cent., but last year only 54 per cent. originated in the United Kingdom. Before the War the proportion was 63 per cent., so that the present indications are that the Home Country is suffering at the expense of the Continent, America and Japan. At the same time the exports from India to the Home Country remain at a steady 25 per cent. of the total, so that while Great Britain still continues to be the principal customer of India, the markets of India are gradually being lost to her. It cannot be doubted that in part at least protection is responsible for some of the fall and British merchants and manufacturers will have to recognise the fact that the politically-minded Indian has every intention of translating his anti-Government feelings into practical form. If the plebiscite were taken at the present time throughout political India, it is probable that a majority would be found in favour of a preferential tariff for all other countries as against Great Britain. Labour Party please note!

Politics.

Bakr-Id passed off with practically no disturbances anywhere, but there was an unpleasant reminder of communal tension yesterday when only the prompt action of the police prevented another outbreak in the city.

The Directors of *Forward*, who are the moneyed men of the Swaraj Party, have issued a manifesto explaining why they disagree with Mr. J. M. Sen-Gupta's tactics and policy, and he has issued a reply which does not carry the matter any further; the opinion is growing that he has succeeded in finally wrecking the Party.

The Corporation debated at length whether or not they should accept the resignation of the Moslem Councilors, the meeting obviously being in favour of doing so. However, on the recommendation of Mr. J. M. Sen-Gupta, it was decided to postpone consideration of the matter for two weeks in order to enable the Moslem Party to reconsider their decision.

There have been a number of police raids over the week-end under Regulation III., i.e., searches have been made in connexion with revolutionary activities. A number of arrests have been made and considerable quantities of revolutionary pamphlets seized. Who is paying for this propaganda work?

Men and Things.

Men and things in Calcutta at the moment are severely "under the weather." With the thermometer at 106 and humidity running in the 90's, it is intolerable, and we are not surprised to read that the range of temperatures this June has been higher than at any time for the last fifty years. Full reports appeared at the week-end of the speeches made at the various Indian dinners in London, and we have naturally felt a certain mount of interest in reading of the beauties of our wonderfuml city, and the duties of the European community. Distance obviously

Digitized by Google

lends enchantment to others besides those who had the fortune to remain in Calcutta during the boom years of the War; there are still a few thousands left here carrying on their jobs cheerfully without any hope beyond their pay, to whom official encouragement would have been more grateful if it had been less belated.

The Trivial Round.

The Tollygunge Gymkhana meeting starts on Saturday next. Thanks to the storms last week the course is in much better order. The Club has never looked better or greener than it does to-day and if only the weather would break, we ought to be in for some pleasant Saturdays.

The outstanding sporting event of the week-end was the Soccer match between England and Scotland on the Calcutta Club ground. The proceeds were given to St. Dunstans and there will be something like £1,300 to pass on to that worthy institution. There was a certain amount of correspondence in the Press on the day of the match, protesting against the stirring up of communal hatred by the arrangement of such a fixture in the present state of tension; in particular it was felt that the question of music before matches ought to be the subject of a Government pronouncement; but in spite of the fact that eight goals were scored, four each, there was no bloodshed.

Defying the appalling heat, the American Vaudeville Company is carrying on at the theatre and much amusement was caused on Saturday night by the performances of some lads from the mills in a singing competition. The picture theatres are full of films, mostly American, showing the extraordinary lives that you people lead when love and hate get in their deadly work; it is all highly educative for our Indian brethren.

Markets.

Although business both in jute and gunnies has again been on a small scale, there are signs of a rather more confident feeling, particularly in the gunny market. Prices have risen slightly on the week and at the close there is a better demand for early delivery than has been apparent for some time. The new crop reports continue to be good, but sellers are very reserved and disinclined to do business. The piecegoods market has gone from bad to worse and the bazaar is practically deserted; prices have depreciated in almost all sections and with the prospect of cheaper cotton, dealers are not keen on discussing new business. Further, the intercommunal tension, which is still in evidence, is another disturbing factor. There has been a considerable setback in the tea market both here and in London on the increased output reported from Java and Ceylon. The result has been a material reaction in prices amounting in some cases to as much as 2d. per lb. in England and 2½ annas here. It is anticipated that stocks for Northern India to the end of June will be up on last year and it appears probable that still lower prices may be experienced before the market settles down again.

In the Stock Exchange, the chief feature has been the steadily falling market for Government Securities; the much discussed New Loan is back to its issue price, and most others have declined proportionately. At the close there is a firmer tendency, but the future of this market is somewhat obscure at the moment and depends to a great extent on the action of the Bombay speculators, who subscribed so heavily for the New Loan. For jute shares there has been a good all-round inquiry at hardening rates; an easier tendency set in later. Teas have not been given the attention accorded to them previously, mainly owing to the weaker market for the commodity, but, on the other hand, rubber shares have shown signs of coming into their own again and the opinion here is that this market is likely to see a rise in the course of the next few months. Business in the Exchange market has been very dull; rates have remained unchanged but the undertone is slightly quieter at the close, due mainly to lack of business. Money has been in plentiful supply and borrowers have been difficult to find; rates continue to be nominal at 2 to 2¼ for Call and Short notice.

THE INDIAN MAIL.

The Wealth of Bengal.

Mr. Gandhi's paper *Young India* has recently published an article by Mr. C. F. Andrews in which the fertility, beauty and prosperity of Bengal, as seen and described by Bernier in the seventeenth century, are contrasted with the very different conditions of to-day. Bernier was deeply impressed with what he saw, and assigned to Bengal the world pre-eminence in fertility hitherto ascribed to Egypt. Bernier said: "The rich exuberance of the soil, together with the beauty and amiable disposition of the Bengali women, has given rise to a proverb, in common use, that the Kingdom of Bengal has a hundred gates open for entrance, but not one for departure." Mr. Andrews says, "But to-day this same fair land of Bengal is no longer as prosperous as it was in those ancient days. Much indeed remains of the beauty of the past, both in the features of the Bengali people, and also in the panorama of vegetation on both sides of the ancient river ways. But poverty, misery, want and ugliness, have crept in on every hand. The jute factories, belching foul smoke, have defiled both banks of the river Hugli almost right up to its entrance to the sea . . . . The economic exploitation is worse than the aesthetic vandalism . . . . A general air of misery and poverty is now to be seen on every hand." Mr. Andrew attributes the decay to the rapid ruin of the cotton industry in Begal owing to the invasion of the cheaper mill-spun and woven cotton goods from Lancashire and says that, "the rulers, consciously and unconsciously fostered and encouraged the change." He says that a somewhat similar decay and dissolution of village life took place in England itself, owing to the introduction of machinery, but in England things had more chances of righting themselves in the long run, because rulers and ruled were one people, and the injury committed on one side was compensated on another. "But in India," says Mr. Andrews, "under British rule, the injury has been done by those who live outside India." Mr. Andrews is good enough not to rest content with pointing out how British rule has ruined Bengal: he tells us how the old prosperity can be regained. "Only by earnest and self-sacrificing restoration of homespinning and homeweaving back to the villages can the beauty and prosperity, the health and wealth, of Golden Bengal be restored."

Earnest and well-meaning people in England often ask me why it is that Mr. Gandhi, who, a few years ago, was reputed to be one of the most influential personalities of the world, has become a "back number." There are many possible reasons but the fact that Mr. Andrews feels it right and necessary to write such stuff as the above in Mr. Gandhi's paper suggests a possible answer to the question. Mr. Gandhi and his faithful henchmen and loyal admirers have never faced facts, but have preferred stories and imaginings only credible in the nursery.

The Bengal Pact.

It seems to be recognised on all hands that the leader of the Bengal Swarajists, Mr. Sen Gupta, Mayor of Calcutta, won a personal triumph when he succeeded in preventing the discussion of the Hindu-Moslem Pact at the meeting of the Bengal Provincial Congress Committee at Calcutta on Sunday, June 13. The Pact, which was the creation and legacy to the Swarajist party of the late leader, Mr. C. R. Dass, enabled Moslems to stay

Digitized by Google

in the party while at the same time it disabled many Hindu members from loyal co-operation and support. Take away the Pact and the coalition between Hindu and Swarajists was practically destroyed: discuss the Pact and the dislike of it by the Hindus became public and must give offence to the Moslems and break the Pact in a very short time. The remaining alternative was to burke discussion of the Pact and this Mr. Sen Gupta succeeded in doing, but only at the cost of the secession of a number of his party members. The Pact was devised as a means of reconciling Moslem politicians to fighting the Reform schemes side by side with the Bengal Hindu Swarajists. It was never very healthy or promising and is not likely to resume vitality at the end of what the papers call its present condition of "suspended animation." It seems more possible now that we may soon be entering upon an era of widespread Moslem co-operation in the working of the Reform schemes, with their rightful and declared dependence on the judgment of Parliament as to the time and measure of further constitutional advance. The logic of events has beaten down the unrealities of the Swarajist theories. It may be stated with confidence that a great majority of Moslems in India will welcome in their hearts the opening of the road to willing co-operation with Government, quite apart from any sectarian feeling aroused by recent happenings which has made them dislike their Hindu fellow travellers on the road leading in the oposite direction. If and when the present communal bitterness dies down, the majority of Hindu politicians will probably find that senseless opposition to Government will be looked upon by the Moslems as an obstacle rather than as an incentive to unity. The great problem for statesmen responsible for the well-being of India is now to foster and promote the co-operation of all sections of the population in the reforms from *bona fide* motives. There will, no doubt, be a strong tendency to co-operate for sectarian or party motives but such co-operation is very brittle.

Indian Agriculture.

I once heard a very efficient administrator say that a golden rule for anyone wishing to improve existing institutions was to pick out two or at most three salient defects and to remedy them. He had found, he said, that attempts at wholesale reform produced so much friction that the last state was worse than the first. The whole question of the reform and improvement of Indian Agriculture is now to be considered. It would be easy to pick out dozens and dozens of defects but a great many of these are better left alone, at all events for the present, as remedies for them would produce undesirable friction and very unsatisfactory results. In some parts of the country the whole system of land ownership, tenants' rights and sub-tenancies is rotten. Some of the Settlement Reports of Bengal districts, for instance, reveal a most painful and unjust condition of affairs, partly the result of mistaken experiments in the Land Revenue and Settlement policies over a long course of years. To attempt to remedy the defects of this system would, however, produce a host of troublesome consequences. This was recognised when the Royal Commission was constituted in January last and it was expressly laid down in the terms of reference that recommendations for alterations in the existing systems of land ownership and tenancy would not be within the scope of the Commission's duties. A very hopeful avenue of improvement in most parts of India is the financial organisation of agriculture. In commenting on a recent conference in connexion with Co-operative Societies held in Bengal the *Statesman* remarks that the industry is not generally organised for sales or for credit, whereas trade and commerce have an elaborate system of credit. Agriculture had nothing but the money-lender until co-operative credit came along. It would be very difficult to over-estimate the improvement in the agricultural conditions of India that might result if the whole system of agricultural finance could be established on a sound basis. It may be hoped that the Royal Commission will point the way to this being done.

A Shikar Story.

The following account of an encounter with a tiger is taken from an Indian paper. The Editor of this section has been an enthusiastic tiger shikari for a great many years; he has had some exciting personal experiences and has read and heard of many more; but he considers this story, quaintly but most graphically told, about the best that he has ever come across. He is sad that the adventure proved fatal to the gallant Mr. Shums Tyabji and congratulates Mr. Azeem Tyabji on his splendid pluck and on his miraculous escape.

"The following is a correct and detailed account of the encounter of Mr. Shums Tyabji and Azeem Tyabji and the remarkable fight Mr. Azeem Tyabji had with a tiger in the jungles of Adilabad district in the Nizam's Dominions on the 3rd of May last. It appears that on the night of the 2nd of May, Mr. Shums Tyabji wounded a tiger from a 'machan.' The next morning at about 8 a.m. he started with Mr. Shujauddin and Mr. Azeem and the shikaries and beaters and a herd of buffaloes to trail the wounded tiger and to shoot him that he may not be a danger to the villagers. Mr. Shums and Mr. Shujauddin were to be on the trees to shoot, and Mr. Azeem was to be somewhere between them on another tree as a spectator to take photographs.

"After trailing the wounded tiger for about six miles from the village of Andoli Chandoli, where Mr. Shums had wounded him, they came to a large patch of tall grass which they entered, and the shikaris located the tiger about 25 yards away in it, some 60 yards inside from the side skirts of the patch, with his face towards his pursuers. At this stage Mr. Shujauddin's automatic rifle was found to be out of order, and he was compelled to wait to put it right. Messrs Shums and Azeem pushed on and took a long turn round from the right side to get behind him, when the beast hearing Mr. Shums rushed out of the grass and charged terrifically with his tail up and curved and a frightful and continuous roar. He came up like lightning with leaps and bounds, crossed the grass in a slight curve, and no sooner did he reach the open ground than he dashed across straight upon Mr. Shums. The trail had shown that he must have been very badly wounded, high up in the left hind leg, and had bled profusely, and for several miles he had rested at shorter and shorter intervals, until he had begun to rest at every 100 yards, and every now and again writhed with pain and laid himself down and rolled from side to side as the marks on the ground had shown, and blood had trickled more and more the further he had gone, and he was compelled to drag his wounded leg across with difficulty, but there was no sign of loss of vigour or weakening of his awful charge. He must have come up upon them in 3 or 4 seconds, and Mr. Azeem found himself not destined to take photographs from the top of a tree but on the ground to defend his cousin Shums from the fury of a wounded tiger well-known as one of the largest in those jungles and an old culprit who had carried off many a cattle.

"Both Mr. Shums and Mr. Azeem stood their ground, Mr. Shums first fired when at a distance of about 30 yards; Mr. Azeem fired next from a distance of about 20-25 yards. There seemed to be no effect on the speed or velocity of the tiger from the injuries of these shots, or of the previous night. Mr. Shums perhaps waited to fire the second shot when the tiger was on his last jump, but he was upon Mr. Shums before the latter could do so. Mr. Azeem fired his second shot when about 7 yards away. One of these shots had broken the tiger's jaw as was subsequently found. But all this frightful injury seems to have had no effect till this time, though it must have ultimately told on the fate of Mr. Azeem. The tiger with a bound seized Mr. Shum's arm in his teeth, bit him, clawed his head, pulled him down, threw him on the back, stood over his chest to finish him

Digitized by Google

and opened a mouth so wide that it seemed to be capable of taking in the whole of Mr. Shum's head and a portion of his chest.

"At this awful moment, Mr. Shums calmly said to himself without grief or fear, in a true sportsman's spirit, "Abhi to mujhe mara"—now the game is up. But Mr. Azeem, who was some 10 feet away on his right and some 3 feet behind, rushed up courageously to save his cousin from this awful death, and having no time to re-load, came up in front of the tiger, and began beating him on the forehead with the barrels of his gun. He hit the animal with as great a force as he could command, once and then a second time, and despaired to think he had produced no effect whatever on the furious animal, except that after the second blow he had closed his mouth. Mr. Azeem then struck a third, fourth and perhaps a fifth blow, when the tiger left Mr. Shums and ferociously turned upon his rescuer, and jumping upon him attacked his head with his mouth. In this terrible danger, Mr. Azeem "took counsel from the valour of his mind" and dodging the animal, dipped low, protecting his head with his right arm. The animal furiously bit his arm and pulled him down and Mr. Azeem found himself on the ground upon his hands and knees, facing the beast. He had saved Mr. Shum's life, but the moment was most awful for him, as he thought soon the teeth of the tiger would crush his bone. To his surprise the tiger let go his grip, perhaps because of his broken jaw. Instantly with the aid of the front legs of the beast which he held to help him to crawl, Mr. Azeem slipped underneath the stomach of the tiger, passed between the two front legs, seized the gun of Mr. Shums which lay close to him, and standing up, struck two blows with the barrel on the wounded jaw of the animal—not knowing that one of the barrels was loaded and ready to be fired.

"The shikari with him had thrown down his muzzle-loader and climbed up a tree and the beaters were 250 yards away and there was no one to assist Mr. Azeem. But Providence came to his assistance. The tiger bit the barrels of the gun and dented it badly in several places and clawed it, and though he had shown no signs of weakness, perhaps now exhausted with leg broken at the thigh, with the loss of blood the whole night, and now a jaw broken admitted Mr. Azeem the victor, and bounded away. Mr. Azeem helped Mr. Shums to stand up and said, 'Thank God we have got off so cheap.'

"All this had taken less than a minute, and very soon after Mr. Shujauddin having heard the shot and the fate of Mr. Shums, rushed upon the scene, and found Mr. Azeem and Mr. Shums both were quietly standing. Mr. Shums was carried and Mr. Azeem walked a mile to the village and then went by carts 8 miles to Utnoor without a groan. Mr. Shums has unfortunately passed away. We are glad Mr. Azeem is likely to be discharged from the hospital in a few days."

INDIAN COMMERCIAL NOTES.

The latest report of the progress of the monsoon shows that a shortage of rain has been experienced over the North-West of India, including the Western portion of the United Provinces, the Punjab and the North-Western Province. Most parts of the Bombay Presidency have received a good deal of rain. There are signs that the monsoon may shortly extend itself to the areas in the North-West where the deficiency has hitherto been most marked.

The Bombay Corporation is apparently about to rescind its resolution of 1923 boycotting British Empire goods. This wretched decision was arrived at in an atmosphere of political and racial ill-feeling and rancour and has been found ineffective in practical application and contrary to the interests of the City as it stood in the way of getting the best value for the Corporation money.

The mail papers give *in extenso* the correspondence between the Millowners' Association, Bombay, and the Government of India leading up to the appointment of a second Tariff Board to hold an inquiry into the alleged need of protection by the cotton textile industry. A second Board was considered necessary in view of the preoccupation of the existing Board with the statutory inquiry into the steel industry required by the Steel Industry (Protection) Act, 1924.

The terms of reference for the Second Board are as follows:

(1) To investigate the condition of the cotton textile industry in India, with special reference to the industry in Bombay and Ahmedabad; (2) to examine the causes of the depression in the industry and to report whether they are of a temporary or permanent character; (3) in particular, to consider whether, and if so to what extent, the depression is due to the competition of other countries in the home and export trade; (4) to report whether, having regard (i) to the fact that the industry has long been firmly established in India, and (ii) to the interests of the consumer and to all other interests affected (a) the industry is in need of protecton, and (b) if so, in what form and for what period protection should be given; and (5) to make any other recommendations that are germane to the subject.

The Bombay Millowners' Association had requested the Government of India to take action to impose additional duties upon the imports of piece-goods and yarn from Japan into India, until Japan took steps to prohibit the employment of women at night, and to reduce the length of the working week per operation in conformity with the Hours' Convention passed at the Labour Conference at Washington. The Government of India found that the line of action suggested by the Millowners' Association would raise difficult points connected with the standing agreements with Japan and avoided these by appointing a Second Tariff Board with carefully chosen and expressed terms of reference.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

An Important Concession.

On another page in this issue will be found details of the important concession in Bulgaria granted to the Bulgarian Development Company of London for the manufacture and export of bacon and other products. The undertaking will call for the construction of cold storage installations, warehouses, etc., and as it will entail a new industry for Bulgaria it should mean much for the country and ought to have an important influence on the general economic situation there. It will be noted that there has been a certain amount of opposition to the concession, but this was perhaps to be expected for the prevailing tendency since the War has been for countries to view foreign undertakings, broadly speaking, in a not very friendly light. But the countries which can afford to do without foreign assistance are relatively few as a result of the War, but it is emphatically satisfactory to know that one determining feature in the grant of the concession was the high reputation this country enjoys in Bulgaria and the desire to open up more intimate relations with the English market. It is particularly gratifying to have this confirmation of a fact, so often emphasised in these columns, that there really is a great opening for British traders in the Balkan markets if only they will pay the requisite attention to these outlets. Our Correspondent, it may be added, makes the interesting suggestion that the outcome of this concession will be the establishment of a British bank in Bulgaria. The lack of such an institution has hitherto been a great handicap to the development of British trade with that country, and it need scarcely be said the existence of such an institution would give a great impetus to trade between the two countries.

The Pending Refugee Loan.

The Bulgarian Refugee Loan negotiations are the subject of another interesting despatch from the same Correspondent who gives the gist of a comprehensive statement by M. Bouroff to the Bulgarian deputies on the negotiations, in the course of which he touched on the conditions attached to the loan. The question which has given rise to the greatest difficulty is the settlement of Bulgaria's obligations to France. It is pointed out that the payment of the 81,000,000 French francs due would necessitate an addition to the amount of the loan of an equivalent of that amount. There is also the question of the payment of matured coupons which by the existing agreement, which lapses on April 1 next, takes place at an exchange of 33 gold centimes for each gold leva. France now asks for a rate of 52 centimes, and this it is urged Bulgaria would be unable to pay. Confidence exists that both these difficulties will be overcome, and it is much to be hoped that there is no undue delay with regard to the issue of the loan for it needs no emphasis that the refugee settlement is a problem which requires a speedy solution.

P. and O. Banking Corporation.

In his speech at the meeting of the P. and O. Banking Corporation Lord Inchcape briefly reviewed trade conditions in the East. The reduction in the bank's holding of bills arises, he pointed out, from a decrease in the export trade of India during the year. Though there was a good monsoon both the exports and imports of India have undergone a considerable contraction. The decline in the exports was most pronounced in grain, tea, wool, and oil seeds, and this was not compensated for by the increased exports of jute and jute manufactures. There was an even greater contraction in the imports and Lord Inchcape expressed regret that a large part of the decline was in imports from Great Britain. He paid a tribute to the improvement in the Indian financial position, which he declared to be one of the most satisfactory features of the year so far as Indian conditions were concerned. Turning to the position of the bank he said that the work done during the past five years had resulted in the establishment of good and valuable connexions not only in London, but all over the East. "When trade revives," he added, "as it undoubtedly will do, we shall find ourselves equipped to take a share in the activity which will ensue." He went on to say that the first five years of the bank's existence coincided with a time of world-wide fluctuations in prices and exchanges, but gradually the elements of instability are beginning to pass away and he looks forward "to the time when the fruits of prudence and careful handling of our resources will yield us the advantage which we have a right to expect from the policy we are adopting."

The Restoration of Turkey.

Encouraging particulars of the position in Turkey were given by General Sir Herbert Lawrence at the meeting of the Ottoman Bank this week. He pointed out that the work of economic restoration, in which Turkey has been engaged since the War, has been pursued by the Government during the past year with an energy and perseverance that deserved the fullest recognition. Agriculture has come in for special encouragement, and among the measures that have contributed to the improvement of this industry he noted the abolition of the tithe, the distribution of seed to farmers, and the provision of motor tractors. The area sown in cereals in 1925 showed an increase of 40 per cent., but owing to inadequate transport it was nevertheless necessary to import a quantity of wheat. The development of agriculture has had its effect on the trade returns, which show a satisfactory tendency for exports to increase at a greater rate than imports.

Turkey's Finances.

Sir Herbert Lawrence commended the monetary policy pursued by the Turkish Government, which he declared was above criticism. Despite the difficulties of an economic character with which it has been confronted there has not been an increase in the note issue. Turkey's own resources are, however, inadequate for the development of the country, as the local capital is already fully employed, and Sir Herbert Lawrence expressed the hope that so soon as the question of the foreign debt of Turkey is settled foreign assistance will be forthcoming on a sufficient scale.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, July 1.

Demands of Traders.

A congress of traders, held recently in Sofia, has drawn up a series of demands and recommendations in regard to the needs of Bulgarian commerce in the present economic and financial situation. In particular the traders ask for the following:— the suppression of all obstacles to the development of exports; drastic economies in public and private expenditure; for it to be obligatory for the State to obtain its supplies from makers and manufacturers in the country; the acceleration of the payment of the debt of the Treasury to the National Bank so that the latter institution may be able to remedy the lack of gold by an increase of the fiduciary circulation which is at present much below the level fixed by the Reparations Commission; the creation of an economic council; the establishment of rapid and cheap means of communication; the grant of a delay to a longer date of the collection of unpaid taxes; the safeguarding of the interests of national production in the case of concessions granted by the State; the institution of a systematic policy for the alleviation of the Reparations Debt of Bulgaria and the return to military conscription in the place of the present volunteer army which absorbs a great part of the resources of the Bulgarian Budget.

The Bacon Concession.

For some time praiseworthy efforts have been made by Bulgarian business men to attract foreign capital for the support of the national production, and already appreciable results are to be recorded. The State for its part appears to be animated by the desire to follow the same policy, and it has signed after long negotiations a contract with the Bulgarian Development Company of London by virtue of which that concern, or rather the company which it will form after the ratification of the contract for the concession by the Bulgarian Parliament, will obtain the monopoly for the manufacture and exportation of bacon, a product still unknown, but readily obtainable, in this country which can produce considerable quantities of pork. The bacon industry calls for a special system of pig breeding which does not exist at present in Bulgaria, and also the construction of cold storage installations and warehouses. The concessionaires have also obtained the right to export, but not as a monopoly, all other kinds of meat and products of other kinds and also material facilities for these exports. These facilities have called forth in the Sobranye the strongest objections on the part of the representatives of Bulgarian commerce and industry who envisage a formidable competition for their own enterprises. There has also been strenuous opposition in certain political circles specially anxious for the independence of Bulgaria's national economy which they fear to see monopolised by the concessionaires. To calm the anxiety the Government found itself compelled to add to the contract of the concession an explanatory declaration which will have the force of law and which to avoid all eventual misunderstandings stipulates: 1. That the right of the concessionaires to receive free lands in the vicinity of stations shall refer only to slaughter houses, cold storage installations, warehouses and other buildings necessarily bound up in the enterprise, that is to say for the preservation of bacon and other products of the pig for export, but in no case for buildings for general use which the concessionaires wish to carry out; that the grant of these lands shall be made on the presentation of the plans of the buildings to be established and that in everything the fiscal and sanitary control of the State shall remain intact; 2. That the enterprise shall benefit by freedom from all duties and taxes only for the manufacture of bacon and other products derived from the flesh of the pig, for the utilisation of the cold storage installations and for the exportation of various other kinds of meat; 3. That the concession shall be considered as lapsed if the industrial enterprise which it is at present is transformed into one purely commercial; 4. That the vessels by which the concessionaires shall assure direct maritime communication between Bulgaria and England shall be new vessels the value of which shall be established by official means as is the custom in respect of all luxury articles.

With these slight amendments the concession, which had been discussed for several weeks, was voted by 102 against 54, there being a certain number of abstentions and especially voluntary absences. It can be said that if it has passed it is first by reason of the good renown that English capital enjoys in Bulgaria where there is a strong desire to enter into more intimate relations with the English market and secondly by reason of the feelings of the mass of the peasantry who are awaiting a new impetus for the development of Bulgaria's national economy.

It is a most important enterprise which is commencing, and one which, after the establishment of the company for the exploitation of the concession, will lead to the establishment of an English bank in Bulgaria with all the advantages which will result from that step to Anglo-Bulgarian commerce.

A BULGARIAN SAMPLES FAIR.

The British Vice-Consul at Sofia reports that the Samples Fair recently held at Gorna Orechovitsa having assumed a national character, was styled the First Bulgarian Samples Fair. In future it will be held twice a year, the dates being from March 27 to April 6, and from September 17 to 27. The exhibits at the recent Fair were divided into three sections—agricultural, industrial and various trades. So far there has been no integral exhibit of any foreign country at the Fair, although it would appear that France, Germany, Austria and Italy are seriously considering the erection of national pavilions for the coming autumn. Consequently the industrial side was largely occupied by exhibits of the growing industries of Bulgaria, such as hardware, heating stoves, office safes, boilers, glass ware, ceramics and ginning machines, mechanical saws, radiators, cotton yarn, musical instruments, etc., raincoats, carpets, silk shawls, cotton thread, buttons, furniture, etc., most of which suggested a quality and price calculated to render competition difficult.

The exhibitors numbered 510 as against 420 in the Autumn Fair of 1925, while the public visiting the Fair totalled 750,000 and 65,000 respectively. The industrial exhibits included agricultural and industrial machinery, 41; metal work, 71; wood work, 79; textile manufacturers, 47; embroidery and hats, 58; sugar products, 58; ceramics, 12; brushes, 4; pharmaceutical, 3; agricultural products, 21; and leather and leather goods, 68. The value of the business transacted was estimated at 120 million leva as compared with about 100 million leva in the Autumn Fair of last year. Only two British firms exhibited.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 13.

The chief incident of the first full week of the second half of the year has been a further slump in the franc, Belgian currency having gone above 200 to the £ Sterling and the French too, at one time, worse than 190. This is an exceedingly unfortunate omen for the success of M. Caillaux's plans, which were to embody the recommendations of the French Expert Committee. There is much discussion now as to what level M. Caillaux (if his stay in office is prolonged) will aim at for eventual stabilisation by tying the franc to gold. The future of the franc should essentially be avoided as a case for gambling by the uninitiated.

Once again the Stock Exchange waited a little wistfully for Thursday's Bank Rate decision, hoping against hope that the reduction, warranted by the monetary position, might be made in spite of the continuance of the coal stoppage. But no change was made, and the period in which the natural flow of gold to this country may be expected is drawing to its close. Consequently, if Bank Rate is reduced in the near future, the period of the lower rate cannot be expected to be very long; and if it does come at all, it is likely to be utilised by the Treasury for making some conversion offer respecting the Treasury Bonds maturing next February. That conversion problem is becoming urgent.

The flow of funds away from the normal employment of financing trade and production keeps the gilt-edged markets firm, and also accounts for the heavy over-subscription of many new capital issues. This week-end sees a notable flotation as a public company of Morris Motors Ltd., whose figures, hitherto unknown to the public, are of a magnitude that will cause much surprise and will certainly attract investors of many types.

Home Railways and the Coal Stoppage.

A question of first-class interest to investors is whether the traffic losses suffered by British railways owing to the general strike and the coal stoppage are sufficiently reflected in the present prices of the ordinary stocks. The half year traffic figures for the four big railways compared with the corresponding period of last year show losses of over 14 per cent. for the London Midland and Scottish, of about 14 per cent. for the London and North Eastern, of about 12 per cent. for the Great Western and of 9 per cent. for the Southern. Against these losses, it is true, certain savings in expenditure can be placed. For instance, two weeks wages bill were saved at the time of the general strike. But all the same the net loss incurred by all the lines, and more particularly of course the London Midland and Scottish and the London and North Eastern, which are more dependent upon goods traffic than the other two lines, must be very considerable. That being so, the question whether present dividend rates can be maintained depends very largely indeed upon the views taken by the various directors as to how far it is justifiable to draw upon accumulated reserves for distribution to shareholders. If rates are to be maintained reserves will obviously have to be drawn upon considerably more freely than of late. The reserves are there. Dividends can be maintained if the directors choose to follow that course. But will they? That is a moot point. On the whole present quotations of Home Railway Stocks reflect a belief that the maintenance of dividends is at least as likely as their reduction. The belief may prove to be justified but it is something of a gamble. It may be assumed also that the comparatively small drop in Home Railway stock prices in this time of great industrial upheaval, also reflects something else—that is, that the Railway Act of 1921 will eventually operate, as it was intended to operate, to safeguard dividend earning capacity of the lines by means of rate adjustment. But the raising of railway rates in times of bad trade raises economic issues of a complex and difficult nature.

Dividends and Income Tax.

It may be useful to those investors who have not yet undertaken their half-yearly audit of securities if we give a hint or two relating to income-tax, for it is a never-failing source of trouble. In particular we refer to the description of some distributions being "less tax" and others "tax free." The policy of "tax free" payments is in itself open to criticism. It dates from a time when the income tax was much below its present level, and a tax free payment appeared to indicate an unusual degree of generosity on the part of the company making it. Subsequently tax free payments, such as the interest on War Loan were devised with an eye on the small investor who not being liable to the tax would not be put to the trouble of claiming a refund.

It is not within the power of any company or individual to "contract out of a liability" such as income tax, so that in this sense the use of the term "tax free" is misleading. It gives no real advantage to the holder of securities whose income is liable to tax, as the gross amount has to be returned and tax paid on it in the long run. Some little trouble, it is true, is saved to those investors whose income is below the taxable level. But except in the case of emergencies such as that in which the 5 per cent. War Loan was issued, it is doubtful whether the implied evasion of a national responsibility is desirable.

COMPANY NOTES AND REPORTS.

PHŒNIX OIL AND TRANSPORT.

The report of the Phœnix Oil and Transport Company for the year ended December 31 states that operations yielded progressively satisfactory results, and the net profit for the year was £284,230, to which must be added the balance brought forward of £221,555, making £505,785, from which has to be deducted the interim dividend paid on July 27, 1925, which absorbed £206,163, leaving £299,622. The directors recommend a final dividend for the year 1925 of 6d. per share on the £1 shares and the relative dividend of 3.488614d. per share on the 1s. shares, which will absorb £103,783, leaving £195,839, which it is proposed to carry forward to the current year. The directors have declared an interim dividend in respect of the financial year ending December 31, 1926, of 6d. per share on the shares of £1 each and 3.488614d. per share on the shares of 1s. each, less income-tax at the rate of 4s. in the £. The reason for declaring an interim dividend of 1s. per £1 share and the relative amount on the 1s. shares last year was that no dividend was paid out of the substantial profits earned to December 31, 1924, which were carried forward, but the company having, as it is hoped, now settled down to the payment of regular dividends the Board have in respect of the current year adopted the customary practice of limiting the interim dividend, with the idea of paying a larger final dividend, and in view of the improved results for the first six months of the current year anticipate that the total distribution for 1926 will be in excess of that for 1925. The gross production of crude oil by the Phœnix Group of Companies for the last four years has been as follows (in tons):—1922, 42,106; 1923, 105,259; 1924, 187,904; 1925, 267,380; while for the first six months of the current year the output was 161,478 tons, an increase in the rate of production which is satisfactory evidence of the continued progress of the company. The chairman's circular letter issued to the shareholders on May 20, 1926, after his annual visit of inspection in Roumania, indicated that the condition of the properties and the position of affairs generally were highly satisfactory, and will be dealt with by him in some detail at the forthcoming annual general meeting. The negotiations for the acquisition of oil lands from the Government of Roumania referred to in the previous report terminated satisfactorily, and all those lands, the concessions for which were anticipated, are now in occupation.

THE BULGARIAN LOAN QUESTION.

(From Our Own Correspondent.)

Sofia, July 7.

Before the members of Parliament left for the holidays M. Bouroff, the Foreign Minister, made a comprehensive statement on his mission to Geneva and on the negotiations which led to the sanctioning of the loan. M. Bouroff emphasised the efforts which his predecessor, M. Kalfoff, had made at Geneva on behalf of the refugees; then he strongly stressed the point that the business had no concern with bargaining or politics on the part of the countries represented on the Council of the League of Nations, where all the world saw in the loan on the contrary a humanitarian work, which, in bringing succour to thousands of unfortunate people driven out of their country, would render them capable of work and production and at the same time would thereby facilitate the effective pacification of the Balkans by settling in their new homes a population that remained involuntarily, and consequently turning away all the bad tendencies arising from despair. A particularly warm tribute was paid by M. Bouroff to M. Vandervelde, who, reporting to the Council the conclusions of the Finance Committee, made the cause of the Bulgarian refugees, whom he had visited, his own. The Finance Committee itself strongly recommended the grant of the loan asked for by Bulgaria, basing its recommendation on a series of considerations which showed the great advantages of the immediate settlement of the refugees and of which the chief are as follows:—(1) That measure will remove the internal difficulties of Bulgaria; (2) it will help to improve the relations of that country with its neighbours; (3) it will re-enforce the economic resources by employing the labour of more than 60,000 workers who now having no home and being unable in consequence to work are a charge on the public Budget and charitable organisations; and (4) it will aid the Bulgarian Government to continue energetically the work of reconstruction, a work undertaken for three years and the first results of which have been the re-establishment of the Budget equilibrium and the stabilisation of the currency.

The precise conditions of the loan have to be arranged between the Government and the lenders, but the Finance Committee has fixed the preliminary conditions which have been unanimously approved by the Council of the League. These preliminary conditions affected three points, and rather complicated the business. In the first place a modification of the statutes of the National Bank is asked for to strengthen that institution and to make it as far as possible a stable bank and less dependent on political influences and Government intervention, at the same time safeguarding its State character as an institution which alone has the right of issuing notes and of being the regulator of the exchange and the defender of the currency. The point in question is notably to separate from the Bank industrial and land credits, which the Government will carry out on its own initiative, and to separate from it the guarantees of departmental or communal loans as well as the short term deposits. Secondly it is asked that the Reparations Commission should raise the mortgage on its receipts which ought to serve as a guarantee for a new loan; this has in fact been done. Thirdly, the organisation of transfer arrangements is asked for, that is to say the manner in which the sums received from the revenues allocated to the loan should be exchanged and transferred out of Bulgaria, in case an unforeseen fall in the Bulgarian leva should occasion difficulty. The Government have already informed the Reparations Commission of the accepted nomination of the arbitrator whose function would ultimately go beyond the service of the loan and would include also that of Bulgarian Reparations.

Outside these three preliminary conditions to which Bulgaria has adhered there were some single recommendations, and it was these which have caused the greatest difficulties, on which M. Bouroff touched briefly and which M. Molloff is trying to resolve in Paris. The question is in short the payment of the advance of 75,000,000 francs which the Banque de Paris et des Pays-Bas made to Bulgaria in 1912 and which France now insists on being liquidated, and the payment of the matured coupons of the consolidated pre-War debt. The first difficulty will be probably solved by proceeding to a conversion which will compel a marked increase in the amount of the loan over the total of £2,250,000 fixed at Geneva, the surplus over and above that amount being used for the complete repayment of the advance in questions of which there remains to be paid 81,000,000 French francs. The second appears to be more difficult to solve, since the agreement regulating the payment of matured coupons which was negotiated two years ago by MM. Liaptcheff and Bouroff themselves, provided for the average exchange of 37 gold centimes for each gold leva, while the French creditors now demand, as from April 1 when the agreement in question expires, a rate of 52 centimes, which makes a considerable difference which the Bulgarian State will not be able to bear.

Despite these seeming difficulties M. Bouroff is convinced that the business will be brought to a satisfactory conclusion and that, in view of the purely humanitarian aim of the loan, the creditors of Bulgaria will not insist on unfavourable conditions.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

Motors and Motoring.

By G. B. B.

I see, from a contemporary, that motor cycle manufacturers are "up in arms," whatever that may mean, because it has become the custom of coroners, police official, unpaid magistrates and journalists to speak of this type of vehicle as the "curse of the road" and to condemn it on a wholesale scale. I quite enter into their feelings. The British motor cycle industry at one time, and that at no remote date, was under a cloud. I remember letting myself "go," to the extent of a full column in a London daily. I wrote—to use the familiar cliché—in no measured terms, of their old-fashioned, antiquated methods, and said that the American motor cycle was beating ours, not only in overseas markets but at home, simply because our machines were out of date and our makers displayed no initiative. Well, all that is changed. Our makers set themselves to put their house in order, with the result that before long they had made up arrears, and had drawn level as regards excellence of production with their American competitors. Since then, they have gone ahead by leaps and bounds and now not only is it a comparatively rare thing to see an American machine here but they have beaten the American in the overseas markets that he had come to look upon as his own. There is no finer motor cycle to-day to be found anywhere than the British built machine. For speed, durability, general excellence and low price British motor cycles are a long way ahead of all competitors. And I agree with the makers of these splendid machines when they raise strong objection to the wholesale condemnation with which they are meeting at present.

At the same time I quite understand the attitude of those who are raising the outcry. They point to the rapidly increasing number of accidents in which motor cycles are concerned, and they draw attention, and rightly, to the appalling list of fatal accidents caused by and to motor cyclists. But I would suggest that in so doing they are labouring under some confusion of thought. They are blaming the motor cycle for the folly and, in many instances, the gross carelessness and thoughtlessness of motor cyclists. It is the riders who are to blame and not the machines they ride. Makers build machines to-day with a tremendous reserve of power, for the purpose of negotiating easily steep hills and for hauling heavy passenger loads in sidecars. The riders, with the sheer exuberance and light-heartedness of youth, use that reserve of power to obtain highly dangerous speeds on comparatively level roads. They dash along main and country roads at speeds of anything from 40 to 60 m.p.h., and in so doing not only risk their own and other people's lives but give rise to the outcry that is being made. We may offer excuses; say boys will be boys and that it was just that dashing, danger-scorning spirit that won the War. But just at the moment we are not winning any war by tearing with the speed of a super-express train through the English countryside, and this motor cycling vogue of high speed driving must be stopped. There is only one way to stop it. It is no use hauling the offenders up before a magistrate and inflicting heavy fines; that simply penalises unhappy fathers who have to find the money. The remedy is suspension of driving licences for at first short, and after second or subsequent offences, longer periods. There is nothing the average motor cyclist fears so much as a suspension of his driving licence. Let it be shown, clearly and plainly, that high speeds mean suspended licences and I am certain there will be no more cause for complaint. But for any sake let us not condemn that highly efficient and splendidly made British motor cycle simply because a large percentage of British motor cyclists do not know how to use them in a sane, common sense manner.

THE TURKISH EXHIBITION SHIP.

On Friday, July 9, the London Committee of the Ottoman Bank invited a large number of guests to visit the Kara Deniz, the Turkish Exhibition Ship, which was lying off Greenwich last week. The company boarded the City of Rochester at a wharf near London Bridge, and were received on board by Lord Oranmore and Browne, in the absence of the Chairman, General Sir Herbert Lawrence. Among those present were the Turkish Ambassador, Ahmed Ferid Bey, and the staff of the Turkish Embassy and Consulate; of the Ottoman Bank, Mr. E. W. H. Barry, Director and Manager, Sir John Hewett, Director, Mr. C. E. L. Corthorn, Assistant Manager and Secretary, and Messrs. E. L. Breakwell and Fraser; Mr. C. C. Farrer, of the Department of Overseas Trade, Mr. A. J. Toynbee, of the British Institute of International Affairs, and numerous representatives of firms interested in trade with Turkey. Lunch was served on the City of Rochester on the way down stream. The toast of "Success to the Kara Deniz" was proposed by Lord Oranmore and Browne, and was replied to by the Turkish Ambassador. After the toast of the Ottoman Bank had been honoured, the company went on board the Kara Deniz, which was described in detail in these pages last week. On the upper deck the President's Band greeted the arrival of the guests with the National Anthems of England and Turkey. After coffee, sweetmeats and cigarettes had been served, the party inspected the exhibits, the selection and general arrangement of which reflect the greatest possible credit on those responsible for the enterprise. The return journey on the City of Rochester to London Bridge was made shortly after 4 o'clock.

Shukri Sarajohglu Bey returned to Athens on July 6 in order to resume the Turko-Greek negotiations for the settlement of outstanding questions concerning Turkish properties in Greece and Greek properties in Turkey.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended July 1, state:—

Since our last report the futures market has been dull and the tone weak; the week's summary of price movements is as follows:—Sakellaridis: July, 29.07 dollars, 0.66 dollars down; November 28.77 dollars, 0.54 dollars down; January, 28.22 dollars, 0.59 down; March, 28.07 dollars; 0.49 dollars down. Ashmouni: August, 20.38 dollars, 0.44 dollars down; October, 20.33 dollars, 0.45 dollars down; December, 20.43 dollars, 0.50 dollars down.

Sakel prices show a heavier decline than Ashmouni but there has been very little commercial support in either market, if anything rather less than last week. The greater part of the stock here is in strong hands and there is no apparent pressure to sell; with the prices of old and new crops so close together, holders are not showing any anxiety, but it is typical of the country to forget that cotton costs money to carry; there is always that secret hope that crop reports may become less favourable. The week's receipts amount to 28,902 kantars against export 112,973 kantars; the stock stands at 1,759,155 kantars.

Spot:—Total sales this week amount to about 6,700 bales, of which we estimate 3,500 bales Sakellaridis, 2.100 bales Ashmouni, 800 bales Zagora, 200 bales Pilion and 100 bales White.

Sakellaridis:—Business done has covered all grades, but the demand has been far from active. There is a fair amount of cotton offering on the market, but it is difficult to find good staple. Spot differences remain about unchanged except for Good and above, which are somewhat dearer.

Ashmouni and Zagora:—There has been a decrease in the turnover for these varieties also. The better grades have been rather neglected and premiums have eased off slightly. In spite of the continuous business done in the medium grades, spot differences remain unchanged.

Pilion:—There has been a slightly better demand for Good Pilion during the week with a consequent stiffening in the premiums.

Brown:—No transactions have been recorded.

White:—A few lots round about Fully Good Fair have changed hands at about last week's differences.

Crop 1926:—The crop news continues to be quite satisfactory. Flowering and bolling are now in full swing in the South and Central Delta and the fields of the Northern districts also show a good number of flowers. The plants are making a large number of bolls and present prospects are for a good yield; we have not yet, however, come to the critical period. Temperature is above normal but this is not harmful while the water supply is plentiful. The discharge from the Aswan Reservoir is 1,324 cubic metres per second against 1,215 at the same time last year.

LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 7:—

Egyptian Futures.—Sakel Contract.—The general tendency of this market has shown little change during the past week, and apart from minor reactions values have continued to move, if only gradually, towards lower levels. Some pre-bureau evening up advanced prices slightly last Friday, but the "bearish" character of the report, specially as regards acreage, brought in fresh selling, and, with the trade still standing aside, the undertone is beginning to show more real weakness than in the initial stages of the decline. During the past two days, we have failed to be influenced by advances in the American markets, hence the straddle has again closed in, the November Egyptian October American difference now standing at 550 to 560 points. With Sakels steadily losing favour with consumers and meeting strong competition from Sudans, we think that this premium will have to be reduced further before the necessary stabilising support will be forthcoming.

With continued good new crop progress, a stock of nearly 1,200,000 kantars more than last year, and a poor outside demand, the Alexandrian market, judging from the course of values during recent sessions, is now beginning to feel more fully the weight of outside circumstances. Alterations in the local old and new crop differences have, as we anticipated, been in favour of the former, the current position especially showing strength, and now standing at 44 points over November. With so little tenderable cotton in stock, this premium may widen further. We still consider that conditions favour the short side, and should prices react in any measure would advise sales.

Upper Contract.—This contract has been under pressure throughout the week, poor Alexandria advices and small selling orders combining to depress values. Crop reports continue to be very satisfactory. In view of the recent recovery in American values, we think that more resistance will develop at the present level, and would advise purchases for a quick turn.

Egyptian Spot.—Inquiry for spot cotton has again been on a very restricted scale and a considerably reduced turnover has resulted. The coal trade dispute still drags on, and the fuel question in mills has become acute. One authority has stated recently that conditions in the Lancashire spinning trade were worse to-day than at any time during the great slump. The holiday season is now in full swing, and this, of course, has to be taken into consideration, but apart from this, matters do certainly appear to be drifting from bad to worse. A new factor has recently appeared, which deserves the serious attention of all connected with the trade. We refer to the recent important "cuts" which have been made by companies engaged in the manufacture of artificial silk.

Digitized by Google

The demand for Sakellaridis has centred once again on the Good Fair cotton, and sellers have been easy to deal with. Only a few odd inquiries have been met with for the better cotton, but the basis for anything over Good in grade has shown a tendency to harden. In Uppers, the Good Fair to Fully Good Fair cotton has again commanded attention, and rather more business has been done in these qualities, which, at to-day's low level (?), compare very favourably in price with the American staple growths. We should not be surprised to see a distinct improvement in the sales of this cotton before very long, particularly should the present industrial trouble reach an early termination. Brown, White and Pilion cottons have been neglected. In Sudan, a moderate business has resulted, but the basis both for the Sakel and the American seed varieties has been well maintained.

C.i.f. business has continued its state of lethargy and shows no signs of revival at the moment. Forwardings to spinners have sunk to a low level, for which no doubt the various mill holidays are largely responsible. The figures for the week ending 2nd instant were returned as only 3,043 bales. Estimated sales, 700 Egyptians, and 900 bales Sudan. Quotations of Sakel show a hardening of 25 points for Fine and Extra Fine; other qualities remain unchanged. Uppers have been reduced 30 to 20 points. F.G.F. Sakel to-day 16.05d. F.G.F. Upper to-day 11.65d.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

TURKEY.

Iron Picks.—The Anatolian Railway Administration invites tenders for the supply of 100 tons of iron picks. August 9. (D.O.T.)

EGYPT.

Steel Water Tower.—The Ministry of the Interior, Cairo, invites tenders for the supply and erection on site of a steel water tower for the town of Zifteh, contract No. 3. August 5. (D.O.T.)

The quantity of gold extracted from the mines in India during April amounted to 31,453 ounces, valued at Rs. 17,92,821.

As a result of the recent floods in Yugoslavia railway communication between Constantinople and Western Europe was interrupted for three days.

The special measure of December last, which reduced by 50 per cent. the Customs duty on wheat and flour imported into Syria has been abrogated.

It is reported that the Greek Council of Ministers have decided to allow the exportation from Greece of 2½ million okes of olive oil, subject to the payment of an export tax of 3.80 drachmæ per oke.

Company Meeting

P. AND O. BANKING CORPORATION.

Trade Conditions in the East.

Lord Inchcape's Speech.

The sixth ordinary general meeting of shareholders of the P. and O. Banking Corporation, Ltd., was held on July 9 at 122, Leadenhall Street, E.C. The Right Hon. the Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E. (the Chairman) presided.

The Secretary (Mr. Chas. Selbie) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—With your permission, we will take the report and accounts as read, as usual.

I think you will agree with me that the results for the year, considering the difficult times we have gone through, are not unsatisfactory. There have been some changes in our figures since last year, which I will explain.

The decline of over a million in our current, deposit and other accounts largely arises from a change in monetary conditions in India, and is accounted for almost wholly by the contraction in the fixed time deposits which we have been in the habit of taking at our Indian branches.

We have been expecting a fall in rates, which banks and others would be willing to allow for six and twelve months' deposits, for these rates are, to some extent, determined by the rates at which the Government of India can borrow, and the greatly improved financial position of India has enabled them to consolidate and convert a large portion of their short-term debt contracted during and after the War at 5 per cent. and 6 per cent., free of tax, into long-term issues on the basis of between 4½ per cent. and 4¾ per cent., less tax.

The reduction in our holding of bills arises from a diminution in the export trade of India during the year under review. In spite of a good monsoon last season, and although the balance of trade is still very largely in favour of India, there has been a considerable contraction both in the imports and exports of that country. Shipments of grain, tea, wool and oil-seeds materially declined, and the increase in the value of the exports of jute and jute manufactures has not been sufficient to offset the decrease in other directions. The import trade shows an even greater contraction, and a very large proportion of the decrease, I am sorry to say, occurs in the exports from this country to India. On the other hand, we have seen a welcome increase in the trade with the Straits Settlements, where the active demand for rubber and tin has spelt a period of prosperity, and I am glad to say that we have had our share of the increased trade of Singapore. (Hear, hear.)

In Hong Kong and China the position continues to be very obscure, but, despite the political and other influences impeding the restoration of normal conditions in that part of the world, there are signs that traders are endeavouring—and with success—to adjust themselves to the new conditions of both distribution and marketing which are being imposed upon the unfortunate traders of China by the unsettled state of affairs.

In our cash and money at call and short notice we have a satisfactory reserve of over 24 per cent. against our liabilities on current and deposit accounts; our investments show an increase, due in some part to a larger holding of Indian Government securities, which have greatly advanced in value by reason of the improvement in the Government's financial position.

The Government and the Rupee.

This, indeed, has been one of the most satisfactory features of the year's history, so far as Indian conditions are concerned, and that Government is now in a position to enter upon the task of once more placing the rupee on a firm and stable basis. This question has been under investigation by a Royal Commission, who have, I understand, submitted their report within the last few hours, and, though unable to speak with certainty, I confidently anticipate that the result of their deliberations will be to stabilise the rupee at 1s. 6d., which was the rate recommended by that extremely able Finance Minister of the Government of India, Sir David Barbour, as far back as 1892, when the closing of the Mints to the free coinage of silver was under consideration.

As to the prospects of the bank, I am glad to be able to say that the work which has been done during the last five years has resulted in our having established good and valuable connexions, not only in London, but all over the East. When trade recovers—as it will undoubtedly do—we shall find ourselves equipped to take a share in the activity which will ensue.

We owe a great deal to the loyal and energetic devotion of our staff at home and in the East, who have spared no pains to set up a sound basis for the future expansion of our business, and in our colleague and general manager, Mr. Gubbay, who goes off to-morrow on a well-deserved holiday, we have a tower of strength. (Hear, hear.)

The first five years of our existence coincided with a time of world-wide fluctuations in prices and in exchanges, but gradually, one after another, the elements of instability are beginning to pass away, and I look forward to the time when the fruits of prudence and careful husbanding of our resources will yield us the advantage which we have a right to expect from the policy we are adopting. I feel sure the Board will have your support in their determination to build up our reserves, year by year. As I came into the room one of the shareholders—a very influential and very large shareholder—told me he had come to propose a counter-resolution. He said he wanted a larger dividend; but, after talking to him for a little time, I found he was only joking and that he quite realised that we were proceeding on the right course.

Of our affiliated bank, the Allahabad Bank, I am glad to say that it continues to make quiet and steady progress.

Since its affiliation to us it has increased its reserves from 41½ lakhs to 44½ lakhs, against a paid-up capital of 35½ lakhs.

The management and staff of that bank deserve our approbation for the care and prudence they have exercised in the conduct of its business.

The working of the Allahabad Bank during the year which has just ended has enabled it to pay its usual dividend of 12 per cent., with a bonus of 6 per cent., less tax, and to increase its carry-forward from Rs.2,75,000 to Rs.3,47,000. So far during the current year it has done well—better than last year.

Current Year's Outlook.

Three months of the current year have gone by with satisfactory results, and, if we can only get settled conditions in labour, without being too optimistic we may look forward with confidence to the future.

The unfortunate coal strike has cost the country many millions. All classes, including the miners, are suffering from it, and the revenue will have to be made good by one means or another—very probably by increased taxation. The Government, with admirable patience, has exhausted every means to secure a fair settlement for both sides, but the obstinacy of the miners' leaders has barred the way. They do not seem to realise that they cannot get out of a pint pot more than a pint—(hear, hear)—and they have shown an absolute disregard of economics. I am hopeful that the alteration in the law—which was made last night—which will permit a miner, if he so desires, to work eight hours a day instead of seven, may bring about a resumption of coal raising in this country. No man could have striven harder than the Prime Minister has done to bring about peace in the coal industry. (Hear, hear.)

In April last I sent a letter to *The Times* from Paris, which they were good enough to print, on the financial situation in France. I had the audacity to suggest that unless our friends took the bull by the horns and taxed themselves sufficiently to balance their Budgets, which they have not done for many years, and made arrangements to discharge their debts to America and Great Britain, financial chaos would overtake them, and this was the last thing we wanted to see happen to our great and friendly neighbour. Unfortunately, things in France since then have gone from bad to worse. When I wrote

in April last the pound sterling could only buy 140 francs. To-day it can buy no less than 186 or 187. From a purely selfish point of view, we do not want to see the value of the franc slipping further away relatively to the pound or the dollar, and I hope our friends across the Channel may be able to stabilise their currency before it is too late. It would be a lamentable disaster if what occurred in Germany were to occur in France. (Hear, hear.) So far as this country is concerned, although it has cost us dear, we must congratulate ourselves on having balanced our Budgets, avoided inflation, got back to the gold standard, and stood up to the debt we incurred in America. (Hear, hear.)

I now beg to move: "That the directors' report and statement of accounts for the twelve months ended March 31, 1926, be and the same are hereby adopted."

Before asking one of the shareholders to second that resolution, if there are any questions which members of the corporation wish to put to me I shall be glad to answer them to the best of my ability.

Mr. Alastair Cameron (Deputy-Chairman) seconded the motion.

Sir Alfred Lewis said he had no question to ask, but he would like to congratulate the Chairman and his colleagues, as well as the management, on the excellent statement which had been submitted to the meeting. It was a very remarkable thing that during such trying and adverse times as they had been passing through the directors had been able to present a statement showing, practically, that the profits had been maintained, notwithstanding that during the last three years the bank's resources had contracted. He had no hesitation in saying that these results reflected the magnificent management which the bank enjoyed, and he was confident that it must have a fine career in front of it directly the trade of the East and the conditions of world economics had improved. In offering his congratulations on the excellent report, he wished the bank every prosperity in the years to come.

The motion was carried unanimously

The proposed dividend of 5 per cent., less income-tax at 3s. 1.72d., was adopted, the retiring directors (the Right Hon. the Earl of Selborne, K.G., G.C.M.G., Mr. F. A. Johnston and Mr. M. M. S. Gubbay, C.S.I., C.I.E.) were re-elected, and Messrs. Peat Marwick Mitchell and Co. were reappointed auditors.

Mr. Langham Reed proposed a cordial vote of thanks to the Chairman and directors, as well as to the staff in London and in the East. The motion was seconded by Mr. Pitt, and was carried unanimously.

The proceedings then terminated.

OTTOMAN BANK.

Turkey's Progress in Agriculture.

The annual general meeting of shareholders in the Ottoman Bank was held on July 12 at Winchester House, Old Broad Street E.C. General the Hon. Sir Herbert A. Lawrence, G.C.B., presided.

The Secretary (Mr. Charles E. L. Corthorn) having read the notice convening the meeting,

The Chairman, in his speech in moving the adoption of the report and accounts, said:—Before entering into details of our work during the past year, I propose, as usual, to recall briefly to you the general economic conditions of the countries in which we operate.

The work of economic restoration in which Turkey has been engaged since the War has been pursued by the Government during the year 1925 with an energy and perseverance which deserve the fullest recognition.

Official encouragement has been given to agriculture, which is the basis of the economic system of Turkey. The abolition of the tithe, the distribution of seed to farmers, the provision of motor tractors—all these are measures which have contributed to the improvement in recent harvests.

Our bank has been pleased in this sphere to afford to the Banque Agricole that assistance which it is its natural function to supply.

Weather conditions have been generally favourable to the varied crops which are produced by the fertile plains of Anatolia with their diversity of climate, and, although all hopes have not been realised, it can be said that marked progress has been made by agriculture in comparison with preceding years. Thanks to the increase in the area sown, cereals showed an increase during 1925 of 40 per cent.

Transport conditions, unfortunately, were not equal to the distribution of the harvest, and thus, notwithstanding the increased production, it became necessary to import a certain quantity of foreign wheat in order to supply the needs of the population.

Tobacco tends more and more to take the first place among national products. Its cultivation extends throughout the territory of the Republic. Last year the yield was slightly less as compared with that of 1924, but the loss in quantity appears to have been fully compensated by the improvement in the quality obtained.

The cultivation of cotton in Cilicia shows steady progress. The crop for 1925 is estimated at 100,000 bales as against 70,000 bales for the preceding year. This result still falls short of the capacity of this rich alluvial region.

The Smyrna Hinterland suffered severely from drought, and the quantity of figs and raisins produced was below the average. As to the other products of the country, opium, silk-cocoons, and nuts, the results have been unequal. Livestock has only been reconstituted slowly since the War, and the production of wool and mohair still remains far below pre-War levels.

Reference to the trade figures and the exchange rate followed, and Sir Herbert Lawrence then proceeded to refer to the monetary policy of Turkey. He said:—Credit is due to the Government for its monetary policy. This is above criticism. The present regime had no sooner taken in hand the affairs of a country just emerging from ten years of war than it found itself face to face with difficulties of an economic nature. Notwithstanding this, it has not increased the amount of notes issued. Its only action in regard to currency has been with the object of replacing notes issued during the War by new notes.

As local capital is scarce and is fully employed, assistance is indispensable to the development of the country. It becomes natural, therefore, to look abroad, and it is to be hoped that, as soon as the question of the foreign debt of Turkey is settled, assistance will be furnished on a scale sufficient for the country's needs.

The distribution of the Ottoman Public Debt between Turkey and the other successor States was continued in 1925 in accordance with the provisions of the Lausanne Treaty. This formality was completed and the Turkish share definitely fixed as to both capital and annuities. Negotiations then took place between delegates of the Turkish Government and representatives of the bondholders with the object of establishing a basis for the service of the loan. Unfortunately these have not, up to the present, led to any agreement.

The Grand National Assembly has set itself to achieve the balancing of the Budget. Revenue and expenditure in the Budget for 1926-27 are estimated at about 190,000,000 Turkish pounds. It is hoped that further reductions in expenditure will be effected and that the year will end with a surplus. In this connexion it must be borne in mind that the Turkish Government, in carrying out a legitimate railway policy, has burdened its regular Budget with considerable capital expenditure, which is met usually by means of extraordinary resources.

Agreements with neighbouring Powers have been concluded lately by the Government of the Turkish Republic. The most recent of these is the Mosul Agreement. Such diplomatic questions as had been left in suspense by the Treaty of Lausanne have now been settled.

Our Constantinople offices and our branches in Anatolia, Roumelia, and Cilicia have all profited by the recovery which we have indicated above, and show improved results this year as compared with recent years.

The resolution was carried unanimously.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Constitutional Difficulties in Greece.

After three disappointments, the President of the Greek Republic has found someone to undertake the responsibility of forming a Ministry. The course adopted is a compromise between a new business Cabinet and the retention of the existing one. M. Eutaxias, the new Prime Minister, retains four of the present Ministers, among whom, it is satisfactory to note, is the Foreign Minister, M. Rouphos. The failure of three men, the last being M. Zilimon, President of the Areopagus, to reconcile their own theories of a Prime Minister's responsibilities with General Pangalos's views on the subject suggested that the return to normal political conditions would be effected more smoothly and expeditiously by using the politicians who have already worked with the President and gradually extending their powers in accordance with ordinary constitutional practice. These Ministers have probably been shrewd enough to appreciate the best features of General Pangalos's dictatorship and to realise that they make a sound basis for rebuilding Greek constitutionalism without some of the aspects which had previously brought it into disrepute. It is true that the official leaders of the political parties consider the present Ministry to be tainted with the President's unconstitutionalism, and, strictly speaking, this may be the case. Greece, however, is more likely to find political salvation by a careful study of realities, even if the process necessitates the scrapping for a period of certain accepted theories of constitutional government. The formation of a new Cabinet has been preceded by an order for the deportation of the leaders of some of the political parties to an Ægean island, but there appears to be some chance of this order now being rescinded.

The Turkish Trial.

It is not unusual for changes in the form of Government in any country to be accompanied by bloodshed. Turkey adopted a republic with practically no loss of life, but she is finding a heavy toll necessary to defend her present régime. The trial of a number of men accused of being implicated in a plot against the President's life has ended in fifteen death sentences, which were immediately carried into effect. In the matter of executions Turkey's "westernisation" has not yet reached the standard of civilisation associated with the West, and the scenes enacted in the public streets of Smyrna serve to reinforce the argument that, if the Turkish authorities are sincere in desiring their country to become westernised, they should appoint Western advisers to indicate what can be regarded as Western and what in the opinion of the West must be held to be a disgrace to civilisation. A second portion of the trial is to be staged in Angora, where certain political suspects are to be arraigned. Again, confident assertions of their guilt precede the trial. The men concerned are identified with the Committee of Union and Progress, the members of which do not seem hitherto to have attracted as much attention to themselves as the outspoken and probably honest critics of the Government. One result of the trial has been the complete exoneration of the more prominent among the latter, who were indiscriminately arrested in connexion with the plot and subjected to a considerable amount of vulgar abuse. General Kiazim Karabekir Pasha, Ali Fuad, Refet and Jafar Pashas and Bekir Sami Pasha have been acquitted. Their dignified bearing before the Tribunal has to be regarded as a greater asset for Turkey than the conduct of those who allowed them to be arrested.

The Safety of the Republic.

Although the Smyrna trial established the existence of a plot against the life of Mustapha Kemal Pasha, it showed also that the Turkish authorities have not yet learnt the value of a régime broad based upon the people's will. The Republic has had plenty of time to justify its existence, and it should be in no danger of being upset, if it has secured the nation's support. The best way of consolidating its foundations would have been to enlist the help of as many Turks as possible in the task of building

Digitized by Google

up the edifice. The one aim of the Angora Government, however, would seem to have been to limit the number of those who are fashioning the new Turkey. Instead of inviting suggestions and criticisms, both are ruthlessly suppressed. Yet the more people who can claim to have had their share in making the Republic what it should be one day, the fewer the disgruntled citizens who will have an interest in trying to effect a violent change. When Abdul Hamid was overthrown, it was not a matter for surprise that the political system associated with his name should have alienated the vast majority of his harried and terrorised subjects. In Smyrna last week there must have been many supporters of the Republican régime who wondered, as they took note of the savage executions in public of fifteen of their fellow-countrymen, whether Turkey was in reality making the moral and material progress that is claimed for her. It is a matter of profound regret to the foreign observer who has based his hopes of a regenerated Turkey on the Republic to find the President steadily raising up against himself a formidable barrier of personal hostility by a régime in which the good points are becoming more and more lost sight of under a grim load of fierce suppression. There must be many thousands of Turks and still more foreigners who share the disillusionment to which General Kiazim Karabekir Pasha gave utterance as he described how he found himself ousted from the councils of the nation by political upstarts, whose sole recommendation was that there was no limit to their sycophancy.

Palestine's Progress.

It is necessary to recall the anxious times through which Jerusalem has frequently passed owing to a shortage of water—the last was less than a year ago—in order to appreciate the significance to the city of the new water supply inaugurated on July 12. Although only a provisional measure, this supply removes any immediate danger of another water famine. It comes from the spring of Ain Farah, seven miles distance, and the water has had to be raised nearly two thousand feet. Simultaneously comes the announcement that the Palestine exchequer has a surplus of £E1,200,000 for the financial year just ended. A year ago the surplus was just over half a million pounds. There are, no doubt, claims outstanding against these balances which will reduce the amount available for development purposes, but it is no unworthy achievement that this small country, confronted with the necessity of making good according to modern standards, should have thus early established favourable Budget balances. The potentialities of Palestine are too restricted to allow it to become a rich country; but the period of British stewardship should enable the inhabitants to assimilate the methods of administration by which the most can be made of its resources and its material development promoted commensurately with its means.

The Pleasure of Prophecy.

The Great War was, of course, a boom period for prophecies, which for some publications filled the place now occupied by cross-word puzzles. One of the most indefatigable of the prophets, or interpreters of prophecies, was Mr. Walter Wynn, who as Editor of the *Young Man and Woman* successfully disposed of Turkey for all time by pointing out that the reference to the 1335 days in Daniel XII, 12, "definitely dated to the year and even day"—October 1917—the downfall of Turkey. The line of reasoning was not explained; but as 1917 coincided with 1335 of the Mohammedan era the connexion was fairly obvious, and as the year ended on October 16 of the Gregorian Calendar, it was desirable to give the interpretation as much rope as possible—the more so as Turkey was all the time in obvious difficulties. When it was suggested that Daniel could really have done better than he had been given credit for doing, Mr. Wynn satisfied himself by pointing out that in after years it would be realised that the "break-up of the Turkish Empire"—incidentally not quite the same thing as the downfall or elimination of Turkey—dated from October 1917. Once again in the rôle of the United Free Church Minister of Chesham, Mr. Wynn comes forward as a prophet or interpreter. The Bible, we are glad to say, has made way for the Great Pyramid; the implication that if Daniel had known his business as Mr. Wynn could have taught it him, the prophecy would have been more precise, caused offence in some religious circles. Mr. Wynn has been studying the Pyramid question for over forty years and was able to declare that July 20 was to be marked "by some event." It is a way with so many days of the year, that some people would have imagined that it was not necessary to bring the Pyramid into the prophecy; but it is comforting to have this silent evidence that "something will transpire which will have a vital effect on coming events." Not the least advantage of these impressive utterances of "Heads I win tails you lose" order is that they hurt nobody and are excellent advertising stunts.

NEAR AND MIDDLE EAST ASSOCIATION.

A general meeting of this Association was held on July 14, at 133, Queen's Gate, by kind permission of Miss Spalding and Mlle. Griboval. The Chair was taken by Lady Boyle, and the subject of discussion was "The Outlook in Yugoslavia." Lady Berry, in an interesting speech, gave an account of the various constituent members of the Union, with reminiscences from her own rich store. Then Major Temperley referred in hopeful tones to the internal and external outlook of the country. He called attention to the phenomenon that while so many countries of the South and West had recourse to a military dictatorship to overcome their troubles, the Serbs, Croats and Slovenes were making a persistent and so far tolerably successful attempt to solve their problems by political methods. He regarded the elimination of the shadowy backing of Balkan States by great Powers as a great factor in the hope of peace, and the Little Entente as a very stabilising influence. He concluded on an optimistic note, with a tribute to the manliness and vigour of the people. Miss Christitch stated that to-day the policy of burying the hatchet was making great headway, especially with the younger generation of the Universities. The Yugoslavs looked forward to friendly and cordial relations with Bulgaria—a good token of which was seen in the present amicable discussion about the suggested removal to his great foundation at Granchanitsa of the remains of King Milutin (ob. 1330) of Serbia—which have been preserved in the cathedral at Sofia for five centuries.

Sir Edward Boyle welcomed this announcement; let the dead bury their dead, he said. The Serbs had had enough fighting, and it was to be hoped they would now devote their great energies and abilities to peaceful constructive work.

NEWS IN BRIEF.

The Roumanian Chamber adjourned on July 15 for three months.

Sir Ronald Lindsay has formally exchanged with the Angora Government ratification of the Mosul Treaty.

The Sultan of Morocco and his three sons on July 16 attended the first religious service to be held in the new Mosque at Paris.

The Palestine Government has decided to pay £E14,000 per annum in pensions to 644 former members of the Ottoman Civil Service or their heirs.

It is stated by *The Times* Basrah correspondent that Karim Fateh Beg, the murderer of Captain Bond and Captain Malakant in 1922, has been killed during an attack on a village near Suleimani.

THURSDAY, JULY 22, 1926.

THE SALONIKA FREE ZONE.

Negotiations between Yugoslavia and Greece for a treaty of alliance have recently been resumed with mutual protestations of good will, and it is hoped on both sides that a satisfactory solution will be found this time of the problem of the Yugoslav free zone at Salonika. This question dates back several years, and the event has proved that it was by no means settled with the handing over of a free zone to the Yugoslav authorities. Not only was the terrain of the zone found to be too small, but the transport arrangements between the port and the frontier left something to be desired. It was quickly realized in Yugoslavia that the free zone would not act as a stimulus to the development of trade, if goods were continually liable to congestion and to delays in transport as a result of the inadequacy of the railway facilities. Moreover, if alongside the Yugoslav free zone there were a better-equipped zone, where goods were handled efficiently and quickly and no delays occurred in despatch, it was obvious that Yugoslav merchants would prefer to import and to export by the other zone, and the Yugoslav zone, which had been the subject of a long diplomatic struggle, would languish for want of patronage. The action of the Greek Government in declaring the part of the port next to the Yugoslav free zone a Greek free zone and in proceeding to equip it in an up-to-date manner tended to deprive the Yugoslav concession of a considerable part of its value. A further complication, or at least disappointment, was introduced when Bulgaria was also offered a free zone at Salonika. Here again, unless the Bulgarians are willing to incur heavy expenditure in equipping their zone, they would hardly be able to compete with the efficiency of the Greek free zone. In these circumstances it would seem as if the moment was ripe—before the negotiations between Greece and Yugoslavia are advanced much farther—for an unprejudiced reconsideration of the whole question. The grant of a free zone at Salonika to Yugoslavia is regulated by formal treaty, and it is not to be expected that any suggestion to forgo the right will at first be popular among the Yugoslavs. If, however, further reflexion shows that the anticipated advantages are not likely to be obtained and that a much better arrangement is possible, the Yugoslavs are too level-headed and far-seeing a people to hesitate to throw away a shadow when, by doing so, they can grasp the substance.

The objects which the Yugoslav free zone was intended to serve are well-known. Salonika is the natural outlet for the whole of Serbia; it would also serve south-western Bulgaria, if there were direct communication between Sofia and Salonika. In regard to Bulgaria there is at present a small gap between the terminus of the light railway which runs from Radomir to the frontier and Demirhissar, which is the nearest Greek town on the Salonika-Adrianople Railway. Neither Yugoslavia nor Bulgaria can afford to pay double dues, to the Greek Government and to their own Exchequers, for goods entering or leaving by Salonika. To each, therefore, the elimination of Greek customs charges, rendering them liable only to port dues, becomes a necessity. For Bulgaria too through railway communication by a line of standard gauge for the whole distance between Sofia and Salonika will be required, if full advantage is to be taken of the geographical position of the port. As far as Greece is concerned, Salonika loses the greater part of its value, if it is not used to its fullest capacity as the port for the considerable hinterland represented by Yugoslav and Bulgarian territory. Accordingly, the interests of the three countries in regard to the port are identical; Greece requires that everything possible should be done to attract and to develop the trade of the interior, while that trade asks only for freedom of entry and exit, together with efficient handling at the port and in transit. In these circumstances it should not be difficult for the three States to arrive at an understanding. The first point that will occur to the onlooker is that the idea of three separate zones, which will be competing with one another, is radically wrong. There is only a limited amount of capital available for the development of the Balkan Peninsula, and it should be made to go as far as possible. If the fullest benefit is to be derived from the relation of Salonika to the hinterland, the three countries should combine to secure the maximum efficiency not only at the port, but also on the railway lines that connect it with the interior.

The original demand for a Yugoslav free zone was prompted by the supposition that there must always be antagonism between Yugoslav and Greek interests in connexion with Salonika, and that only by being given a free hand in the management of her own affairs could Yugoslavia count upon securing satisfactory treatment for herself. With the passage of time the States of the Balkans are learning from their taskmaster experience that the economic interests of neighbouring countries are more often identical than antagonistic. Thanks to her possession of Salonika Greece has a personal interest in the economic development both of Serbia and of Bulgaria second only to the interest of the country itself. She should, therefore, require no prompting to guarantee her neighbours a better service at the port than they can hope to build up for themselves in separate free zones of their own; moreover, the best railway administrative talent that she can command should be concentrated on the Ghevgeli-Salonika line until all causes for complaint have been eliminated from that section. No policy could be more suicidal from Greece's point of view than that of attempting to block Yugoslav trade or of hesitating to encourage the Bulgarians to make the fullest possible use of Salonika. Owing to the failure of her Governments to realise that the interests of the three countries are identical, Greece finds herself more or less on the defensive for her sovereign rights. The present negotiations may lead to a settlement; but unless it is based on long-sighted views which have regard to the economic potentialities of the Peninsula as a whole, it will fail in the long run. The three Governments might be well advised to appoint an economic Advisory Committee, consisting of two Greeks, one Yugoslav and one Bulgarian, to consider the economic matters in Macedonia having an international bearing. Such a Committee would obviate the necessity for separate free zones for Yugoslavia and Bulgaria, and could approach railway matters with a broad outlook, knowing that every improvement which helped the trade of the interior must ultimately benefit Greek finances.

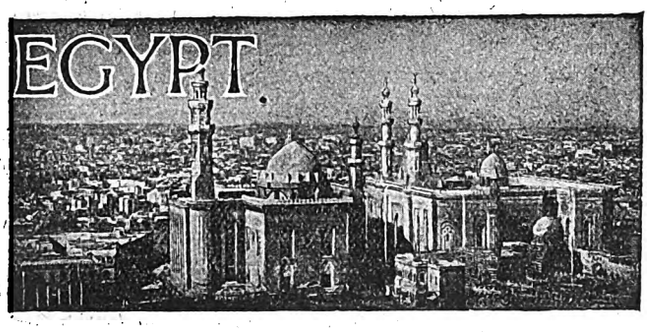
The Near and Middle East*

From Our Own Correspondents.



Cairo, July 10.

The High Commissioner's Departure.

Lord Lloyd had a very warm send-off yesterday when he left for Europe. During his absence on leave Mr. Neville Henderson will act as High Commissioner. The Residency will, however, not transfer to Alexandria until the rest of the Government moves into summer quarters by the sea. This cannot happen until Parliament rises, and as the presentation of the report of the Budget Commission has been delayed it is not now expected that the two Houses will complete their discussion of the Budget before the beginning of next month.

It had been the original intention of the High Commissioner to remain in Egypt until the end of the parliamentary session. His departure at this much earlier date has given rise to much comment in the Press, which sought to read into this change of plan all manner of sinister motives. The announcement in the House of Commons of the acceptance of the resignation of Sir Geoffrey Archer has contributed to increase the flutter in the local Press dove-cotes.

It is amusing to note how in this country people go out of their way to look for and to assign motives to actions and events that in reality have a simple explanation. The reason that the High Commissioner has gone on leave earlier than he had originally intended is that the situation affords no reasonable cause for anxiety. No doubt, as is usual when the British Representative is in England, matters connected with Egypt and with the Sudan will be discussed by Lord Lloyd with the British Government. But to say that it is because of the urgency of these matters that he has put forward his departure and to publish details of these matters in the manner in which certain vernacular organs have done is merely to excite local feeling and by no means to conduce to that atmosphere of friendly co-operation which is so essential to Egypt's political future.

Agricultural Co-operation.

The Egyptian Government, and particularly the Ministry of Agriculture are to be congratulated on the step they have taken with regard to the encouragement of Agricultural Co-operation. The movement was started over twenty years ago, but owing to lack of organisation and the difficulty of securing funds it has languished in spite of periodical efforts to give it an impetus. The idea of taking £E1,000,000 from the Reserve to form an endowment fund and of putting the movement on a proper basis under State control is excellent, and it is to be hoped that this scheme will not suffer from political controversy as has been the fate of so many of the projects for economic and social developments, of which Egypt stands so sorely in need. One is not quite certain, however, that the committee appointed by the Minister of Agriculture consists altogether of the men most competent to elaborate a scheme of this nature. One notices the absence of the names of at least two, who have made a through study of the subject, and whose co-operation particularly in these days would have proved most valuable. In any case it is evident that expert advice will be necessary, not only for the elaboration of the details, but also for the organisation of the movement, and it is to be hoped that the responsible authorities will seek for this collaboration even if it be necessary to engage assistance outside the country.

I am informed that it is possible that the endowment fund will be made very much larger, and that there is a proposal to get the Government to allocate part of the proceeds of the cotton-tax, which at present brings in an annual revenue of £E2,000,000. It is stated that the services of one of the big banks will be sought in order to ensure that from the financial point of view the fund is soundly administered.

Mr. Kershaw's Resignation.

It looks as if the political murders acquittal will have its echo in the Mixed Courts. There is a very strong feeling in European circles that Judge Kershaw should not accept the decision given this week by the "Committee of Eight" but should bring an action against the Egyptian Government for payment of his pension. The "Committee of Eight," it may be explained, was brought into existence by the law governing the service of European Officials, and consists of four Egyptians and four European officials. By the casting vote of its Egyptian Chairman it decided, this week, that by his resignation Kershaw had contracted out of the foreign officials' law, and so could not secure the pension assured thereunder to resigning officials, but that he was nevertheless entitled to the compensation provided for under that law.

In foreign circles it is generally held that the form in which Judge Kershaw resigned had nothing to do with the matter, and that nothing but a council of discipline could deprive him of his pension. This was the manner of thinking of the foreign members of the "Commission of Eight." The Egyptian members all voted solid for deprivation of pension, but admission to compensation. But whether the view that his pension was a vested right is correct or not, there cannot be two opinions on the illogical character of a decision which puts on record that

a man has voluntarily contracted out of a law and so has forfeited one of its benefits and yet in the same breath declares that he has remained under that law for certain of its other benefits. One is inclined to think that the verdict of the "Commission of Eight" would have been very different had there not come first the unprecedented action of the Minister of Justice, who in an *arrêté* accepting his resignation took the quite unusual step of including in it a declaration that he had forfeited his pension.

The Birthday Honours.

The Birthday Honours include four Anglo-Egyptians, who fully deserve the recognition of their services which this denotes. Sir Reginald Patterson, who receives the K.B.E., has filled the highest posts open to Europeans in the country, viz., Adviser to Education, Financial Adviser, which he still holds, and Adviser to the Interior *per interim*, and he has fully maintained the traditions established in those responsible positions by a long line of distinguished Britons. Mr. Anthony, who has received the C.B.E., is the Director-General of State Domains; he has seen no less than thirty years' service in Egypt, and enjoys the high esteem, not only of his fellow countrymen, but also of the Egyptians amongst the fellaheen classes as much as amongst the Pashawat. It will be remembered that the Wafd Government behaved most disgracefully towards him when in office two years ago, and made allegations from which he was cleared by a special commission, to the great satisfaction of the European communities and of all self-respecting Egyptians who had been horrified at the unwarrantable calumniation of a man who had always stood high in regard to his integrity and honour. Mr. Furness receives the C.B.E. as a reward for his services as Oriental Secretary from which post he retired a few months ago; and Mr. Prowde has been given the same honour in recognition of his work in connexion with the construction of the Makwar Dam, where he was Resident Engineer.

Sofia, July 14.

King Boris's Departure.

A little unexpectedly, in fact to the great surprise of the uninformed, King Boris left the other day for Western Europe, which he is visiting for the first time since his accession after the abdication of his father in 1918. The Sovereign, who has taken with him only an Aide-de-Camp and a Secretary, has gone first of all to Switzerland, via Italy, intending to spend several weeks there, in strict *incognito*, under the name of Count Rilski. As Switzerland is a neutral country, his stay will create no inconvenience, but, although this journey has no political significance, that will not prevent him from meeting some political personages. He will subsequently visit Czecho-Slovakia and Hungary, where he owns some property and where he will see his relations, his brother Cyril who lives at the family château at Vienna, his married sister in Germany, and certainly also his father who is living in retirement at Coburg.

What is the meaning of this visit? Not political, as I have already said. It is stated—and there is no reason for disbelieving it—that the King has gone simply as a rest from the labours of his official position in Bulgaria. Such a rest cure was recommended to him over four years ago, but he was right in refusing to take it then. But it is probable that matrimonial considerations are not entirely lacking in his voyage. It is known that King Boris has for some time wished to marry, so as to endow the Throne with an heir. All the successive Governments have advised him to marry. And now it appears that he has come to a general decision. The name of the Princess Ileana of Roumania is no more spoken of, but one hears freely mentioned that of the Princess Giovanna, daughter of the King of Italy and of Queen Helena, who is the daughter of King Nicolas of Montenegro. It is asserted that the uncle of King Victor Emmanuel, the Duke of Aosta, whose wife is the sister of the late Marie-Louise, mother of King Boris, has invited him to spend some time in Italy.

In any case, the departure of King Boris, who accompanies his unmarried sister, Princess Eudoxia, has at least this importance, of showing that the country, which has recently undergone such tragic experiences, is now sufficiently tranquil for the King to be able to leave the reins of State in the hand of the Government—a thing which he would not have dared to do during the régime of the two preceding Governments. This is incontestably a mark of success for the Liaptcheff Cabinet and for its policy of appeasement and of consolidation.

The Situation in the Dobruja.

Sad events have occurred during the last few days in the Dobruja, where deeds were wrought more horrible than those which happened in the region of Kourtbounar (see my letter of June 5).

The incident took place this time in the region of Toutrakan, which, like that of Kourtbounar, is in the neighbourhood of the Bulgarian-Roumanian frontier, along which the Averescu Government, by its policy of intense colonisation, wishes at all costs to establish a barrier of Kutzo-Vlachs, expelling the Bulgarian population, whose rural goods it is actively confiscating for the benefit of the new colonists.

On July 6 the village policeman of the town of Staro-Selo, having, it appears, drunk more than usual, amused himself, in this state of intoxication, in bursting a bomb found in the environs of this locality. The bomb exploded and killed or wounded him. Immediately the cry of assassination was heard and the story set about of a vast conspiracy on the part of the native Bulgarians against the Roumanian authorities. The occasion was not lost of engaging in a recrudescence of persecution. The Chief of the Gendarmerie arrested the entire male population of the aforesaid village, that is, 120 men, who were submitted to questionings and to exceptional treatment, after which the majority were released. Twenty-six, however, were kept under arrest, and the following day were con-

ducted under escort to Silistra, the main place of the Department, to undergo a judicial inquiry. All that was only a *mise en scène*, for the convoy had scarcely left the town of Toutrakan when these unfortunate men were miserably killed by their guards, under the pretext that a Bulgarian band had attacked the convoy in an endeavour to rescue the prisoners. The consternation and the agitation which the Bulgarian population of the Dobruja felt may be imagined, for the explanation of the Roumanian authorities deceived no one. These last, as if perceiving the inadequacy of their arguments, tried to invent an incident on the frontier. It is so easy: one has only to announce an attack of Bulgarian *comitajis*.

But this manœuvre did not succeed. The Bulgarian Government, which followed closely the activities of the organisation of the Dobrujan refugees in Bulgaria, an organisation which lends itself occasionally to Bolshevist influences in Moscow, and which, it is suspected, receives from the Soviets money to create difficulties between Bulgaria and Roumania, had decided, before these events, on an energetic measure: to arrest fifty of the Dobrujan leaders and to clear the frontier of all suspects whose attitude gave rise to fears of complications on the frontier—in a word, the whole Bulgarian part of the frontier was purged of undesirable individuals, so that when Bucharest announced a frontier incident, Sofia could reply that it had no knowledge of it and that it demanded proofs establishing the reality of what had been put forward from the other side of the Danube.

Then the Roumanians, taken, so to speak, off their guard, and not being able to cover their acts of violence, tried to provoke an effective incident. During the night of July 8-9 a detachment of newly arrived soldiers—they were not the frontier guards—opened fire on the Bulgarian frontier post N 15, which is on the road between Rustchuk and Toutrakan. The occupants of the post, who were but four or five soldiers, overcome by the relatively considerable number of the assailants (about forty) at first withdrew; then, appealing for help to some peasants of a neighbouring village and reinforced by some other soldiers who had rushed up to the alarm, retraced their steps and prepared to attack their own post which had been taken by the Roumanians, when they saw, on approaching it, that the latter had departed without waiting for the Bulgarian attack.

The Bulgarian Government at once made serious representations to Bucharest, and, sure of its position, it demanded an inquiry into what had occurred and the establishing of responsibility. The Roumanian Government did not reply. The Foreign Minister of Roumania, M. Mitilineu, told the Bulgarian Minister in Bucharest that he was not *au courant* with the affair. The demand for an inquiry could not, however, be refused. It is to be hoped that it will sufficiently illuminate the matter as to prevent all future incidents. But no illusions in this regard can be entertained if the Roumanians do not put an end to their policy of extermination of the Bulgarian element in the Dobruja, a policy of which manifestation makes pale even the famous massacre two years ago of Tarlis, near the Græco-Bulgarian frontier.

ROUMANIA.

Bucharest, July 14.

Political Irregularities.

The new Parliament met at the end of June, for the purpose of confirming the mandates of the members. This ceremony, which should be only a matter of form, has kept the Parliament in session for a fortnight, owing to the debates which arose on the validity of many of the seats. To the protests raised by the Opposition against the methods of coercion employed at the elections, the Government apparently replied, no doubt with perfect truth: "Our methods were no more reprehensible than those of our predecessors in power." Every Government party in turn in this country appears to consider fair, as in love and war, all methods at the elections which will help to establish its superiority: and although the Opposition in each case calls Heaven and Europe generally to witness the misdeeds of its political opponents, it has every intention of proceeding with equal irregularity when its turn comes. The real fact of the matter is that the idea of playing fair in any walk of life has not been developed in Roumania any more than in other semi-Eastern countries, and it seems futile to look for Western standards of conduct in a people whose history as a European Power has only recently begun. They have had to fight for their existence against huge odds for many centuries, and have had to keep their end uppermost by hook or by crook against equally crooked methods on the part of their adversaries; it is not surprising, therefore, that they have not yet learned to despise such methods. Whether they ever will is a psychological question for the future to answer.

Official Changes.

But to return to the business of the Chamber—after a fortnight's discussions the members have all taken the oath and the Chambers have been constituted. General Coanda has been appointed President of the Senate, and has, therefore, resigned from the Ministry of Industry and Commerce, which portfolio has been taken over, *ad interim*, by M. Mitilineu, Minister for Foreign Affairs: and M. P. Negulescu, having been elected President of the Chamber of Deputies, has resigned his portfolio of Public Instruction which has been assumed by General Averescu, *ad interim*. One or two meetings will be held to formulate the reply to the Speech from the Throne, and then the members will disperse for the summer vacation. No doubt they will be glad to reach the country, as the heat in Bucharest is almost insupportable.

IRAQ.

Baghdad, July 7.

The Weather.

After a May and June of exceptionally low temperatures the thermometer in Baghdad has risen in the last days of the latter month to a normal summer level, varying between 110 and 115. Except for one or two days of stagnant air, conditions have been not unpleasant, save

that in some quarters (and notably in the civil cantonment of Alwiyah) there has been a plague of mosquitoes and sand-flies; these no doubt are one consequence of the floods. At the moment of writing the temperature has dropped again, with a steady north wind.

The King's Departure.

King Faisal left Baghdad on Wednesday afternoon for Europe. He will travel, escorted by an armoured car, by Rutbah, Amman and Jerusalem to Egypt, and in Europe his first stopping place is to be Vichy. It had originally been doubtful whether he would visit London, but his desire to express in person his appreciation of Great Britain's efforts in securing the Turkish settlement has led him to insist on a short stay in England before he returns—probably in October—to this country. He leaves his brother King Ali as Regent in Baghdad and is himself accompanied on his travels by Naji Beg al Suwaidi, Minister of Justice, an accomplished linguist and politician. The portfolio of Justice will be taken temporarily by Abdul Muhsin Beg, the Prime Minister, whose name it was pleasant to see as the recipient of a K.C.M.G. in the Birthday Honours list just published. His popularity, due to a high character and exceptional charm, is remarkable.

Iraq and Great Britain.

At a banquet given by the King shortly before his departure, important speeches were delivered by him and by Sir Henry Dobbs. Even allowing for the formulæ of courtesy current on such occasions, a very genuine cordiality between the greater and the lesser Ally was emphasised: the King was outspoken in his thanks to H.B.M.G. for its successful conclusion of the Turkish Treaty: and the High Commissioner happily seized the opportunity to announce a further and very tangible boon conferred by Great Britain upon Iraq—the cancellation in its favour of nearly a million pounds' worth of the capital debt, owed (on account of roads, bridges, telegraphs and the like) by Iraq to the British Treasury. The extreme Nationalist Press, with a perversity with which it is hard to sympathise, endeavours to make what capital it can out of the "great sacrifices" made by Iraq for the Turkish settlement. There have been, in fact, no sacrifices; and no infant State—the recent unselfish creation of another—has ever benefited more signally by the disinterested efforts of its natural protector than has Iraq from the diplomatic success of Sir Ronald Lindsay at Angora. This fact (fully and generously admitted by Yassin Pasha to the writer) is fortunately recognised by the entire public save the handful of lawyers and journalists who paradoxically monopolise the claim to "Nationalism."

Official Visits Abroad.

Others besides the King are feeling the attractions of foreign travel. The Minister of Finance and his Adviser have felt their presence essential at the discussion of financial problems in Paris and in London. The Director of Tapu (Land Registry) is visiting Constantinople to recover Turkish land-records relevant to Iraq. And it is not impossible that changes in the official relations of Iraq and Persia will call for the presence of Customs or Postal officials in Teheran.

Summer Station for Iraq.

No Europeans from here have ventured this year to spend the summer in the Lebanon, although several distinguished Iraqis are braving the unsettled conditions there. The latter have emphasised Iraq's need of a satisfactory summer station—cool, safe, and accessible and if possible without the trying trans-desert journey. These considerations point rather to Persia than to Syria, and of Persian resorts Hamadan is the most likely to find favour. Official recognition of Iraq by that country is said to be imminent: this, with the greater security following on Riza Shah's régime and with the abolition of the road tolls, will encourage Iraq residents to look eastward for a spot wherein to escape the rigours of the summer here.

CYPRUS.

Nicosia, July 5.

Cypriots and British Nationality.

Lord Lloyd, on the occasion of a recent visit to Alexandria, received a deputation of the "Cypriot Brotherhood," a very large Greek body in Egypt. He expressed his great interest in the affairs of Cyprus. With regard to the petition that Cypriot Greeks living in Egypt and the Sudan might be recognised as British subjects, while replying sympathetically, he pointed out that there were considerable difficulties in connexion with the claim.

Sir Malcolm Stevenson.

It is generally believed that the Governor will be very shortly leaving the island to take up another appointment. The work of Sir Malcolm during his tenure of office as Chief Secretary, High Commissioner, and lastly as Governor is discussed in the papers. His just administration, and zeal for island welfare are fully and sympathetically admitted.

An Island Earthquake.

A shock, sufficiently severe to cause considerable alarm, was felt in all parts of the island on the evening of June 26, coinciding with the shocks along the Mediterranean seismic area that affected Crete, Rhodes, and Egypt. The island is seldom long without tremors of more or less severity; but only one really serious shock (or rather series of shocks) has occurred since the British occupation. This caused damage in the south-west district of the island, especially at Limassol, and in the Akrotivi peninsula. The town of Limassol narrowly escaped serious disaster: and the inhabitants would not occupy their houses for many weeks.

Underground Water Supplies.

Great interest continues to be taken in the projected borings, which are to follow as an outcome of the researches of Mr. Thompson, the distinguished hydraulic engineer and expert, whose report is under consideration. Work, which it is hoped will be more fruitful in results than any carried out hitherto, is to proceed in the Famagusta district, under a director and an assistant from England. Boring for possible artesian supplies at Kithræa, in the north of the island, is meanwhile suspended.

The new Paris Mosque was opened by the Sultan of Morocco on July 15.

King Boris of Bulgaria, accompanied by Princess Eudoxia, arrived last week at Lucerne.

Sir Geoffrey de Montmorency has been appointed a member of the Executive Council of the Governor of the Punjab, in succession to Sir Herbert Maynard.

His Majesty has appointed Mr. Maung Ba to be one of the Judges of the High Court of Judicature at Rangoon, in the place of Mr. Justice Joseph Augustus Maung Gyi, who has been appointed to the Executive Council of the Governor of Burma.

Mr. "Pussyfoot" Johnson has sailed from New York to attend the International Anti-Alcohol Congress, which is to be held at Tartoma (Dorpat), in Estonia, after which he is leaving for a tour of the Balkans and the Near East.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

Digitized by Google

THE FUTURE OF THE WAHHABIS.

On July 8, at the Royal United Service Institution, Mr. St. John Philby lectured to the Central Asian Society on "The Triumph of the Wahhabis," Sir Michael O'Dwyer being in the Chair.

Mr. Philby began by stating that although the Wahhabis provided the subject of his address, it was really about *the* Wahhabi, Ibn Saoud, that he was going to speak. For the history of the triumph of the Wahhabis was the history of the triumph of this man, now King of the Hejaz and Sultan of Nejd and its dependencies. The secret of this triumph was due, first to his conception of his duty to his people and to his God, and then to the practical way in which he had avoided the mistakes of his predecessors. It might, of course, be that Ibn Saoud would fail as, for instance, the great Ibn Rashid of the Shammar failed; but the lecturer believed in his permanence. If Ibn Saoud were now to die, it would be another matter, but with that contingency he did not reckon. Nor was Ibn Saoud at the end of his expansionist tether—and the unification of Arabia would surely increase the prospects of permanence.

The difference between the present King of the Hejaz and his Wahhabi predecessors lay in this. Past ebullitions from Arabia ended in disaster either because the forces of Nature were too strong or because of outside hostility. When, moreover, the original white heat supplied by religion had died down, there being no fresh fields to conquer, these movements petered out, and Arabia relapsed to its original tribal anarchy. But Ibn Saoud had set out to conquer the chief enemy of Arabia—Nature herself. Arabia was not, as was widely thought, doomed for ever to a pastoral existence accompanied by anarchy.

The lecturer developed this point by sketching Ibn Saoud's career. In 1901, he said, Ibn Saoud, who had spent his boyhood at the wise feet of Sheikh Mubarak of Koweit, launched out on Arabia his seemingly mad scheme. He captured Riyadh from the Hail dynasty, and in the next twelve years recovered the rest of his ancestral domain. Whether at this time he dreamed the greater dream of restoring the empire which had been won and lost by his forbears a century before it was impossible to say. In any case, Ibn Saoud saw clearly that the tribal organisation of the Arabs had to be broken up before the qualities of the Bedouin could become a factor in the erection of a homogeneous State, and a policy of agricultural settlement was, therefore, the only hope of success. He began to look for suitable and sufficient land for the permanent accommodation of his military contingents, whom he summoned to his colours in the name of the old religion. His first experiment was made in 1912 at the desert wells of Artawiya, where are now some 5,000 flourishing inhabitants. This was the pattern of 50 or 60 Ikhwan colonies which have grown up subsequently in the desert. In this accomplishment, tribe was necessarily used against tribe, and victors and vanquished were then reconciled by Ibn Saoud's scheme of agricultural settlement. These colonists not only tended to break up the tribal system, but they became in effect a cantonment of the Sultan's standing Army. They were given mosques by Ibn Saoud and assistance to dig wells and houses, and to make fields out of the desert. In return for this they swore allegiance to Ibn Saoud, and in his name and in God's service they would not scruple to attack tribes to which they belonged by birth.

This successful scheme had been accompanied by wars of conquest since its inception. Ibn Saoud had now a constant supply of fresh military material—for instance, very few of the troops who attacked Taif in September 1924, took part in the capture of Jeddah and Medina at the end of 1925. Nor was this, as had been pretended, due to casualties within Wahhabi ranks.

Proceeding with Ibn Saoud's history, Mr. Philby showed how after this agricultural scheme had been launched in 1912, the Wahhabi found himself hemmed in between Ibn Rashid and the Turks. From Great Britain, to whom he made tentative advances, he could get no encouragement. He therefore fended for himself. He attacked the Turks in the Hasa province, and his dash was completely successful. Before Turkey could organise her revenge, the Great War ensued. Then, ensured of British moral and material support against Hail, he took on Ibn Rashid, but owing to Captain Shakespeare's unfortunate death, the Indian Government became rattled and left the field clear for the British authorities in Egypt, who were fortified by Lord Kitchener. The result was the Shereefian campaign. Owing to the diplomacy of Sir Percy Cox, Ibn Saoud was immobilised by the unfavourable Treaty of December 1915. Throughout the War the Wahhabi had to watch his Shereefian rival being pushed by Britain from one pinnacle to another. However, he had the sense to remain quiet, consolidating, without advancing, his position. But the state of feelings between Ibn Saoud and Hussein became increasingly bitter, and the British Government in the last years of the War had perforce to divert the former's attention from his grievances against Hussein, so that the Syrian and the Hejaz campaigns should not be hindered. When the lecturer went to Arabia in October, 1917, he realised that the border oasis of Khurma was already a *casus belli* between the Nejd and the Hejaz. The leader of this oasis, which, in return for golden English sovereigns, had supplied the Shereefian armies with men, had been offended by Hussein, who threatened to punish the place. Thereupon the inhabitants, being Wahhabis, appealed to Ibn Saoud for protection. He assented. The Shereefian attacked the place in the summer of 1918, and were beaten off. But it was obvious that Ibn Saoud would not stomach such conduct. The British Government was forced to intervene, and both sides were warned of its intention to arbitrate. But Hussein was in no mood for reconciliation. He attacked Khurma yet again, and a direct conflict was inevitable. But the end of the War ensued, leaving Hail still out of Ibn Saoud's hands, and Hussein's hands full of British gifts or promises.

A temporary lull came over Arabia, but the main problems were still outstanding. The British Government was still using Hussein as the pivot of Arabia, hoping that Faisal would become a convenient instrument in its hands. In the uncertain situation, Lord Curzon, then in charge of the Foreign Office, summoned an inter-departmental conference to consider what should be done. To this conference the lecturer was invited. He found, however, that he was the only one to vote against the "Hussein policy," which was proclaimed as the British policy. It was decided to inform Ibn Saoud that Khurma had been adjudicated to Hussein, who was supposed by the War Office to be capable of beating any rivals in Arabia.

Mr. Philby, who had opposed the cause of Hussein without success, left that conference, he said, convinced that his Arabian career was over. His judgment on the Arabian situation, although listened to very generously, had been overridden, and he prepared to return to India.

The next development was when Abdullah, Hussein's son, entrenched himself at Turaba, a day's march from Khurma. In the night the Wahhabis fell upon this force and practically annihilated it. The Hejaz now lay at the mercy of Ibn Saoud. The British Consul at Jeddah reported that Ibn Saoud was marching on Mecca. Thereupon Lord Curzon sent the lecturer post haste (by aeroplane to Cairo) to attempt to stop Ibn Saoud (who, as the lecturer alone believed, was not really advancing on Mecca). But when Mr. Philby reached Jeddah, he was forbidden by Hussein to land. Apparently Hussein had recovered from his fright.

Digitized by Google

Since then, from May 1919 to August 1922, Ibn Saoud had been extending his boundaries in every direction. In 1920 he reduced the mountainous districts of the Asir province to submission; in 1921 he fulfilled a life-ambition in taking Hail; in 1922 he annexed Jauf, besides capturing such border oases of the Hejaz as Khaibar and Taima. By the end of 1922 he was master of desert Arabia as far as Transjordan and the Hejaz. All this time Ibn Saoud was maintaining a perfectly correct attitude towards the British Government—he was drawing indeed a substantial subsidy from the Treasury. His hostility was concentrated upon the Shereefian Princes, who fully reciprocated it. For the British Government this was an intolerable situation, and towards the end of 1923 the Government saw the necessity of arranging a *modus vivendi* between Ibn Saoud and his neighbours. Consequently, it invited the potentates concerned to Koweit, where a conference was held, under Colonel Knox, in November. Hussein, however, refused to send representatives. Moreover, the President was charged to press Ibn Saoud to give up Khurma to Hussein. This doomed the conference to futility, and in April 1924, it came to an unsuccessful end. As the lecturer wrote from his post at Amman at the time, the way now led straight to a Wahhabi occupation of the Hejaz.

Ibn Saoud, having now no British subsidy to restrain him, meant business. In September Taif was fallen upon. Mecca came next, and the Emir Ali, being defeated at Hadda, fled to Jeddah. Before this last place operations were prolonged, the while Ibn Saoud was organising the administration of the territories which had fallen into his hands.

In this conflict the European Powers had proclaimed their neutrality. But the British Government, which had long cast desirous eyes upon the Maan-Aqaba district at the northern extremity of the Hejaz, now stated that the temptation afforded to the Wahhabis by this region was a menace to Palestine. Hussein took up residence at Aqaba, and this was the excuse which enabled the British Government to annex what was indubitably Hejaz territory.

Of the next stage in Ibn Saoud's progress, the Clayton Treaties, the lecturer spoke highly. These treaties, he said, were most satisfactory from the points of view both of Ibn Saoud and of the British Government. It was, however, unfortunate that Sir Gilbert Clayton should have passed from negotiations with the Wahhabis to negotiations with the Yemenites, for not only was such an action bound to create misunderstanding in the mind of Ibn Saoud, but what would be the position, if the Mission had succeeded in negotiating a treaty with the Imam Yehia, when or if war broke out between the Yemen and Ibn Saoud?

With the acclamation of Ibn Saoud as King of the Hejaz, on January 8 of this year, Arabia found itself at peace for the first time since the idea of a united Arabia had been mooted in the counsels of Whitehall, Cairo, and Mecca.

In conclusion, Mr. Philby reverted to the question of the permanence of the Wahhabi régime. He firmly believed in that permanence, not only because of the modification in Arabian society referred to, but also because there was now no Moslem Power capable of invading Arabia. Moreover, the acceptance of material developments was extending to Arabia. Motor-cars had been provided by Ibn Saoud for the pilgrims; at the Mecca Conference it was resolved to build a railway to Mecca; and soon Ibn Saoud would have his wireless station at Riyadh, as he had already one at Abha, in Asir. Some conception of what modern methods could do might be gained from the modern Sudan.

Ibn Saoud had always professed his desire for cordial relations with Great Britain, and it was time that this country realised the fact that the goodwill of the Wahhabi leader was worth more than the activities of a thousand consuls.

In a discussion that followed Dr. Hogarth said Mr. Philby had given a fair account of recent history in Arabia. but he (Dr. Hogarth) did not agree with Mr. Philby's views or his prophecies on the future. Mr. Philby spoke of the present condition of things in Arabia as permanent, but "permanent" was a word that had no meaning in Arabian politics. What Mr. Philby called the permanence of Ibn Saoud's empire depended on the accomplishment of two things. One of these was the settlement of the bedouin upon the land. It would have been a great advantage if Mr. Philby had given some information on this matter. He had spoken of the occupation of Artawiya, with five thousand people, but exactly how much arable land was there for them and how much water was available for them? How far was the settlement really agricultural? So also with the other fifty or sixty settlements mentioned by Mr. Philby as scattered up and down Nejd. One had to know this sort of thing before one could ascribe the tremendous social revolution that had taken place in Central Arabia to the settlement of the bedouin.

Another of Mr. Philby's points was that a permanent empire could not be established except on a religious basis, and that the religious feeling in virtue of what you conquered must be kept at a white heat. But it was extraordinarily difficult to keep people at a white heat for long. The method had been successfully followed at the beginning of Islam; but, as Mr. Philby had said, it was extremely improbable that the Arabs would ever again overflow the northern borders of Arabia. The parallel between the conditions obtaining at the time of the immediate successors of the Prophet and those of 1919 had often been drawn. The extreme weakness of the Byzantine Empire, due to the clash with Persia, was a good deal reproduced at the close of the Great War by the exhausted conditions of the Allies. These had suffered by the War, whereas the Arabs had gained money, arms, experience and a knowledge of the West which they had not had before. These facts made it seem possible there should be another outburst from Arabia into western lands; but the enormous difference between the present time and that of the founding of the Arab Empire consisted in the fact that the Arabs were still pretty much where they were—even Ibn Saoud with motor cars and machine guns was not very far ahead of the first Mohammedan conquerors—whereas the West had transformed itself. That its weapons and organisation were infinitely superior to those of the Arabs was shown by the fact that the Wahhabi raid on Transjordan simply melted like snow under rain before a few armoured cars and aeroplanes. If the Arabs could not overflow their northern borders what were the Wahhabi to do? He supposed they must "mop up" the countries of Southern Arabia, Yemen, Hadramaut and Oman, which they had not got under at present. It was extremely difficult to believe that any creed such as that professed by the Wahhabis would ever make way among a people with the spirit, courage, and general tradition of the Yemenites. But even if Ibn Saoud could conquer Yemen, what would happen after? If he could conquer southern Arabia at all it would not take long to do; two or three years would be enough, but after that how was the white heat to be maintained?

Another great difficulty that Ibn Saoud was only just entering upon was that of the pilgrimage. His predecessor in Hejaz had quarrelled with Egypt in a most foolish and ridiculous manner. The whole history of Hejaz showed it was a country that could not depend on itself; it must depend on a richer country, and that country had always been outside Arabia. But now the position seemed to be that no such arrangements had been made with Egypt as would lead to Egypt's paying the bill for the Hejaz, and without money you could not buy the modern implements of war. Another of Ibn Saoud's difficulties would be with the bedouin mind. It was all very well to try to settle the bedouin upon the land, but in doing so you were running counter to age-long tradition.

Captain Crawfurd, Major Moore, the Rev. A. R. Dard, and Iqbal Ali Shah also spoke.

The two British flying-boats from Felixstowe left Aboukir on July 18 for England via Sollum and Athens.

Book Review

A FRENCHMAN ON ISLAM.

L'ISLAM SOUS LE JOUG," By Eugene Jung (50 avenue Malakoff. Paris. Chez l'auteur. 5 francs.)

The author of this book, M. Eugène Jung, is widely known to students of the Middle East, particularly for his writings on the Arab world, but it may well be doubted whether, from a sensational or journalistic point of view, he has ever surpassed this little tract on contemporary European policy in relation to Islam. That it is highly coloured goes without saying; that it is readable is proved by the fact that one reader, at any rate, read it through continuously; and that the false in it can easily be separated from the true is one of those delightful facts which will immediately make itself apparent to the informed peruser.

M. Jung begins by stating as a general dictum that there is profound unrest throughout the Islamic world, and this unrest he attributes directly to the pretensions, claims, or activities of Christian Powers. The anti-European movement, he contends, is spreading, for the Moslem world regards the present attitude of the Western Powers as "the new Crusade." Nor, in his opinion, is the crusade merely the revival of an old enterprise, undertaken only by the Catholics; for under his condemnation come also, as being adversaries of Islam, Protestants and Zionists. The anti-Islamic move must, he asserts, be stopped; and his suggestions for a remedy arise from the facts, first that he is a patriotic Frenchman, who desires that his country shall become again the leading in the world, and, secondly, that he is a man who appears to see in all religions equal values. On the first score, his patriotism, we may take his protestations for granted. On the second, however, it may be just said here that his inability to account any one religion, Christianity, Islam, Buddhism, Brahmanism, superior to the other, only makes him the more convinced that the cause which he sets out to defend, Islam, is being menaced by other religions. But let us hasten to his vivid analysis of the existing situation of Islam.

Having preferred, in the brief logical way of which he is a master, the economic reasons which induced the West to "invade" the East, he examines the Mussulman countries one by one. Turkey, he asserts, cannot long remain in her present state; and he thinks she is prepared to intervene in the general Moslem world. We note, however, that he falls into the journalistic error of supposing that "Turkey considers the Lebanon, Syria, Palestine, Transjordan and Iraq as Alsace-Lorraines."

On Egypt he is particularly interesting. He believes that Egypt is reverting to her old, historic rôle, that is, to be the pivot of the Oriental polity. He quotes with approval a brochure written by Moustapha Kamel in 1899 in which the thesis is maintained that a British occupation of Egypt is a menace to the freedom of the *hajjis*, and judges that Cairo's decisions carry very considerable weight in the Islamic world. In opposing the Egyptians' desire for independence Great Britain is, therefore, playing with fire.

For some of the other Oriental countries, such as Mongolia, China, Afghanistan, Persia, he appears to rely for information upon French newspapers: and in all these he finds that the attitude of domination or superiority on the part of the West capable of bringing about a cataclysm.

He then turns to his favourite subject—the Arab countries. Here he discovers that an "energetic *volte-face*," by France and by England, is overdue. Or, if England does not understand the necessity, or seeks to supplant or to dominate or to dupe his country, France must alone change her attitude: for on this depends peace or war. Tracing the course of Anglo-French rivalry in the Middle East, he affixes the label "domination" as the motive of British efforts, and "profit," of French efforts. And when Great Britain and France at last became Allies, when they received the help of the Arab world (although M. Jung, as is perhaps natural to a Frenchman who could hardly be aware of the nature of the assistance rendered to the British armies in Palestine and Syria and Mesopotamia by the Arabs, grossly exaggerates this), they repaid their Moslem aspirants for independence by the imposition of mandates! The mandatory system (Class "A") he considers absolutely unjust, one which, if persevered in, will bring disaster.

On the French mandate for Syria he is particularly severe. Refusing to throw on General Sarrail all the blame for the recent arraignment of the French mandatory before the League, he states that since 1920 the irritation of the Syrians has been profound. Nor has M. de Jouvenel shown any signs, despite personal advice from the author, of mending the situation, for the "government" which has been set up in Syria is not really nationalist.

In Iraq he asserts that Great Britain is playing a very dangerous game, and that in Palestine she is "with the Zionists and has against her the Mussulmans together with the Christians, who only await a favourable opportunity to disembarrass themselves of the intruders."

Up to this point M. Jung has said little that is not the stock-in-trade of the Arabophil. But he now goes further. In a striking chapter upon "Islam and its Adversaries," he first attacks the Catholic Church. Rome, he says, is insatiable; but "she has badly understood her interest, for Islam has never been hostile to it." And, too, encircling Islam are the Protestants and Zionists—an encirclement which, incidentally, is much too intimate to please Rome.

But all this Western intrusion is, it is to be inferred, only temporary. In the heart of Arabia, where Ibn Saoud, independent and inscrutable, bides his time, an Arab Empire is in the making.

For behind the great material and political struggle in the East lies the religious factor. Confronted with the menace of Catholicism, Protestantism, and Zionism, the followers of the Prophet are preparing, together with their allies the Buddhists, to resist the assault.

M. Jung then returns to his main concern: What is France to do about it? His answer in brief is: renew with the Arabs the gesture of Francis I. with Suleiman. Let the rest of the world say what it will, France must settle her differences with the Levant, the Lebanese, the Syrians, and with Islam. She, the one true friend of the Moslem world, must go to the Arabs with open hands, signifying loyalty. Then would ensue the respect of her colonies and protectorates.

It is all very exciting, even thrilling. But it by no means carries conviction. The examination is far too superficial, quite apart from the number of definite errors that are made. (M. Jung should, for example, check more carefully, before he sets them down in a book, the statements that French and British representatives are to reside in Riyadh or that in the terms of the Treaty between Turkey and Iraq there was provision for the loan by London to Angora of £20,000,000.) In this respect it bears resemblance to the various documents with which Arab propagandist organisations from time to time flood the placid West. A fuller account of the Arabs' own shortcomings, a less hasty disposition to generalise about impending woe, and, particularly, a smaller inclination to identify Nationalist movements in Moslem countries as inevitable manifestations of a general revolt of Islam—such things as these would have fortified M. Jung's thesis, which is at least tenable.

We ought to say that this book concludes with the report of an interview which M. Jung had with Mahmoud Bey Salem Al Arafati upon the condition of Islam. This interview is in keeping with the rest of this book in its sensationalism, but it is too one-sided to agitate any but the converted.

THE LATE MISS GERTRUDE BELL.

The sudden death in Baghdad last week of Miss Gertrude Lowthian Bell has removed from the service of the Empire a very remarkable woman. Of her intellectual ability her career is eloquent testimony. Opportunity and her own choice had given her an exceptional knowledge of the languages, the people, the archæology and the literature of the Middle East; but prior to 1914 she had followed her bent in this direction from no other prompting than love of her subject. The Great War was to reveal not only how deeply her devotion to the Arab cause had entered into her being, but also to put her knowledge to the searching test of practical application under the most exacting conditions. Although officially attached to the Political Department of the Government of India, Miss Bell in the early days of her service in Mesopotamia was consulted alike by the Military and the Civil Administration. Her task was primarily to supply, collect and correlate the intimate information regarding the country and its people without which the Government could not be conducted with any hope of success. Her reputation among the Arabs, the ties of sympathetic understanding which bound her to them and the genuine esteem in which they held her did much to help the British cause in Mesopotamia. She was, however, one under authority, and the moulding of the destinies of the young country was not in her hands alone. It says much for her sense of discipline, her loyalty to the Arabs and her faith in the ultimate triumph of the cause that she had espoused that she never thought of withdrawing her help because the administration was not being conducted on the lines that she might have wished. Her enthusiasm never ran away with her judgment. She knew the limitations of the Arabs, and had no illusions as to the material with which the new State had to be built up; but she believed that the Arabs could make good in their own way and was convinced that it was Great Britain's duty to enable them to make the attempt. Those who did not share her optimism were inclined to cavil at her inexhaustible patience, her tolerance of Arab failure, ingratitude and incompetence. Of the foundations of Anglo-Iraqi friendship, however, the more lasting, if all could be known, would probably have to be traced to Miss Bell's house in Baghdad—the *rendezvous* at one time or another of all who hoped to play some part or to have some say in Iraqi affairs—the tribal Sheikh no less than the town politician, the patriot as well as the self-seeker—bent on gaining the ear of one whom they regarded as the power behind the throne. Yet the woman who traversed Persia and Arabia alone, who combined powers of physical endurance with complete fearlessness, and whose fine intellect was the equal, perhaps, of any of her generation never lost her womanly charm, nor sacrificed the warmth of a friendly affectionate nature.

Miss Bell has been a victim to her devotion to Iraq. The strain of the climate had told upon her, and her friends had hoped that she would retire early this year. But the claims of archæology held her, and she was working to set a properly equipped archæological department on its feet before she left the country. The National Museum at Baghdad will not be the only memorial of her work for the Arabs, and the desert, we doubt not, will continue to hear for generations to come of the exploits of the wonderful English lady who helped to bring the Arab world into its own. Had it not been for the duties of her office, she would have had time to have added to her publications, the best known of which are "The Desert and the Sown" and "Amurath to Amurath," for she had collected much material which was to have been utilised as soon as she retired.

General Averescu, the Roumanian Prime Minister, in answer to a question in the Chamber, contradicted reports emanating from abroad about an impending reconcilation between King Ferdinand and his elder son.

THE WEEK AT HOME.

London, Tuesday Morning.

Coal, the Government, and Intermediaries.

Readers of this chronicle will surely have wearied of the subject of coal, which as often as not is at the head of this column. It is still, however, incomparably the most important problem in our national life, and, unhappily, looks like remaining so for some time. Many people are trying to get something done—the last, and most conspicuously unsuccessful, are clergymen from the Anglican and Free Churches—but nothing is actually accomplished. A speech here and there from the mine-owners' and from the miners' side, a pronouncement occasionally from the Government, generally one-sided from the subordinate members of the Cabinet and double-sided from the Prime Minister, and then—nothing: no clouds are lifted, no single ray of hope is visible. This coal struggle is increasingly becoming a war of attrition, the while the ordinary Englishman looks bewilderedly about him to find the real enemy.

There was probably never very much hope of the success of the ecclesiastics' effort last week to induce the Government to carry out fully the recommendations of the Commission which it had appointed. Well-meaning men have generally an aversion from what officials are pleased to call "facing the facts," and Mr. Baldwin had no difficulty at all in demonstrating that the clerics' proposals were condemned by the Report itself! But the Premier was, one thinks, a little hard on the priests and ministers, whose main line of thought was indubitably in the national direction. One thinks of their ideas and contrasts them with, for instance, those of Sir Adam Nimmo, a leading coalowner, who talked last week as if output were the one thing that mattered in industry. It may indeed be true that the miners are tied to a slogan, but their obstinacy is at least equalled by the owners', if this speech of Sir Adam may be taken as a criterion.

A kind of dull and numbing anxiety is, therefore, becoming the country's enforced pall. Enthusiasm in whosesoever cause is waning; even the Government's masked activity arouses no support. Not Mr. Baldwin himself, who at Crown Point by Norwich the other day made one of his typical speeches, can satisfy the nation that all that is possible is being done to stop this lock-out. Nor has the recent restoration of the full service of passenger trains convinced even the meekest season-ticket holder that all is to be well. The Premier has expressed his belief that "for the country's sake owners and miners

will soon see that it is their duty to find some way of coming together and ending the conflict in a way honourable to both parties." But that was very much the Premier speaking, just as it was very much the Premier who answered the Churches' proposals: Mr. Stanley Baldwin, the countryman from the West, is, together with his Royal Report, dishearteningly in the background in these critical days. There is a man who is the politician's puppet, and there is a man who is the nation's prototype (even last Saturday at Norwich this last figure peeped out in the remarks on *laissez faire* and Socialism), but Dr. Jekyll and Mr. Hyde were not more tantalising in their respective manifestations.

Bias in History.

It was the real Mr. Baldwin, *our* Mr. Baldwin, who spoke last week to the Congress of Anglo-American Historians. Here his utterances were the result of no consultations but only of personal reflection. Consequently they are worth reading and remembering: Mr. Baldwin is surely the greatest occasional speaker of our time.

Like all sensible men who have lived to see the decay of that absurd Cambridge notion that History is a science, Mr. Baldwin believes implicitly in the desirability of bias in a historian. History is, as all the great English historians knew, from Gibbon to Belloc, an art, and personality is inherent in art. Who but the student for examinations has any use for the mere record, the dull, impartial chronicle which, emerging from our University Presses, is so often classified as History? Was it not Mr. E. V. Lucas who wrote of our dons' attempts at history:—

"It all comes out of the books they read
It all goes into the books they write."

That is why, for hodiernal instance, one can read a leading article in the *Daily Post*, and one cannot read a leading article in the *Morning Telegraph*. Real feeling, real personal conviction which is the result of all available study, is the root of good historical writing. Mr. Baldwin knows this fact well. But the old superstitions die hard that in order to be correct one must be colourless, that to every question there is more than one side, that in short, there is no such thing as a balance of truth.

Wireless Accent.

One of the most painful things which the listener-in has to endure is the accent and pronunciation in which some of the announcers deliver their words. This varies from the affected accent of the day which enables people to talk, for instance, of "wahless" "guvverment" "shorely" and so on, to positive mispronunciation. Now this mispronunciation is apparently due more to obscurity than to ignorance, so that the B.B.C. have appointed a committee, under the unsurpassable chairmanship of Mr. Robert Bridges, to deliberate on the question of the pronunciation of words in common use. Their rulings, which of course are not dictatorial, contain, in the purely English list, but one surprise. This is in the word "obligatory," for which the accent is chosen by them on the second, instead of the first, syllable. One hopes, indeed, that they will not deal similarly with "laboratory." It is good to see that in the French words, they have adopted the obvious ruling for "charabanc" and "chauffeur," though personally I am irreconcilable to "quest-yon-air," for "questionnaire" and to "Reams" for "Rheims." But generally speaking the cultured man with an ear (two very distinct attributes) will not quibble much at this list. Those whose pronunciation depends more on "rules" that they once learned than on euphony may argue about these decisions, but it is to be remembered, and certainly not likely to be forgotten by the admirable men who compose this committee, that English pronunciation, being the pronunciation of English, a living language, is an inevitably changing thing.

The Insanity of Celebates.

We know that statistics are lies, and we know that the silly season approaches, but we had not previously noticed the merging of the two into one uproariously false folly. But in Edinburgh the other day Professor G. M. Robertson, President of the Royal College of Physicians, delivered a lecture containing evidence on the greater prevalence of insanity among unmarried persons. Having stated that there was greater insanity among males than among females (general paralysis and alcoholism were the cause of this), he said that between the ages of 25 and 55 insanity was nearly three times as prevalent among single men and women as among married men and women.

The Professor is, however, something of a philosopher, for, lest the young and middle-aged of this kingdom who have so far resisted the violation of their solitude should rush to matrimony as a refuge from the pursuing demon of insanity, he reminded his audience of the old tag that the lives of married men are not really longer than the single: they only seem longer. (He might have added the story of the little boy who asked his father what the word "matrimony" meant, the father replying that it was not a word but a sentence). In the end, notwithstanding, the statistician got the better of the humourist, for the Professor convinced himself that bachelors die on the average four years sooner than married men, and run three times the risk of becoming insane.

It is not difficult for the bachelor to reply: and what of the four years when you've got them? But professors are like party politicians and poets: they think in numbers.

The Reform of Cricket.

Two things appear finally to have convinced authorities on cricket that all is not well with the ruling of the game—these are the drawing of the three Test Matches and the fact that both the Players and the Gentlemen at Lord's last week scored over 500 runs in a single innings. Something must be done, it is argued, to help the bowler. Everything nowadays is in favour of the batsman; from the preparation of the wicket to the implements of the game. Either, therefore, you must do away with the perfect, generally marled wicket of to-day, or you must alter the l.b.w. rule, so that any ball that would have hit the wicket, no matter where it pitched, may claim a victim, o rthe stumps must be broadened or heightened, or the blade must be made narrower, and so ingeniously on. Mr. P. F. Warner, to whom the conception of altering the rules of cricket is something like sacrilege, contents himself with suggestions that a batsman be given out even if he snick on to his pads a ball which, had he not hit it, would have ensured an l.b.w. decision. (As a matter of fact, no one is nowadays given out l.b.w. if he first hits it, although I believe a batsman can under the existing rules be dismissed in this way. Mr. Warner's suggestion, therefore, is merely to alter the instructions to the umpires.)

Of course the rules as they are at present are quite adequate for village and club cricket—it is just the difference between the game as it is played locally and the county or Test game that matters. In club cricket both sides are out to win, and what spectators there are can seldom complain of boredom. In county games, on the other hand, there is often in evidence the merely negative spirit of avoiding being beaten, and the spectator, having paid to see the game, sometimes find the batting very tedious. Unfortunately it would probably be impossible to alter the rules for county cricket and retain them as they are for games of an inferior grade, but, speaking humbly from the lower category, one can emphatically say that there is no desire that the rules of the game shall be changed.

Midsummer.

We are now high on the full tide of midsummer; and not too comfortable about it. Glowingly during the winter we talk of the loveliness of summer heat, and yet when it does descend on us—as it indubitably descended last week—we are never ready for it. And really London, with its pavements and walls reflecting the heat, the noise and bustle of its traffic, and, perhaps above all, the crowded carriages of the railways and tubes, is hardly the place in which to realise that all is well with the world.

Digitized by Google

But once out of the town, and the July beauty comes over one in its full splendour. The smell of the hay, mostly cut but not all carried, of the limes and the meadow-sweet and the honeysuckle; the jolly flight and the buzzing of bees; the heat mists in the morning and the damp mists at night; the scent of flowers through the windows —all this things and a hundred other make one rejoice to be in England at its flowering-time and to think of the pageantry, brief but unforgettable, with which the summer passes down to autumn. ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

July 22, 1926 (New Style).
July 9, 1926 (Old Style).
Muharram 11, 1345 A.H., of the Moslem Calendar.
Ab 11, 5685, of the Jewish Calendar.

The Maharaj Kumar Shri of Kutch has arrived at the Hyde Park Hotel.

Mme. Ferid Bey left London on July 18 for Switzerland, and will remain on the Continent till October.

Sir Alexander Muddiman embarked in the P. and O. s.s. China on July 16 at Marseilles for Bombay.

Prince Nasir Ali Khan and Prince Mumtaz Ali Khan are among recent arrivals at the Bedford Hotel, Brighton.

Sir Geoffrey Archer is recovering satisfactorily from the operation which he underwent on July 18 in a London nursing home.

The death is announced from Eastbourne of Mary Elizabeth Youell, widow of Edward Charles Youell, of Galatz, Roumania.

Sir Kay and Lady Muir last week arrived in London from the Near East on a short visit before leaving for Blair Drummond, Perthshire.

The Viscount and Viscountess Willingdon had the honour of being invited to luncheon with the King and Queen at Buckingham Palace on July 13.

Sir Ronald and Lady Storrs, who recently arrived in London from Jerusalem, are staying at 7, Park Place, where they will remain until the end of July.

On July 17, at Buckingham Palace, Sir Geoffrey Archer had an audience of the King, upon relinquishing his appointment as Governor-General of the Sudan.

Rai Bahadur Lalit Mohan Banarji has been appointed a Puisne Judge of the High Court of Judicature at Allahabad in succession to Rai Bahadur Pandit Kannaiya Lal.

Captain the Earl of Altamont, who has been spending his leave in town with his parents, the Marquess and Marchioness of Sligo, on July 16 joined the P. and O. steamship China at Marseilles, on his way to join his regiment in India.

The Duke of Connaught presided at the luncheon of the British Indian Union held at the Hotel Cecil on July 20, when the opportunity was taken to bid farewell to Lord and Lady Willingdon before their departure for Canada.

El Lewa Thomas Russell Pasha (Commandant of the Cairo City Police) had the honour of being received by the King at Buckingham Palace on July 19, when his Majesty invested him with the Insignia of a Companion of the Most Distinguished Order of St. Michael and St. George.

General Gouraud, Governor of Paris, arrived in London on July 16. He was entertained to luncheon the following day by the Anglo-French Luncheon Club. The ex-High Commissioner for Syria left for Paris on July 20.

The Queen of Roumania will leave Bucharest early in September next for a two months' tour of Canada and the United States. The Queen, who will be accompanied only by her youngest daughter, Princess Ileana, who will act as her private secretary, will travel incognito. It is expected that her Majesty will be present at the opening of the International Museum at Maryhill, Washington, and formally open on behalf of Roumanians in America the Roumanian Room which will be devoted to Roumanian Art. Several days will be spent in Canada, with visits to Toronto, Montreal, and Winnipeg; and later the Queen will go to California and spend some time in San Francisco, Los Angeles, and Hollywood.

PROMOTIONS, APPOINTMENTS, ETC.

The King has approved the following appointments in the Diplomatic Service:—

The Right Hon. Sir Ronald Lindsay, G.C.M.G., C.B., C.V.O., his Majesty's Ambassador Extraordinary and Plenipotentiary at Constantinople, to be his Majesty's Ambassador Extraordinary and Plenipoteniary at Berlin.

Sir George Clerk, K.C.M.G., C.B., his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Prague, to be his Majesty's Ambassador Extraordinary and Plenipotentiary at Constantinople.

Sir Ronald Lindsay had previously served in Russia, Persia, France, and the United States, and for the period 1913-1919 was seconded for service under the Egyptian Government.

Sir George Clerk, who is at present British Minister to Czecho-Slovakia, entered the Foreign Office in 1898, and a few years later was appointed to Addis Ababa. He has previously served at Constantinople in the capacity of First Secretary.

Chicherin, Soviet Commissary for Foreign Affairs, has sent a telegram to the Bulgarian Minister of Foreign Affairs strongly protesting against the repatriation by the Bulgarian Government of Russian refugees without a Soviet visa and in circumstances which, he alleges, frequently involved their death by drowning.

LORD OLIVIER ON THE HINDU-MOSLEM QUARREL.

In his letters appearing in *The Times* of the 10th and 15th inst. Lord Olivier has managed to convey some very false impressions, which appear to require an even fuller correction than has yet been publicly supplied by the letters in reply from Sir Michael O'Dwyer (*The Times* of the 12th inst.), Sir Theodore Morrison (14th inst.), and Mirza Abbas Ali Beg (16th inst.). In his first letter, which was headed "The New Bengal Regulations," Lord Olivier pressed the following points:

Sir Michael O'Dwyer had been wrong in attributing communal dissensions to the Montagu-Chelmsford Reforms, as the causes were anterior and wider. The communal franchises adopted under that scheme had, however, accentuated and extended the dissensions and Lord Olivier expressed his opinion that ordered progress in constitutional government was impossible until the communal principle for electoral franchises was eliminated.

In reply to this Sir Michael O'Dwyer pointed out that he had never said, and was never likely to say, that the dissensions were *due* to the Reforms. What he had said was that since the Reforms the traditional sectarian hostility had been aggravated tenfold by the political struggles of the rival religions and races to possess themselves of the power and place which the British Government was, to their minds, vacating. Lord Olivier replied to this with a conditional apology for misinterpreting Sir Michael, but added that in his opinion, "tenfold aggravation" was an enormous exaggeration. The previous statement of Lord Olivier's first letter that the communal principle for electoral franchises must be eliminated was dealt with by Sir Theodore Morrison and by M. Abbas Ali Beg, both of whom showed clearly that the principle was indispensable for various cogent and evident reasons. It seems sufficient in this connexion to say that to eliminate the principle in question would be to destroy all hope of Moslem co-operation in the Reform schemes and to aggravate the Hindu-Moslem tension and rivalry to an appalling extent.

The second point brought forward in Lord Olivier's first letter was that British officials in India showed a bias in favour of Moslems. The words used were: "No one with any close acquaintance of Indian affairs will be prepared to deny that on the whole there is a predominant bias in British officialism in India in favour of the Moslem community, partly on the ground of closer sympathy, but more largely as a make-weight against Hindu nationalism." Sir Michael O'Dwyer characterised this as an unjust and unfounded statement and said it showed anti-Moslem bias in Lord Olivier's own mind, to which the latter replied that the majority of the Englishmen he had met in the course of his life, who had served in India, had forcibly expressed predilections for the Moslems, thereby disproving their qualications for governing Hindus. Neither Sir Theodore Morrison nor M. Abbas Ali Beg deal with this part of the controversy, probably not thinking the charge of bias germane to the question of communal franchise.

A great deal could be written on this charge of "predilection for Moslems" on the part of British officials in India. It is not a new theory. *Prima facie* it is more natural for a Western to sympathise with a Moslem than with an orthodox Hindu, who may associate the idea of pollution of caste with the touch of the Western or with his dietary and social habits. We may grant that the British official (also the British non-official and European non-British visitor to India) is less attracted by people who cannot eat with him in India (though they abandon many of their exclusive habits when in Europe) than by those whose religion teaches them to regard Christians as reasonably close to them in many important social and religious matters. We can, however, unhesitatingly deny that on this very natural distinction the statement can be justified that bias has been shown by British officialism of the nature hinted at by Lord Olivier, either in recent times or before the Reforms scheme came over the horizon. It may surprise Lord Olivier to know that British officialism and the whole British Government have been at various times acused by leaders of the Moslem Community of having shown a bias of policy against them. In 1872 the late Sir William Hunter wrote a book, "Our Indian Mussalmans," in which he endeavoured by logic and facts to prove that our whole system of administration had in practice reacted most unfairly in favour of the Hindus and against Moslems. Among other things he demonstrated that our system of filling Government posts had led to the exclusion of Moslems to an unjustifiable and ever-increasing extent.

Recently in the couse of the bitter quarrels at Calcutta a Moslem leader reminded a mass meeting of his fellow-religionists of the case for bias against Moslems on the part of the British made out by Sir William Hunter and brought the series of anti-Moslem policies right down to recent times. Is it possible that Lord Olivier has never heard of all this? Does he not know that the cancellation of the Partition of Bengal was and still is regarded as having been inspired by an anti-Moslem policy? If British officialism had ever allowed its alleged pro-Moslem bias to guide its actions the present position of Hindus and Moslems would indeed be very different in the matter of power and influence.

Lord Olivier's next charge is that there has been vacillation in police action and police court practice, sometimes on one side and sometimes on the other, encouraging each side against the other in turn and that this is "almost universally attested by responsible Indians who impute it—I do not say justly—to a deliberate desire on the part of authority to maintain communal trouble as a testimony against the possibility of constitutional progress." It would really be difficult to imagine a more contemptible or ridiculous insinuation. Can anyone with the slightest knowledge of India think that the local or all-India authorities would attempt to carry out a sinister and secret policy of keeping the two religious sections in a state of mutual tension and bitter-

Digitized by Google

ness by means of vacillating and inconsistent police action or police-court decisions? One may just as well argue that Mr. Baldwin's Government wishes to increase the number of motor accidents because the police and magistrates do not always act with consistency and continuity in the matter of dealing with offences connected with rash or negligent motor driving.

Lord Olivier goes on to cap this absurd charge by insinuating that it is made credible by the fact that no Hindu-Moslem troubles arise in Native States, where "the purpose of maintaining public order and an even balance is untainted by any such mischievous *arrière pensée*." Sir Theodore Morrison has, in reply to Lord Olivier, pointed out that the latter has misread the evidence and that the absence of Hindu-Moslem trouble in Native States (not, I may say, quite so absolute in recent times as formerly) is due to quite other causes than those put forward by Lord Olivier.

The absence of cow-killing troubles in the Native States is no new phenomenon and has often attracted attention and comment. In 1908 Mr. S. M. Mitra published in England his "Indian Problems," and the following quotation from pp. 37 and 38 of this well-informed work is relevant.

"Some years ago parts of British India were much disturbed by cow-killing riots, which are always liable to break out again on the recurrence of certain annual festivals, or even without them. The Hindus object entirely to the slaughter of kine, animals which they hold sacred. The Mohammedans, on the other hand, eat beef freely; and in places where religious feeling runs high between the two creeds, this question of the slaughter of animals held sacred by one party and required for food by the other, leads to serious disturbances and human bloodshed. The British power has to interfere to keep the peace and generally does so by some compromise, such as the seclusion of slaughter-houses, which satisfies neither side. In Native States there are not, and never have been, any cow-killing riots. The explanation is simple. The vernacular Press in Native States does not enjoy the same licence as in British India. In the latter the Hindu has all the paraphernalia (leaflets, pamphlets, etc.) of a free Press to express his hatred of the Mohammedans and *vice versa;* the result is that racial hatred is excited to such a pitch that the rival religions have recourse to violent measures; they break each other's heads till the authorities come to disperse them. As there is no such thing as a free Press in Native States, there is nothing to foment racial or religious hatred."

Later on in this book Mr. Mitra has written:

"With all the progress of education, and an ideal judiciary, both Calcutta and Bombay have been disgraced with bloody riots over the killing of a cow, an animal held sacred by the Hindu and the food of the Mohammedan. The ordinary executive of both Calcutta and Bombay miserably failed to cope with the cow-killing riots (Calcutta 1897; Bombay 1893), and the Military had to be called out to dispense the rioters. A cow-killing riot is unknown in Hyderabad or any other Native State. This shows that the British ideal of a strong judiciary—at the expense of a strong executive—is not a panacea for all Indian evils. A strong judiciary is no doubt desirable, but a strong executive is indisputably necessary."

The last extract contains a strong criticism of the executive authorities who, Mr. Mitra thought, ought to have been able to deal more successfully with the agitation and riots; but he never suggests that the weakness he detected in them was due to any Machiavellian policy of letting the ill-feeling develop in order to serve the selfish ends of the British Government.

Lord Olivier's final effort in his first letter surpasses all the others. Having unjustifiably charged his own people with partiality to Moslems and having repeated somebody else's accusation against Government of double-dealing in order to keep open a sore in the whole body politic of India, he concludes with a partial, ignorant and most offensive mis-statement in connexion with the religious doctries and practices of Islam. Sir Michael O'Dwyer dealt with this part of Lord Olivier's letter very briefly. He wrote: "I am afraid that Moslem critics will detect an anti-Moslem bias in the late Secretary of State for India, not only because of the above statement (i.e., about the pro-Moslem bias of British officialism), but also because of the extraordinary ignorance of Islam displayed in his confident assertion that the killing of kine at the great Mohammedan festivals is not an obligatory religious sacrice, but 'at best a more purveying of butcher's meat' and 'an exclusively secular feat'! One wonders from what sources Lord Olivier derives his information. But those sources are obviously anti-British and anti-Moslem." In addition to the charges quoted by Sir Michael, Lord Olivier used the words "idolatrous sacrifice wholly repugnant to the religion of Moslems" in connexion with the killing of kine. Sir Michael O'Dwyer's letter gave Lord Olivier the chance and opportunity of verifying his statements, but in his second letter to *The Times* dated July 12 Lord Olivier failed to retract or revise what he had said in his first letter and the controversy in *The Times* has been left in such a state that it is open to people in England, with no special knowledge of India or of Islamic religion or practices, to think that Lord Olivier may be right in saying that the killing of kine is in no way connected with the religion of Islam and that it is "at best a mere purveying of butchers' meat" on the part of Moslems. We, who have lived in the East, even if we have not made a study of Islam, do know that the great annual festival of Moslems in practice includes as an important item the killing of certain animals including kine. Islam is fundamentally opposed to idolatry and therefore to use the words "mere purveying of butchers' meat" and "idolatrous sacrifice" is, on the face of it, a gratuitous and unjustifiable insult to all our Moslem friends. Under all the circumstances some explanation of the place in Islam of the sacrifice of kine may be of interest. We propose to attempt this in a subsequent issue.

CURRENT TOPICS.

India and Parliament.

We have been told by a great Sunday paper that there is a desire among many private members of the House of Commons to talk about India and that pressure is being brought to bear on the Government through the Whips for an early afternoon. Apparently the normal manner for such a debate to be started would be for the official heads of the Liberal or Labour Party to press for a day and to put forward a matter for discussion, but at present not only is there no time available but there does not appear to be any subject on which a discussion would be at all profitable. These facts may or may not be a tribute to "the satisfactory way in which our great Dependency is being governed," as the Sunday paper alleges, but we feel that a debate on India in the present excited state of the House is much to be deprecated. A debate could hardly be interesting without becoming an occasion of inter-party strife and the important questions now troubling India are eminently unsuitable for discussion in Parliament with all the accompaniments of invective and hooliganism which now seem inseparable from a clash of views. Judging by the attitude of Lord Olivier in his letters to the papers, we should expect to find the Labour Party anti-Moslem to a remarkable extent and some very foolish but damaging things might be said. We might find the same Party pressing for a premature change in the new Constitution, which might just unsettle the people in India whom the logic of facts is beginning to convince that the scheme of the British Government is seriously meant. On the other hand, some Government party members might feel constrained to protest against the Protection policy of India and weaken the effect which the self-denying policy of the Indian Government has produced on the Indian commercial community. On the whole we hope that Parliament will leave India alone until

Digitized by Google

the fury and turbulence engendered by the happenings in England of the last few months have subsided.

The Viceroy's Speech at the Chelmsford Club.

The enthusiasm with which Lord Irwin's speech on the all-pervading question of Hindu-Moslem tension was received is a good indication of the recognition by the audience of the necessity for some change for the better in the present situation. Lord Irwin contradicted with all the authority of his own sincere personality and of his position as Viceroy the misconceptions that the Government viewed the communal trouble either with satisfaction or with apathy. He declared that such accusations were denied by the whole tenour of British policy towards India, which was for the furtherance of harmonious intercourse in daily life and mutual acknowledgment of common rights and duties in Indian citizenship. He proceeded to make a deeply-earnest appeal to the communal leaders themselves to come to agreements, and to appeal to their co-religionists to conform to them. Such an appeal supported by active propaganda setting forth the new gospel of peace would surely not pass unheeded. In the course of his speech Lord Irwin showed that the system of communal representation was the result of unanimous Indian opinion in its favour.

The new Viceroy could hardly have done more than he has done by this speech to bring about a truce between the two antagonised communities. Throughout India, *pace* Lord Olivier, the whole official world will feel that the abatement of hostile feelings and manifestations has been confirmed by the highest authority in the land as the most pressing and immediate duty of every one concerned in administration. It remains for the leaders of the two communities to pass on the Viceroy's feelings and wishes to their followers in a convincing and effective manner. The Indian Press has now a wonderful opportunity and it is earnestly hoped that it will use it promptly and well.

Lord Birkenhead Unlikely to Visit India.

There has been some talk of Lord Birkenhead visiting India this autumn, but the visit is quite unlikely to materialise. The visits paid by Lord Crewe and by the late Mr. Edwin Montagu during their tenure of the post of Secretary of State for India were for very special objects and reasons and there is and should be no recognised custom of such visits being paid in the ordinary course either for instructional or consultative purposes. It is undesirable that the Viceroy's position in India should be even temporarily overshadowed, more particularly in the matter of his personal relations with the Indian Chiefs. The presence in India of the Secretary of State side by side with the Viceroy must inevitably produce some clash or comparison of personality and authority. In such cases an impetus would be given to intrigue which would lead to a lot of undesirable whisperings and rumours which would not be to the public advantage.

The Amir and the Bolshevists.

The recent lecture by Colonel Saunders, Chief of the Military Intelligence in India, to Europeans in Calcutta continues to attract attention here and a good deal of anxiety as to what the association of Bolshevist money and individuals with the Afghan authorities really portends is finding expression both in the Press and in Parliament. It is not unnatural that the young Ruler of Afghanistan should desire to strengthen his military power both for offence and defence. In doing this he and his advisers are not thinking either of the Russians or of the British: they are thinking of themselves. The idea of peace as the most desirable condition is not, for a very long time, likely to prevail either in Soviet Russia or in Afghanistan. The Amir cannot obtain all the military improvements he desires from India and when the Bolshevists offer to supply him with these and to pay for part of them it is not strange that he should avail himself of the offer. While doing so he will endeavour to use the Bolshevists as his tools, while they will do exactly the same by him. These were the conditions of the old Russian menace to England through Afghanistan and India and they have now been repeated and developed on modern lines. The use of propaganda and money is better understood and more relied on than before the Great War. War-disgust and impoverishment have made us desire to use a political foil with the button on rather than the naked sword, but neither the Soviets nor Afghanistan have any belief in mere fencing as a means of deciding vital questions. The temptations of India to the independent Tribes and to the Afghans still remain. The conditions in India may or may not be favourable to predatory designs; the facts in this connexion are of much less importance than the manner in which the Indian picture is drawn for trans-frontier eyes. When the military opportunity seems ripe we may be sure that the position in India will be made to seem favourable, just as when Turkey was about to enter the Great War against us conditions in India were falsely made to appear as if they were entirely favourable to Germany and Turkey.

On the whole the situation seems to be dangerous but not hopeless. The threat is a military one combined with the modern military ally of propaganda. The answer to it must alas! be military preparation and determination sufficient to carry their own propaganda with them.

The Indian Coal Industry.

A cabled summary of the findings of the Tariff Board which has been inquiring into the alleged need of protection for the coal industry of India has recently been received in England. For the first time the Board has had to split its opinions and recommendations between a majority and a minority Report. The Board unanimously declares that no case for a general protective duty has been made out and that the industry suffers from disadvantages, the remedy for which is in the mine-owners' hands, namely, the improvement of conditions and qualities and the securing of rebates through the certificate of the grading board. There is, however, a sharp division of opinion on the question of a countervailing duty on South African coal. Both sections of the Board agree that the rebate on exports has been granted by the South African Government with the deliberate intention of developing the export trade. The majority of the Board are against any imposition of a protective duty in India on South African coal, as they hold that this would be unfair to coal importers on the Bombay side; they say that the exclusion of South African coal would not increase the sale of Indian coal by more than 100,000 tons yearly, which would have but little beneficial effect on the Indian coal industry. On the other hand, the imposition might provoke South Africa to retaliate by increasing the duty on rice and cotton manufactures from India which would be prejudicial to Indian residents in South Africa. The majority recommend therefore that no alteration in the existing arrangement should be made.

The minority view of the situation is that South African coal has an unfair advantage over Indian coal through the bounty system now in force in South Africa and is in favour of a protective duty in India of a rupee and a half per ton on the former. It minimises the practical disadvantages of the retaliation likely to be provoked.

It is unfortunate that the Board have been unable to agree. The whole case is left much where it was as regards argument, though it is probable that the majority view will prevail as regards action.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 1.

The Steel Tariff and Pig-iron Exports.

We hear that the U.S.A. Government is being pressed to impose an anti-dumping duty on India pig-iron, which means Tatas' pig-iron. Evidence before the Tariff Com-

Digitized by Google

mission last year indicated that there was not complete harmony in the Indian pig-iron family and some of the members were obviously of the opinion that Tata's had some cards under the table in the matter of Japanese exports; old contracts, said Tata's, and for the time being the breeze died down. The fact remains however that, as the only steel-makers in India, Tata's are able to regard pig-iron as a by-product and, their steel industry now being heavily subsidised by Government, they can dump their pig-iron anywhere at almost any price. Presumably their Indian competitors, who live or die by their prices for pig-iron, would be glad to see most of the Tata surplus going to America, particularly if this left the Japanese and British markets more open to them, but should the Tata American trade ever reach a point that mattered in the U.S.A., there is little doubt that it would have to come to the heel of the steel groups there or be snuffed out.

The Menace to the British Trade.

Japan has already shown, in the matter of the threat of piece-goods duties, that it knows how to handle the tariff weapon efficiently; pig-iron may have to suffer in return; when it suits the Japanese steel industry, that market will be closed to Indian pig-iron. What dump remains for the surplus? Apparently, only poor old England! The British groups will watch with interest the Indian tariff being manipulated not only to capture their Indian markets, but to enable pig-iron to be dumped at Home at lower prices than will ever be possible with Western labour. Then the alternatives will be British anti-dumping duties, or Indian works, if the door has not been already closed to the latter. At present Tatas have a monopoly and apparently they have only to ask anything from the Tariff Board to get it; they are not likely to leave the other entrances to their house unwatched.

The Bengal Legislative Council.

On Tuesday next the curtain goes up on another act of this farce. Possibly the Swarajists may still absent themselves; probably at least some will find an excuse for gathering in their travelling expenses; certainly all will be worried by the Mohammedan resolutions to increase the proportion of Government posts reserved to Mussalmans from 45 per cent. to 50, 55, 60 or even 80, as one stalwart proposes. A host of other resolutions are tabled most of which will never be reached and no one will mind but the movers. Time has promoted the gem of the collection and we may have to spend some hours listening to the debate on Babu Umes Chandra Chatterjee's desire that "all sorts of cycles and motor vehicles invented by foreign brains be prohibited in Bengal." How long, O Lord, how long!

The Mad Dog of the World.

The House of Commons' debate on Soviet activities lifts a corner of the curtain and is welcome accordingly. We are all too conscious here of the poison which is being steadily distilled in Moscow and persistently injected where it will best paralyse sane human relationships. The old Russian Bogey of the frontier has given place to a Russian Menace, more subtle, more sinister, more persistent and probably far more dangerous. Here is no product of the heated imagination of the peppery Indian general of fiction; the fires of racial hatred in India have been lighted according to programme and everyone on the inside of affairs knows that the flames are being fed by no prentice hands at the game. Afghanistan, so long the buffer between India and the old Russian military power, has been so successfully impregnated that the buffer has become as intangible as smoke; but the smoke is opaque and something is smouldering. Little news gets into the papers but there is an Afghan air force flying Soviet planes and trained by their officers amongst many other things to be noted. We believe that Simla knows and watches; we are glad that you at Home have been told at least something of what is going on. Once again it is a case of "Watch the Bear."

Local Politics.

Bengal politics at the moment have become almost entirely personal and they centre round Mr. J. M. Sen-Gupta, the uneasy wearer of the triple crown. Never in the experience of the writer have there been such dissensions as now show in the Indian Press; it seems impossible for even two of the organs to play the same tune. Beyond the evidence it offers of the capacity of the Bengali in organisation and government, there is no significance in the present situation.

Racing and the Church.

Possibly the Bishops' protest agaist the betting tax at Home is responsible for the fact that a padre in Colombo has recently had to defend himself from complaints that he attends the races. Generally in India the padre is a very human being and the complaining Colombo parishioners will probably retain their monopoly a long time. In Calcutta, where the Turf Club has a series of race-lunches in the cold weather, which are almost functions, the Bishop (the Metropolitan of India) is always asked, and goes, on the day of our Metropolitan Stakes. *A propos* of which, a good story was handed to him there last year. His bearer was doing a roaring trade in special tips on the course, containing the best timings of the morning trials; it transpired on inquiry that he had a monopoly of the Cathedral spire, the only place from which a perfect view can be obtained of the dead flat course. When in addition his master had obviously special facilities for getting information from the Powers That Be, no further recommendation was necessary to enable him to achieve the small fortune he had made!

The Trivial Round.

We are all delighted with the English showing in the Second Test and we equally wish Reuter would save the expense of cabling cackle about how to run the games. We have quite enough irritation from the universal prickly heat at the moment.

Golf after all does not matter so much; it is really a Scotch game, so Bobby Jones can have it—and Hagen.

We see that friends from this side are keeping up a reasonable end at Wimbledon; not so bad for a small community which regards tennis as a game.

The Soccer League ends to-night; Calcutta have finished and at the moment are top, but if the North Staffords beat their fellow regiment to-night, they will tie. They should win the replay, with Calcutta only half a team, thanks to injuries. It would be good if the soldiers pulled it off for a change. Teams are coming from all over India for the Cup, which should be a great show this year.

Jute versus Gunnies had their annual day out last Friday; the usual Soccer "Rag" included an attempt to guy Leglen, but it fell short of the original.

Calcutta Rugger will be stronger than ever this year; last season, Services, Regiments, Scottish, "Robots" and others branched off, and still over one hundred players are left with the club; so we have agreed to a new classification and all players who have not been out two years will be "Calcutta Griffins"; they should have a brilliant side and there will be blood when they meet the seniors.

The monsoon still holds off and if we live through this, we need never fear the hereafter.

Markets.

Little material change has taken place in the jute market this week; buyers continue to be scarce but sellers have not been pressing, with the result that prices remain fairly steady. A small business has been done in New Crop for the near forward positions. The better demand for gunnies, which has been apparent recently, has continued, shippers being interested mostly in this direction; for forward hessians, the only inquiry, and that a small one, comes from the mills. In the piece-goods market there is nothing to report, conditions being as stagnant as ever. Tea prices have shown a further decline this week. At the sale here there was a moderate demand for Dar-

Digitized by Google

jeelings, but generally buyers are holding off; this is the somewhat natural result after the issue of the figures of outturn from the various tea-growing countries, and it is more than probable that dealers will continue to watch the market for some time, in the hope of still lower rates.

The Stock Exchange has passed an idle week on the whole; the tendency in most departments has been towards lower prices, a remark which applies particularly to tea shares. Government Securities are again easier, 3½ per cent. Government Paper being dealt in at as low a price as Rs.76/1. Jutes are quiet but steady. Rubbers, on the other hand, are a firmer market, and at the moment there is little scrip on offer. As mentioned, tea shares are weaker, and at the close selling orders have been difficult to place; all the best shares, however, which have been purchased for investment purposes, are being held, the selling pressure being confined mostly to the more speculative shares. In the Exchange Market apprehensions of a failure of the monsoon led to considerable buying in Bombay and the rate there for Ready T.T. fell to 1s. 5 27-32d., though here 1s. 5⅞d. was always available. Later a fair number of bills have been showing and the undertone is now distinctly steadier. Money has again been very easy and is quoted at 2 per cent. for call and short notice.

THE LAST OF THE MADRAS ARMY.

(By MAJOR-GENERAL SIR GEORGE MACMUNN, K.C.B., K.C.S.I., D.S.O., late Quartermaster-General in India.)

The depositing of the colours of the last of the regiments of the Madras Line in the beautiful cathedral of St. George at Madras itself among the tablets and the Flackman memorials, which has recently taken place, marks the practical end of a long story of wars and conquest and pacification in which the memory of the old Coast Army is inextinguishably mixed. Slowly during the last seventy years this army has dwindled and by the force of circumstance lost its importance, as the *Pax Britannica* spread over the Indian Peninsula, till now the last remaining battalions of the line have gone. The 73rd Carnatic Infantry of Lord Kitchener's roster, the 1st Battalion of the 3rd Madras Regiment in the roll of Lord Rawlinson, and the 13th Madras Infantry of ancient fame, as also the 75th Madras Infantry, or 2/3rd Madras Regiment, have handed in their colours and gone about their business in the villages of the Carnatic. Now there remains of the eight cavalry regiments and 52 battalions of the last days of John Company, only the specialised remnant in the shape of the Madras Pioneers and the Queen's Own Sappers and Miners.

There will be many yet alive who will pause, if not to drop a tear, at least to lay a wreath on the colours of the last of the enduring Madras Infantry. The names of Coote and Wandewash, of Clive and Arcot, of Bangalore and Seringapatam, of Cornwallis and Meddows, of Munro and Malcolm, of Arthur Wellesley and Assaye, of Mehidpur and of Ava, are inextricably mixed up in our memory with the regiments and batteries of the Madras or Coast Army. Pondichery and Fort St. David, Lally and Dupleix and the French Grenadiers struggling for an Empire in the East, Hyder Ali and Tippu Sultan fighting to impose the rule of Islam over that of the Hindu, are but the scenery amid which the history of the Madras Army has been enacted. Faithful during the strain of the Mutiny of the Bengal Army, sharing in the beating out of that conflagration, its claims to remain were great, and yet, and yet—times were too much for it.

At the time of the third Mysore War, when Lord Cornwallis in 1791 tried to bring Tippu to his senses, without destroying him, the Madras Army consisted of two battalions of artillery, four regiments of native cavalry and fourteen battalions of infantry besides the Fusiliers. But from this time onward it steadily expanded till it had reached by 1857 the eight cavalry regiments and fifty-two battalions referred to, with a European artillery and a horse artillery second to none, besides the famous battalions of the Madras Fusiliers. To understand its rise, however, it is necessary to remember the situation of each of the three Presidencies, entirely separate from eath other, with many hundred miles of powerful independent and often hostile states intervening, each with entirely different problems to solve, and different enemies to deal with, in addition to the big central powers of the Maratha confederacy which impinged on all three.

The Madras Presidency is a country of many mountain ranges, full of hill fortresses in which, during the decay of the central authority of the Mogul, innumerable barons and chiefs had set themselves up, to live at their ease on the country side and to follow in the wake of any of the greater chiefs whom they dared not defy. It was many years after the final defeat and expulsion of the French from the interior before the Madras Army ceased from campaigning both again Mysore and the Marathas, let alone against the innumerable petty states, rebel Polygars or barons, and feudal chiefs referred to, whose feudal armies largely consisted of Arab and Pathan adventurers.

Further, to Java, to Ceylon, to Burma and to China sailed the troops of the Coast Army in the early days of the nineteenth century, and it was not till well on in the 'thirties that a general peace came over the southern Presidency.

With that peace perhaps the decay of the Army commenced. By the early 'fifties the more eager spirits among the officers were finding their way to the Afghan border to serve in the Frontier Force or in the Political service, but the Army remained at its well-trained and efficient zenith till the days of the Great Mutiny. That strain and its temptations were resisted, and many units served in Central India in the suppression of the rebellion. It has been said that the custom of this army in keeping the men's families with the regiment had a considerable effect in keeping it loyal, which may or may not be true. It was certainly a steadying factor.

After the Mutiny, the infantry was reduced to close on thirty battalions and the cavalry to four regiments, while the European artillery and infantry were transferred to the Crown. The infantry that remained was remodelled on the so-called "irregular" system on which the post-Mutiny Army was organised, but the cavalry alone remained "regular," since the *silledar* system adopted universally for the rest of the cavalry was not suitable to the classes who came to the mounted branch in the south. The years that followed the Mutiny were peaceful enough. The fierce fighting in the Umbeyla Hills brought no call to the Coast Army, nor did even the Afghan War require much more than its ever-famous Sappers and Pioneers.

Gradually as the peaceful years went by the officers became more satisfied with a life of sport and ease and less ambitious of the glory and bubble reputation of a campaign, while the martial qualities of the races from which the ranks were recruited deteriorated in a still greater degree. No longer was it possible to pick and choose recruits from among newly-arrived Moguls and Pathans, crowds of whom formerly flocked down each winter to join the armies of the Princes of the South of India.

Those military adventurers had ceased to come and though the Madras Army was recruited partly from their descendants, proudly tracing their descent from Arab Sheikhs and Syads or from Northern Moguls and Pathans, and partly from the local men, Tamil or Telegu peasnts as well as the faithful outcaste Pariahs, yet there could be little doubt but that all of these except the last, the Chowry Motoo (Thomas Atkins) of Madras, had deteriorated and softened under the relaxing influences of 100 years of peace. Meanwhile the enemy they might

Digitized by Google

have to fight had improved and hardened. Instead of local troops, the horizon showed Frontier tribesmen and even grey-coated Russians, and it was felt that with the leading not quite of the same quality the Madras troops came under doubt and suspicion as military instruments in modern warfare.

Then came a sudden shock. In 1885 the 12th Madras Infantry, in the expedition to Burma up the Irrawaddi, would not follow their British officers to the assault of Minla. More failures occurred, and the reorganisation of the Madras Army commenced. Lord Roberts as their local Commander-in-Chief and, later, Sir James Dormer, his successor, made great attempts to improve recruiting. Coorgs from the hills, and Moplahs from the coast were tried and found ineffective. Keen officers of the army devoted their lives to the justification of their men, but more and more the impression prevailed that they were not good enough for the task now before them. Six battalions were eventually mustered out and their places filled with Punjabis and Hindustanis, though the new battalions kept their serial number in the Madras Line. Then Lord Kitchener came to India with a definite mission to prepare against the new Russian menace. Every corps and every race in the army was weighed in the balance. Snows and frosts were the winter portion of the Indian Army under modern conditions. In each of the three Armies the less hardy races were to be eliminated, and the whole of the Madras Line, including the three remaining Light Cavalry regiments, but with the exception of nine battalions and the Pioneers, was now to be recruited from the races of the Punjab. The three Lines were now merged into one and numbered serially. The battalions of Madras were counted from 61 onwards, sixty being added to their original number, but only nine remained recruited from the Carnatic races in addition to three battalions of Pioneers: these were the 61st, 64th and 81st Pioneers and the 63rd, 65th, 73rd, 75th, 79th, 80th, 83rd, 86th and 88th Carnatic Infantry (the 63rd and 83rd had special titles).

During the Great War, though several new Carnatic battalions were raised, they were not employed to any great extent except in East Africa. With the immediate reconstruction after the War the total was reduced to five besides the Pioneers, who, with the entire regrouping of all the Indian battalions on more modern lines, became the four service battalions and training battalion of the 3rd Madras Regiment, one of the premier positions in the Line, in view of their antiquity. Btu it was not a position that they were long to enjoy. The demands for economy were insistent. The old view against having all the eggs in one basket, and that Carnatic battalions well led and loyal might be the match for mutinous troops of other races, had long been discarded. The Carnatic battalions which were left were full of keen lads, athletic, well-drilled—indeed the Madras Army had always been famed for its musketry and its smartness under arms. They had done well, certainly some of them, on the frontier, but further demands for economy were now to result in the disappearance of what was undoubtedly the weakest link in the defensive chain. Two more battalions were first disbanded and now the last have gone; the 73rd and the 75th have been broken up and both have therefore handed in their colours. The military families in the villages who still talk of Arthur Wellesley will no longer serve. It is a pathetic fact, but no modern mind will for a moment question the rightness of the decision. The Pioneers remain, with service and training battalions, recruited from the so-called outcaste tribes, splendid workers, always alert and cheery, and with a considerable reputation for putting up a fight if need be; they are invaluable in their own line, as are also the Sappers and Miners, who are largely drawn from the same classes. With these exceptions the Madras Army of nearly 200 years of honourable existence is no more. Its cavalry vanished except by name many years ago when so many corps transferred their recruiting ground to Northern India. The Line has now handed in the last of its colours. *Sic transit gloria mundi!*

THE INDIAN MAIL.

Future Policies and Parties.

The dissolution of the anti-Reform Scheme alliances which has been brought about by Hindu-Moslem antipathy, by the discrediting of active revolutionary scheming and by the collapse of the anti-British Islamic platform have left Indian policies and politics in a very fluid and chaotic state and it still seems impossible that any reasonable, clear-cut non-communal policies should emerge before the Legislative Council elections come on in the late autumn. The great bulk of the Swarajist party see clearly that the old policy of negation and destruction must be abandoned; otherwise they will be left out in the cold and lose all influence and scope for propaganda and work. The Responsive Co-operators are too few to form a strong party without alliances, but the possible allies are antipathetic and the connecting link between them would snap at the first strain. The Moslems are out in bitter earnest for their own community and no game of politics would compensate for the loss of communal advantages. The numerically smaller parties, the Liberals and the Independents, are surrounded by the threatening forms of Moslem predominance, revolutionary activity, Swarajist tyranny and popular disfavour and are too weak at present to dare to advance under the somewhat colourless banner of co-operation with Government, conditional on a premature advance of constitutional change.

A Moslem leader, Mr. Ghuznavi, said in a recent speech at a Conference of Mohammedans in Calcutta: "Thank God the mirage of the Bengal Pact has vanished and (Moslem) brother has come back to brother—with a view never to part again, never to fall again into snares however alluring, but to stand shoulder to shoulder in the safeguarding of our just rights, whilst scrupulously avoiding to encroach upon the rights of others, but remembering that India is a country where the Hindu and the Moslem have got to live side by side, but each has to evolve his political destiny apart, until both can meet on equal terms, and then sail in the same political barge."

The anti-climax of the last few words reflects the present and perhaps the future unlikelihood of Hindus and Moslems being found sailing in the same political barge for some time to come. The whole of Anglo-Indian and most Indian opinion at present is to the effect that no outsider can really contribute to the allaying or abatement of Hindu-Moslem feeling. Government by some unwitting mistake might unite the communities against itself but would find it very difficult to heal the breach otherwise. Mr. Ghuznavi's statement of the case regarding the determination of Moslems not to enter into any extra-communal alliances is probably representative of the feeling of his co-religionists in most parts of India. As regards Hindu feelings on the subject they are likely to be expressed with greater consideration of political expediency. Fundamentally, however, the communal aversion is probably quite as strong with them. The situation that has arisen must entirely alter all the old Indian political parties which combined or stood apart from non-communal reasons. The most that can be hoped for is a motto of "Live in peace but work apart."

Agricultural Finance, and Social Reform.

The need for improving the existing system of Agricultural Finance has come much into the limelight of late owing to the impending proceedings of the Royal Commission and to the general interest aroused by the publicity given to the developments of the co-operative credit movement, which was first started officially in India in 1904. An able writer of a series of three articles, which have appeared in *Commerce*, says that the results of this movement have been disappointing owing to want of system and of the active support of the State. In summarising the situation *Commerce* says that the question is really "will the Government give up their present policy

Digitized by Google

of indifference, or, at best, lukewarm interest, and will they take a direct and active share in the promulgation of measures which could demonstrate the Government's intimate and vital interest in the welfare and prosperity of the great industry of agriculture?"

There is, however, another side to the picture of agriculture suffering chiefly from a bad banking and a long or short credit system and from the apathetic neglect of Government. Sir Valentine Chisol in his most recent book on India lays stress on two special matters which are at the back of a good deal of agricultural indebtedness. One of these is the lavish and excessive expenditure on marriages, funerals and other ceremonies while the other is the hoarding habit, owing to which a considerable amount of the wealth earned by successful agriculturists becomes barren. Comparisons have been made between the finance of Indian Agriculture and that of Industrial enterprise. If we take the history of any big and successful company we surely find that progress has been largely dependent on the continuous use of part of the profits in further developments of the trade of the company. Extravagant expenditure on marriages, etc., and hoarding of profits by converting them into dead gold or silver, depend on the social habits and ideas of the agricultural Community. It will be very interesting to see whether the Royal Commission will be able to suggest any schemes for alteration and improvement in this direction. It need hardly be said that the losses to the agricultural community through extravagant expenditure and hoarding are not new to Government. Every settlement report has been full of them for the last 50 years or more, but remedies have been very difficult to suggest or apply.

The Bakr-Id.

This important religious festival of the Moslems passed off quietly on Monday and Tuesday the 22nd and 23rd of June. All over British India very special and elaborate precautions were taken by the authorities, but these would hardly have prevailed had not the two great communities themselves felt that the days ought not to be made the occasion for further fighting. We are told that in Bombay City the observance of the festival involved the sacrificial slaughter of 3097 goats and 329 cows. It may be imagined how difficult the position is when it is remembered that the taking of such animal life is deeply repugnant to many sections of the Hindus. Sacrificial slaughter can be made very offensive or it can be conducted with a minimum of publicity. The same is the case with the playing of music by Hindu religious processions. We can imagine what a ferment there would be here if on any one day the sacrificial slaughter of hundreds of horses were carried out, even though the horse is not sacred according to our religion. The whole position of Government towards the vital differences between the practices of the two great religions in India is extremely difficult and the recent allegation by Lord Olivier that officialism in India is biased in favour of one religion against the other is shamefully mischievous.

INDIAN COMMERCIAL NOTES.

Index-numbers of wholesale prices in Calcutta have now been published for the month of May, 1926, showing a decline to 150, or 50 per cent. in excess of the levels recorded in July, 1914. There has been a steady decline from 163 in January and 158 in February to 155 in March, 153 in April and 150 in May.

There are several points of interest arising in this connexion. Food-grains have declined during the first five months of 1926 from 140 to 137. Compare with these the price of cotton manufactures, which is still, approximately, 225, or 2¼ times the pre-War price. There is little wonder that the consumer in India still finds it difficult to buy cotton piece-goods. Actually raw cotton prices in India are only 45 per cent. above pre-War. The difference between the index-number of raw cotton and the index-number of cotton manufactures is striking. It is due to the higher wages now paid to industrial workers and also to the fact that restricted output exaggerates the incidence of overhead charges.

Compared with the cotton industry, prices in the jute industry have fallen considerably. Raw jute has fallen from 188 or 88 per cent. above pre-War in January, 1926, to 123 in May; and jute manufactures from 178 to 136. In other words, while the Calcutta jute mills are paying 23 per cent. over pre-War for their raw material, they are getting 36 per cent. over pre-War for their manufactured goods.

Of India's staple exports, hides and skins show the poorest return in comparison with pre-War prices. The index-number for this line of trade has fallen from 120 in January, 1926, to 105 only in May. Actually during the slack season of 1925 the prices of hides and skins in India were below pre-War level; but they have since recovered and fallen again.

The general conclusion to be drawn from these figures is that fluctuations in the prices of both imports and exports of Indian markets are still serious enough to handicap trade. The effect of the slump in cotton has been to ruin many up-country dealers; and there is little doubt that India's import trade is seriously handicapped by reductions of capital in the bazaars.

The latest news of the monsoon indicates good rainfall in the centre, east and north-east of India, extending north-westwards to Rajputana. More rain is needed in the United Provinces, where however the condition of standing crops is fair. In the Punjab light rain has fallen and more rain is urgently needed. It is reported from Bombay that fairly heavy general rains have benefited sowings during the week ending July 10, but here also more rain is needed.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

A Loan for Palestine.

A Palestine loan has been mooted so often in the last few years that people might almost be pardoned for wondering if anything would ever come of the project; but it is a long lane that has no turning, and no doubt the improvement in Palestine's finances in the past two years has had a great deal to do with the fact that the loan is now on the point of materialising. It is included with other loans which are the subject of a resolution to enable a Bill to be introduced authorising the guarantee by the Treasury of principal and interest. The loan for Palestine is to be of the amount of £4,500,000, and will be devoted to works of construction, such as the harbour at Haifa, for which, as recently noted in these columns, plans have been drawn up and are now under consideration, and railways, and the acquisition of existing railways and other capital assets from the British Government. It is a fairly large amount, but the financial position of the country, to which I have already referred, would seem to be a sufficient justification for it. For the past year there was a balance on the Budget of £1,200,000, which compares with one of £500,000 for the previous twelve months, and suggests very plainly that despite the difficulties presented by the country Palestine is developing in the right direction. It would be a great mistake, however, to look for miracles of progress even after the completion of a programme of construction, for, as I think was made quite clear in the notes on Palestine which appeared in these columns recently, the country has been very meagrely supplied with natural riches, and, that being the case, it is clear that development possibilities must be somewhat circumscribed.

The Bulgarian Refugee Loan.

There are thus two Near Eastern loans on the tapis, the other, of course, being the Bulgarian Refugee Loan which has been sanctioned by the League of Nations and negotiations in regard to which are now in progress in London. It is not expected, I may add, that either loan will be issued until the autumn, for the holiday season which is now upon us is usually avoided for financial operations of this character. For Bulgaria, as I have pointed out the matter is one of some urgency, for it is obvious that the sooner the work of relieving the refugees is undertaken the better. This aspect has been fully appreciated by the Council of the League, and yesterday the Financial Committee met to deal with the question of advances pending the issue of the loan.

Egypt's Trade Position.

The figures for Egypt's commerce for the first five months of this year show very plainly the effect on the country of the fall in the price of cotton and the restricted demand for that commodity as a result of the absence of a general trade revival. The value of the imports for the period was not much below the total for the corresponding months of 1925 at £E21,300,632 as compared with £E22,627,395, but that of the exports shows a decline of £E8,544,885 at £E19,908,117, this being almost wholly accounted for by the decrease in the cotton exports. Egypt has therefore a slight adverse trade balance for the five months as compared with one of almost £E6,000,000 in her favour in 1925. These vicissitudes are to be expected in the case of a country so dependent on one commodity as Egypt, and the country has had so many good years recently that she is in a posiion to view with relative equanimity a situation which will be reversed as soon as world trade again begins to develop.

Roumania's Economic Position.

It is eminently satisfactory to learn from our Bucharest Correspondent that the prospects for the Roumanian harvest are excellent. If transport facilities are available—and in this connexion it may be pointed out that Roumania is trying to borrow rolling stock from Czecho-Slovakia—the export of the surplus cereals shold go a long way to improving the rate of the leu. It now stands at 1065, which naturally seems absurd when one considers Roumania's unrivalled natural resources. The lack of transport is, of course, the principal hindrance to the country's development, preventing Roumania from profiting to the full from her wonderful oilfields. The Government has now approved of a scheme for the construction of a new pipeline to Constantza, and this, it is anticipated, will go far to further the increase of the export of oil.

Furness Withy.

In view of the continued depression of the shipping industry the results shown by Furness Withy for the past twelve months can only be regarded as extremely satisfactory. The net profits were £523,144 as compared with £528,742, and over the last fire years the company has maintained a remarkably level record of profits. This is, of course, due to the fact that the company's interests are widespread, and indicates the improved results that may be looked for when conditions become normal. The company again propose to pay 7½ per cent. tax free on the ordinary shares, while the allocation for depreciation is again £200,000, leaving £150,303 to be carried forward as against £187,259.

The Rubber Outlook.

It is now absolutely problematical whether there will or will not be a restriction in the rubber output of 20 per cent. at the end of this month. At the present time the average price for the quarter is about .16d. above the all-important figure of 1s. 9d., and if it is to fall below that total it is necessary for the price to be just below 1s. 8¼d.

for the remaining two weeks. As I have already said, I think it will be a bad thing for the industry if a further restriction is imposed, entailing as it would the fluctuations of prices that were so strongly in evidence during a large part of last year. Of course, if this month passes without a change we may yet have it at the end of the next quarter, for it is far from certain that the prolonged coal strike here will not mean a modification of the immediate outlook for the industry. Optimism is based on the rapid growth of the use of the motor, but this tendency may well be checked in this country for a time, while the increasing use of the motor abroad may not continue without a pronounced trade revival.

Motor Transport in the Sudan.

The question of motor transport is of course a predominant question in a region like the Sudan, where it is necessary to transport loads across rough tracks or across country, and it is interesting to note that a large order has recently been given for Thornycroft motor vehicles for that country. The order was for 23 Thornycroft type A.1. rigid six wheeled vehicles. The vehicles can transport loads of 30 cwt over rough country while their capacity over good roads is 50 cwt. Platform bodies are to be fitted to 18 of these vehicles which will have trailer attachments to carry 20 cwt. while War Department bodies will be fitted to the remaining five vehicles.

COMMENTATOR.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, July 14.

The Italian Loan.

M. Manoilescu, Under Secretary for Finance, has returned to Bucharest from Italy having successfully concluded the negotiations for a loan amounting to 200 million lire in cash from the State Company A.G.I.P. at 7 per cent. interest, redeemable in 10 years, and a further 100 million lire without interest, from private industrial concerns against orders for materials required by the Roumanian industries. No material guarantees, it is reported, have been required or given. M. Manoilescu has also been instrumental in establishing an agreement with Italy by which Roumania's War Debt to that country is fixed at 157 million Italian lire including interest, the payment of which is to be effected over a period of 50 years. The interest charged is 1½ per cent. and the first yearly instalments are fixed at a low figure. The Press comments are generally appreciative of the friendly attitude of Italy in this matter.

The Stabilisation of the Leu.

As a result of General Averescu's invitation to bankers and industrialists to submit to him their ideas as to the measures best calculated to attain that devoutly wished for consummation—the stabilisation of the leu—M. Jean Chrissoveloni has compiled an interesting memorandum on this subject, which is published in the *Argus*. After showing that any arbitrary stabilisation at an artificial rate (such as was attempted in Belgium) is utterly futile and only leads to a worse state of affairs, M. Chrissoveloni suggests that an attempt be made to maintain the leu at the rate which prevailed during most of last year, viz., 1,000 to the £1 sterling with the assistance of the National Bank, which should purchase all foreign cheques not absorbed by the needs of the market and by means of reduced taxes to encourage exports and the restriction of imports within the limits of the absolute necessities. M. Chrissoveloni's memorandum is too long to discuss here in detail, but it appears to contain many elements of sound policy.

Favourable Harvest Outlook.

In spite of floods and storms having destroyed or greatly damaged the crops in many districts the harvest prognostications are extremely favourable as a whole and it is said that this year's harvest is the best obtained for half a century. Already the Railway Administration is taking steps to provide more transport facilities and it is hoped that some more or less efficient measures will be devised to this end.

The High Commissioner for Indian and Lady Chatterjee held a reception at the Indian Gymkhana Club, Osterley Park, on July 16, when a cricket match was played between the High Commissioner's Office and the Club. The guests included:—Earl and Countess Winterton, Lord Sinha, Sir Basanta and Lady Mullick, Sir Campbell Rhodes, Mr. and Mrs. Surendra Nath Mallik and Miss Chowdry, the Maharaj Kumar of Mayurbhanj, Lady Barrett, Sir Lalabhai Samaldas, Mrs. Bannerman, Mr. S. M. Habibulla, Sir Edward and Miss Chamier, Sir Austen Hadow, Nawab Malik Muhamad Hyat Khan, Mr. and Mrs. Maya Das, Sir Selwyn and Ladv Fremantle, Mr. and the Misses N. C. Sen, Sir James and Lady Walker, Mr. and Mrs. B. Cowasjee, Mr. W. Coldstream, Lieutenant-Colonel T. M. Hutchinson, and Mr. T. B. W. Ramsay (hon. secretary of the Indian Gymkhana Club).

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 20.

The Stock Exchange has passed a comparatively quiet week. Although Bank Rate possibilities are slipping into the blackground the gilt-edged market remains steady, but a sudden pause appears to have come to speculation in the industrial market. This can be directly attributed to the reduction of 3d. per share in the interim dividend declared by Courtaulds. The reduction itself was a trifling matter, but it served to set in motion a good deal of uneasiness among holders of shares in other favourite industrial companies, who, when they saw a sudden decline of £1 per share in the market value of Courtaulds began to unload their shares at a rate which upset a number of sections in the industrial market, and even affected the stock markets as a whole. Some of the rises in certain industrial shares have undoubtedly been of an artificial nature and are not warranted by the present economic and financial situation, and even now there is a considerable bull acount open, but it is not surprising that the slump in Courtaulds has exercised a strongly restraining influence. The further collapse in the franc to over 230 to the £1 following the fall of M. Briand's Cabinet has naturally disturbed the market for French bonds, and is, perhaps, partially responsible for the general dullness of markets. But another reason is the fact that a 21 day account is now starting and nothing in the shape of a revival of activity is expected until after the August Bank Holiday, unless, of course, a satisfactory solution of the coal trouble is reached in the meantime.

The Trade Balance.

As was only to be expected the figures of overseas trade for June and the half year make a poor showing. The surplus of imports for June, it is true, is nearly £5 millions lower than in June 1925, but imports were swollen enormously in that month a year ago by the rush to forestall the new duties which came into force on July 1st, and we find that the import surplus of £36½ millions for June 1926 is no less than £20 millions higher than in June 1924. Again, for the six months the import excess, though £9½ millions lower than in the corresponding half of 1925, is £61 millions higher than in the first half of 1924. As compared with May last, the month of the general strike, the June figures show an all round expansion but are slightly below those of April. On the export side coal, iron and steel and cotton goods account for the bulk of the decline as compared with June of last year, and so long as the coal dispute remains unsettled this tendency must be expected to continue.

Industrial Profits.

The analysis of company profit and loss accounts undertaken by the *Economist*, does not show the effects of the general strike and the coal stoppage upon the earnings of industrial joint stock undertakings, as the reports covering that period have not yet been published. The statistics show, however, some interesting results. The reports of 1,475 companies, which have appeared during the past twelve months, show aggregate net profits of £165 millions, representing an increase of over £11 millions or 7.3 per cent., in comparison with the net profits earned by the same companies in their preceding financial year. The list of companies, however, includes oil and rubber undertakings, whose figures obscure to some extent the real facts of the case. The profits of the rubber group, for example, show an increase of 186 per cent., and of the oil group an increase of 14 per cent., whereas two of the more important home industries—iron and steel and textiles—show decreases in profits of 60 and 6½ per cent. respectively, while those of shipping companies are lower by 11 per cent. Of the total profits 60.5 per cent. was paid to ordinary shareholders, and 18.4 per cent. to preference shareholders, the balance of 21.1 per cent. being placed to reserves or added to balances carried forward. The average rate of dividend paid on ordinary capital works out at 11.1 per cent. as compared with 9.9 per cent. at this time last year, the most prominent increase being that shown by the group of 280 rubber companies, namely from 6.9 to 19.9 per cent.

A Sound Preference Share.

At present there is a certain disposition to disparage the preference share. It is pointed out that, while the preference shareholder has to be content with a moderate fixed rate of interest, the holder of ordinary shares often receives a generous return; but that in the event of the company falling upon evil times the former is not infrequently called upon to make sacrifices with the latter. It is true that in a number of post-War capital re-organisations preference shareholders have not been treated with strict fairness. All the same it cannot be said that there is no difference between a good preference and an ordinary share.

To those investors who are looking for an attractive preference share, details of the 6 per cent. cumulative preference shares of the Victoria Falls and Transvaal Power Company may be useful. During recent years the net profit has continuously increased, the figure for the year ended December 31 last being £363,940, in contrast with £349,852 a year ago. The balance sheet, moreover, shows a strong position. Against an issued capital of £3,000,000, and a debenture capital of £2,614,284, there are assets, totalling £7,726,833. The reserve fund stands at £400,000, while, in addition, the Company holds £502,218 in cash and Treasury Bills, and £1,334,318 in Government securities. Yielding £5 18s. 6d. per cent. the 6 per cent cumulative preference shares are, therefore, not without attractions.

* Buyers.

The new water supply for Jerusalem was inaugurated on July 15. The water is being brought from the spring of Ain Farah, seven miles distant from the city, and famed in connexion with King David in the pastoral days of the Holy Land as the supposed setting of the 23rd Psalm. The water is raised through three pumping stations. The whole undertaking cost £52,000, which is being borne entirely by the Government of Palestine.

BULGARIAN SIX per CENT. LOAN of 1892.
Notice to BRITISH, FRENCH, DUTCH, ITALIAN, BELGIAN, SWISS, SPANISH, and AMERICAN BONDHOLDERS.
COUPONS due July, 1926, may now be DEPOSITED.

Bondholders of the above nationalities are hereby notified that the COUPONS due July, 1926, may now, and until further notice, be deposited at the Ottoman Bank Coupon Office, 25, Austin Friars, E.C.2, between the hours of 11 a.m and 2 p.m. (Saturdays excepted), for PAYMENT at the rate of 32 per cent. of their nominal value in the most appreciated currency mentioned on the Bonds.

Coupons which are the property of other holders may also be deposited, but are subject to special conditions, particulars of which may be obtained at the Ottoman Bank, as above.

COMPANY NOTES AND REPORTS.

IMPERIAL BANK OF INDIA.

The report for the half-year ended June 30 states that the net profits for the period were Rs.74,27,300 as against Rs.69,39,700 for the corresponding six months of 1925; brought forward from the previous half-year Rs.10,22,900 as against Rs.12,58,200, making Rs.84,50,200 as compared with Rs.81,97,900 for the corresponding period of last year. The Governors have declared a dividend of 16 per cent. per annum, free of income tax, absorbing Rs.45,00,000, transferring to reserve fund Rs. 10,00,000 leaving to be carried forward Rs.29,50,200.

BOMBAY BARODA RAILWAY.

The gross earnings of the Bombay Baroda and Central India Railway Company for the year ended March 31 last were Rs.12,25,14,963, the net earnings being Rs.70,75,571. Out of the surplus of Rs.8,48,484 due to the company in respect of the year 1925-26, Rs.2,00,693 were remitted to England in November, 1925, producing £15,183, and the balance of Rs.6,47,791 in May, 1926, producing £48,247. The directors recommend a final dividend of 1½ per cent., making, with the guaranteed interest of 1½ per cent., a total payment in July of 3 per cent., and for the year of 6 per cent.

BRITISH CONSULAR REPORTS.

(Continued from page 87.)

development purposes such as the drainage of certain marsh- land regions on the Danube and Black Sea coast, the irrigation of the valley of the Upper Maritza, and the construction of three railway lines:—(a) Rakovski—Kirdjali—Mastanli; (b) Tatar Pazardjik—Mechomia—Nevrokop; and (c) Yambol—Elchovo.

These schemes are dependent on foreign financial assistance, however, and the possibility of raising a loan for Bulgaria at the present time seems to be remote, except for the settlement of refugees. Another project of considerable utility is that for a line from Sofia to Bourgas by Pirdop and Kazanlik.

These railway schemes form part of the pre-existing project referred to above, and a considerable amount of preliminary work has been accomplished in each case. In general, it would appear that the execution of an extensive programme of railway construction and land reclamation would be of substantial benefit to Bulgaria, and would probably afford scope to British capital and enterprise.

A revised tariff, 10 per cent. higher than before, was introduced on March 15. This was the first increase since August, 1924. Railway rates are still very low in Bulgaria, being only ten times greater than before the War, whereas the cost of living has risen by three times that ratio.

Shipping Intelligence.

SUMMER DAYS IN WINTER TIME.

For 161 days, from November 13 next, to April 23, 1927, the Empress of Scotland, the flag ship of the Canadian Pacific Fleet will be engaged in a leisurely pleasure cruise around the world, in the wake of the sun. Visits will be paid to places of interest in twenty-two countries, including Madeira, Morocco, Italy, the Riviera, Egypt, the Holy Land, India, Ceylon, China, Japan, Batavia, Sumatra, Honolulu, the Philippines, San Francisco, the Panama Canal, the West Indies, Havana, Quebec, New York, etc. Many places off the beaten track will be touched, and the cruise has been arranged so that the countries are visited under the most favourable climatic conditions. Many interesting shore excursions have been planned. Christmas will be spent in the Holy Land, and New Year's Eve in Cairo. The tour, which will be under the management of the Canadian Pacific throughout, will be acomplished without change of steamship. A profusely illustrated book of 96 pages describing the cruise has been published, and copies may be obtained free on application, to the Canadian Pacific Railway, 62-65, Charing Cross, London, S.W.1.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, July 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maihar for Port Said, Colombo, Madras, and Calcutta (London, July 24).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (London, July 28).

British India Line.—S.s. Treloske for Bombay and Karachi (London, July 24); s.s. Malda for Colombo, Madras and Calcutta (London, July 31).

Cunard Line.—S.s. Tyria for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Fiume, Trieste, also Algiers and Gruz if inducement offers (Liverpool July 29, Swansea August 3); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow, and Swansea, August 14).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 22); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 21).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, July 23); s.s. Nellore for Colombo, Madras, and Calcutta (London, July 24).

Ellerman and Papayanni Lines.—S.s. Gerano for Gibraltar, Malta, Patras, Smyrna, and Constantinople (Liverpool, July 24); s.s. Andalusian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 7); s.s. Roumelian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool August 12, Swansea August 16); s.s Grodno for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 14). (* Subject to sufficient inducement.)

The International Conference for the Scientific Exploration of the Mediterranean was opened on July 12 in Venice. Great Britain, France, Italy, Egypt, Tunisia, Greece, and Roumania were represented.

The Postmaster-General announces that a new edition of the Air Mails Leaflet, embodying particulars of certain changes in the air mails, has been issued. A new route by ordinary afternoon service from London to Paris, connecting in Paris with the air service next morning for Nuremberg, Prague, Vienna, Budapest, Belgrade, Bucharest, and Constantinople, is announced among other changes.

Motors and Motoring.

By G. B. B.

The "New Phantom" 40-50 h.p. Rolls Royce car is evidently becoming popular overseas, as I have before me two photographs, one showing this type of car in India and the other a view of part of New South Wales with a New Phantom in the foreground. The Indian picture is rather striking in view of what I have said of late in these columns regarding roads in India. The road shown in the photograph is well made and curbed, and appears to be wide enough for four cars abreast. It is the main highway between Bombay and Poona, and at the point at which the view sent me was taken the road is over 2,000 feet above sea-level, this altitude being reached within a distance of four miles. So well has the road been designed, however, that the gradient is hardly noticeable. The Australian photo shows a British Rolls Royce chassis, the bodywork of which has been constructed in Australia to suit local climatic conditions

"Bumpers."

Returning to town after a brief visit to the North, I was struck with the increasing number of cars one meets which are fitted with what our trans-Atlantic friends call bumpers. As the advantage of these becomes recognised, I feel that they will be more and more used, and that in a comparatively short time it will be rare to see a care without these accessories. Traffic is now so dense that a number of minor collisions are continually taking place; collisions which do not damage the car, as such, but which crumple up wings, put dents in panels, bend up dumb-irons, knock off lamps and so on. The fitting of a transverse steel buffer or bumper bar to a chassis at front and rear is, to my mind, a perfectly reasonable precaution akin to the provision of fenders in ship-work, to use when a vessel is in harbour or alongside another ship. Of course the fitting is neither handsome nor interesting-looking in itself, but what does that matter? A spare wheel is not exactly a thing of beauty, but we do not refuse, for that reason, to carry one on the car. Experience has shown unmistakably that the provision of fore and aft bumpers protect a car from all minor collisions and the cost of the steel bars is saved within a very short time.

Motor Cycles.

I thought it would not be long before some one took me to task regarding my recent remarks on motor cycles and motor cyclists. A colleague writes to say that he has recently made observation "on several of the arterial roads which were crowded to their full capacity with everything from the humble pedal cycle to the mighty charabanc, and if I were asked for my opinion I should say that the motor cyclists were easily the safest drivers on the road." The "safest" drivers are those, surely, who are least exposed to injury from outside causes. I should say, for example, that the driver of a super-tank would be an even "safer" driver than the motor cyclist. But all that is beside the point; we know exactly what the writer means. But there is one remark in his note which is not beside the point at all, but which on the contrary, requires underlining. He says his observations were made on roads "crowded to their full capacity." I was not referring to the behaviour of motor cyclists on densely crowded main roads. On the contrary, I emphasised the excellence in every way of the British motor cycle, and criticised only the motor cyclist who dashes about at speeds of anything from 40 to 60 m.p.h.; "tearing with the speed of a super-express train through the English traffic in circumstances of rapidly occurring emergency. The British motor cycle is all that can possibly be desired. The objections I and others raised, and for which I claim suspension of licence to be the only remedy are to the making use of the great reserve of power which the motor cycle possesses for the purpose of "shaving off" the speed of the machine by rapid accelleration, with or without a passenger in places where other road or foot traffic may reasonably be expected and to the driving at high speeds—speeds in excess, say of 30 m.p.h. in country roads where any and every kind of traffic may be met without warning.

Magnetos.

I was struck by some figures recently published in the *Accessory* on the above subject, and I remember getting out figures relating to magnetos, plugs, and other accessories myself, for the British Government, some time ago and consequently I can vouch for their accuracy. Twelve years ago we imported something like 98 per cent. of the magnetos used in our petrol-driven vehicles; to-day not less than 98 per cent. of the magnetos we use are made in England and over 50 per cent. of these are made in Birmingham.

The export of British magnetos has increased with the increase in the export of motor vehicles. During 1925 altogether 19,316 motor cars and 46,642 motor cycles of British manufacture were exported, as against totals, for 1913, of 7,595 and 16,850 respectively. Practically all the cars and motor cycles exported last year were fitted with British-made magnetos, whilst before the War, almost every one had a German-made magneto. Germany has lost the predominant position which she had secured in this important branch of manufacture before the War and which she made great efforts to re-establish when the War came to an end. The German magneto maker, just as the American motor cycle builder, has been overtaken and hopelessly out-distanced in a race in which a few years ago they appeared to have an unassailable lead.

An Agricultural Exhibition, to be held under special auspices, will be opened at Poona on October 20.

Mr. A. Cartwright has been appointed a director of Vickers Limited. Mr. G. G. Sim has been appointed secretary of the company.

Company Meeting.

ORIENTAL TELEPHONE AND ELECTRIC COMPANY.

Increased Gross Income.

The thirty-second ordinary general meeting of the Oriental Telephone and Electric Company, Limited, was held on June 29 at the Abercorn Rooms, Great Eastern Hotel, Bishopsgate, E.C. Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (chairman of the company), presided.

The Secretary (Mr. J. Macleod) having read the notice convening the meeting and the report of the auditors,

The Chairman, in his speech in moving the adoption of the report and accounts, said:—As you will have observed from the accounts already before you, the gross income for the past year amounted to £145,880, as against £135,704 for the previous year, being an increase of £10,176. This is due mainly to an increase of £4,418 in subscriptions and rentals, of £1,341 in dividends and interests from the associated companies, and of £3,634 in sundry commissions and interests. On the other hand, expenditure has advanced under the headings of working expenses, depreciation, and London expenses, and the net result is a balance of £67,017, as against £59,307 for last year.

Adding the balance brought forward from 1924 (£11,889) and deducting the amount of the interim dividends paid on the preference and ordinary shares in November last, there remains a net amount of £55,141 to be dealt with, as against £52,278 a year ago.

This your directors recommend should be appropriated as shown on the first page of their report, namely, in payment of a final dividend of 3½ per cent. on the preference shares and of a final dividend of 6 per cent., plus a bonus of 2 per cent., on the ordinary shares free of tax, the balance of £14,218 being carried forward.

The Bombay Company, which paid a dividend of 2 per cent. for 1924, finds itself unable to make any distribution for the past year. The reasons for this seem to be the heavy charges for debenture interest and depreciation, which two items alone more than swallow up the whole of the increase in revenue recorded since the reconstruction of that company in 1922-23, and also to the prevailing depression in trade, which, coupled with the effect of the increase in subscription rates referred to at the last annual meeting, have placed a severe check on development, the addition in exchange lines and revenue for Bombay, Karachi, and Ahmedabad during the year being only 263 and £2,888 respectively.

After careful consideration, your directors have come to the conclusion that an independent investigation should be made into the causes which have led up to the present position of that company, and that expert advice should be sought as to the best methods to be adopted to place its affairs once more on a sound financial basis. (Hear, hear.) I am glad to say that, for this purpose, we have been fortunate in securing the services of Sir William Plender, of Messrs. Deloitte, Plender, Griffiths, and Co., whose name in itself will afford a guarantee of the thoroughness with which this investigation will be made, and of the soundness of the recommendations which may be expected to result from it.

Of the Bengal Corporation I am glad to be able to give a more reassuring account. The message rate, which has been in operation in Calcutta since September, 1924, has converted a loss of 144 exchange lines during 1923 and a further loss of 48 for the first eight months of 1924 into a gain of 407 for the remaining four months of that year alone. During 1925 1,122 new exchange lines were added, and up to May, 1926, another 385. The increase in gross revenue for 1924-25 amounted to £6,38[illegible] and the result of working for the last six months of 1925 shows that, without making allowance for any further additions during the remaining six months—although considerable additions have, in fact, been made—the increase in gross revenue for the whole year will be in excess of £10,600.

The recent disturbances in Calcutta have, of course, interfered considerably with normal development, and I mention this because, as the Bengal Corporation's financial year terminates on June 30, the effect of these disturbances will be reflected in the accounts for their current year's working, which will be presented about October or November next.

On the other hand, it is proverbially an ill wind that blows nobody good, and, as a result of these disturbances, the calling rate has risen to a remarkable extent. As a case in point calls at the Burra Bazaar sub-exchange, which is situated in the centre of the disturbed area, rose on April 26 last from the normal figure of 13,000 to 38,000. Under a flat rate these calls would have brought in no additional revenue. Under the message rate they are charged for at the rate of about 1¼d. each.

As you will have seen from the report, the Bengal Corporation have paid a dividend of 2 per cent. for the year ended June 30, 1925, and, from the reports we have recently received, there is good reason to expect that, provided no unforeseen contingencies arise, the Bengal Corporation should be in a position to improve on that result for the year 1925-1926, and record a steady rate of future progress.

In Madras the measured rate which has been in force since January, 1925, and which was to a certain extent in the nature of an experiment, has not yet met with that success which was anticipated in certain quarters, though it has at least had the effect of arresting the heavy withdrawals which were taking place prior to its introduction. The measured rate—at least in Madras—has been found to be open to the same objection as the flat rate, though, of course, to a lesser degree, in that the minimum charge is relatively high, and it is the minimum charge that the subscriber looks at.

The report was unanimously adopted.

INSURANCE NOTES.

(From a Correspondent.)

Motor Car Insurance.

The enormous growth of motor traffic has naturally had the effect of making motor car insurance one of the prominent features of the insurance world. This particular branch of insurance has a special interest to readers of THE NEAR EAST AND INDIA who may be home on leave and propose to spend part of their time motoring about the country. I have before me as I write the prospectus of the comprehensive motor car insurance policy issued by the Royal Exchange Assurance. This policy has a number of special features which it may be of interest to enumerate. It covers third party claims, accidental and malicious damage, fire and theft, damage to the car by accidental external means sustained during transit, permit for repairs, legal expenses up to a certain limit, and finally the policy covers the use of the car on the Continent, including Algeria and Tunis, for a period of not more than three months in the year provided prior notice is given to the Corporation. I think it will be agreed that it is well termed a comprehensive policy. The rates of premiums vary acording to the Treasury rating of the car. Up to 5 h.p. the rate for £200 is £8 5s. rising to £18 7s. 6d. for that amount for a 23 h.p. car.

Educational Insurance.

Another form of insurance that is on the increase, and that is also likely to make a particular appeal to our overseas readers is educational insurance, in other words, insurance to permit of the adequate education of children at specified ages without it being too great a burden on the parents. To the official and other classes with fixed incomes it is obvious that this type of provision for the future should be specially welcome in these days of inflated prices. There are three ages of the young when assistance is usually welcome—the preparatory school period, the public school, and the university. Even the first stage if ambition is allowed to dictate the institution may well prove onerous to the average parents, but it is the third stage that really matters, and it is then that the provision by insurance of a few hundred pounds for this contingency makes all the difference.

British Consular Reports

I.—BULGARIA.

(Concluded.)

The nature and conditions of Bulgaria's economic structure are revealed in the other sections of this report, where reference is also made to the crisis through which she is passing and to certain controls and restraints (e.g., official control of exchange, prohibition of imports under the "luxury" law, increase of customs tariff, etc.) intended to reduce her adverse trade balance. But all these controls and restrictions, necessary as they may be, inevitably act directly or indirectly as restraints upon trade and are, at the best, purely negative in their results. Bulgaria is fundamentally agricultural and her prosperity lies not in controls and restrictions, but in the intensive development of her natural resources. She needs above all to increase her power of production for export, and she cannot do this to any appreciable extent without the aid of foreign capital and the co-operation of foreign markets. Consequently, anything tending to alienate foreign sympathy or to create distrust in financial circles abroad must, in the long run, work to her disadvantage.

The lines of goods in which United Kingdom manufacturers might do business with Bulgaria are indicated by her agricultural character and the list of her principal regular imports; and they would do well to take note of a Sample Fair which now takes place at the end of March and September in Gorna-Orechovitza, an important railway junction in northern Bulgaria, near the old capital, Tirnovo. As regards new developments for the future, the mountainous nature of the country seems to render certain, sooner or later, great activity in hydro-electrical and irrigation works and, eventually, in communication by aeroplane in place of, or supplementary to, railway communication which, even where available, gives an average speed of little more than 20 miles per hour.

The mainsprings of Bulgarian economic life are agricultural and pastoral. On her productivity in these directions depends not only the prosperity of her own subsidiary industry but her capacity to pay for imports from abroad. A study of these sources of her wealth is therefore of the first importance in the formation of any opinions on the commercial, economic, and financial conditions of the country.

Tobacco has become Bulgaria's most important article of export in recent years. About 40 million kilos. of old crop tobacco were awaiting exportation at the end of 1925, and the new crop amounted to a further 30 millions not yet ready for the market. The Regies of Italy, Hungary, Poland and Czecho-Slovakia appear as regular customers for Bulgarian tobacco, and the Austrian Regie may soon be added to their number.

The industry is suffering severely from over-production and lack of sales. Bulgarian tobacco, loaded with heavy communal and district taxation and a high export duty, has met with severe and increasing competition from the newly-restored and less-heavily taxed industry in Turkey and Greece, and although the finest grades have continued to find an outlet, the market in general has shown signs of saturation. Representations made to the Government by foreign tobacco firms on the subject of over-taxation for a long while met with no response, and several of the latter have actually transferred the seat of their operations to Turkey. At the end of the year, however, a law was promulgated by which local and export duties would be halved on the 1925 and altogether remitted on the 1926 crops, and the present outlook for this industry is, accordingly, more hopeful.

The anticipations of an excellent harvest in 1925, which led to the removal of the prohibition of the export of cereals in July and the imposition, in its place, of export duties, were largely realised, and the harvest was a good one in Bulgaria as elsewhere. The seasonal price of wheat was low, however—631 leva per ton as against 883 leva in 1924—and the most favourable moment for placing the exportable surplus on the market was allowed to go by. It seems—though the question is somewhat obscure—that in August (when the price of wheat was still 700 leva per ton), the peasants were recommended to withhold their wheat from the market in anticipation of a rise in prices. This advice appears to have been readily accepted, and practically no wheat came forward for export during the month of September. Instead of prices rising, however, they fell still lower, and a crisis ensued. With large stocks on hand, exportation remained at a standstill through October and November, and it was only at the very end of 1925, and after two reductions in the export duties had been made, that the prevailing stagnation was alleviated by a slight reaction in the Western markets.

It is estimated that the cereal harvest for 1925 amounted to 2,900,000 tons, including 700,000 tons of maize. The latter crop was cultivated with great success last year, and over a larger area (619,685 hectares) than ever before. It is by its nature a costly crop to store, and should figure largely amongst Bulgarian exports in the early months of this year. From the extensive importations of wheat in the early months of 1925 it may be inferred that a large proportion of the existing stock will be retained for home consumption, but it is probable that there will still be a considerable surplus from the harvest of 1925, even if the bulk of it is withheld from exportation until that of 1926 is well in sight.

New Railways.

The following were the only new lines which were opened to traffic in the course of 1925:—(a) A narrow-gauge railway from Bourgas to Anhialo built in order to facilitate the exploitation of the salt mines there; it is proposed to extend this line to Messembria in the coming summer. (b) A narrow-gauge line from Orechovo to Bela Slatina.

The broad outlines on which the development of the existing railway system in Bulgaria must proceed have long been projected, and on the basis of these plans a considerable amount of preliminary work has already been done. Finance has been the governing consideration in all such construction, and work such as track-levelling, the building of embankments, etc., which can be carried out in large part by unpaid compulsory labour from the adjacent communes, at a small cost to the central government, has been pushed forward with considerable energy, whereas the purchase and laying of rails has been postponed.

Various schemes have been put forward by the Bulgarian Government for the settlement of refugees and for

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended July 8, state:—

Since our last report the futures market has been dull and irregular with an undecided tone. The week's summary of price movements is as follows:—Sakellaridis: July, 28.95 dollars, 0.12 dollars down; November, 28.55 dollars, 0.22 dollars down; January, 28.10 dollars, 0.12 dollars down; March, 27.95 dollars, 0.12 dollars down. Ashmouni: August, 19.80 dollars, 0.58 dollars down; October, 19.88 dollars, 0.45 dollars down; December, 20.04 dollars, 0.39 dollars down.

There has been very little real business during the week, and the trading has consisted chiefly of professional operations. The business has principally been purchases of October by some of the export houses, together with some straddling—buying October and selling November. The demand from spinners continues to be of the smallest proportions, and in view of the unsettled conditions ruling in many of the consuming countries, there is also very little inquiry for new crops. The position at the present moment looks bearish, but we should not advise leaving open commitments in Ashmouni; present prices are on the basis of good crop reports and the crops, both here and in America, have yet to pass a critical period. At the first July tender, no dockets were issued. The week's receipts amount to 41,530 kantars, against 105,298 kantars; the stock stands at 1,695,287 kantars.

Spot: The market has been fairly active throughout the week and total sales amount to about 7,800 bales, of which we estimate 4,100 bales Sakellaridis, 3,000 bales Ashmouni, 500 bales Zagora, 100 bales Pilion, and 100 bales White.

Sakellaridis: There has been a rather better demand for good grades and holders of these cottons, being anxious to get rid of their stocks, have not been too difficult as to price; except in the case of really good staple cotton, premiums have eased slightly. For the medium grades spot differences are more or less unchanged, but are somewhat cheaper for low grades.

Ashmouni and Zagora: All grades from Good Fair to Fully Good have been dealt in but the greater part of the business put through has been in the better grades. Spot differences are without much change.

Pilion: Some business has been done in Fully Good Fair and Good at about last week's differences.

Brown: No transactions have been recorded.

White: This variety is difficult to find on the market and the slightly increased demand has caused spot differences to harden somewhat. The grades dealt in have been Fully Good Fair and above

Crop, 1926: There is nothing new to report on the crop. Development is proceeding normally under favourable climatic conditions. Temperature is about normal and water is ample.

The report of the Ministry of Agriculture for June reads: "Favourable weather, hot temperature and ample water supply have had a beneficial effect on the growth. Flowering is general in early cultivations and in fields which were sown in time. Bolls are forming in Upper Egypt and in some early sown crops in Lower Egypt. The cotton worm attack was, in some localities, earlier and severer than last year. However, owing to the active measures taken by the cultivators under the control of the officials in combating this pest, and to the hot temperature which helped in killing new-hatched larvæ, the crop has not suffered from the attack. Wilt disease was noticed in some localities on Sakellaridis. The aphis attack was also slight in Beni Suef and Fayoum Provinces. The general condition of the cropss is satisfactory."

TEXTILES.

IF you are dealing in Textile goods, you will be well advised to try K JEBARA, 25, Princess Street, Manchester. (Established 1887).

LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 14:—

Egyptian Futures.—Sakel Contract.—Whilst there has been no change in the conditions closely relating to this contract during the past week, the strength of the American markets has forced values, if rather reluctantly, towards a somewhat higher level. Operations during the various sessions have been of an unimportant character, although straddle selling against purchases of Americans continue to be in evidence, as our advance has not been commensurate with that witnessed in the other market, the difference shows a slight narrowing. Under normal conditions the Alexandria market is very sensitive to New York advices, but, at the moment, judging from their ability to hold advances, the general apathy shown by consuming countries to Sakel cotton quite outweighs all other considerations.

Reports from the home trade continue to be of a pessimistic character, and the offtake for both spot and forward cotton tends to become increasingly restricted. Into sight figures of both Egyptians and Sudans are still heavy for this period of the season and, even should the coming crop fall below the average—and from the consistently favourable reports received, so far, this does not appear a probability—the heavy carry-over indicated at the end of the statistical year would in all likelihood more than compensate for the deficiency. On its own merits we consider that our market is on too high a level and we remain of the opinion that sales on advances, such as witnessed during the past few days, will ultimately yield satisfactory profits.

Upper Contract.—Only isolated transactions have been recorded in this option during the past week, but, following the lead of the American market, prices show a fair recovery from the recent low level. The offtake for cotton covered by the contract continues distinctly moderate and offerings are heavy for this period of the season. New crop reports continue to be favourable and indications are for a more plentiful supply than last season. The outlook will be largely bound up in American condition reports, but, on the whole, at the present level, we would prefer to advise moderate commitments on the "short" side.

Egyptian Spot.—A rather better inquiry has been witnessed during the past week, and in Egyptian cotton, as distinct from Sudan, a little more business has resulted. Many of the mills have been running with their stocks of raw material at a very low ebb, and the recent spurts of "bullish" activity which have been seen in the American markets, as a consequence of insect damage scares originating in the U.S.A., have no doubt given spinners something to think about. At the moment, purchases continue to consist of small parcels only, but the market is undoubtedly in a rather sensitive state, and should the reports referred to continue, we should not be surprised to find quite a substantial buying movement inaugurated at this end, particularly as regards Upper Egyptians which, at the current price of 165 points on American, appear distinctly attractive.

The local demand has been chiefly concerned with Uppers at from 10¾d. to 11½d., but buyers are attempting to ignore the recent rise which has taken place. A week or ten days ago, a good style of Fully Good Fair Uppers could have been purchased at about 11¼d. To-day, it is doubtful if the same cotton could be found at 11.75d. Some slight improvement has been noted in the demand for the better style of Upper also, but up to date little weight of business has resulted. In Sakellaridis, the

Digitized by Google

quality mostly in demand has been Fully Good Fair to Strictly Fully Good Fair at from 16½d. to 17¼d., but here again actual business has been on restricted lines. The demand for the Good to Fine cotton continues to be about the same, that is, only moderate.

Low cotton has been less in request than has recently been the case. Brown and White have been neglected, but a small demand has continued for Pilion cotton at about 12½d. per lb. Sudans have been much quieter, although a large amount of averaging and testing has continued, the Continent recently showing quite a lively interest in this cotton. The basis for both the Sakel and the American Seed growths remains very steady.

C.i.f. business shows no signs of a revival at the moment, although reports from Manchester have recently been of a more optimistic character. Forwardings to spinners for the week ending the 9th inst. were returned as 9,179 bales. Estimated sales, 1,300 bales Egyptian and 350 Sudan. Quotations of Sakel have been advanced 20 to 30 points, and those of Upper 30 to 35 points. F.G.F. Sakel to-day, 16.25d. F.G.F. Upper to-day, 12.00d.

The Egyptian Ministry of Finance is considering the question of the creation of two new wharves in Cairo.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Water Installation at Beba.—Tenders are invited by the Egyptian Ministry of the Interior, Cairo, for the supply and installation of pumping machinery, filters, and accessories required for the Water Works of the town Beba. August 15. (D.O.T.)

Steel Water Tower.—The Ministry of the Interior, Cairo, invites tenders for the supply and erection on site of a steel water tower for the town of Zifteh, contract No. 3. August 5. (D.O.T.)

The directors of the Bank of Roumania recommend a final dividend for the year 1925 of 3s. per share, less tax, making 6s. per share, less tax, for the year, the same as for 1924.

The net profits of the Central Bank of India for the half year ended June 30, including the balance brought forward amount to Rs. 16,45,017. A dividend of 10 per cent. has been declared, leaving Rs. 8,04,357 to be carried forward.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Italy and the Balkans.

In the letter that we publish this week from our Tirana Correspondent reference is made to the various ramifications of the economic hold that Italy has secured on Albania. There is, perhaps, no single item in this list to which exception can be taken, and it is not surprising that, in view of Albania's need of capital for development purposes, she should have recourse to Italian money. Yet the realisation of the extent of this peaceful penetration at such an early stage of the country's career as an independent State may well awaken misgivings in the minds of thoughtful Albanians, the more so when the less discreet organs of Fascism are in the habit of regarding Albania as a purely Italian base for the economic conquest of the Balkan Peninsula as a whole. One of the latest schemes that is being discussed is the construction of an Italian railway across the Balkans from an Albanian port to the Black Sea. Such a line might assist Italian penetration, but at the same time the Peninsula itself would stand to benefit, and the Balkan States would have themselves alone to blame, if the line became in any way a menace. The desire of the Balkan peoples to keep the Peninsula for themselves is altogether a praiseworthy one; the mistake that they make is not to realise that they are losing good opportunities and making the task more difficult by short-sighted jealousy and bitterness. Every fresh movement that seems to be an advance along the road to unity is almost invariably followed by some regrettable setback. A short while ago relations between Yugoslavia and Bulgaria seemed to have improved; yet the attitude of the Little Entente in trying to put its political spoke into the economic wheel of the Bulgarian loan can hardly fail to set back the hands of the Balkan clock. The League of Nations is not likely to make itself responsible for a loan to Bulgaria without making sure that the money would be properly expended. For the neighbouring Governments to insist on a separate supervision was not only superfluous, but also threw away an opportunity of furthering Balkan unity. Their suspicions, if they could only realise the fact, do as much harm to themselves as to Bulgaria.

Balkan Friction.

The latest outbreak of friction in the Balkans has occurred on the Dobruja frontier, between Bulgarians and Roumanians. It has not yet been possible to disentangle a satisfactory explanation from the mass of contradictory reports, and if the West is called upon to give judgment at this stage, it would probably be of opinion that both sides are to blame. Certainly the incident or the series of incidents has deeper roots than can be discovered in a bomb explosion or a *komitaji* attack. The Bulgarian version appeared in our Sofia letter last week; it was not wholly convincing, still less was the Roumanian account of the trouble. The Bulgarian Government has since acknowledged that there was much in its first version of the incident that required modification. The Bucharest Government has to bear in mind that it is not enough to say the word *komitaji*, in order to enlist the whole of European sympathy on its side. *Komitajis* are not a separate outlaw race, whose activities are directed from a single centre. They are in nearly every instance honest industrious peasants who have been forced to abandon their ordinary avocation as a result of deliberate persecution or merely bad government. If they appear on the Bulgaro-Roumanian frontier, the inference is that they are Bulgarians who have been dispossessed of their lands or have been driven out of the Dobruja by the Roumanians and are trying, in revenge, to make things uncomfortable for the latter. A few of them may, of course, be men "wanted" by the Bulgarian Government for one offence or another; but the allegation immediately brought forward when there is trouble of this nature that the raiders are urged on by the Sofia authorities is too childish to be considered seriously. Mistakes of policy are made in Bulgaria, but there is no ground for supposing that any Bulgarian Government by now fails to realise that it stands to lose much more from *komitaji* activities than it can hope to

Digitized by Google

gain from them. There is, unfortunately, reason to suppose that Roumanian policy in the Dobruja has tended inevitably to the creation of Bulgarian *komitajis* on the frontier. It may not be that the Roumanian Government has acted differently from what any other Balkan Government would have done in similar circumstances; but the fact remains that *komitajis* still are a Balkan product and are likely to be produced until one Government takes the lead in setting an honourable example in the treatment of minorities.

France in Syria.

French troops have made a fresh move in Syria and there has been a successful engagement in the Ghuta, or Damascus oasis, from which point of vantage the insurgents have been in the habit of making life in the capital uncomfortable for the inhabitants. It is conceivable that the Druses will be inclined to cite this fighting as confirmation of their contention that the French were by no means the masters of the situation that the optimistic utterances of the High Commissioner may have led his fellow-countrymen to suppose. On the other hand, they will not be able to derive much encouragement from a collision with the French that has still further depleted their numbers by numerous casualties, with little prospect of their ever being made up by reinforcements. The reports of the fighting are too meagre to enable judgment to be formed as to its value in the French scheme of securing the pacification of the country. In rounding-up operations of this nature the moral effect may depend less on the number of casualties than on the extent of the surprise to the enemy and his difficulty in escaping. Generally speaking, an isolated action in this kind of warfare is of little value. If the morale of the insurgents is to be destroyed, it should be followed up by an equally successful attack in another direction. The immediate future will show whether the French have sufficient troops in Syria to adopt the obvious strategy, or whether they will have to content themselves with a minor success here and there, with sufficient intervals to allow the insurgents to pick up heart again.

Egypt "Carries On."

The adage that no news is good news applies these days with some appropriateness to Egypt, where Parliament is still sitting and no untoward incidents have as yet been reported. It is true that King Fuad has been obliged to postpone his intended visit to England; but that visit might have been shorn of half its value, if it had taken place at a time when there could be no certainty that an explosion might not be imminent in Egypt. The formation of the Adly-Sarwat Cabinet implied that for the time being Zaghloul Pasha accepted the facts of the case and did not propose to kick against them. His followers—to judge from the attitude of the meeting which endorsed this decision—were unmistakably relieved at the course of events; but it was problematical how long the veteran leader's amenability would last. He has already gone far towards confirming the opinion of those who believed that he was shrewd enough to realize that the time had come to adapt himself to altered conditions. His hold on the people remains; but he must know that it is uncertain whether it would stand another serious challenge to Great Britain. As things are, there is no need for such a challenge, from Egypt's point of view. The present Cabinet's attitude towards what the Zaghloulists regard as the Egyptian problem is not a whit less strong than Zaghloul Pasha's own attitude; but so long as Adly Pasha remains the titular head of the Government he can be relied upon to seek a solution by a friendly understanding. The longer correct relations are maintained between the two countries, the nearer does such an understanding come to realisation. Zaghloul Pasha's former tactics failed to achieve any progress in four years; his party should now make up its mind to give the new tactics an equally long run.

The Baghdad Motor Service.

After negotiations extending over the greater part of a year the arrangements for the absorption of the Nairn Transport Company—the private enterprise of two brothers, Norman and Gerald Nairn—by an Anglo-French group have now been completed. The group has been formed at the instance of Sir Albert Stern and comprise Messrs. Stern Brothers, the Anglo-Persian Oil Company, the Imperial Bank of Persia, the Ottoman Bank and a French syndicate, of which the chief members are the Messageries Maritimes, Banque de Paris et des Pays-Bas and the Crédit Foncier d'Algérie. With the exception of Messrs. Stern Brothers and the last-named company all the elements of the group have direct interests in the countries served by the Nairn Transport Company. It was owing to the foresight of the Imperial Bank of Persia that the Company in the first instance was able to obtain the money required to start the Desert Service. The Directors of the Bank were the first to realise what such a service would mean for the Middle East, and they were prepared accordingly to advance money for a scheme which a Bank without their vision would have emphatically "turned down."

The Development of the Middle East.

The Desert Motor Service, started with such justifiable confidence by the brothers Nairn, has not only outgrown the capacity of a small company, but has also opened out a vista of the potentialities of motor transport in the Middle East. It is well, therefore, that the initial enterprise should be taken over by a large undertaking with resources equal to future requirements. The actual journey across the desert will in future be made under more comfortable conditions as a result of the introduction of six-wheeled cars; a rest-house on modern lines is in course of erection at Rutba Wells, the half-way halting ground both of the motor service and, in case of emergencies, of the Cairo-Baghdad Air Service. For the present the cars will follow the northern route from Beyrout via Palmyra, where the Eastern Transport Company had erected a hotel, which will be taken over by the new company. A variety of reasons commend the Beyrout Baghdad route as against the Jerusalem-Baghdad route, and consequently the cordial co-operation of the French authorities in Syria and of French companies interested in Syria was to be desired. The Messageries-Maritimes had already entered into the Desert Service enterprise more whole-heartedly than any other steamship service

ARABIA AND ISLAM.

The general obscurity that still hovers round the relations of Arabia to the rest of the Islamic world, an obscurity which even the recent *haj* has done little to dispel, must be a matter of some misgiving to the Muslim student of affairs: it is certainly puzzling to the Western observer. Without any doubt the new King of the Hejaz, who is Becket-like in his mixture of religious man and politician, had determined that the pilgrimage this year and the Moslem Conference at Mecca should be a resounding success, signifying the return of Islam to its original source of inspiration, Arabia. And, indeed, as far as one man could foresee and provide, they were a success. In the actual conduct of the Conference, upon which we publish on another page an authoritative article by Sirdar Ikbal Ali Shah, one of the Afghan delegates to Mecca, the Wahhabi monarch proved that modesty was not his only virtue, for, if one may judge from this distance, all his political stratagems "came off." It is true that he was not this year proclaimed Caliph, but Time is on Ibn Saoud's side, and it is reasonable to expect that he will so arrange matters within Arabia that next year an assumption of the historic title ("free elections" in Arabia are always an assumption!) may come as the natural corollary of his present position. There are, however, one or two indications that this year's pilgrimage was not quite the success which had been expected. For instance, there was the now famous story of the Egyptian Mahmal, the return of whose escort to Cairo appears to have been marked with expressions of considerable hostility to the Wahhabi régime. That there should have been friction between the fanatical Nejdis and the one Moslem Power whom Ibn Saoud had done so much to conciliate must have been extremely irksome to the Wahhabi monarch. If the explanation is correct that Ibn Saoud is unable always to control his followers, it is quite certain that one of the most fruitful sources of Mecca's income will be cut off; and the Hejaz without the pilgrims is a bankrupt concern. But not only among Egyptian Moslems is there doubt of the desirability of the Wahhabis' control of the Holy Places; uncertainty appears to extend to other of the Sunnis. Indian Moslems are notoriously divided; nor will the Indian delegation to Mecca have done much to clear up the existing difference of opinion. And the fact that neither Turkey nor the Yemen was among those represented at Mecca would hardly support the claim that Islam is on the verge of a great movement once more to return to the sources of its original faith.

In addition to those wavering Sunnis who are not yet wholly convinced supporters or detractors of Ibn Saoud, there are, of course, millions of Shiahs, who, still, apparently, believing the false story of Wahhabi desecration of Medinan shrines loathe the name of Ibn Saoud. These opponents of the Wahhabi dominion exist mainly in Persia, where disapproval of Ibn Saoud's claims or activities appears to have been officially organised. In smaller numbers they abound in India and Iraq. Now if the Wahhabi régime is to endure—and for our part we incline to a belief in its lasting at any rate so long as Ibn Saoud himself endures—one development in the Islamic world is certain: the Shiahs will more and more turn to their holy cities of Nejef, Kerbela, and so on. That is, the links between Iraq, Persia, and India will become infinitely stronger. There are those who think, indeed, that an intenser form of Shiah pilgrimage will ultimately imply the dominance of Persian and Iraqi in the Moslem world. However that may be, it is certain that this reinforced kinship of India with Persia and Iraq will have political effects which may profoundly influence the various Middle Eastern polities.

There is, however, an even broader aspect of the apparent reluctance of the Islamic world to accept the new King of the Hejaz. Whatever Great Britain, as a Christian, or at least as a non-Moslem Power, may think of this sterling Arab, and however friendly it may wish to become, his success must be barren, if Moslems in general, and Egyptians in particular, do not recognise his assumption of power. The possibility must, therefore be faced of a decline in importance of Mecca and Medina in Moslem eyes. It may be, as we have indicated, that Shiahs will tend to substitute for Mecca and Medina Nejef and their other cities; and if security in the Hejaz and freedom of traditional observance in Mecca and Medina cannot be guaranteed to the Sunni pilgrims, how will any such schemes as the actual motor-route from Jeddah to Mecca or the projected extension of the railway through the habitually hostile country of the Beni Harb perpetuate the irresistible appeal of the places where the Prophet was born and died? True, there is no one now (unless as is improbable, it were the Iman Yehia) to humble Ibn Saoud; but boycott of the Hejaz would be effective enough. It is, of course, futile to dogmatise upon this question of the lessening hold of Arabia upon Islam, for both are subjects upon which prophecy is impossible; yet at least Islam would but be following a similar tendency observable in the history of Christianity. It can hardly be denied that the local birth-place of Christianity has not now the attraction for Christians that it had, say, up to the time of the Reformation, and if there were to ensue in Islam a turning-away, so to speak, from the original local source of its inspiration, the break-up of the Moslem world would not necessarily be involved. There are, we should imagine, Moslems who could face with equanimity the possibility of places like Nejef and Cairo becoming to Mecca what, for instance, Canterbury and Rome are now to Jerusalem. But, after all, this is mere speculation, for if Ibn Saoud, by some astute move of which assuredly he is capable, were to renounce his pretensions to hegemony in the Hejaz, or to assuage the fanaticism of his followers in their attitude towards other Moslems, he might so unite the Prophet's followers, both Sunni and Shiah, that Arabia would indeed became again the fount and place of continual inspiration of Islam. Quite patently Islam is at a distinguishing point in its history; it is with Ibn Saoud, in choosing between "mortal sovranty" and "the Paradise to come," either to have himself proclaimed Caliph, to conquer the rest of Arabia, and, possibly, to further the disintegration of the Moslem world, or, by putting the Holy Places in commission, to pave the way for the spiritual regeneration of Islam.

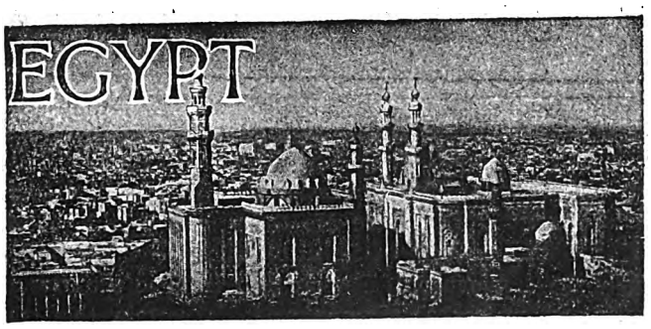
The Near and Middle East*

From Our Own Correspondents.



Cairo, July 18.

Parliament.

The Parliamentary session proceeds unexcitingly, the Budget discussion providing little scope for explosive activities. The debates, indeed, are distinctly dull, and would be much duller were it not that Saad Zaghloul Pasha, who is back again after his indisposition in the Presidential Chair of the Chamber of Deputies, makes effective use from time to time of the very sharp wit which is one of his most attractive characteristics. His manner of controlling the proceedings is admirable, and his immense personal prestige makes it possible for him to indulge in paternal chidings of deputies who seem disposed to dispute the authority of the Chair. In this way he is able to expedite business by putting the closure on discussions which have strayed from the point with a decisiveness which a Chamber with but little knowledge or experience of Parliamentary procedure might well resent from any other President.

Occasionally, amidst the general financial business, some Zaghloulist deputy or other manages to squeeze in a mildly worded suggestion on the attitude of the late Administration to some constitutional issue or other. In nearly every case it is not the Ziwar Government which is aimed at, but the influence, represented in the person of Hassan Nashaat Pasha, which last year exerted so powerful a control over the Government. The Wafd has often let it be understood that, when Parliament met, there would be discussion of many matters which a few months ago were wrapped in mystery, and sometimes scandal, and these innocent-looking motions in the Chamber are instances of the desire to re-wash some linen formerly reputed to be soiled.

One of the slyest of these proposals was made last night, when Abdel Rahman Azzam Effendi, a Zaghloulist deputy, brought up the question of the exchange of Zaafaraan Palace last year for a large tract of Government land. The proposition to appoint a commission of inquiry was based on the fact that the exchange had been the cause of many rumours, "no doubt without any foundation whatever," being circulated, and that "it was desirable, once and for all, to put an end to suspicion." This wording of the motion, coming from such a source, was certainly not without humour. Had the Chamber agreed to Azzam Effendi's suggestion the Government would have been placed in a rather embarrassing position, but for a time it looked as though they would have no escape. But Zaghloul Pasha's attitude, in the first place, in questioning the utility of an inquiry now, when the exchange has been long settled and almost forgotten and, secondly, the intervention of the Prime Minister, who suggested that, before deciding on an inquiry, the Chamber should give its Finance Commission the opportunity of seeing the documents—which the Government would furnish—connected with the transaction, persuaded the Chamber to forgo its wish for an immediate investigation.

Egypt and the Haj.

The return of the pilgrims and the publication in the Press of accounts of their experiences in the Hejaz has strongly reinforced Egyptian opinion against King Ibn Saoud and his methods of administration. The affray in the Muna Valley had already come as a shock to the large number of Egyptians who had hailed the victory of the Wahhabi leader over King Hussein, who was greatly detested here. And now that more particulars of the Muna shooting, together with details of the Egyptian pilgrims' experiences, are becoming known, King Ibn Saoud seems likely to be as much hated here as his predecessor. The reported destruction of shrines at Mecca and Medina, confirmed by the Afghan Minister to Turkey, who, passing through Cairo on his way from Mecca to Constantinople, has given to the *Mokattam* his opinion, in no measured terms, of the Wahhabi régime, is one cause of Egyptian resentment. Another arises from the exactions to which the pilgrims were subjected, and which they declare to have been far more excessive than under King Hussein. Lastly, the returned travellers assert that King Ibn Saoud seems to have no control over the Bedouin who at pilgrimage time infest the country around Mecca, and who this year robbed and maltreated the pilgrims without hindrance from the Hejaz police or from the Wahhabi troops.

The local Press expresses the opinion that it is intolerable that control of the Holy Places of Islam should be vested in a man whose idea of the best manner of preserving the sacred buildings and sites seems to be to destroy them, and that, even were King Ibn Saoud's own views on a fitting régime for the Hejaz acceptable to Moslems generally, that would be of little use unless he were able to control his followers better than appears at present to be possible. The Afghan Minister referred to above has declared his opinion that, if the Wahhabis

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

remain in the Hejaz, the pilgrimage will be abandoned, and the inhabitants of the country, whose means of life are principally provided by the religious tourists, will starve. Several Egyptian newspapers suggest a world Moslem conference with the object of giving King Ibn Saoud notice to quite and of deciding what form of administration to set up in his place. One journal goes so far as to say that there is obviously only one possible solution of the problem, which is to give Egypt a kind of mandate from all Moslem countries to take over the government of the Hejaz, in the interests of Islam as a whole. If King Ibn Saoud refuses to accept notice, says this origin of opinion, the Egyptian Army will soon chase him back to Nejd, just as, under Mohammed Ali Pasha, a hundred years ago, it ejected the Wahhabis from the Holy Land, where, in circumstances similar to the present, they had installed themselves. But whether the Egyptian Army or the Egyptian people as a whole will share this enthusiasm for what, at the best, would be a most unpleasant and possibly very costly campaign, is much to be doubted. It may be assumed, too, that other interested parties would have something to say before the Egyptians could embark on a crusade of this nature. The action already taken by the Egyptian Government in withholding the usual annual contribution to Hejaz charities, because King Ibn Saoud insisted on controlling the distribution of this money, seems to be the only effective protest against the present régime in the Hejaz which this country can make.

ALBANIA.

Tirana, July 15.

A British Cruiser.

The most important event of the past week was the visit of the Dauntless to Durazzo. The arrival of this vessel from the British Mediterranean Fleet was the occasion of fêtes in the British Legation, on board the cruiser, and of a garden party and breakfast supplied by the Albanian authorities. These festivities were prepared for a week in advance—so monotonous is life in Tirana, in Durazzo, in fact throughout Albania, where receptions, soirées, balls and so on are extremely rare.

The Commander of the Dauntless, Captain Danreuther, was féted as a friend and as a precious guest. These events may be ascribed to important reasons, quite apart from the honours due to a distinguished visitor bringing the British flag to Albanian waters.

Political Difficulties.

I have mentioned in my previous letters the anxiety which is caused in this country by the attitude of the Rome Government, and particularly by the representative here of Signor Mussolini, Baron Aloisi. Recently the Baron went to the President of the Republic to make propositions as precise as they were unexpected. These were: to put the Albanian Army and gendarmerie under Italian instructors, to accept the control of Italy in matters of finance and national economy, and finally to place the whole of Albania under the protection of Italy. Ahmed Zogu did not give a categorical answer until he had sounded the opinion of the representatives of other Powers and had discovered whether the suggestion of the Consulta originated in the Duce himself or in an understanding between the Great Powers. Shortly afterwards, the Albanian Government convinced itself that the second of these hypotheses could be excluded; and the response given to Baron Aloisi was a categorical refusal.

It appears that Albania's answer, and especially the fact that the secret has been divulged, have produced a considerable impression in Rome, where, it seems, efforts are being made to give another version of the matter.

The Government of the Consulta (like that of Greece and of Yugoslavia) possesses a powerful lever in the presence in Italy of a number of political refugees—the rest of whom are in Greece or in Yugoslavia. The Tirana Government has guarded against the possible activity of these refugees by taking certain military measures, and by sending troops to Valona and Argyrocastro.

These military movements of course cost money. An official decree increases the Budget by two million golden francs, allotted to military operations. This sum has been covered by a forced loan imposed upon the various villages, with imprisonment for all who do not pay it within twenty-four hours.

Executions.

The sailors of the Dauntless profited by their visit to see Tirana, where, however, they witnessed the rare and sad spectacle of two men hanged by order of the political tribunal of Tirana. They were Abdullah Bojko and Beqir Struga. Abdullah was a notorious miscreant of Ochrida, the author of dozens of assassinations. He was vainly sought for by the Yugoslav gendarmerie, for he was a Yugoslav subject and an inhabitant of Yugoslavia. In December 1924 he helped Ahmed Zogu to return to Albania, and in recompense for services then rendered he was made Captain. As an Albanian officer, therefore, this man was recently arrested (for unknown reasons) and then condemned to death, with his friend Beqir, by the political tribunal.

NEWS IN BRIEF.

The King of Roumania, who is travelling incognito, arrived in Paris on July 20, and has proceeded to Bagnoles de l'Orne.

Sir Albion Rajkumar Banerji, the former Diwan of Mysore, was received in audience by the Prince Regent of Japan on July 23 in Tokyo.

A committee has been formed in Jerusalem by Christian and Jewish friends of France to start a fund to assist in stabilising the franc.

The Turkish Colonel Zekky Bey, who was arrested some time ago in San Remo on the charge of having murdered Reshad Pasha, the physician of the late Sultan Wahid-ed-Din, was released on July 25.

The Yugoslav Prime Minister, M. Ouzounovitch, has requested all the Ministers to revise their departmental estimates so as to secure a reduction in the Budget expenditure of 10 per cent, for the current year.

The Indian Exhibit at the Philadelphia Exhibition is in charge of Mr. F. A. M. Vincent, M.V.O., C.I.E., formerly Chief Commissioner of the Bombay Police, who was responsible for the Indian Section at Wembley.

The Turkish Tribunal of Independence has announced that very severe penalties will be incurred by anyone who helps or harbours Kara Kemal Bey and Abdul Kader Bey, a former Vali of Angora, who have been sentenced to death in connexion with the plot against the Ghazi Pasha but are still at large.

The Sultan of Morocco returned to Paris from Belfort on July 22 after his tour through Alsace and Lorraine and other provinces. The same evening his Majesty attended a gala performance at the Theatre de la Madeleine of "Ruse de l'Homme," a play written by his Grand Vizier, Si Kaddur Be Ghabrit, and played in French by French actors.

THE WEEK AT HOME.

London, Tuesday Morning.

Debts to America.

Of recent days the chief topic of conversation, apart from that of the fate of the French franc, has been our debts to America. The subject was debated last week in the House of Commons, where a show of unanimity was made on the question of the consistent hardness of the United States in this matter. Nor was any bitterness taken out of the discussion by the official American memorandum on the affair. It appears now to be quite certain that the psychological gulf between Great Britain and America is unbridgeable: which means that, whatever happens to the debts due from other nations to us, British money will continue to cross the Atlantic.

Naturally one has one's own view on the nature of the war-debts; but there is no absolute right or wrong in the matter. Legally, America is right: morally (that is, according to the morals of those who were in the Great War from the beginning) she is wrong. It is useless to argue the point. How long it will pay America to continue in her present attitude is problematical; but it is certain that so long as it is good for America to have repaid to her the money which Great Britain borrowed on behalf of the Allies, she will insist on having it. To suggest, as some have suggested, that it was only Mr. Baldwin's folly that enabled the Americans to get our money, seems to be naïve in the extreme. As if financiers in this country had no control over the financial activities of our politicians!

The Wallsend By-Election.

We have had another by-election, at Wallsend; and the result makes poor reading for the supporters of the Government's policy on the coal stoppage. There the Labour condidate, Miss Margaret Bondfield, polled 18,866 votes, the Tory candidate received 9,839 voles, and the Liberal, of increasing course, forfeited his deposit. It is impossible on this occasion to complain that the Liberal spoiled the Conservative's chances, for the Labour candidate made mincemeat of them both. How the decrease in the Government supporter's votes from 15,672 to 9,839 votes is to be explained, except on the basis of dissatisfaction with the Government's coal policy, it is difficult to see.

The Churches and Coal.

It is perhaps not unfair to say that the Churches do not stand well in the week-day opinion of this country, and there have been not a few people ready to disapprove of the recent and unsuccessful effort of the ecclesiastics to "butt in" upon the coal question. Some say that clergymen have no right to political opinions; others emphasise their notorious ignorance of the "facts" of everyday life; while others, including, seemingly, the Prime Minister himself, distrust their ability to create a new atmosphere between mineowners and miners. The Norwich speech contained even a simile drawn between the Churches' present endeavour and an endeavour by the Federation of British Industries to reconcile the extreme Anglo-Catholics with the Particular Baptists.

There is, however, a considerable, though amorphous, body of opinion which regrets heartily the Government's attitude towards this effort of the Churches. These Anglican and Free Churchmen have now published the proposals which the Government rejected, and it is hard to resist the conclusion that they are far more in keeping with national sentiment than is the Government's present show of impotent inactivity. The suggestion that the subsidy which is involved in the Churches' proposals should be included in a loan to the coal industry seems to be gaining ground, and the apparent hostility of the Government to the idea is being attributed in many quarters, not usually antagonistic to Mr. Baldwin, to unworthy motives. Argument in this sense runs on the line that the mines must, if the bigger recommendations of the Samuel Report are to be carried out (and there will assuredly be trouble for the Government if they are not), have capital. Where, if not by the Government, can such money be found? Last week in the Commons Mr. Runciman gave figures of what the country is losing by the prolongation of the coal lock-out, nor has anybody been found to explain that such losses are the cheapest way out of our national difficulty.

In any case, the reply of the Government to the Churches, whether or not right in sum, is seen to be not quite honest in method. For the very man who pointed out that a further subsidy was one of the things which the Royal Commission expressly discountenanced is the same man who is watching anxiously the effect of his Eight Hours Bill, which, also, the Royal Commission expressly discountenanced! But the mines are not yet being filled with men only too anxious to return on the owners' generous conditions, and it may be that the Government will have to tolerate the "butting in" of more than one party who is anxious to stress the points of view of both sides.

Coal in Parliament.

The Parliamentary debate on coal yesterday was disappointing. From the politician's point of view, it is true, the Government had an easy task in disposing of the criticisms of Mr. Lloyd George. But it appears to be necessary to emphasise the fact that because in 1921 Mr. Lloyd George did exactly as Mr. Baldwin has recently done, in disregarding the findings of the Commission which he had appointed, in taking no action upon the intervention of the Churches, and so on, it does not prove that such conduct is correct. The wonder is that Conservatives do not think that it must necessarily be wrong!

The Prime Minister even indulged his modesty so far as to say that the only difference between himself and Mr. Lloyd George was the difference between the man in office and the man out of office. But the nation knows better than this, and it is still hoping against hope that Mr. Baldwin may revert to that acceptance of the Report which first seemed to be signified by him. Unfortunately it appears to be certain that no advantage is to be made of the new atmosphere created by the Churches, for the subsidy involved in those proposals is now to the Government as a red rag to a bull. The only visible hope of a stoppage now lies in an early return, enforced either by "starvation" or by "the logic of facts" (it depends on the point of view), by the miners to the pits. And

Digitized by Google

to descry such a thing requires uncommonly good eyesight.

Political Dug-outs.

Probably the habit has always been indulged in, but Sir Alfred Mond, in refusing to regard the feelings of his constituency upon the question of his political change, has done much to increase its popularity. I mean the departure of our modern politicians from the strict theory of "representative" government. Take the case of Mr. Neville Chamberlain. This able Minister feels the hostile tribes of Labourism swelling up threateningly around him. What does he do? He merely changes his seat; or in the language of the War, he goes to a "better 'ole."

It is illuminating, if not amusing, this decision to transfer from lukewarm Ladywood to estimable Edgbaston, that is, from a place where the Tory majority is only 78 to one where it is 13,078. One wonders whether in a few years there will be enough Kensingtons and Edgbastons to go round. It is increasingly difficult nowadays to fight from dug-outs. To the philosopher, of course, this kind of politics appears to be a game, a sort of musical chairs.

Piccadilly Circus.

The gyratory, or round-about, system was put into operation at Piccadilly Circus yesterday, and the change in the traffic there is probably greater than anywhere else. Under the new system all buses from the City go up Regent Street, and to the City down Haymarket. No west-bound Piccadilly traffic may turn to the right into Dover Street or Albemarle Street, and no east-bound Piccadilly traffic may turn to the right into Bennett Street or Arlington Street. The main points at which west-bound and east-bound traffic, respectively, are allowed to turn north or south, are Berkeley Street and Bond Street, and St. James's Street.

At the moment hold-ups appear to be just as frequent as they formerly were, but no doubt when the drivers become accustomed to the new rules, the interest of the motorists will prove to have been furthered.

Doctors and Diet.

This is the season when the most learned and stupid of men habitually discuss the things that concern us most. A fortnight ago the professors dilated on marriage; last week it was our daily food that was the object of their intellectual microscope. But it is always the same story with them: our most cherished delusions are mocked at by their scientific gaze. Professor Leonard Hill, for instance, has just assured us that consumption of sugar is absolutely wrong. As for white bread, in the eyes of the British Medical Association, it appears to be poison.

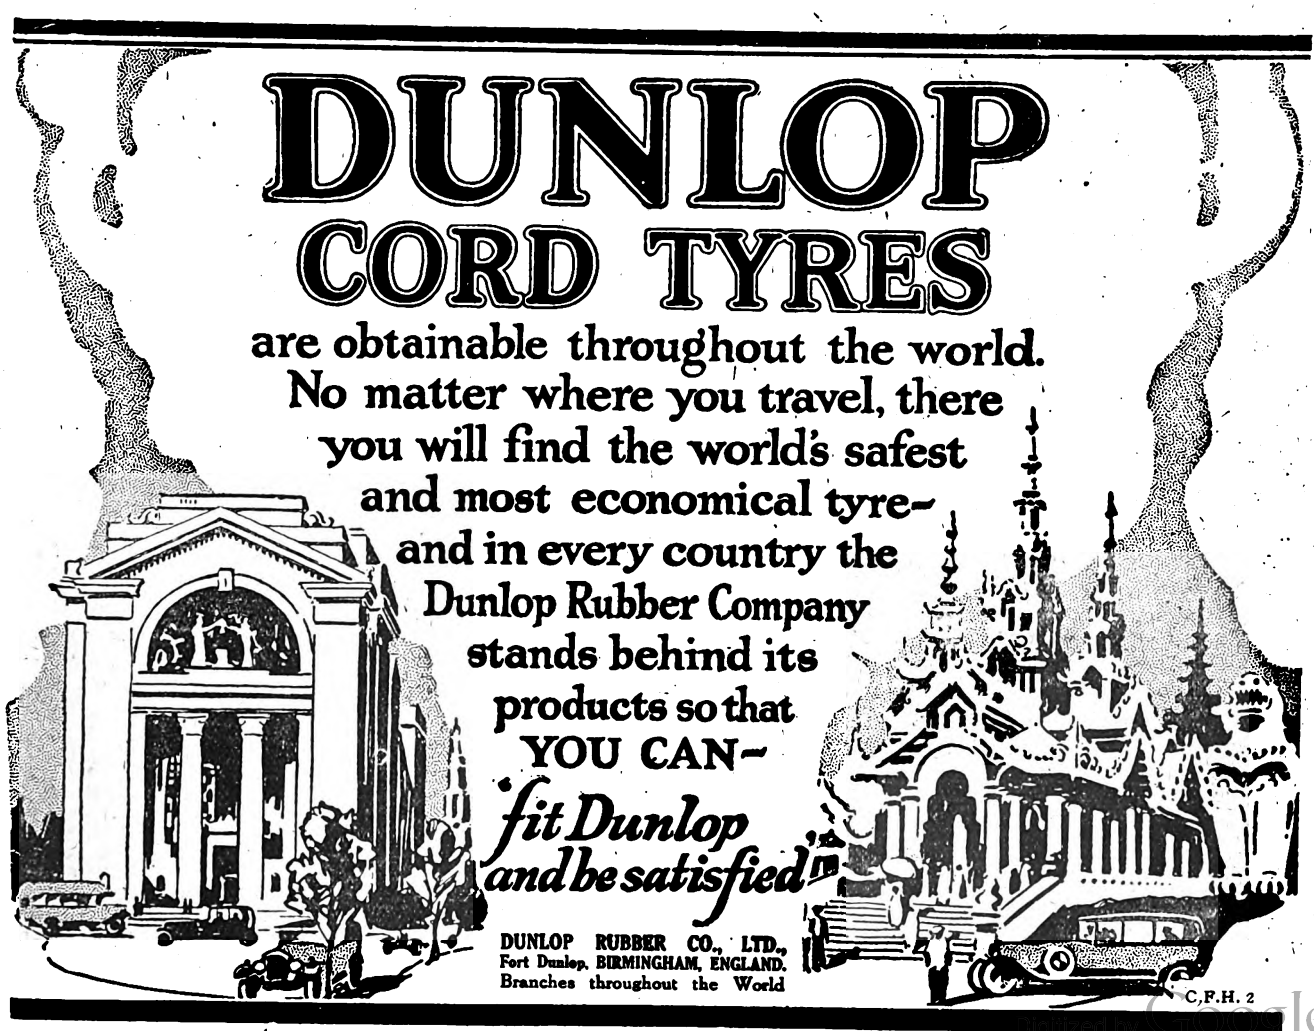
These alarming comments upon our national diet are probably recognised by those who make them as perfectly futile, for as a rule Englishmen do not take kindly to fads in respect to their food. After all, the nation has existed for a considerable time on undoctored diet, and the suggestion that we should all mend our ways at this late stage in our history makes good copy for the jejune newssheet but little food for real thought.

ALTER EGO.

It is reported from Teheran that the Sipah-dar-i-Azam, formerly Prime Minister of Persia, has committed suicide.

The death is announced of Commander Francis Henry Boyer, who played a prominent part in the bombardment of Alexandria in 1882.

The death is announced of Lt.-Col. Thomas Louis Leeds, of Amor Hall, Ipswich. He had a distinguished career in the Indian Army. He saw active service in China and on the N.W. Frontier, and during the War commanded his battalion, the 59th Rifles, Frontier Force, in France, Mesopotamia, and Palestine.



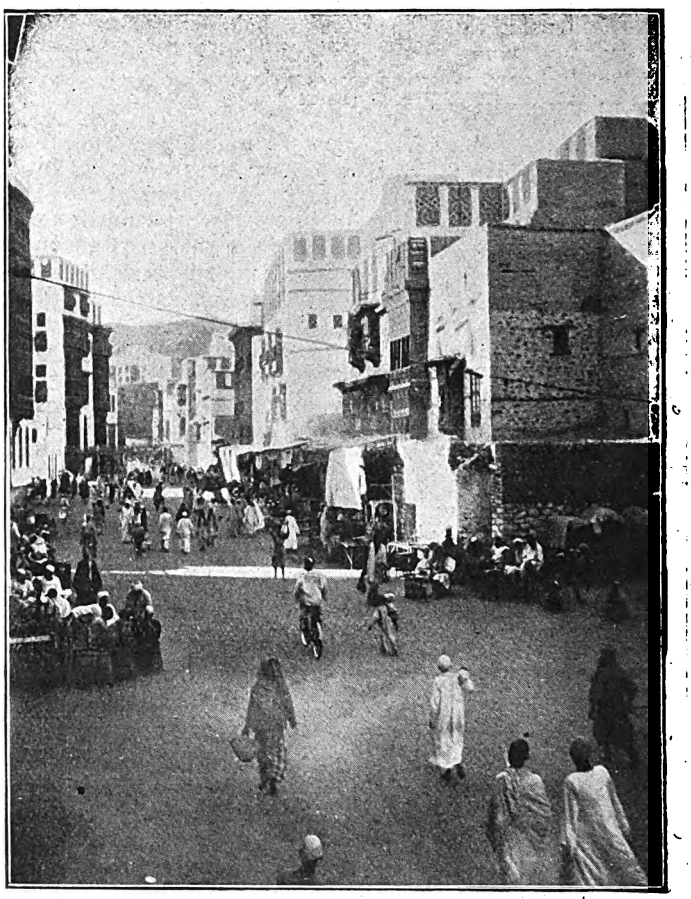
THE GRAND MECCA CONFERENCE.

BY SIRDAR IKBAL ALI SHAH.

But seven weeks ago a most significant Conference of the Moslems of the world was held in Mecca. No fewer than twelve nationalities were represented at the Assembly when, on June 6, Jalalatul Malik Sultan Ibn Saoud performed the opening ceremony in the Shilak just below the old Turkish fort. It was my privilege to attend that international gathering at Mecca. The first idea that struck me was that the old spirit of conservatism is not wholly dead among the Moslems of the world, for no one responded to the first invitation which Ibn Saoud sent out. But, true reader of political events as he is, this Prince of the desert waited for an opportunity to invite a second time at the opportune moment, with the consequence that delegates from Java to Asir attended the call. Some of the representatives, more enthusiastic than others, thought that the capital item on the Conference agenda would be the question of the Khilafat. Indeed, Mr. Mohammed Ali of India (if one may judge from the interview he gave to the *Bombay Chronicle*) set foot on s.s. Akbar with an avowed intention of asking an explanation from "the strong man of Nejd" of the reported demolition of shrines in Mecca and Medina; not only this, he wanted to understand how it was that the Sultan had declared himself the master of the Hejaz in view of the fact that he wished only to purge the Holy Land of Islam of ungodly Hussein and his family, and made "Hejaz for the people of Hejaz" his battle-cry.

The advanced thinkers of Moslem politics were, however, quickly disillusioned when the Sultan, in his presidential address to the Conference, made it perfectly clear that the Assembly need not "waste" its valuable time on the deliberations of the questions of the Hejaz politics, nor touch the phases of the Arab problem which related purely to the international policy of his Government. All thought was to be bestowed on the well-being of the people of Mecca. It was, for instance, agreed upon to lay a railway line between Jeddah and Mecca, link it up with the Hejaz railway at Medina, and ultimately extend it to Yambo on the Red Sea Coast. Then the questions of providing better field hospitals for the pilgrims, of the improvement of the water supply from the Zubaida Canal, and of the laying of broad roads around the Haram, were usefully agreed upon.

I shall never forget the scene one day in the Conference when Hafiz Mahhaba—a right-hand man of the Arab King—rose to make a speech. A volley of "points of order" from the left wing (where sat no fewer than 12 Indian delegates) welcomed him as he ascended the President's dais to make a statement. To hear the Indian delegate being rebuked for using the English language was an unforgettable incident. "Speak in your mother tongue," yelled somebody in Arabic, and had Sharief Adnana not exercised the prerogative of his Chair, the discussion might have ended in blows. And when the Hafiz had had enough of the points of order, he looked fiercely at the interrupter, the fire of the true son of the desert burning in his eyes. "You, Sir," pointing to a corpulent Indian delegate, he said, "insist upon speaking in a language which is not generally understood in this Assembly, and what is more," he continued, "is that you both in your public speeches and in writing have stigmatised the English Language as the Infidels' Language, totally unfit and improper for use for a Moslem, and you employ that language in this pious gathering almost within sight of the Holy Kaaba." The interrupter had, however, recognised Hafiz Wahhaba as being the same man whom he invited to edit a magazine of Khudamav Kaba, and suffered him to starve in Delhi, and ultimately,



Street scene in Mecca, showing the space of Safa-Marva. On the right is the wall of the Haram. The tall buildings on the left are lodging houses. This photograph depicts the town life at the time of the pilgrimage, when peoples of almost all nationalities are to be seen. In the foreground is a real "son of the desert." Note also the woman (with back to the camera) and men wearing the *ihram*

Jalabatul Malik Sultan Abdul Aziz Ibn Faisal Ibn Saoud, the present Wahhabi ruler of Nejd and of the Hejaz, with three Egyptian doctors, who went to Arabia to treat his left eye for cataract.

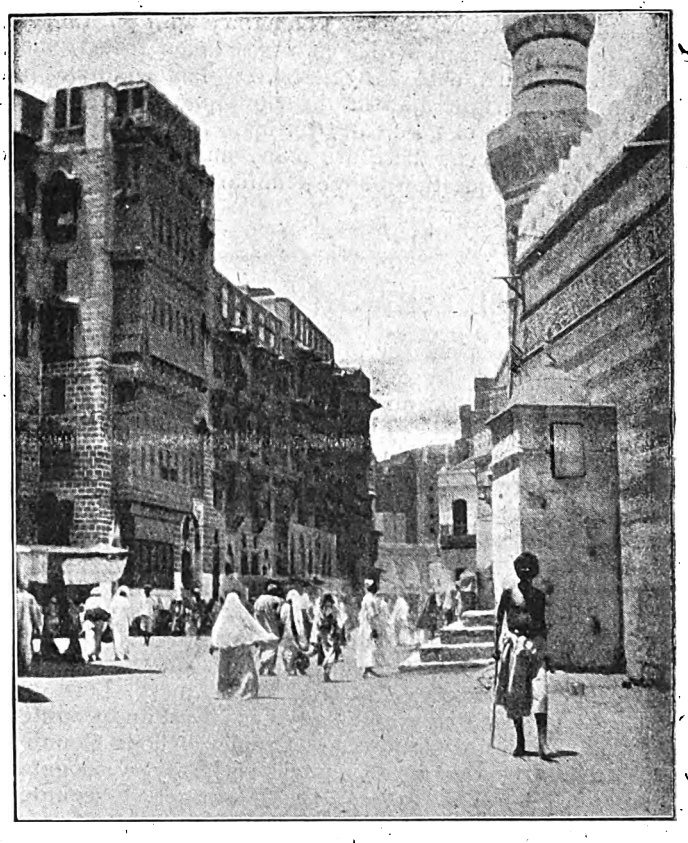
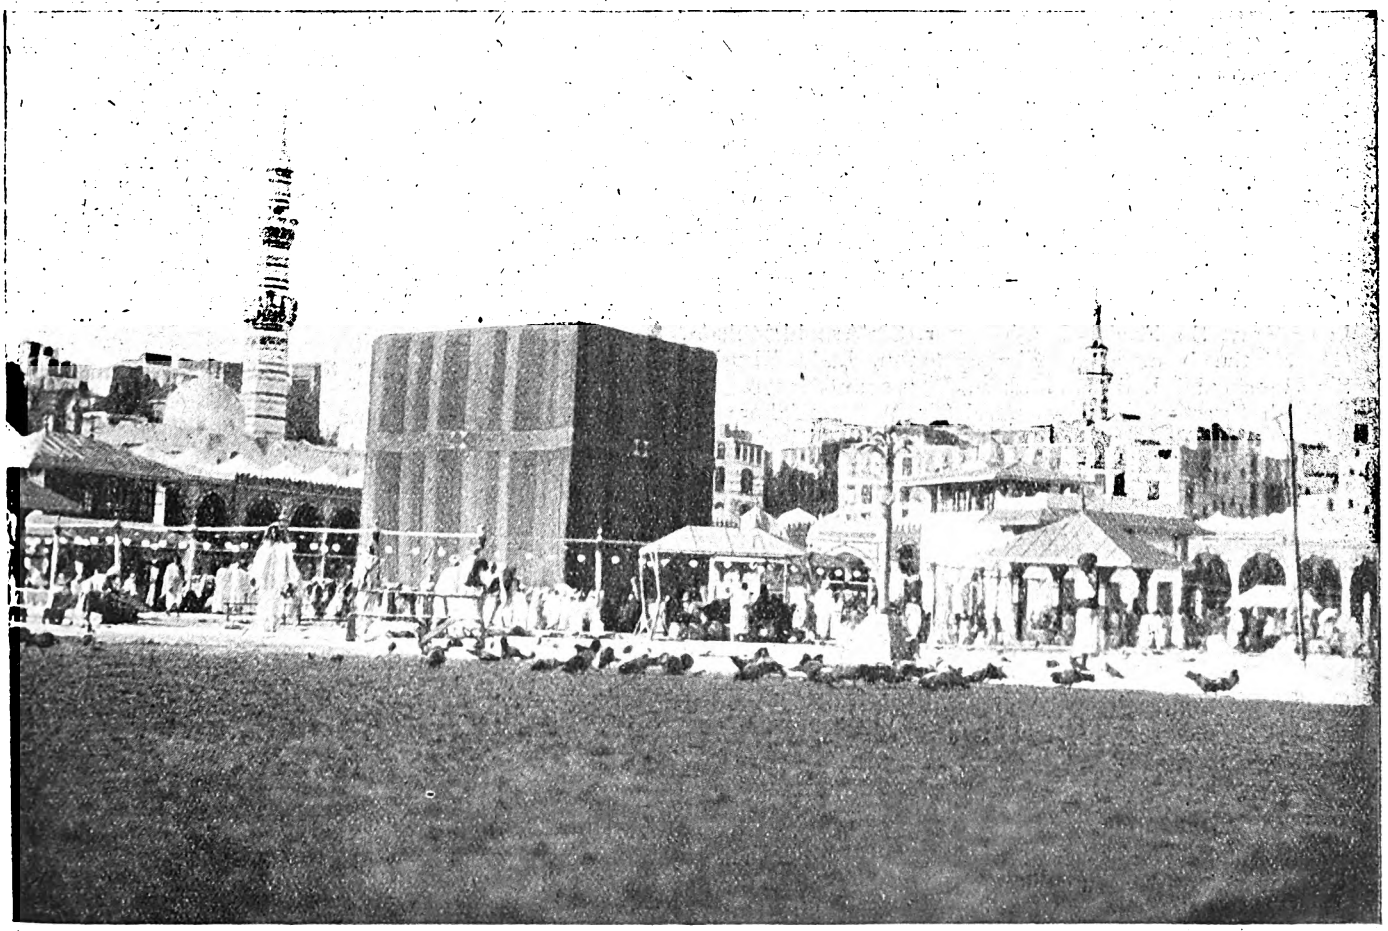
after selling his clothes, to return to Egypt, and would not be dictated to by such a man. The saving grace was that the Hafiz had also recognised his benefactors, for the Ali Brothers have not changed very much. Perhaps the most curious sight of all was to see some representative of a distant country endeavour to talk to the delegates from Bokhara; it was remarkable to compare Syed Sulaman Nadvi and Razauddin, the former always playing with his beard and looking inanely around, whilst the alert, watchful and learned attitude of Razauddin from Turkistan was impressive. Both were elected as the Vice-Presidents. It is, however, necessary to point out here that, although from a glance at the number of items actually discussed and agreed upon, remarkably little work appears to have been put in, yet some items took days to disentangle and hours to decide. Nor is there any doubt that the delegates really earned their hospitality at the hands of Sultan Ibn Saoud, for work began at two in the morning and finished for the day at noon. This unusual hour of the Arabian time, when translated into Greenwich time, means about nine a.m., for in Mecca the day is of twelve hours, and as many hours go to make a night, and sunset marks the hour of twelve, as does the dawn. One fact which did stand out in bold relief to the observant eye at the Assembly, was that the Government of the Heiaz had so balanced the votes that practically without effort the Arab party could out-vote its opponents. That was singularly well manifested at the election of the office-bearers, for every one whose name one had heard long before the Conference in connexion with the different posts, secured them, despite severe challenges. The appointment of Tofiq Sharief, as a General Secretary, is a case in point. Why his candidature was bitterly opposed by the Indians, when they had taken him to India themselves not many months ago to "lay the ground," is, as Kipling says, another story.



Street scene in Mecca. The width of the street, the cafes on the left, the electric telephone wire, and the man on the bicycle are to be noted. There are only four bicycles in Mecca. Riding a bicycle is supposed to imply great misfortune.



The Kaaba, the Holy of Holies in the eyes of all Moslems, covered with a thick khaki cloth It is a peculiar fact that the pigeons, who are feeding on the ground, are never to be seen perched on the buildings They disappear from the Haram at sundown and reappear with the call of the prayer in the early morning.

Digitized by Google

Regarding the present Government of Hejaz, all that need be said is that there is tranquillity with puritanism; whether strictness has been at times taken to extremes, remains a much-debated question. That Sultan Ibn Saoud is the right man at the right place at the right moment, admits of no doubt; yet upon his having "come to stay" at Mecca, there are many misgivings. In the meantime, the question of the Khilifat hangs fire—let us wait and see."

MEMORIAL SERVICE: MISS G. L. BELL.

A memorial service for Miss Gertrude Bell was held at St. Margaret's, Westminster, on July 22. Canon Carnegie officiated, and the Dean of Westminster read the lesson.

Among those present were Sir Hugh Bell (father), Colonel Maurice Bell, Mrs. Walter Johnson, Mrs. C. Y. Pease, Sir Herbert and Lady Richmond, Mr. Charles Trevelyan, the Diplomatic Agent for Iraq, Nouri Pasha, Commander-in-Chief of the Army of Iraq, the Minister of Finance of Iraq, the Hon. Sir Arthur Stanley (representing the British Red Cross Society), Sir Denison Ross (representing the School of Oriental Studies, London), Mr. D. G. Hogarth (President, representing the Royal Geographical Society), Mr. and Mrs. Amery, Lord and Lady Lloyd, Sir Percy and Lady Cox, Earl and Countess Buxton, Katherine Countess of Cromer, Rhoda Countess of Carlisle, the Dowager Countess of Jersey, Viscountess Astor, Viscountess Goshen, the Dowager Viscountess Cobham, Viscount Cecil, Sir Valentine Chirol, Mr. and Lady Victoria Russell, Lady Alice Shaw-Stewart, Lord and Lady Gisborough and the Hon. Ursula Chaloner, Lady Burghclere, Lord and Lady Gainford, Lady Emmott, Sir Evelyn and the Hon. Lady Cecil, the Hon. Roland Kitson, the Hon. Eric Collier, the Hon. Mrs. John Bailey, the Hon. Mrs. Francis Balfour, Sir Bernard and the Hon. Lady Mallet, the Hon. Sir Arthur and Lady Lawley and the Hon. Ursula Lawley, the Hon. Lady Cunliffe, the Hon. Mildred Lowther, the Hon. Mrs. Buxton, the Hon. Mrs. Norman Grosvenor, Major and the Hon. Mrs. Goldman, the Hon Thomas Spring-Rice, the Hon. Mrs. Lyell, the Hon. Mrs. Edward Talbot, Dame Caroline Bridgeman, the Hon. Dame Maude Lawrence, Dame Beryl Oliver, Lady Isabel Browne, Lady Henderson, Admiral Sir William and Lady Goodenough and Miss Goodenough, Sir Gilbert and Lady Clayton, Sir Henry and Lady Galway, Sir Robert Hamilton, Sir Edgar Bonham-Carter, Sir William Willcox, Sir Ronald and Lady Storrs, Sir Edmund and Lady Phipps, Sir Albert and Lady Gray, Sir Frederick O'Connor, Sir Arnold Wilson, General the Hon. Sir Neville Lyttelton, Lady Higgins, Sir Henry and Lady McMahon, Lieutenant-General Sir Raleigh Egerton, Major-General Sir William Thomson, Air-Marshal Sir John Salmond, Sir Campbell Rhodes, Sir John and Lady Harrowing, Sir Arthur Dorman, Sir Edward Boyle, Mrs. Winston Churchill, Miss Haldane, Mr. W. J. Jeeves, Mr. Albert Ball, Colonel R. Pope Hennessey, Mr. and Mrs. J. W. Mackail, M. W. L. Johnson, Mrs. Miles Lampson, Mr. and Mrs. Henry Yates-Thompson, Mr. and Mrs. George Stott, Mrs. Charles Thynne, Mr. Robert Grant, Mrs. Mackeson, Mrs. F. K. Stobart, Major-General A. C. Daly, Mr. Victor Malet, Mr. and Mrs. Edgar Dugdale, Mr. and Mrs. Geoffrey Dawson, Mr. Leland Buxton, Miss Violet Markham, Colonel Keeling, Mr. and Mrs. Lionel Hichens, Mrs. Carnegie, Mrs. E. H. Holford, Colonel Lowry, Miss Beales, Miss Crossland, Mr. and Mrs Vernon, Mr. C. S. Clarke, Mr. R. Money, Mr. G. Eady, Mr. H Norman, Mr. Owen Hugh Smith, Mr. W. M. Crook, Mr. and Mrs. Fisher Unwin, Miss Clare Attwood, Mr. Rhuvan Guest, Colonel and Miss Arthur Grenfell, Mr. H. St. J. Philby, Mr. H. A. L. Fisher, Miss Terry Lewis, Mr. Holford Knight, Dr. Wilberforce, Miss Elizabeth Robbins, Mrs. Douglas Hankey, Miss Flora Russell, Mrs. Arthur Godman, Colonel and Mrs. P. C. Joyce, Miss Diana Russell, Mrs. King-Wood, Mr. and Mrs. Maurice Macmillan, Major-General Leslie, Miss Joan Hampden, Mrs. and Miss Cuthell, Miss Maxse, Mrs. Tainsh, Mr. Drower, Mrs. Foxley Norris, the Rev. H. J. and Mrs. Kitcat, Mrs. Humphrey Mrs Huth Jackson, and Mrs. Black.

FOREIGN DECORATIONS.

The King has given the following gentlemen authority to wear decorations of the Order of the Nile conferred on them by the King of Egypt in recogniion of valuable services:—

Insignia of the Second Class.—Mr. George Watkins Williamson, formerly Judge of the High Court and Registrar-General of Lands, Sudan Government; Mr. Richard Edwardes More, Sudan Agent; Mr. Kenneth Chetwood Price Struvé, Governor, Upper Nile Province; Major Rowland Percy Somerset Elderton, late Assistant Financial Secretary, Sudan Government; and Major Percy Calvert Lord, Chief Engineer, Sudan Government Railways and Steamers.

Insignia of the Third Class.—Mr. Oliver Francis Haynes Atkey, Director, Sudan Medical Service; Mr. Harold Wynne, Director of Posts and Telegraphs, Sudan Government; Mr. James Douglas Craig, Deputy Civil Secretary (Native Affairs), Sudan Government; Major James Oliver Thorburn, M.C., Royal Artillery, formerly Commandant of Artillery, Egyptian Army; and Mr. Alfred George Innes, M.A., Ph.D., F.I.C., Director of the Chemical Department, Egyptian Government.

The King has also given Sir Robert Waley Cohen, K.B.E., General Technical Director of the Royal Dutch Shell Company, authority to wear the Insignia of the Third Class of the Order of Saint Sava, which decoration has been conferred on him by the King of the Serbs, Croats, and Slovenes in recognition of valuable services.

NOTES OF THE WEEK.

(Continued from page 92.)

catering for the East, its interest at Beyrout giving it a position of advantage. By means of the new organisation, which will cater for Arab "third class" passengers, as well as for "first-class" traffic, there should be a considerable development of native travelling under safer conditions than have prevailed hitherto. Finally what has been achieved between Beyrout and Baghdad is capable of being extended in many other directions, if the new Anglo-French group retains the driving force which has laid the success of the Nairn Transport Company. The motor service between Baghdad and Teheran requires to be taken in hand; at present it is run on more or less happy-go-lucky lines. Nor should the day be far distant when the whole of Persia should begin to be opened up by means of motor transport; which in turn may supply the Arabs of the Arabian Peninsula with the unifying influence that they have always lacked in the past.

The Constantinople Penal Court has concluded the trial of the two policemen accused of having caused the death of Lieutenant Hairi Bey last March. One was acquitted and the other sentenced to one year's imprisonment.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

Book Reviews

THE SAMARITANS.

"THE SAMARITANS: THEIR HISTORY, DOCTRINE, AND LITERATURE," by Moses Gaster, Ph.D Schweich Lectures for 1923 (Published for the British Academy by Humphrey Milford, Oxford University Press, 10s. 6d. net.)

Dr. Gaster's masterly book fills a place long empty. There has been a tendency to consider the Samaritans as a remnant of historical interest only: Dr. Gaster shows conclusively that they are an important contribution to the theory of Biblical tradition. He deprecates the failure of scholars to reconstruct the story of this "solitary remnant of the Ancient House of Israel" from their own very definite records and traditions, which are worth a closer attention than they have yet received. Undoubtedly, the Samaritans have not been quite fairly treated by the outside world. The very origin of the name "Samaritan" has been so twisted as to throw a slur upon it. They "call themselves 'Shamerim,' meaning 'those who keep or observe the law,' and add 'al-haemet—in truth,'" whereas the usually accepted origin is "shomronim," "a people dwelling in the land of Shomrom, who are of purely heathen origin." The Samaritans maintain, and their history upholds the claim, that they keep themselves wonderfully free from other religious movements and influences. "None of these (outside) forces acted upon the Samaritans, and, if anything they are the only people who have had neither reason nor occasion to change. . . . Their tradition has been riveted to the same place for so long, and has been handed down direct from generation to generation, that the utmost reliance can be placed upon it. The power and prerogative of the priests has never been challenged. Throughout the ages they have been the sole rulers and guides."

Dr. Gaster traces the story of Ephraim's severance from the other tribes from the Samaritan records, and points out that despite this terrible breach, the Prophets of Israel speak of Ephraim as an estranged and erring brother and not as an outcast of mixed or heathen blood. Subsequent Jewish opinion has inclined towards the latter and unfavourable view. "Never by a single word does Jeremiah allude to the fact that the country has been absolutely denuded (through exile), or that Ephraim has been supplanted by a mass of proselytes whom afterwards the Jews refused to recognise as being of the old race. No suspicion is raised against the purity of Ephraim, or of the tribes of Israel; they share the fate of the Southern Kingdom, both being sent into captivity, and both being brought back." Various efforts after reconciliation were made by early Jewish kings and prophets; possibly, political motives influenced these attempts, and the fact that reunion was desired by the rulers and not by the people was sufficient to doom each in turn to failure. Ezra destroyed the last faint hope of reconcilation. With the same ruthless purpose that severed husband from wife and parents from children, he rejected the Samaritans' offer of help in the rebuilding of the Temple at Jerusalem. He went further. "According to the tradition of both (Jews and Samaritans) Ezra transcribed the Hebrew text from the old characters still found among the Samaritans into the Aramaic script. There could only have been one reason for such a drastic step, namely, to break completely and to eliminate the Samaritan text from circulation among the Jews, to relegate it to a place of inferiority or declare it spurious . . . . and to wean the people from any contact or any knowledge of the old script. The new alphabet formed the impassable barrier between the two." The "virulent hostility" of the Samaritans against the memory of Ezra is understandable; they accuse him, however, of having "changed the character of the alphabet and falsified the text."

Dr. Gaster does ample justice to the tenacity with which the Samaritans have handed down their religious beliefs and observances from century to century. "It is one of the cardinal beliefs of the Samaritans that the Pentateuch, as it stands now, was actually written by the Hand of God . . . . the only thing that Moses did was to transcribe it and hand it on to the priests and elders." The Ten Words by which the world was created are scattered throughout the Pentateuch, every word having "an open and a hidden meaning;" to discern the latter was to be endued with "the mystical power of creation inherent in it." The Name of God being the most potent of all words and letters. "The origin of the Kabbalah . . . . rests entirely upon the text of the Pentateuch." The Samaritans "believed in angels as the messengers of God." Belial "is the power which caused Eve to disobey." They base their "theory of life after death, of punishment and reward, and of the final events," upon Deut. xxxii. Their calendar resembles that of the Sadducees. Messiah will spring from Levi, and after performing miracles with Moses' rod and discovering the lost Vessels of the Temple, "he will die and be buried among the 'Pure Ones' at the foot of Mt. Gariziṁ." The Samaritan conception of the office and mission of Messiah differs curiously from the Jewish, in that they look for no temporal or material advantage through His coming; His sole concern will be with matters pertaining to their worship and the spiritual life. The Jews look for a Messiah Who shall "restore the Kingdom to Israel."

The Samaritan literature is almost exclusively religious; its scope has been narrowed by the people's rigid isolation from the rest of the world. The majestic outpourings of the Prophetical Books are rejected by the Samaritans; all is based upon the text of the Pentateuch. The discovery of the Samaritan Pentateuch by the persevering Pietro della Valle (1616) is one of the romances of literary history. It stirred the Western Schools to their depth, and presently became a weapon in the armoury of ecclesiastical disputes, the Roman Catholics upholding the Samaritan text in opposition to the Protestants, who maintained the absolute validity of the Hebrew. There is no doubt of the great age of the Samaritan scroll; they themselves ascribe it to Abisha, the priest, but it may well be the ancient copy of an even more ancient MS., which was destroyed, with the mass of Samaritan writings, by Hadrian. The Samaritan liturgy embodies some very old prayers and hymns; many of the latter contain alphabetical acrostics; their prevailing characteristic is a "morbid consciousness of sinfulness."

One could quote pages from this delightful book; but a review is only a sign-post, pointing readers to the most valuable and authoritative work yet produced upon a fascinating and important subject. Dr. Gaster's lucid and scholarly style adds distinction to his theme. There are several interesting illustrations, and six ample appendices.

THE INDIA OFFICE.

"THE INDIA OFFICE." By Sir Malcolm Seton (Putnam's Sons, 7s. 6d.)

This book is the third (or perhaps the fourth) of those in which the Editor of the Whitehall Series has set himself to enable those interested in the government of the country, whether for personal or general reasons, to obtain "accurate and authoritative information in an accessible form" about the great Departments of State. It is, in fact, less a history of the India Office than a popular account of the evolution of the Government of India, as at present con-

Digitized by Google

stituted, from the old East India Company, accompanied by a series of articles on such subjects as Finance and the constitution and position of the European services in India, with special reference to their relations with the Secretary of State and the India Office. The author deplores the harm that has been done in India by "wrong-headed or ill-informed utterances" insisting on the subordinate character of the Government of India or describing the Governor-General as the agent of the Secretary of State: and the scheme of his book is certainly in keeping with his sentiments in this respect. The focus of the picture that he has painted is the Government of India and its officers, with the Secretary of State and the India Office as accessories—and not particularly important accessories at that. As regards the Secretary of State, he quotes the opinion of a distinguished French observer who said that his duty is "to watch, to consult and occasionally to intervene"—though it is an accepted principle that the Government of India should only be overruled for very cogent reasons, the Secretary of State is the mouthpiece of the orders which ensure that, if there is a difference of opinion, the will of the Imperial Government shall prevail in the last resort. As regards the India Office, one cannot improve upon the author's own words: "When measures require the approval of the Secretary of State in Council, it is the plain duty of the India Office to examine them closely and make any suggestions which it honestly, if not always accurately, believes to be of value."

The book is written throughout in a clear and interesting manner, and contains not only much readable information of a kind which, as the author puts it, is usually "successfully evaded by the educated British public," but a great deal of wise and witty comment—witness, for instance, the very amusing account of the difficulties experienced in finding a name for the Order of the Star of India. The Editor of the Whitehall series may be congratulated on having obtained the assistance of Sir Malcolm Seton for the production of this volume: if he has been equally fortunate as regards the others, the Whitehall Series should reach, with the most beneficial results, an even wider public than that which he has set himself to influence.

A NOVEL ON ZIONISM.

"JACOB'S WELL." By Pierre Benoit. Translated from the French by Dr. Angelo S. Rappoport. (London: Stanley Paul and Co., Ltd 7s. 6d. net.)

There can be few students of the Near East who are insensitive to the merits of M. Benoit's novels, which are often fresh, vivid, and adequate representations, or, better, presentations of Oriental life. To the extraordinary colour and life of this book, his latest novel, unreserved praise may be given. It comprises a quite remarkable exegesis of the Jewish soul, an exposition in which Zionist deep calls unto Zionist deep, an explanation of the eternally recurrent appeal of Zion to the denationalised Jew.

We do not intend to sketch the story of the reactions of the heroine, a Jewess courtesan named Hagar, to a Zionist colony called "Jacob's Well." Through the unlikeliest mediums, a French atheist and a female doctrinaire, she is induced, first of all to abandon her stage life in the Levant to work actively in the Galilaean plain, and later, to sell the results of her profligacy in Paris for the help of the bankrupt colony, and finally, through the sharp twinges of her Semitic conscience, to abandon the luxurious life of the West and once more to turn her weary face, as well as her easy money, Eastwards.

From many points of view this is a notable novel—from its local colour, which is certain and direct, from the accuracy of its characterisation, which is particularly masterly, and above all, from its intellectual poise, which is the quality that will, perhaps, make it most popular with English readers. M. Benoit takes no sides in this Zionist question; his aim is to expose or to prefer it. There will be those who smile at the fanaticism which prompted Cochbas to leave a "safe billet" with the Paris Rothschilds for the stones of Palestine, or who will grieve that the beauty of Hagar should finally have been wasted on the partly desert air of the Holy Land. Yet there will be others who may be fired by the magnificent enthusiasm of the doctrinaire and of the prostitute. Only once does M. Benoit explain what may be his position towards the Jews: it appears to resemble that of other eminent observers, such as Shakespeare and Mr. Chesterton. He puts these thoughts into the mouth of an intelligent Frenchman, M. de Biesvres, who, having asked a young Jewish journalist, wounded during the War while fighting for the French, which he was the more proud of, his wound or his origin, said:—"You are more proud of your origin, is it not so? . . . . It is yourself who objects to being confounded with the other mutilated soldiers of France. It is not from us, but from you that comes this gesture of repulsion. . . . Will you always persevere in your isolation? Will you always keep before your eyes the flame, a sombre reflection of the stakes of Spain and of the burning of Zion? Will you never shake off that mournful and sterile pride, that *tædium vitæ*, and return to the freshness of soul of your ancestors once dwelling in the vineyards of Canaan? Is this eternal thirst for suffering, this enjoyment of suffering, so deeply rooted in your hearts that you are anxious of constituting yourselves your own tormentors, after having successfully subdued (by financial means) those whom you are calling your tormentors?"

That is a notable passage from a notable book, which we enthusiastically recommend both for its subject and its treatment. It is to be regretted that the translation should suffer from over-literalness. Even that defect, however, cannot prevent the astonishing incisiveness of the novel coming through.

In conclusion, we would point out that seekers after political capital will find little gratification in this novel. It is not the problem of Palestine but the problem of the Zionist which M. Benoit is concerned to depict. And this, we believe, he has done in a way unsurpassed even by one of that race or nationality whose martial qualities enabled the great and, as the author of this novel sharply but dispassionately implies, as yet unsuccessful experiment of practical Zionism to be made.

SWASTIKAS AND SPIRALS.

"THE MIGRATION OF SYMBOLS: THEIR RELATIONS TO BELIEFS AND CUSTOMS." By Donald A. Mackenie. With 16 Plates and 53 Text Illustrations. (London: Kegan Paul, Trench, Trubner and Co., Ltd.. 12s. 6d. net.)

Mr. Mackenzie has compiled a quite pleasant, if curiously rambling, series of chapters on certain symbols which are found widely scattered over the old and new worlds. His book is liberally illustrated, and there is a full index. We wish that we could say more in favour of a book forming part of the "History of Civilisation" which has given us much sound work.

But the truth is that the book has no scientific value. This is plain on nearly every page; an extract from page 172 will do as well as any other to show what we mean:—"Edinburgh has its fairy hill called 'Calton,' which the 'fairy boy of Leith' was wont to visit so as to take part in fairy revels. The name Calton is a close rendering of the Gaelic *Calltuinn* which means 'hazel grove.' The suffix surviving in the 'ton' of 'Calton' is used in connexion with the hazel and not with any other tree. It may be compared with the suffix 'tin' in *gestin*, the ancient Mesopotamian name of a sacred tree and a compound of the words *ges*, 'wood' and *tin*, 'life.'"

Incidentally this passage indicates Mr. Mackenzie's patriotic tendency to use Scottish (especially Highland) instances in place and out of place. As an example of the latter, we notice that the text on Plate XIV contains the words "Tintern Abbey, Scotland."

In consideration of the title, it is more than odd that the book says very little and makes no attempts to prove anything about the migration of symbols. C. S.-W.

PERSONAL AND GENERAL

TO-DAY

July 29, 1926 (New Style).
July 16, 1926 (Old Style).
Muharram 13, 1345 A.H., of the Moslem Calendar.
Ab 18, 5685, of the Jewish Calendar.

Sir Geoffrey Archer continues to make good progress towards recovery from the operation he underwent recently.

Mr. Richard Turner, Commercial Attaché in the British Legation in Copenhagen, is being transferred to Athens.

Sir Milne Cheetham, British Minister at Athens, and Lady Cheetham have arrived in town from Paris. They are staying at Claridge's.

Mrs. Maud Howe Eliott has arrived in London from Greece, and is the guest of the Dowager Lady Eliott at 25, Montague Street, Portman Square.

General Gouraud, former High Commissioner for Syria, had the honour of being invited to luncheon with the King and Queen at Buckingham Palace on July 20.

Lord Lloyd, High Commissioner for Egypt and the Sudan, who arrived in London on July 20, had an audience of the King at Buckingham Palace on the following day.

Ahmed Pasha Ziwar, ex-Prime Minister of Egypt, was received by the King during the Garden Party at Buckingham Palace, and congratulated on his efforts to promote an Anglo-Egyptian Entente.

Rai Bahadur Lalit Mohan Banarji has been appointed one of the Judges of the High Court of Judicature at Allahabad, in the place of Rai Bahadur Pandit Kanhaiya Lal, who has retired.

Among the prominent Egyptians now on a visit to this country are Ismail Sirry Pasha, Minister of Public Works in Ziwar Pasha's Cabinet, and Tewfik Doss Pasha, a former Minister of Agriculture.

Colonel R. J. Collins, the Director of Military Training in India, leaves for home in August to assume his new appointment at Portsmouth in command of the 9th Infantry Brigade.

The Viscount Willingdon had an audience of his Majesty on July 20, when the King invested him with the Insignia of a Knight Grand Cross of the most Distinguished Order of St. Michael and St. George.

The King has approved the appointment of Mr. Cecil Patrick Blackwell to be a Puisne Judge of the High Court of Judicature, Bombay, in the vacancy created by the promotion of Sir Amberson M. Marten to be Chief Justice.

Ex-King George and Queen Elisabeth of the Hellenes paid a private visit on July 22 to Penshurst Place, the residence of Lord de L'Isle and Dudley. Viscountess Hardinge and the Hon. Ruby Hardinge and Lord Hardinge of Penshurst were also present.

Among the passengers who left London on July 22 by the P. and O. special train for Marseilles to join the steamship Malwa for Bombay were Sir H. Moncrieff Smith, Sir H. N. Bolton, the Bishop of Calcutta, and the Bishop of Bombay.

Professor Vincent, the President of the Rockefeller Foundation, has passed through Belgrade on his way to Southern Serbia, where he will visit various hygienic institutions and the districts which have been ravaged by the floods.

Mr. Rowland Cash has returned from Egypt, and has resumed his practice at 10, Clifford Street, Bond Street, W.1.

The following have been selected as Probationers in the Sudan Political Service:—P. Broad, A. P. Cullen, A. W. M. Disney, D. Hawkesworth, G. Hawkesworth, K. D. D. Henderson, N. McL. Innes, M. F. A. Keen, C. A. E. Lea, T. A. Maclagan, C. Nicholls and E. H. Nightingale.

The Air Council entertained Nouri Pasha al Sa'id, C.M.G., D.S.O., Chief of Staff of the Iraq Army, at luncheon at the Savoy Hotel on July 22. Sir Samuel Hoare, Secretary of State for Air, presided over the company, which included: Jafar Pasha el Askeri, Major-General A. C. Daly, Air Marshal Sir John Salmond, Air Commodore C. L. N. Newall, Air Commodore A. M. Longmore, and Group Captain C. S. Burnett.

THE LATE MISS GERTRUDE BELL.

The Secretary of State for the Colonies has received the following telegram from the High Commissioner for Iraq: "I receive every day from all parts of Iraq countless expressions of grief and distress at Miss Bell's death and of affection and gratitude for her devotion to Iraq. Arabic newspapers continue to print articles of eulogy and regret. Never, perhaps, has the death of a European aroused such a remarkable demonstration in an Eastern country, and we here all feel proud to have been associated with her in the work which has had so wonderful a result."

In a race, on July 25, in the Gulf of Cattaro, between the British seaplanes which are visiting Dalmatia and Yugoslav seaplanes, the Yugoslavs won.

The Greek Government, on July 22, issued instructions cancelling the proposal for the extension of the Syngros Boulevard in Athens through the site of the Temple of the Olympian Zeus.

It is stated from Constantinople that Hassan Bey, the former Minister of Finance, is leaving for London in connexion with the settlement of outstanding questions of finance relating to the Treaty of Mosul.

LORD WINTERTON'S SPEECH.

The Times described the proceedings of the House of Commons on Tuesday, the 20th inst., when the Vote of £47,401 for the India Office was discussed and agreed to, as being of the nature of hearing a statement rather than of a debate on Indian affairs. The Under-Secretary for India read out a crammed and condensed statement to a small audience and elicited a minimum of live comment in contradiction or support of his facts and deductions. Colonel Wedgwood led the Opposition and four other Labour Members spoke, but Mr. Ramsay MacDonald did not make a speech as he did last year. One Labour paper makes out that the speech of the evening was really that of Mr. Johnston (Dundee, Lab.), though this was reported in *The Times* in two lines only.

Lord Winterton began by drawing a pretty and pleasing outline for his picture, which he said was in almost every respect the most satisfactory of the four annual pictures of India which he had had to present to the House. Hopefulness, he said, covered almost the whole sphere he had to survey. Then came the details. First and foremost the monsoon, one of a series of good ones with all its attendant advantages. This series has indeed been a blessing in every way to Government as well as to India. Not only do over 72 per cent. of the whole population depend on pasture and agriculture, but the effect of the monsoon extends to most sources of public and private finance and income, to trade and industry, to crime and public security, to health and in fact to nearly every aspect of life. A good monsoon following others of a similar nature must indeed contribute enormously to a favourable statement on the year's conditions. *Prima facie* a period of good monsoons should produce a high degree of prosperity and contentment and a reserve of both for the inevitable sequence, sooner or later, of less favourable climatic conditions. An account of the condition of India, after a fairly long succession of good harvests, should be examined from the point of view that defects require more explanation than they would do under other circumstances. Lord Winterton dealt at considerable length with the acute tension now existing between the two great religious communities. The bearing of this on the political future of India is being considered with intense interest and anxiety in India and is very properly attracting attention in England. Colonel Wedgwood deprecated excessive regret for the dissensions, as he said that he would rather see in men's eyes the light of fanaticism than no light at all. This is a new way of expressing a liking for Mr. Montagu's declared objective of a disturbance of the pathetic placid contentment of the masses. Lord Winterton's attitude was that any system of development on the lines of gradually increasing the power in the hands of Indians themselves and thus augmenting their interest in practical politics brought out, as a natural result, with increasing clearness the "very real depth and sincerity of the cleavage existing between Hindus and Mohammedans." It seems then that in Parliament the aggravation of communal dissensions is looked upon as an incidental feature of the Indian people's progress towards responsible Self-Government, a sort of youthful disease which may however undermine the Constitution permanently unless it is checked and overcome mainly by the patient's own efforts. We ourselves are not quite reconciled to this view. We think that in the first few years of the Reforms the British executive in India was unduly and prematurely weakened and that to this has been largely due the continuing failure of the administration to resist the indulgence of both Hindus and Moslems of their age-old religious antipathies. Lord Winterton's diagnosis seems to us to evade some realities in this matter both in the past and present. In writing of the policy and action of the Labour Government in regard to India at the end of 1924, the Rt. Hon. Sir William Joynson-Hicks said that in the nerveless grasp of the then Secretary of State, India was slipping away and that anarchy and sedition were increasing every moment in India, fomented by the thought that the British Government was at least not unfriendly to the seditionists. Whether these words were exaggerated or not, it seems fairly clear that the system of law and order was not as strong and healthy as it should have been when the time came later on to check communal outbreaks. As regards the present we shall mention later on some points on which we think Lord Winterton's picture of India shows some want of appreciation and realities.

Turning to "the brighter side of things, namely, to trade and finance," Lord Winterton said that the satisfactory state of the export trade had provided a clear refutation of the foolish cry of exploitation raised by the Swarajists and their friends. We are not at present concerned to discuss the exploitation theory, but we feel less certain than Lord Winterton that at the time of his speech all was well with the export trade in spite of the four good seasons in succession. The official trade returns show the following figures:

	Value of India's Exports
May, 1925	Rs.32,53,00,000
April, 1926	Rs.26,77,00,000
May, 1926	Rs.24,48,00,000

The visible balance of trade was in favour of India to the following extent:

May, 1925	Rs.10,48,00,000
April, 1926	Rs. 3,88,00,000
May, 1926	Rs. 42,00,000

There has recently been a large falling off in the value of exports of food grains, raw materials and produce, including raw cotton, oilseeds, linseed and raw jute. In alluding to the Indian cotton industry Lord Winterton said that it had been going through a difficult transitional period which was not confined to India. This description of the situation is scarcely adequate. The Indian cotton mill industry has for some time now been in a disastrous condition, largely owing to circumstances beyond its own control. The trouble in China has caused the collapse of the yarn trade with that country, dumping of cotton stuffs from Japan has cut into the sale of Bombay productions; and lastly the feeling of insecurity in the up-

Digitized by Google

country cities has altered the whole custom of traders in the matter of buying and holding stocks. Considering the huge capital invested in the cotton mill industry, the fact that the great majority of the mills have for the last two years either made heavy losses or exceedingly small profits somewhat spoils the rosy picture of India's trade.

Another matter mentioned by Lord Winterton on the "brighter side of the picture" is the Indian coal trade, although all he said about it was that it was hoped by reduction of railway rates to stimulate exports. Alas! the coal trade of India is very sick. The latest reports from India about conditions and prospects are most pessimistic. A recent article in the chief commercial newspaper of Calcutta on the coal trade bore the following heading: "The Coal Trade: A Vanished Mart." It requires a very sanguine mind to add the coal trade to the credit side of Indian conditions at the present time. The sickness of the trade is partly due to high railway freights and want of up-to-date methods generally.

In dealing with the satisfactory financial position of Government, Lord Winterton was on surer ground. The favourable monsoons have been the main factor, but their effect has been well supplemented by capable financial methods and economy. The recent Four per cent. loan is mentioned by Lord Winterton as a convincing illustration of the generally satisfactory position of Government credit. We have no wish to be hypercritical, but there are two points worth mentioning. One is that the turning of investors to gilt-edged securities bearing a low rate of interest is a common phenomenon when industrial investments are shaky, and the second is that the issue of this latest loan was attended by some very unfortunate incidents. The methods adopted for the issue favoured "stagging," an orgy of speculation ensued and the price of the stock jumped about, being at one time Rs.3 over the issue price, then falling to Rs. 1—8 below it and then returning to about the issue price (Rs.88). A number of speculators in the loan burned their fingers very badly.

The railway position was described by Lord Winterton as highly satisfactory and his statement that third-class passengers would be able to travel long distances on some lines at ¼d. a mile elicited cheers from the House. Many people interested in Indian railways are sceptical of the advantage to the State or to the public of Government control and management of railways. Experience of other concerns shows that where making a profit by business methods is a serious consideration, management is best left to private individuals and companies. This question will probably come up again in India.

Lord Winterton alluded to the Royal Commission on Agriculture and all well-wishers of India hope for great things of this, though they do not expect the farmers' millennium to arrive immediately. We sincerely hope that false hopes will not be raised and that the policy of disturbing any "pathetic placid contentment" there may be will not be pursued. That way lies danger in Indian agricultural matters.

The question of Indians in South Africa was lightly touched upon and we gladly accept the wholesome change in last year's unfortunate situation, which has resulted from the Paddison deputation. It will, however, require great tact and firm statesmanship to prevent this question from leading us into far more difficult areas than even South Africa.

We are exceedingly glad to hear that Lord Winterton has received a most favourable report on the calibre of the candidates for the Police Service, and that the position in regard to recruitment for the Indian Civil Service continues to improve in a satisfactory manner. It is impossible to overrate the importance of the suitability of the British candidates for both services. For some years the position has been undoubtedly so unsatisfactory that confidence in the future administration of India has been severely shaken. We hope that the improvement mentioned by Lord Winterton is really materialising, but we are not satisfied that there is evidence of this yet in India itself. Lord Winterton informed the House that there had been no important developments in Bolshevist activity in India during the past year. Considering the recent disclosures at the lecture in Calcutta and the general ideas on this subject held by residents in India, Lord Winterton's negation of any extension of Bolshevist activity comes as a surprise and we hope it is not inspired by the optimism which seems to us to have characterised some others parts of his statement.

The general effect of the debate will be, we think, to make Parliament and the general public feel more comfortable about the Indian situation and prospects, while closer students of Indian affairs will derive from it an impression that the India Office at present is in a cheerful and hopeful mood, resolved to see the best side of things but also ready to deal energetically with anything that may threaten to spoil the pleasing picture.

ISLAM AND ANIMAL SACRIFICE.

As promised in our previous issue, we proceed to attempt an explanation of the place in Islam of the sacrifice of kine, not in any spirit of claiming to possess expert knowledge, or of presuming to decide between rival theories, but simply as having lived in India for many years and as having made an effort to ascertain what the recognised authorities on Islamic doctrines and customs have to say on the subject.

The religion of the Moslem is divided into Faith and Practice. Faith consists in the acceptance of six articles of belief:—1. The Unity of God. 2. The Angels. 3. The Inspired Books. 4. The Inspired Prophets. 5. The Day of Judgment. 6. The Decrees of God. Practical religion consists in the observance of 1. The recital of the Creed—"There is no deity but God, and Mohammad is the Prophet of God." 2. The five stated periods of prayer. 3. The thirty days fast in the month Ramadan. 4. The payment of legal alms. 5. The Pilgrimage to Mecca. A belief in these six articles of faith, and the observance of these five practical duties, constitute Islam. He who thus believes and acts is a "believer": but he who rejects any article of faith or practice is an "infidel."

It will be noticed that sacrifice finds no place in the obligatory practices. It is, however, mentioned in the Koran where, it is stated that the flesh of the sacrificed animals will never reach to God, nor yet their blood, but the piety of the sacrificers will reach Him. In other essential scriptures of Islam a good deal is said about the sacrifice of animals, though there are some differences in the injunctions of the scriptures themselves, as well as in the opinions of the authoritative commentators. Some of these have said that it is the duty of every Moslem to offer a sacrifice on the day called by various names, the most classic of which is Id-ul-Azha or "Festival of Sacrifice"; while others say that such a sacrifice is very laudable, though not indispensable. On the whole it can be said that the great majority of Indian Moslems consider it part of their religious duty to sacrifice animals at the time of that particular Festival. This fact has been always recognised by the British authorities. Casual visitors to India are informed of it. Thus Murray's Handbook for India begins its brief account of "Mohammedan Festivals" with the following words: Bakar-Id, Id-ul-Azha, or uz-Zoha, or Id-i-Kurban (sacrifice) is held on the tenth day of Zil-Hijja, in memory of Abraham's offering of Ishmael, which is the version of the Koran. Camels, cows, sheep, goats, kids or lambs, are sacrificed." The following is a quotation from a book "Observations on the Mussalmans of India by an English lady married to an Indian Moslem (Mrs. Meer Hassan Ali) published in 1832. "Buckrah-Eade is a festival about as interesting to the natives, as Christmas Day is to the good people of England: and the day is celebrated amongst all classes and denominations of Mussulmans with remarkable zeal and energy. The particular event which gives rise to Buckrah-Eade is the well-known circumstance of Abraham offering his son to God. The Mussulmans insist, however that the son so offered was Ishmael, and not Isaac, as our Scriptures declare. The Mussulmans

Digitized by Google

I should remark, as well as the Jews, trace their origin to Abraham, the former through Ishmael and the latter through Isaac. The Mussulmans, the children of Abraham, annually testify their reverence for their progenitor and respect for his faith towards God, in the way most congenial to their particular ideas of honouring the memory of their forefathers.

On this day all classes of people professsing "the faith" sacrifice animals according to their circumstances: some offer up camels, others sheep or goats, lambs or kids. It is a day of religious veneration and therefore by the pious prayers are added to sacrifice; it is also a day of joyful remembrances, consequently one of festivity, amongst all ranks of the Mussulman population." (Vol. 1. Letter XI. p. 260 -262.)

The two quotations above have been brought in to testify to the general recognition of the fact that the sacrifice of animals is an important part of the ceremony observed by Moslems on the occasion of their greatest day of the year. By a curious coincidence that day this year fell on the 12th July, the very day on which Lord Olivier wrote his second letter to the *Times*, in which he failed to retract his previous statement that the killing of kine was to Moslems "at best a mere purveying of butcher's meat." About that time the cables from India were full of anxiety as to the day of the Great Festival passing off without disturbance, rioting and bloodshed; and it is amazing that an ex-Secretary of State, engaged at that moment in a public controversy as to the practice of kine-killing by Moslems, should have made no attempt to understand the occasion for so much anxiety.

The sacrifice of animals on the day of the Great Festival in India is a reflection of what takes place on the same day at Mecca. It has been mentioned above that the Pilgrimage to Mecca is one of the five indispensable practices of Islam. It is founded upon express injunctions in the Koran, as the result of which it is considered incumbent upon every Moslem, once in his life time, if he be an adult, free, sane, well in health, and has sufficient money for the expenses of the journey and for the support of his family during his absence. The ceremonies of the pilgrimage last ten days, the last of which is the "Day of Sacrifice," which is the day "known all through the Moslem world and celebrated as the Id-ul-Azha" (cf. Hughes' Dictionary of Islam). The concluding ceremony of the day, and of the whole pilgrimage, is the sacrificial slaughter of a sheep, or a goat, or a cow or a camel, according to the means of the pilgrim Mohammed himself initiated and instituted this sacrifice by sacrificing two rams. An account of the observance of this day at Mecca in 1909 has been given by the late A. T. B. Wavell in his book "A modern Pilgrim in Mecca." Wavell performed the pilgrimage disguised as a pilgrim (as a few Europeans had done before him) and gave a very detailed account of what he did and saw. He says: "Every pilgrim must this day sacrifice an animal of some sort, and a sheep or goat is usually chosen. The meat may be eaten, or preferably given to the poor. When this rule was made by the Prophet he probably did not conceive the enormous dimensions the pilgrimage would eventually attain, for nowadays this immense number of animals is quite uselessly destroyed . . . . at least half a million are sacrificed annually on this day."

There has been a good deal of speculation as to the exact meaning of the sacrifice as instituted by the Founder of Islam. The generally accepted idea is that Mohammed intended it as a continuation and development of the sacrifice of the Jews and in particular as a commemoration of Abraham's sacrifice of the ram, which took the place of the victim first offered who according to Moslem tradition was Ishmael and not Isaac. The sacrifice is a commemoration, a thanksgiving and a dedication, but not a symbol of expiation.

Apart from the sacrifices enjoined for the Great Festival, Islam includes the practice of sacrificing goats as a ceremonial consequent on the birth of a child. It is incumbent upon the Moslem father to sacrifice one goat for a girl and two for a boy at the ceremony held at a stated interval after the birth. The idea of these sacrifices is believer to be that they symbolise a dedication and a thankoffering.

The non-sacrificial killing of animals for food is part of the ordinary life of Moslems, just as it is with Christians, but in the case of the former there is a religious element absent from the practice of Christians. The Koran says: "Oh ye who believe! eat of the good things with which we have supplied you, and give God thanks if ye are His worshippers. Only that which dieth of itself, and blood, and swine's flesh and that over which any other name than that of God hath been invoked, hath God forbidden you." Other injunctions concerning food are found in the Traditions and Sayings of Mohammed. As the result of the scriptural authorities and the practical interpretation of these, the custom is that no animal or living creature (except fish and locusts) is lawful food unless it be slaughtered by drawing the knife across the throat and cutting the wind-pipe, the carotid arteries and the gullet, while at the same time the Arabic words for "In the name of God, God is great" are pronounced. Thus the killing of animals for food is accompanied by the formal praising of God, which tends to make Moslems, especially in times of religious excitement, very sensitive to any interference with their right to provide themselves with the food prescribed for them by their Scriptures. All this is very well known in India and, in normal times of comparative communal peace, the supply and killing of animals, whether for food or sacrifice, are arranged peacefully and satisfactorily. When communal bitterness or religious excitement prevails, the question of animal food and animal sacrifice can very easily become a very exciting one. It may be noted however that the recent disturbances have not arisen out of the question of slaughter of animals. The new Bengal Regulations were necessitated by trouble arising out of the question of music played by Hindu religious processions near mosques, as is clear from the Government Resolution under cover of which they were promulgated. The question of the offence to Hindus caused by kine-killing by Moslems was unnecessarily dragged in by Lord Olivier in the course of his arguments to show how much better Indian States dealt with the Hindu-Moslem question than the authorities in British India. It is to be hoped that nothing more will be said or done here in England to add to the fire of religious feeling in India. The British public can rest assured that the authorities in India have all the knowledge, experience and impartiality which are required for the solution of the very difficult problem of abating the bitterness and religious animosities to which our great political experiment has to some extent contributed.

CURRENT TOPICS.

Indian Currency Report Forecasts.

The *Financial News*, which may be considered to speak with special authority, is inclined to accept as well-informed the forecast of the Simla Correspondent of the *Statesman* to the effect that the Commission will be found to have recommended that the rupee should be stabilised forthwith at the rate of 1s. 6d. gold. This is opposed to the forecast we dared to make a few weeks ago when we expected that the Commission Report would be found to recommend that the rupee should be allowed to fluctuate within fairly narrow limits, say from 1s. 5 1/32d. to 1s. 5 29-32d.

Indian Industries.

A recent issue of the *Financial Times* contains an article from Calcutta in the course of which the writer declares that one result of the War has been to stimulate enormously the industrial development of countries whose industries were backward in 1914: and that India is such a country. In support of this statement he gives some interesting statistics. Before the War India consumed annually 3600 million yards of cotton goods, 2600 of which were imported and 1000 manufactured by herself. To-day the consumption is the same, but the proportions are very

Digitized by Google

different—2000 million yards manufactured and 1600 million imported. Before the War, Calcutta exported about 60 per cent. of her jute in the raw state, and 40 per cent. in the shape of cloth or bags. To-day the proportions are exactly reversed.

Important as they are, these figures would have been still more so if they had included a comparison between the exports of raw cotton before the War and at the present time. The Statistical Abstract for British India says that, in the "cotton year" of 1924-25, nearly 450,000 tons of home-grown cotton were consumed in India, while the export of raw cotton, for the last six months of that year, amounted to approximately 400,000 tons. It would seem, therefore, that the total exports are still much larger than the total home consumption; though doubtless much less so than they were in 1914.

"Telegraphese."

In his hand-book on the India Office, a review of which appears elsewhere in this issue, Sir Malcolm Seton indulged in an *obiter dictum* on the use of the cable, which struck a responsive chord in the breast of the present scribe. He said that the Resident Clerks in the India Office, whose duty it is to dispatch and receive official cablegrams at night and during week-ends, "probably adopt a peculiar dichotomy of Secretaries of State and Viceroys, into those who recognise a difference between telegrams and Parliamentary orations as a method of expression, and those who do not." This reminded one of an experience of one's own at Army Headquarters in India during the currency of a Frontier expedition, when it was one's duty to decode, during the small hours of many successive nights, cipher telegrams dispatched by the General Commanding at the front when the day's work was over—they usually arrived between 1 and 3 a.m. The dispatches of this particular member of the "rude unlettered soldiery" invariably contained gems of composition of which the following example, as it painfully emerged group by group from the ciphered original, remains in the memory: "We — march — ed — down—a—smil—ing—valley—fringe—d by—field—s of—wav—ing—corn."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 8.

Emperor Gandhi.

"If Mahatma Gandhi were Emperor of India . . . ." said Mr. J. H. Spender recently: and the Mahatma in his weekly organ took up the theme and told how he would send his disciples to preach love to the frontier tribes. *Forward* now translates Gandhi's gentle breathings into the language of reality, and it is an interesting programme. On the night of his accession he will walk the streets, collect the thousands who sleep in the open and give them Government House to live in at four annas a month rent, burning the furniture and sacking the Band. "The civil servants who have fattened into servile adherents of despotism" are sent to a week's fasting and penance and a course of good manners. The army is disbanded, and only a few police kept to hold off robbers. He would summon the spleen-kicking brotherhood of the mill areas, the colliery districts and the planting districts" and set them to the spinning wheel. He would cut the Penal Code down to one-tenth, "scrape off the entire civil and property laws," and give every man the necessities of life by legislation. Here we may pause to remember that land-holding is universal in India, and that the whole social system rests upon the family property; so the Mahatma is to alter the very basis of the social system in this respect, presumably at the same time as he abolishes caste by order.

"Utter Annihilation" for the British Government.

After further futilities, with more than a dash of racial poison, we get a final pæan to "that auspicious period when true friends of human progress would celebrate the dissolution of a political fraud, of a brute engine, which has been the perennial cause of the vices of the Indian people, and which has mischiefs of various sorts incorporated with its substance and not otherwise to be recovered than by its utter annihilation." Not too clear perhaps except in its intentions, which are entirely mischievous. The editor may have changed, Mr. J. M. Sen-Gupta may have made peace with the directors, but *Forward* is the same poison-gas factory.

More Slander.

Forward also continues its campaign against the Police, and more than sneers at the grant of the Police Medal to the Acting Commissioner for his part in the riots. Sir Hugh Stephenson, as Governor, distributed police awards at the week-end, and ventured to congratulate the force on its work in the riots; for this he is pilloried with the oppressors, and to complete the circle we have the old charge that Government organised and directed the riots for political purposes. "Add to this the 'admirable manner' in which Mr. Armstrong handled the recent Calcutta riots, and we can understand how the Police Commissioner justified the confidence placed in him by the Government. With the 'utmost tact and skill' the riot was allowed to develop; 'patience and self-restraint' were shown till a few hundred heads were broken, and there were no 'greater loss of life and property' than the exigencies of the political situation demanded. Surely Mr. Armstrong deserves a statue on the Maidan!" Why should the broadcasting of this lie be allowed to continue? Government can stop it by more than one method, and the mischief it does is ever-growing.

The Bengal Council.

The Bengal Council duly assembled on Tuesday last, but the Swarajists as a party were not present; six Moslem members of the party, however, duly appeared and took part in the proceedings—a significant sign of the times. The Session was devoted almost entirely to discussions as to whether permission should be given to introduce various Bills. A proposal to refer the Rent Act, which expires next year, for amendment was lost, as also was a proposed Domestic Servants' Registration Bill; another Bill to amend the Rent Act, a Bill to amend the constitution of the Calcutta Improvement Trust and a third Bill amending the Municipal Act, all promoted by private Members, were refused. Nothing was done that could not have been equally well disposed of by an under-secretary in half an hour, and the session was a wasted afternoon for anyone who had not time to kill or travelling expenses to draw.

Politics Generally.

Things are still at sixes and sevens amongst the P.M.I.—the politically-minded Indians—in spite of the fact that the two sections of the Swaraj Party have agreed to sink their differences for the time being at least. A touching article in *Forward* sets out their resolve to forget all the nasty things they have said about each other, and never to mention the "Hindu-Moslem Pact."

Mr. B. C. Pal devotes his weekly article to the "Curse of Communalism," and he then calls on Government to govern—the Mussalmans!

Another Hindu demonstration has overflowed the Town Hall to protest against Government orders, now being issued monthly, prohibiting music outside mosques at stated hours of prayer. This has however ceased to be a matter of placating anybody; it is only a necessary precaution against inevitable trouble if things were left to take their own course.

The Marwari Community have addressed a memorial to the Viceroy asking that they may be allowed to take further steps for protecting their lives and property, particularly in regard to the grant of more arms licences for themselves and their retainers. If their request is granted, the next riots in Calcutta will see a "certain liveliness," for the Marwari is more than slightly nervous, and any gun he holds goes off very suddenly. When the

Digitized by Google

communities, their volunteers and retainers are all armed, and the Indian Press is allowed to continue preaching that the riots are organised by the police, we shall have a very promising situation.

Men and Things.

We see that a statement has been issued at Home denying that Lord Lytton intends to resign; no one here thought that he would seriously consider doing so, even though his health has been none too good recently.

The Honours List was duly issued and, from the point of view of the onlooker at Home, it may be described as a routine one. Mr. Justice Buckland becomes a Knight in his turn; two officials are knighted and Mr. W. S. J. Willson, who has put in so much public work in the Legislative Assembly since he retired, now reaps his reward and becomes Sir Walter with our congratulations.

The Police Report for the last year has been issued, and the decline in serious crime during the year (this was before the riots) is noted with satisfaction by Government. More vacancies are reported in the ranks than have existed for the last four years; another less satisfactory feature is the increase in the number of street accidents, these causing 125 deaths during the year, while 1,575 people were injured.

A public subscription has been started by leading merchants, both Indian and European, to replenish the Police Provident Fund as a mark of appreciation of their work during the riots. It will be interesting to see who subscribes.

The Assam Legislative Council has voted ten lakhs for the improvement of the roads of the tea districts; the planters, who have been agitating for action for so long, may congratulate themselves on this good beginning.

The tin-plate industry has applied to the Tariff Board for a further instalment of protection; they are already protected, and they further obtain their steel from Tata's for less than cost. The manufacturers of galvanised iron have obtained the Board's recommendation for the abolition of duty on spelter in their favour.

Mr. T. Edelston lectured before the Rotary Club this week on the co-ordination of charities. He did not appear very hopeful in regard to the possibility of inducing individual societies to give up their independence; meantime new ones are springing up daily, and we must derive what comfort we can from the testimonial given by a padre at the Club Meeting that "Calcutta was the most generous city in the Empire."

The Trivial Round.

The rains have at last returned and, although all June records have been broken both for temperature and prickly heat, we are all grateful to be reasonably cool at last.

The second day of the Tollygunge Meeting took place on Saturday, and produced a number of surprises. The standard of the horses running at these meetings is steadily rising, and there were many last Saturday who will be seen at the big meetings later on.

The Soccer League has ended, and the soldiers are at the top; no one grudges the 1st North Staffords their victory, as they are a popular and smart regiment and they play a particularly clean game. After a tie with Calcutta on Points, a weak Club team put up a great fight last night, but were beaten 3—1. Indians beat Europeans 1 0 in a Charity Match last Saturday. The Cup starts next Saturday with really brilliant entries. Incidentally there was a repetition last night of the jeering on the Indian side of the ground at an injured Calcutta player; this kind of thing will not sweeten tempers.

The golf courses are crowded at the week-ends, and have seldom been in such good condition as they are at present. The Merchants' Cup is about to begin, and there is a record entry of firms; this would be a more sporting event if it were a handicap one; as it is, numbers tell heavily.

There was a brilliant Charity Show at the Empire last mail night, in which all the best amateurs joined with the Military to make a most vivacious evening. The American Vaudeville Company still defies the weather.

The Saturday Club, taking a line from the restaurants, opened on Friday last a series of dinner dances: and, to judge from the initial success, they should be popular. For the first time non-member friends were admitted; but nothing happened, in spite of the rumours as to the intentions of some of the lads!

This morning's cables from your end give the 'Varsity cricket result; the scores look like a sporting finish. The breaking of records at the A.A.A. meeting must have meant first-class conditions that afternoon. Fast times are also noted at Henley, particularly in the Grand and the Stewards; but to mention Henley, in the weather we have been having, is worthy of *Forward!*

Markets.

The publication of the preliminary jute forecast for this year, showing a greater area under cultivation than in 1925, has had its effect upon the market. Prices are down, and sellers are keen to do business; but buyers' ideas are below current rates, and little business has been done in consequence. Hessians have declined in sympathy: and, but for a limited number of sales for the near position, scarcely any transactions are reported. The piece-goods market continues at an entire standstill; the weakening of cotton has further affected the market and, with the paucity of orders generally, prices are expected to recede further. Both here and in London the tea market has shown an improvement, the prices at the sale here being satisfactory and in most cases slightly above those at the sale in the previous week. The figures for June are not yet to hand, but they are estimated at something in the neighbourhood of seven million pounds in excess of those for the same month last year; on the other hand, prospects for the current month are not good, and it is anticipated that the outturn will be less than for the corresponding month last year.

In the Stock Exchange there is a rather better feeling at the close. The settlement in Bombay passed off satisfactorily, in spite of fears that some of the speculators would not be able to fulfil their commitments: and, as a result, the market for Government Securities is likely to broaden; already some of the loans are quoted above recent prices, and they have every prospect of going better still. Investment Stocks continue in demand, with debentures particularly to the fore. Jutes opened steady, but a slight reaction set in in some cases on account of profit taking; the shares, however, were easily taken up, and the market may now be described as strong. Teas remain irregular; but, with the improvement in the commodity, a better feeling is likely to ensue. Rubber shares continue to be in demand at increasing prices.

Exchange is quiet with ready T.T. quoted down to 1s. 5 27-32d. Money remains very easy, 1½ per cent. only being obtainable for call and short notice.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 9.

The arrival of Mr. Cobham who is due to land at Karachi on his flight to Australia is perhaps another milestone for Bombay. For we cannot be wholly blind to the fact that our claim to be the Gateway of India, Urbs prima in Indis, and the second city of the Empire, is being slowly sapped by geographical changes.

In the days of sails, when all traffic came to India round the Cape, the southern ports were at least on an equality with Bombay: and Goa was selected by the Portuguese mainly because it was, for a good deal of the year, the natural landfall from Africa: and its importance was so great that the two chief Portuguese ports on the east coast of Africa were named Algoa and Delagoa simply because they were the natural calling places on the way to and from India.

Digitized by Google

With the later improvement in the rig of sailing ships there was no particular difficulty in coming further north to Bombay, which was not only developed to its utmost by its owners the British East India Company, but was also the natural outlet for the cottons of Gujerat and the Berars: and the opening of the Suez Canal established the supremacy of Bombay as the nearest port to Aden, apparently for all time. Railways were built to tap the cotton districts and, though it was still more convenient to ship the produce of Bengal through Calcutta, Bombay had every other geographical advantage. The importance of a port as a distributing centre depends solely on the extent of hinterland that it serves. I have often been asked by the admiring inhabitants of other ports, such as Cochin, Rangoon and Bangkok, to give any reason why they should not rise to at least the importance of Bombay, and it has always seemed to me that this was a sufficient answer. The village shop cannot possibly compete with Harrod's or Selfridges, simply because the village has not enough customers.

The population of Northern and Central India is quite big enough to support the growing trade of at least four ports, but Bombay may well be a little nervous that our share of the business is not a growing one. The fact that Karachi is the port of call for aeroplanes, with which I began this letter, may or may not be important: anyone may take what view he likes of the date at which air travel will really interfere with the P. and O. business. But there can be no doubt that Karachi is developing itself, both as a port and in its communications, and is taking more and more of the business of the North-West.

This cannot be helped; but what is more serious is the gradual loss of the business of Bombay to Calcutta and Madras, because that is our own fault. Business is cut so fine that the determining factor of the port of shipment depends on the combined cost of railway freight, port dues, and steamer freight, calculated to the fraction of a penny: and, if the port dues at one place rise by a shilling a ton in relation to another, it means that so much more railway freight can be paid to the cheaper port. Bombay is already an exceedingly expensive port and, as more and more freight is scared away to Calcutta and Madras, it becomes more and more expensive: and the diversion of freight continues until, logically, there will be none left at all.

It is up to us in Bombay to press for the utmost possible economy in the city and the docks if we are to compete with our rivals.

But there is a still more serious question. How far is the trade of India, which means the productive capacity of India, capable of further expansion? A railway journey through Central India, say from Bhusawal to Jubbulpore or Nagpur, is at any time of year an impressive sight, with the crops stretching away on each side of the line to the distant hills: and there is certainly no room for development there. But have the crops followed the railway, or has the railway followed the crops? The district officer presumably knows pretty well what lies beyond those hills, where the Bombay merchant cannot follow: and, if there really are valleys and tracts of land in India which only need opening up by railways to make them blossom like a rose, is it not time for a really forward policy in the matter of feeder lines?

Fears as to the delay of the monsoon have been dissipated this last week by really good and widespread rains over almost the whole of the country. The first week of July is really about as good a time for a heavy rainfall as can be desired: and, though much depends on the continuance of heavy showers throughout August and September, we have now at any rate got over our early disappointment over the failure of June. Moreover, we may now hope that Bombay will be a more tolerable place to live in than it has been for the past six weeks. I have never complained of the climate of Bombay except for two weeks in the year: one in mid-April, just as the wind changes to the S.W., and one immediately before the rains break. But when those two weeks run into each other, and drag on for nearly two months, we have a pretty bad time of it.

THE INDIAN MAIL.

The Coming Elections.

Up to date it seems not to have been definitely settled when the elections for the Legislative Assembly will take place. The new Chamber will meet in Delhi by the third week in January and on former occasion the results of the polling have been out by the end of November. It is expected this time that the present Assembly will be dissolved at the end of September and the elections will be held between the end of October and the middle of November.

Pandit Madan Mohan Malaviya on Responsive Co-operation.

The Pandit is not only a convinced orthodox Brahmin but he is also a fervent nationalist and one may be perfectly certain that any words he uses and any action he takes are intended to further the interests of his Hindu co-religionists and of what appears to him to be the national cause. At the present time he is a "Responsive Co-operator" in politics and has in a recent speech at the University Institute, Calcutta, explained what he thinks should be the policy and programme of the party known as standing for "Responsive Co-operation." He recommends all the political parties in India to sink their differences and form one large Congress party, with the common policy of utilising the Councils "for what they are worth, resorting to co-operation wherever it is necessary for the interest of the country, and to obstruction where the country's interest demanded it." This united party, he says, should go into the Councils and occupy every place of power, prestige and initiative and, if the Government refused to accede to their demands as they did in the past, and if it was necessary to prepare the country for a campaign of non-payment of taxes, the best course they could adopt was to work the Councils and the Assembly to the fullest extent. Apparently the Pandit has learned nothing from the experiences of the past few years. His programme really offers no scope whatever for unity between his followers and either British non-officials or Moslems. The former can never be willing to join with people who refuse to co-operate with Government except on the basis of a surrender by Government of Swaraj demands, outside and far beyond the the constitutional scheme. Moslems can no longer follow such leaders as the Pandit because they have learned that his proposed occupation of "every place of power, prestige and initiative" will not meet their own aspirations. The Pandit's intractability is poorly camouflaged under the party label of "Responsive Co-operation." One can hardly imagine a more fitting comment on this label than the old Latin tag *lucus a non lucendo*.

Hindu-Moslem Bitterness.

The Mail papers still show no real improvement in the feeling between the two communities, and it is generally recognised that nothing but extraordinary precaution on the part of the authorities has been keeping off serious trouble in many parts of India. The situation has been such that hardly any recognised leader dare suggest to his co-religionists to make the concessions required from both sides before the crisis can pass. Each side thinks that the other is in the wrong and the attempt of the executive authorities to give decisions as an impartial umpire is still lacking just that amount of forceful authority which alone can create and maintain acceptance of the decisions. Similar situations in the world's history have too often been ended by one side gaining ascendency over the other, but no such solution is possible in India. Recourse to war, arbitration or courts of law is equally out of the question. Everyone recognises that mutual

Digitized by Google

conciliation is necessary for peace, but that conciliation and the insistence on communal rights are incompatible while as the *Statesman* puts it "the plain truth is that there is little desire for conciliation or concord." What is needed is the creation of the desire for peace and that will take time. Meanwhile the responsibility on the executive authorities is tremendous and each day that goes by without mistakes of weakness or of excessive force is a tribute to the perplexed and anxious Government.

Trade Returns for May.

The returns of India's sea-borne trade for May show a further decline from those of April, though not by any means so heavy a one as that recorded in the latter month. The imports of private merchandise fell in value from 2005 to 1991 lakhs, and the exports from 2678 to 2448 lakhs. The net import of treasure was 486 lakhs and the visible balance of trade in India's favour was 42 lakhs—a very much smaller figure than for many months past.

Under the main heads in imports, manufactured articles remained practically steady, with a fall from 1564 to 1555 lakhs: imports of food, drink, and tobacco fell from 267 to 223 lakhs, while there was a small rise in the value of imports of raw materials, from 153 to 161 lakhs. The export figures show a marked fall in the value of raw materials and produce, from 1333 to 1127 lakhs, a fall in manufactured goods from 705 to 644 lakhs, and a rise in food drink and tobacco from 612 to 660 lakhs; 52,400 tons of raw cotton were exported during May, of which Japan and China took 32,400 tons between them.

The share of the United Kingdom in the trade of India shows a further fall in imports, from 53 to 50 per cent., but a rise in exports from 11 to 16. Japan, the United States and Germany each claim 8 per cent. in imports, and 14, 12 and 5 respectively in exports. Thus, while German trade with India has remained practically the same for the past few months, Japan's share of India's exports tends to fall: it was 19 in March and 16 in April. Both in imports and exports, the United States shows a small but steady rise: in the former, the percentages for March and April were 6 and 7, and in the latter 10 and 11.

Bombay Back Bay Reclamation Scheme.

The fact that the Government of India as well as the Government of Bombay have appointed committees in connexion with this unfortunate scheme has caused a little confusion. It appears, however, that the two committees will not overlap. The Bombay committee will consider the question of the feasibility of carrying out the reclamation scheme in whole or in part, while the Government of India Committee will conduct an inquiry with a view to ascertain the causes that have led to the miscarriage of the original programme and to fix the responsibility for the loss sustained so far in carrying out the scheme. This division of duties between the Central and Local Government is logical. Bombay remains responsible for the future of the scheme while Simla has to find out whether Bombay was remiss or not in the past.

Christian Missions in India.

The Secretary of the Baptist Missionary Society has recently given some facts regarding missionary work in India which are both surprising and interesting. According to him there are about 12,000 individual missionaries in India of all churches and nationalities, out of whom 55 per cent. are engaged in educational work and the remaining 45 per cent. in purely religious work. Half of the 12,000 belong to the Protestant Churches of England and America. For the whole of India 139 per 1,000 men and 21 per 1,000 women are literate, but for Indian Christians the corresponding proportions are 355 and 210 per 1,000 respectively.

There are 221 mission hospitals with 5,000 beds, besides 187 dispensaries, 8 tuberculosis sanatoria and 68 leper institutions. The amount expended on all these enterprises is said to be 4 million pounds yearly, a notable contribution made by the Christian Churches of the West to the welfare of India, where the Christian community includes nearly 5 millions of people, or about 1½ per cent. of the whole population.

INDIAN EXCHANGE.

London, July 26.

For the past week quotations in Calcutta and Bombay have been very steady for both spot and forward. Ready rates have been 1s. 5 29-32d. to 1s. 5 15-16d., with a moderate amount of business recorded, and forward rates have shown a decidedly firmer tendency. This may be ascribed to the progress of the monsoon which, although late, has now become general over India, and the outlook is consequently very much improved.

On the Calcutta side, the increased acreage under jute may result in a record crop being harvested, and in Western areas it is hoped that the copious rainfall will continue, in order that produce and the cotton crop may be assured.

Exports naturally are quiet at present, as is usual during the early part of the monsoon; but rates have been quite steady for three months' credits at 1s. 6 7-32d., with opportunities now and again of placing bills at 1-32nd lower, for delivery within a month. In the forward market T.T. is quoted 1s. 5 15-16d. for August; 1s. 5 31-32d. for September; 1s. 6d. to 1s. 6 1-32d. for October, and 1-32nd higher monthly to the end of the year. Fixtures have been reported at 1s. 6⅛d. for January-February, and the foregoing rates are quoted firm with 1-32nd higher available for some deliveries. In the London market, business for some time has been restricted. We have heard of inter-bank transactions at 1s. 5 15-16d., but there are few sellers of T.T. on India under 1s. 5 31-32d. for immediate delivery.

The outlook is steady for near and firm for forward.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

Commercial Treaty with Greece.

The new Treaty of Commerce and Navigation with Greece, which replaces the Treaty of 1886, the Commercial Agreement of 1890 and the Declarations regarding commercial matters of 1904 and 1905, provides that the customs duty on currants imported into the United Kingdom shall not exceed 2s. per cwt. The Greek Government undertakes that a quantity of currants shall be set aside for export each year on the basis of the average of the three preceding year's export plus a margin of 5 per cent. for the probable increase in consumption. The Treaty further brings into force a schedule of conventional rates on goods imported into Greece from the United Kingdom, and it is provided that the additional taxation on these goods shall not exceed 75 per cent. of the corresponding customs duty. It is agreed that both countries shall do all in their power to avoid prohibitions and restrictions on imports and exports from one country to the other. Finally, the treatment of the coasting trade undergoes a chance. National treatment was mutually guaranteed under the previous treaty, but now provision is made for most favoured nation treatment on a reciprocating basis.

Trade with Roumania.

The economic position in Roumania was naturally dealt with in detail by General Sir Herbert Lawrence at the meeting of the Bank of Roumania. As I have frequently had occasion to point out, the failure of Roumania to progress to the extent that her great natural resources would suggest has been one of the anomalies of the post-War years. The lack of transport has of course been a very potent cause in hindering the country's recovery, though it has been by no means the only factor. Sir Herbert Lawrence pointed out that the limited export of grain last autumn had a pronounced effect on business. The decline in the export of grain is attributed to the fall in world prices, heavy export duties, and lack of transport. At the present time it is estimated that 1,500,000 tons of cereals are awaiting exportation. The export duties, reduced a year ago, were further reduced a few months ago, and as the authorities are making special efforts with regard to transport it may reasonably be assumed that Roumania should be in a position to profit this autumn from her surplus cereals, the stocks of which promise to be considerably increased as a result of this year's harvest. As Sir Herbert Lawrence justly pointed out, oil is the brightest spot in Roumania's economic life. The exports of oil in 1925 amounted to 783,000 tons of the value of 5,698,000,000 lei, and it is estimated that this year's exports will be nearly double this quantity. The oil export trade, like every other branch of exports, has been affected by the transport question, but the construction of the new pipe line which has been authorised will materially alter the situation for the better.

Progress in Palestine.

The report of the Economic Board for Palestine, which will be found on another page, makes encouraging reading for it indicates plainly what determination can accomplish in a country which is not blessed with natural resources. The chief feature of the year was the great improvement in the Government revenues, the surplus as already recorded amounting to £E1,200,000. There was an expansion of £E97,000 in the export trade at £E1,297,559, and while that total makes a poor showing compared with the import figures, it shows at any rate that Palestine is progressing in the right direction. The country's staple industry, oranges, had a wonderful year, all previous records being surpassed. The exports totalled 2,141,727 boxes, an increase on the previous year's total of 552,396 boxes. The importance to the country of the continued influx of immigrants is shown by the fact that it is estimated that last year they introduced one and a half millions of new capital into Palestine. A passage of special interest in the report refers to the British Empire Exhibition, and is an answer to those who question whether the Eqhibition was worth while. At the end of the 1925 season the guarantors of the £3,000 fund for the Palestine Pavilion were repaid in full and a sum of £1,900 was returned to the Palestine Government. Altogether the cost to Palestine of representation at Wembley was £3,500, and the direct business done in the pavilion during the two years amounted to £47,000, so that the expenditure must be accounted small in proportion to the advantages gained. It was the best form of advertisement that a country like Palestine could hope to receive, and the fillip tha tthe orange trade has received from the introduction of the Jaffa to thousands previously unfamiliar to it is no doubt responsible for the increase in the acreage under orange groves.

The Bulgarian Loan.

The Financial Committee of the League of Nations, which has been holding a special session in London principally in connexion with the Bulgarian Refugee Loan, has recommended to the President of the Council of the League that he should authorise the Bulgarian Government to proceed with negotiations for an advance of £400,000 pending the issue of the loan, which, as I have already pointed out, is not expected before the autumn. This decision follows the satisfaction by Bulgaria of certain conditions laid down as essential for this advance. The conditions have already been dealt with in detail in these columns, and it is therefore unnecessary to advert to them again.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, July 27.

The Stock markets during the past week have been rather under the influence of the gyrations of the franc, which have naturally had a disturbing effect. This, coupled with the lull in speculation in industrials which followed the reduction in the interim dividend of Courtaulds and the sharp setback in the price of that company's shares, has been responsible for a general weakening tendency in share prices, apart from the gilt-edged market, which has remained steady. A further factor making for irregularity is the approach of the holiday season; for although in August 1924 and 1925 the Stock markets were quite active—in the former year owing to the London Agreement and the Dawes Settlement and in the latter to the rise in raw rubber and the boom in rubber shares—such conditions were quite abnormal, and there does not appear to be much likelihood this year of anything but the general slackness of markets which is normal in August. A re-opening of the coal mines under a reasonable settlement might, perhaps, produce a small outburst of optimism, but no sharp upward movement is either likely or justified, for present prices are in most cases as high as the present economic situation warrants.

The Investment Outlook.

The renewal in an acute form of the French political and financial crisis and the further collapse of the franc has had a marked effect upon investment views in the shape of a more sober outlook, which is governed by two outstanding questions: firstly, will this country be able to settle the coal problem on terms under which the mines can be reopened on a sound basis and recover from the loss produced by the stoppage? and secondly, can France pull herself together financially by adopting the recommendations of the Expert Committee and put the franc on a gold basis, thus ending the disorganisation to international trade and industry caused by recurrent and almost chronic currency dislocation?

So far as this country's immediate problems are concerned, the gross loss caused by the coal stoppage for three months is put at £150 millions, which means that for several years to come this country will have to work and save with redoubled vigour. Given an early settlement of the dispute, it is still hoped in industrial circles that an active recovery will set in, and from Mr. Churchill's recent speech in the city there seems no reason to anticipate that the situation is yet so bad as to necessitate the imposition of further taxation.

Dividend Difficulties.

Few matters so bewilder the investor as do dividends, with the result that they are the most frequent source of friction between client and broker. The reason is not far to seek, for there is the utmost diversity of procedure adopted by Governments, corporations, companies and all who have to make dividend payments. Before the War there was some confusion, but the great increase in the number of Government stocks has made confusion worse confounded. So far as Consols are concerned, however, the practice remains the same as before the War. That is to say, the price is marked ex-dividend on the date on which the Bank of England closes the transfer books, this being a month before the cheques are distributed. The enormous increase in the number of accounts which had to be opened in respect of loans raised by the Government during the War made it impossible for dividend warrants to be prepared and distributed within a month. The Bank of England accordingly closes its books for preparation of dividend warrants in the case of the 5 per cent. War Loan, and some others, for five weeks in advance of the actual payment of the cheques. The 5 per cent. War Loan holders receive their interest on June 1 and December 1, but the price of the stock goes ex-dividend on April 27 and October 27, or thereabouts, according to the date advertised by the Bank of England.

Shares ex-Dividend.

Thus even in this small group there are sev different methods adopted for making the prices ex-dividend. With regard to home railway stocks and other securities deliverable by deed or transfer, excepting mining, oil, and rubber shares, together with registered debentures, the prices go ex-dividend on the account day following the date of the closing of the books for the payment of the dividend. To this, however, there is a variation, for the rule may be applied to the account-day following the date on which the dividend may have been declared, provided the dividend be made payable to the holders then registered. In the mining, oil, and rubber sections the rule is that the price of shares goes ex-dividend on the account-day following the payment of the dividend. It is frequently asked why this convenient rule is not extended so as to cover all the stocks, but such an extension, while desirable enough, would be impossible in the case of stocks domiciled at banks which close their books for dividend preparation a fortnight, a month, or five weeks before the sending-out of the cheques. There is one other dividend rule which is easily remembered, and that is in connexion with securities to bearer. These are quoted ex-dividend on the day when the dividend is payable. If, however, the investor is in doubt regarding his dividends, he should consult his broker, who obtains from the Stock Exchange a fortnightly list of the prices which will be quoted ex-dividend on the account-day following the distribution of this list.

The Imperial Bank of India have removed from 5, Whittington Avenue to 22, Old Broad Street, London, E.C.2.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

Monthly Supplement of "The Near East and India" : No. 19.

THE YUGOSLAV DEBT TO AMERICA.

Statement by Dr. N. Peritch, Minister of Finance.

At the meeting of Parliament on June 18, 1926, Dr. Ninko Peritch, Minister of Finance, made the following declaration:—

The Bill which is now submitted to the House presents for approval the agreement reached at Washington on May 3 concerning the consolidation of Yugoslav debts to the United States of North America. On June 15, 1925, Yugoslavia owed the United States, according to mutual agreement, the sum of 62,857,112.39 dollars. When the agreement was signed 7,112.39 dollars were paid in cash, leaving the amount of debt a round 62,850,000 dollars. Of this total 51,886,390 dollars represent the capital, and the remainder the interest, which is reckoned up to December 15, 1922, at 4¼ per cent. per annum, and after that date at 3 per cent. During the negotiations with the United States it was our aim to reach such an agreement that our debt should be so consolidated as to permit its repayment without disturbing the economic life and development of the State. After a temporary break in the negotiations, when it seemed that the United States would refuse our last offer, the offer was accepted, and an agreement was concluded, of which this is the essence.

The debt is consolidated by adding to the capital of the debt the interest reckoned until June 15, 1925, and by fixing the period of redemption for the sum thus obtained (which was rounded at 62,850,000 dollars by two small payments in cash) at 62 years, the first instalment being made payable on June 15, 1926, and the debt being finally settled on June 15, 1987, when the last annuity becomes due.

The question of the rate of interest was settled in the following way:—For the first twelve years (i.e., until 1937) no interest is payable; during the following three years the rate is reckoned at one-eighth of 1 per cent.; for the following fourteen years the rate is one-half per cent.; for the next three years 1 per cent.; for the next three 2 per cent.; and after that, from June 15, 1961, it is 3½ per cent., at which rate it remains until the final repayment of the whole debt.

Parallel with the rate of interest, the instalments of repayments increase in mild progression, beginning with 200,000 dollars in 1926, and reaching the maximum sum of 2,406,900 dollars in the last year. The annuities also move from the starting sum of 200,000 to the final figure of 2,490,210 dollars. Thanks to the fact that the redemption of the debt begins at once a gradual reduction of the capital is achieved under favourable conditions during the period when no interest is payable and when the rate is very low, and this reduces the burden of the annuities to some extent in later years. The total, therefore, of all the annuities by which the whole debt will be paid off in 62 years amounts to 95,177,635 dollars, which means that on a capital of 62,850,000 dollars we shall have to pay interest in 62 years amounting to 32,327,635 dollars, or 32.198 per cent.

We have to issue to the United States for the whole sum of the debt 62 bonds dated according to the expiry of the periods of repayment and amounting to instalment plus interest. But, if it should be so demanded by the Minister of Finance of the United States of America, the bonds must be substituted, according to Clause 7 of the Agreement, by bonds of another kind which can be divided up conveniently for sale to the public. This, however, is not of any great importance, since it does not interfere in any way with the conditions and obligations arising out of the Agreement as regards date of issue, period of coming due, the rate of interest, freedom from taxation and other conditions affecting the bonds which are withdrawn and replaced by bonds of another type. A fact of more importance is that the Agreement gives us the right, in case of any difficulty, to postpone at our own request the payment of any instalment of capital coming due after 1937 for two years at the most from the date of its expiry, on condition that we give notice to the United States of our intention to postpone payment twenty days in advance, and with the limitation that we may not make use of the right to postpone the payment of any subsequent instalment while any previous instalment remains unpaid. In the case of deferred payments the rate of interest on the amount of capital outstanding will be 4½ per cent. per annum, payable half-yearly.

As regards the payment of both capital and interest, this may be effected, at our own choice, either in the present legal gold currency of the United States, or in any U.S.A. bonds issued after April 6, 1919, these being reckoned at their nominal value plus the interest which has accrued on them by the date of payment. State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes

State Tobacco Factory in Liubliana

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

method of payment may be of advantage to both sides, since it may provoke an increase in the demand for the bonds in question and thus favourably influence their exchange rate, while also it may bring about a certain saving in our expenditure.

From the foregoing statement it is evident that the settlement of our debt to the United States is fairly favourable. It is true that our first proposal which served as our starting point in the negotiations had to undergo some changes, but it is only natural in negotiations that both sides have to make some concessions. But there can be no doubt that in present circumstances we could not have obtained better conditions of payment, that the Agreement reached is quite acceptable, and finally, that it gives us the opportunity of repaying our debts to the United States without disturbance to the State finances and economic life.

Speech by Dr. M. Stoyadinovitch.

In the course of the debate on the Debt Agreement with the United States, Dr. Stoyadinovitch, the former Minister of Finance, who had been responsible for the negotiations, said:—You have before you to-day the Agreement definitely concluded and signed between Yugoslavia and the United States of America. I consider it my duty to say a few words in connexion with this Agreement, first since I was the chief of the delegation to the United States, and secondly in order to correct some erroneous opinions as to the nature of the Agreement. The voting and discussion in the Financial Committee are in themselves sufficient to show what a success this Agreement means, since even some of the members of the Opposition voted for it.

In 1923 the United States concluded their first agreement for the settlement of War debt with England. By this agreement, England is to repay her debt in 62 years, paying during the first ten years 3 per cent., and during the remaining fifty-two years 3½ per cent. annually. This agreement with England became the type for all subsequent agreements.

Some criticisms have been made of our Agreement, which is accused of being worse than that obtained by Belgium. This is quite wrong, for the conditions offered to Belgium were offered to us also, but we asked for better ones than those. It should not be forgotten that only one-fifth of our War debt was received before the Armistice, and that this constitutes the debt of the Kingdom of Serbia. This amounted to 11 million dollars. The remaining four-fifths, or 40 million dollars, were obtained after the Armistice, and this is the debt of the S.H.S. Kingdom. Since, therefore, the proportion of War to post-War debt is different in this State from that of Belgium the application of the Belgian system would have been much more unfavourable to us that the Agreement which has been actually concluded. We pay only 32 per cent. of our debt; the Belgians pay 46 per cent. This criticism, therefore, is quite unfounded, since our conditions are obviously better.

Then there is the Italian agreement. Italy pays 26 per cent., as compared with our 32 per cent. Taking the Agreement as a whole, therefore, the Italian is somewhat better. But such a comparison is very relative. What does a comparison for 62 years in advance mean? Who can foresee what may happen in that period? The question which I consider more important is how we stand during the first period of repayment. Italy pays no interest during the first five years only, while we pay no interest during the first twelve years. During the next nineteen years—as stated in the accompanying letter of the Minister of Finance—we stand better than the Italians. Judging, therefore, by the first period, our agreement is better than that of any other State, even Italy. If we reckon that Poland, Roumania and other States are paying 80 per cent. of their debts, and Belgium 46 per cent., then our 32 per cent. is really justly moderate and we ought to be satisfied.

If we add to this the fact that when the agreement was signed in 1919, we gave America the first right to our

Digitized by Google

reparations from Germany to an amount of 3,150,000 dollars payable within five years at 5 per cent. interest, it is obvious that with a period of repayment of 62 years, relatively small interest and annual repayment instalments beginning from 200,000 dollars for the first 5 years, we have obtained great facilities of payment. If these repayments become larger as years go on, they do so in view of our expected economic progress and of the conviction that German reparations to which we have the right, will be regularly paid.

From what I have said it is evident that my former optimism was quite justified. In spite of some predictions to the contrary at the plenary session on February 7, the American Commission gave the best possible answer to our offer, that is, it accepted our proposal as a whole, not changing a single figure. Dr. Georges Juritch, our Minister in London, remained in Washington to receive this answer, and it was in no small measure thanks to his services that the answer was so favourable.

I beg therefore, Gentlemen, that, having heard the statement of the Minister of Finance, you will accept this Agreement. By voting for this Agreement you will declare your gratitude to the American Government for the help given in the most critical days of our history—(applause and cries of "Long live America!")—and also for just treatment at the moment of settlement.

BELGRADE BANKS IN 1925.

The statistics issued by the Association of Belgrade Banks, on which this article is based, include only those financial institutions whose permanent seat is in the capital. There is thus no information regarding the four foreign banks with branches in Belgrade, viz., the Franco-Serb Bank, the British Trade Corporation, the Vienna Bank Union, and the Credit Bank of Prague. Neither do the branches of the Zagreb and other Yugoslav banks, of which there are ten in the Belgrade financial market, come into consideration. Probably by accident the Zemaljska Kreditna Bank, which removed its seat from Sombor to Belgrade a year ago, is omitted. Some banks are omitted rightly which exist under the name of banks and are in fact ordinary partnerships or trading companies.

The total number of purely Belgrade banks is 60. This was also the number according to the statistics for 1924 and 1922. While in 1923 the number was quoted at 64. According to the statistics for 1922 five banks have ceased to exist: Ujedinjena, Komisiona, Srpska Bank, Centralna Kreditna Bank and Beogradska Hypothekarna Bank. On account of fusion the Podunavska Trgovacka Company has lapsed. Two banks are not included in the present statistics, though they are at present in existence, but they are not shareholding banks (included nevertheless in 1922), viz., Beogradska Oktuzna Stedionica and Hypothekarna Bank Trgovackog Fonda. Mentioned as new in the statistics of 1923-24 and in last years's are: Agrarna Industrijska Banka, Savezna, Lombardna Kreditna Produktna, and some banks which are of older date but were not included in earlier statistics.

The total capital of Belgrade Banks amounts in millions of dinars to:

1922	...	393.6	1924	...	466.5
1923	...	394.7	1925	...	480.3

As will be seen stagnation set in only last year, otherwise the increase of capital was fairly active. In 1924 the Jadransko-Podunavska increase in capital was from 80 to 120 million, the Srpsko-Amerikanska from 10 to 25 million, Vracarsko Stedionica from 3 to 5 millions and the Zalozna Bank from 8 to 10 million.

While the statistics of capital illustrate the crisis which occurred in the financial market, this condition is not apparent in the figures for saving deposits. On the contrary, available capital is now coming back to the banks after the experiment of loans and other investments at high rates, since many investors had unfortunate experiences in placing their money privately outside banks. Hence during the past year a great increase in all banks in savings deposits. The total sum of deposits in million dinars was:

1922	...	339.8	1924	...	319.1
1923	...	315.1	1925	...	408.3

While the sum is practically identical for 1923 and 1924—for in six banks the increase was 11 millions, but in 1924 the deposits decreased in three banks by 16.6 million——during last year the increase is general in all the Belgrade banks. The deposits of the following banks are specially favourable:

	Million dinars	
	1924	1925
Zalozna Bank	12.3	23.3
Izvozna Bank	8.2	14.9
Vracarska Zadruga ...	7.2	9.8
Zemaljska Bank... ...	10.5	14.4
Beogr. Kredit. Zavod ...	8.0	11.6
Messarska Bank	5.1	8.6
Beogr. Trgovacka ...	11.6	14.9
Generalna Bank	4.5	7 2
Kolonijalna Bank ...	5.8	8.8
Vracarska Stedionica ...	8 7	13.6
Total	81 9	127.1

In relation to the total increase in all banks of 89.2 million dinars these ten alone show an increase of 45.2 million or more than half of the total. In the Zalozna Bank these deposits were doubled in the year and in many of the above-mentioned the increase was 5-6 million in the year.

It is interesting that banks where the deposits were stationary in 1924 and in 1923 considerably decreased, as in the cases of the Izvozna Bank, Vracarska Zadruga, Zemaljska Bank, show in the last year a greatly improved position in their balance sheets.

In relation to the private resources of the Belgrade banks (capital and reserve) which amount to 621 million dinars, the deposits do not amount to more than two-thirds. This figure is small, if one considers that many banks hold savings deposits to the extent of two or three times their own resources. For instance the Kolonijalna Bank with two millions capital and reserve and 8.8 million deposits (four times).

The cause of this is mainly in the fact that three of the big banks of Belgrade have a sum in deposits less than their capital in shares. Thus the Jadransko-Podunavska Bank has in deposits 62.6 million (to its capital 120 million), the Bosanska Bank 7.2 to 30, and the Izvozna 15 to 30. The proportion is much more satisfactory in the banks of Zagreb, which are in fact real deposit banks, not to mention the Prva Hrvatska Stedionica where the deposits are 8 times as great as the private resources of the bank and which is in fact a real savings bank.

For a more accurate estimate of the condition of savings deposits it must not be overlooked that the State Hypothekarna Bank (Uprava Fondova) has deposits to the extent of more than one hundred million dinars, and the Post Office Savings Department had on December 31, 1925, deposits to the amount of 348.1 million, of which sum 64.4 million belonged to Belgrade.

It must also be mentioned that among the debit current accounts there are also certain sums which are of the nature of savings deposits. Belgrade banks do not differentiate in the balance-sheets between short term deposits and such as have taken merely the form of current accounts and are not in any way different from savings deposits. Thus as debit account in the narrower sense would remain only the debt of the bank in question to other banks.

So far as transactions are concerned, current accounts provide the highest level reached so far. The total sum is more than one milliard. The large banks, especially those which take an important part in Exchange transactions, have had to retain this type of credit accoun' which is very convenient for banking transactions. Discount business also shows development. Promissory notes held amounted to 588.8 million dinars (in 1924 it was

Digitized by Google

437.6 million). With the development of effective business (especially with War indemnity bonds) "lombarding" business increased a little. Loans on deposits amounted to 51.7 million against 25.2 million in 1924.

From profit and loss accounts it is apparent that the last banking year was less satisfactory than previous years. For 1925 one-third of the Belgrade banks paid no dividend: 21, as against 16 in 1924. Some adhered to their former practice in carrying forward their profit, but others joined the number which have a good record as dividend payers and play an important part in our money market. Nine of the pre-War Belgrade banks pay the same dividend as in former years. The highest dividend is paid by the Kolonijalna Bank (60 per cent.). The other banks, according to the current value of their shares, pay a small dividend of 4 or 5 per cent., but in relation to the nominal rate of the shares the dividend amounts to 15 to 20 per cent. For instance, the Beogradska Zadruga pays 15 per cent. dividend in relation to the nominal rate of its shares, but that is less than 4 per cent. income taking into consideration the rate of the shares at the moment of the payment of the dividends.

YUGOSLAV EXPORTS IN MAY.

Customs returns give the following totals for exports during the current year:—

	Tons	Gold Dinars
May 1925	448.836	75,763,366
May 1926 ...	564 783	67,939,266
1st 5 months 1925	1,766,640	320,540 594
1st 5 months 1926 ...	2.214.304	303,561,852

The decrease in value is explained by the fall which started last autumn in the prices of agricultural products on the world markets, and secondly by the increase in the value of dinars this year. The dinar has increased in value in the course of the first five months of the year by 8.57 per cent. when compared with the value of the same period of 1925.

The chief articles of export during May were:—

Article	Units	Amount	Millions of gold dinars
Maize	Tons	230,371	29.6
Wood: —for building ...	,,	117,642	7.9
—for fuel ...	,,	15,191	0.3
Eggs	,,	3.681	5.9
Corn: —Wheat	,,	16.820	4.7
—other	,,	3,615	0.5
Live cattle	Heads	7,596	2.1
Meat: —fresh	Tons	1.084	1.5
—meat products ...	,,	57	0 1
Crude Copper	,,	510	1.2
Wheat flour	,,	2.661	1.2
Live pigs	Head	11 101	1.2
Live horses	,,	232	1.1
Sheet lead	Tons	831	0.8
Cement	,,	23,174	0 7
Hemp	,,	749	0.5
Prunes	,,	947	0 5
Oak sleepers		83,877	0.5
Other ,, ...	,,	144,893	0.5
Tanning extracts	,	851	0 4
Lard	,,	200	0.3
Small cattle	,,	19,635	0.3
Lamb and kid skins ...	,,	82	0.2
All other goods	,,	124,125	5.9
Total Tons		564,783	67.9

The destinations of the chief articles of export were as follows, in millions of dinars:—

Maize.—Down Danube *via* Braila 19.3; Italy 4.0; Austria 2.7.

Wood (for building).—Italy 5.3; Hungary 0.6; France 0.6; *(fuel)*: Italy 0.2; Hungary 0.04.

Eggs.—Switzerland 2.8; Germany 1.4; Austria 1.1.

Corn (wheat).—Italy 1.5; down Danube *via* Braila 1.3; Czecho-Slovakia 0.7; *(other corn)*: Greece 0.2; Austria 0.1; down Danube *via* Braila 0.1.

Live Cattle.—Italy 1.4; Austria 0.3; Italy 0.2.

Meat (fresh).—Austria 0.8; Italy 0.3; Czecho-Slovakia 0.2; *(meat products)*: Austria 0.08; Italy 0.04; Czecho-Slovakia 0.01.

Crude Copper.—Germany 1.2; Italy 0.02.

Wheat flour.—Czecho-Slovakia 0.5; Austria 0.5; Greece 0.08.

Live pigs.—Austria 0.8; Czecho-Slovakia 0.3.

Live horses.—Italy 0.8; Turkey 0.2; Austria 0.07.

NEW COMMERCIAL CONFERENCES.

The Minister of Foreign Affairs and the Minister of Commerce are planning a series of new commercial conferences. The intention is to make permanent commercial treaties with France, Great Britain, Belgium and Spain, inasmuch as the pre-War commercial treaties of Serbia with these States, which since the War have been extended to the whole of Yugoslavia, have ceased to be valid.

On account of the extent of the work entailed the Government has already appointed a large delegation to carry on commercial negotiations with the above-mentioned countries. For the commercial conferences with France the chief delegate is Dr. M. Spalaikovitch, Minister to Paris, and for the conference with Great Britain Dr. G. Juritch, Minister to London. Under their direction commercial conferences with Belgium and Spain will also be held.

The commercial delegation will leave for Paris on July 20, and there the conferences with France, Belgium and Spain will take place. The negotiations for commercial agreements with England will follow in London.

The Belgian and Spanish Governments have replied that they agree to send their delegates to Paris to confer with the Yugoslav delegation there.

THE MONOPOLY ADMINISTRATION.

For the year ending March 31, 1926, the Yugoslav Monopoly Administration shows receipts amounting to 2,503,019,400 dinars, as compared with 2,357,017,260 dinars for the previous twelve months ending March 31, 1925, and an estimated revenue of 2,315,600,000 dinars. To the total the Tobacco Monopoly contributed 1,698,256,328 dinars; salt, 359,042,727 dinars; kerosene, 153,152,148 dinars; matches, 143,546,114 dinars; and cigarette paper, 141,288,975 dinars.

The statement of revenue and expenditure issued by the Monopoly Administration for the twelve months ending March 31, 1926, was as follows:—

REVENUE.	Dinars.
Monopolies (March)	193,845,240
,, (Apr.-Feb.) ...	2,309,174,160
Customs (March) ...	158,301,590

MEETING OF THE ECONOMIC BOARD FOR PALESTINE.

The fourth ordinary general meeting of the Economic Board for Palestine was held at 7, Queen Square, Southampton Row, on July 19, the Rt. Hon. Sir Alfred Mond, Bt., M.P., in the chair.

The report of the Executive Committee for the year ended December 31, 1925, which was presented at the meeting, states that it will be noticed that the expansion referred to in last year's report continued at an accelerated rate. The Government revenues show substantial increases, and the surplus balances at March 31, 1920, reached a total of over £E1,000,000. Exports (Palestinian produce only, £E1,297,559) were £E97,000, and imports (£E7,603,923) over £E2,000,000 in excess of those of 1924. The orange trade surpassed all previous records, 2,141,727 boxes being exported in the season October, 1924, to August, 1925, an increase over the previous year of 552,396 boxes of a value of £E186,997. An additional area of 5,600 dunams (1,400 acres) was planted with oranges during the year.

The net immigration during the year was 30,541, the largest yet recorded, and during the first nine months of the period 34 per cent. of the immigrants were in Category B., i.e., possessed a minimum capital of £500. It is estimated that about one and a half millions of private capital were thus introduced into Palestine, which were chiefly invested in building operations and land purchases, and thus immobilised. This fact, and the financial depression in Poland, which, about October, checked the flow of money from that country, caused a shortage of capital towards the end of the year, and a temporary restriction of credit. On the whole, however, the year was very prosperous, and a great deal of development work was done in all parts of the counry.

The high freight and landing charges, and the actual losses incurred owing to the total absence of all port facilities in Palestine have been pointed out in previous reports. The present situation is rapidly becoming intolerable and should be remedied at once. In view of the expanding trade and the improvement in the financial position of the Government, there should be no difficulty in financing the construction of a port if suitable terms are offered.

The Jaffa fuel station, owned by the Palestine Electric Corporation (Rutenberg Concession), had a successful year, the number of consumers being more than doubled. Similar stations were opened during the year at Haifa and Tiberias. The Palestine Corporation made a net profit for the year of £E545. The report and accounts show that the enterprises to which loans (£E31,223) have been made, are with one exception developing successfully. The investments have not yet earned a dividend, but substantial progress has been made during the year by all the companies in which the corporation is interested.

It will be recalled that the Board, at the request of the Government of Palestine, raised a Guarantee fund of £3,000 for the Palestine pavilion at the British Empire Exhibition; and that the guarantors, in order to enable the pavilion to be financed, were good enough to adopt the unusual course of paying up their guarantees in advance. At the close of the 1925 season they were repaid in full, and a sum of approximately £1,900 was returned to the Palestine Government. The net total cost to Palestine of her representation at Wembley was about £3,500, which must be considered a very small sum in comparison with the publicity attained and the large amounts spent by the other Governments who took part in the Exhibition. The results were equally satisfactory to the exhibitors, as the total of their sales in the pavilion for the two seasons was £47,000.

The Central Bank of Co-operative Institutions in Palestine continues to progress and to perform valuable services, not only by the credit facilities it provides, but also in the organisation and regulation of the co-operative movement in Palestine. It will be the aim of the Board to develop its usefuless in this respect. The total amount issued in loans during the year was £E80,797, as compared with £E70,451 during the preceding year. Repayments continue to be very satisfactory, the arrears at August 31, 1925, being less than 1 per cent. of the outstanding debts.

In moving the acceptance of the report, Sir Alfred Mond said that as far as the Economic Board was concerned, the position was satisfactory. The report gave a pretty good picture of the progress made. The fiscal policy in Palestine was still in rather a chaotic state, hovering between inadequate protection and the endeavour to raise revenue, which was hampering industry. Sir Alfred further mentioned the opening of a new Jerusalem Water Works by the High Commissioner, Lord Plumer, which would, he said, temporarily relieve a difficult position. The Palestine Electric Corporation, on the other hand, was not an established business and at a fairly early date the future development and composition of the Company would have to be considered. The Economic Board was doing very useful work, keeping in constant touch with the Colonial Office, which was on the whole very sympathetic. In conclusion, Sir Alfred thanked Mr. Walter Cohen, the hon. secretary of the Board, for his work, which was a labour of love.

In reply, Mr. Walter Cohen said that although the Economic Board had many promising projects, yet it could not get sufficient money for them. Much more money was needed than was at the disposal of the Board.

Sir Robert Waley Cohen and Mr. A. I. Belisha were unanimously re-elected to the executive committee. Mr. A. I. Belisha moved that a vote of condolence should be sent to the widow and the children of Sir Adolph Tuck, a late member of the Board. Sir Adolph Tuck, he said, was not only a conscientious, but also a most sympathetic Jew. Mr. Walter Cohen seconded the vote of condolence, which was carried unanimously.

RUSSO-PERSIAN TRADE RELATIONS.

The Closed Frontier.

By MIRZA FIROOZ KHAN.

Since last February the Russian frontier has been closed to Persian commerce with the exception of cotton. At first animal intestines and hides were also permitted, but later on these too were prohibited. Now one can be sure that there is, or has been, some kind of open or secret enmity between Russia and Persia ever since the collapse of the idea of a Persian Republic (or Bolshevism) and the establishment instead of a monarchy. It is true that we have a constitutional monarchy, but according to Soviet opinion our monarchy at present is far more despotic than that of Nasr-ed-Din Shah. The deep-rooted view of Russians is that Riza Shah Pahlavi betrayed despotic tendencies the first days of his War Ministry and that now he is unable to drop them.

The responsibility for the closing of the frontier by Russia is thrown upon Persia. In this connexion the following incidents and facts should be taken into consideration :—

1. Russians, to bring sugar into Persia, used to pay to our Government a tax of 12.50 krans per pood (25 lb.). The Persian Government raised this tax to 18.00 krans.

2. The tax on kerosine oil was increased by 3.00 krans per pood.

3. The Russian Bank in Tauris was unable to buy its chervonetz, because the bank had no silver coin to pay for them and the result was that chervonetz began to fall rapidly from 45.00 krans to 36,00 krans and even to 35.00. To save the chervonetz the Russian Bank wished to bring some Persian silver coin from Russia into Persia. The crude silver was coined into Persian silver five-kran pieces which were actually brought to the border, but the Persian Government would not permit their importation unless 25 per cent was paid as tax. The Russians considered this too high a tax and would not consent to it. They were willing to pay a tax of 12.5 per cent., but our Government was immovable. A second objection on the part of the Persian Government to admitting the money was that it was coined with the head of Sultan Ahmed Shah, not the head of Riza Pahlavi (who was not at that time crowned as Shah of Persia). The money, which altogether amounted to 4,000,000 tomans, was taken back to Moscow to be recoined—so it was said—with the head of Pahlavi Shah, but it has not been brought back yet!

The Russians were enraged over this episode and considered their dignity outraged and determined to have their revenge! So they closed the border to Persian merchants and it has remained closed ever since. Some merchants applied to the Russian Soviet Consul in Tauris and succeeded in transferring one tenth or even a quarter of their goods in time for the fair in Baku, that was to be held from April 24 to the end of May, but that was done by special permission from Moscow (perhaps because the Russians needed some of these goods) on the following four conditions.

1. Sabza (yellow raisins) were to be imported to the extent of 25 wagon loads (wagons holding 900 poods each).

2. The price of sabza was to be decided at so many roubles per pood by the Russian authorities.

3. Sabza not sold at that price, could not be transferred to other bazaars in Russia, nor could it be stored in Baku for the following year. It had to be taken to Persia again!

4. Merchants willing to sell their sabza at the Government price were not to be paid in cash, but in goods—sugar, naphtha, calico, candy, bags, threads, nails, etc. The merchants, however, were to receive 10 per cent. in cash, in order that they might pay the expenses of transferring these goods into Persia!

These unheard of terms caused a storm of protests, but nothing could be done! Soviet Russia has a "commercial representative" (apart from the Consul) in Tabriz, who looks after the interests of Russian merchants in Persia. Protests and applications were made to him with a humble request to pass on the representations to the Russian authorities in Moscow, and now it was the turn of Moscow to become "immovable." Some merchants regarding the future as dark decided to get rid of their goods at any price, and—as I said above—made application either to the Soviet Consul in Tauris, or through their Moscow agents directly to Moscow and obtained permission to send part of their goods to the Baku bazaar where they were sold—if at cash price—at a small loss to the merchant. But this loss will be more than regained in selling the Russian goods to native Tabriz merchants. This saves no small amount of trouble and loss of time to the Russian merchant who has the advantage of selling his goods in his own home. This was a "tit for tat"! on the part of Russia.

Some time ago small silver coins—one and two kran pieces—that were in any way defective were being refused. Even such Government departments as Posts, Telegraphs, Finance, etc., were only willing to accept defective coin—filed, worn, drilled, cracked, etc.,—at 20 per cent. loss to the wretched owner! This became for a time a regular source of income for some speculators, who used to collect defective coins from the villagers through their bazaar agents at 25, 30, 40 per cent. loss and sell them to Government departments at a 20 per cent. loss, sometimes at no loss at all! For the merchant would get the coin from the peasants with a trifling defect or none at all, and pass it on—among bags of silver money to the Finance Department as "good" money. People who had money hidden underground had to unearth it and sell their "undesirable" coins and this amounted to thousands and thousands of krans.

Taking this "defective coin" business as a pretext the people closed the Bazaar on the very day that the accession to the throne of Persia of Shah Riza Pahlavi was being celebrated by the various State Departments to whom certain sums of money were sent for the purpose of the celebrations—tea, sweetmeats, etc., in the day time and fireworks at night! The next day orders came from Teheran that all kinds of coin—except those that had holes drilled through them were to be accepted! This was a boon to the unconscientious speculator who had acquired bags of "defective" coin at the expense of those who know little or nothing of such ways of amassing wealth!

In the meantime the road to Russia was remaining closed. Merchants all over the country have been sending telegrams to Teheran for the last five months begging the Government to "open the road, or we shall be ruined." The only reply given to these telegrams was a caution to the merchants through the Press "not to hurry the Government in its political affairs"! Caution is futile, however, against despondency and the loss of silver, and lately the merchants have begun to bombard the Teheran authorities with a new kind of telegraphic bomb. Nearly every department has received the messages—Finance, Home, Foreign, even His Imperial Majesty the Shah. It is said that the telegram addressed to His Majesty was to the effect:—1. Either buy our goods yourself, or 2. Open the Russian frontier, or 3. We Azerbaijanis will secede from the rest of Persia and join the Azerbaijan of the Tatars of Baku! Most likely it is as the result of these telegrams that the Cabinet has fallen and Taghi-zadeh, a strong Russophil, has been asked to take charge of the Persian Foreign Office. A

strong agitation is going on in the provincial towns by propagandists sent by the Tabriz Central Committee of Democrats in favour of the separation of this province from the rest of Persia and of junction with the Union of Soviet Republics of Caucasia. Seven of the prominent leaders of the Democrats have disappeared—exiled, hanged or buried alive—no one knows where and by whom, but facts are facts, and a fact can convince anybody that it is no fun to "monkey" with a Government that has sixty thousand well-drilled and well-disciplined Cossacks! The agitation in favour of secession is strongest in the northern towns, nearer the Russian border, as in Khoy, Dilman, Marand etc. Troops in numerous motors have been hurried to these places with the historic Prussian command: "Give no quarter and spare nobody"! It is said that some troops—unpaid for some months—have joined the "rebels," but it is to be hoped that the loyal Cossacks will soon restore peace and order! Both Colonel Kalb Ali Khan and Colonel Yusooph Khan, the Town Commanders in Dilman and Khoy respectively, have been murdered by their own troops. These rebel troops have looted the bazaar, merchants' offices, the Finance rooms and the Government House in Khoy, the amount of looted money being about 2,000,000 krans. Hence the command: "Give no quarter, spare nobody" seems to be justified. Seven thousand persons have registered themselves in Tauris as Bolsheviks and the process is going on still!

Tabrizians, and, in fact, Azerbaijans declare "we cannot live without Russia. Russia for us is as water is to fish! Russia buys our produce (Sabza, cotton, rugs, etc.) and gives us money. England gives us goods and buys nothing! She takes our silver and gold away from the country. Cotton has gone up from 18 to 28 krans. Sabza from 4 to 20 krans, castor seeds from 5 to 15 krans a batman, wool from 6 krans a batman to 16 krans, all because Russia is our customer! and a customer like Russia we can find nowhere in the world!" Merchants declare that since the closing of the Russian border to Persian goods—the loss in sabza alone amounts to crores of tomans (fifty million tomans), but this is rather exaggerated! The amount given might apply to every kind of exports, but for sabza alone it is ridiculous!

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 15, state:—

Since our last report the futures market has been quiet with an undecided tendency, but the undertone has been slightly heavy. The week's summary of price movements is as follows:—Sakellaridis: July, 29.57 dollars, 0.62 dollars up; November, 29.28 dollars, 0.73 dollars up; January, 28.88 dollars, 0.78 dollars up; March, 28.88 dollars, 0.93 dollars up. Ashmouni: August, 20.50 dollars, 0.70 dollars up; October, 20.60 dollars, 0.72 dollars up; December, 0.78 dollars, 0.74 dollars up.

Price movements in this market have more or less followed American price fluctuations, but for which they would probably have remained stationary. The change in American crop reports has brought home to speculators what we have several times pointed out, namely, that a continuation of the recent good crop reports should not be anticipated. Too much attention must not yet be paid, however, to the rather less favourable news from America; admittedly it is a bit too wet in places, but it would be folly to think that the crop is ruined because of a little unfavourable weather in early July, especially in view of the fact that the plants are healthy as a result of the good conditions which have ruled up to the present. There has been a little more activity on the part of the trade during the past week and some of the export houses have been buying new crop Uppers. The demand from spinners does not show much improvement although we understand that America has bought some Uppers.

The statistical position has not been relieved to any extent, as the following figures show: stock Alexandria, 1,660,000 kantars; stock up country, 225,000 kantars (estimate); total, 1,885,000 kantars, against a total in Egypt at this time last year of 782,000 kantars. On present indications we look like having a carryover of about 1,500,000 kantars, including the Government stock of about 500,000 kantars. Sakel, of course, predominates in the stock, but a great deal of this Sakel consists of undesirable spinning cotton. At the second July tender, 2,500 kantars were issued. The week's receipts amount to 25,353 kantars, against exports 61,546 kantars; the stock stands at 1,659,094 kantars.

Spot: The market was closed on Monday last on the occasion of the Moslem New Year festival. Total sales during the week amount to about 5,500 bales, of which we estimate 2,500 bales Sakellaridis, 2,500 bales Ashmouni, 300 bales Zagora, 100 bales Pilion and 100 bales White.

Sakellaridis: The demand for all grades has been maintained during the week, but buyers find difficulty in obtaining good style cotton. Spot difference about Fully Good Fair are about the same as last week, but for Fully Good Fair and below they have, if anything, eased off a little.

Ashmouni and Zagora: Business in these varieties also has covered all grades. Although there is a fair amount of cotton showing, the better styles are held by wealthy merchants and cultivators who are at present holding their cotton off the market. Spot differences for Fully Good Fair and below remain about unchanged, but for grades above Fully Good Fair they are rather harder.

Pilion: A few lots have changed hands at about last week's differences.

Brown: No transactions have been recorded.

White: There is a continued small demand for this variety but the cotton is difficult to find. Spot differences are, if anything, rather dearer.

Crop, 1926: The crop is progressing normally under favourable conditions. Temperature has been somewhat fresh at nights, but this has had no ill effects. The plants are bolling well up to the average, and no pink boll worm has yet been reported. Water is plentiful.

LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended July 21:—

Egyption Futures.—Sakel Contract.—We have to report a series of rather featureless markets since our last report, and, generally speaking, no fluctuations of importance have taken place. On the whole, the Alexandria market has not reflected the steadiness of the local contract, with the result that we have regained in a minor degree some of our regular premium; at present the heavy stocks of Sudans are keeping the movement in check, and, until these move off, we do not anticipate any material alteration in the ruling difference. Trade reports are generally pessimistic in tone, and the market is receiving little support from spinners.

Crop accounts continue to be satisfactory, but it must be borne in mind that the most critical period is just approaching and that we are unlikely to reach the marketing stage without the usual alarmist rumours. In addition to the depressing state of affairs in this country, the Continental situation is likely further to reduce the consumption of Sakel cottons, and whilst admitting that values may be lifted from time to time on detrimental new crop reports, either American or Egyptian, we consider that sales on strong markets will later on show satisfactory profits.

Upper Contract.—This option continues to command little outside attention and transactions have been limited

Digitized by Google

to a few contracts daily. Fluctuations have been mainly governed by the movements in the American markets and on balance we show minor advances of 10 to 30 points on the week.

Egyptian Spot.—We have experienced a quiet week in this department, and the off-take for all varieties has been decidedly limited in character. Owing to the poor demand for yarns and the inability of manufacturers to take delivery in certain cases, we hear that some mills are further reducing their already curtailed working hours. Any buying that comes in is for retail qualities, the bulk of the orders being for odd ten and fifteen bale lots. In addition to their lack of encouragement from the yarn markets, the majority of spinners evince little confidence in the price of the raw material. The general trade outlook is depressing, and we must confess that it is impossible at the moment to discern any redeeming feature likely to influence improvement in the near future. An analysis of the inquiry does not prove very illuminating, except that Sakels tend to fall further out of favour, the bulk of the demand runs on the G.F. to F.G.F. Upper qualities. Competition to secure business is keen, and holders are inclined to accept easy prices to clear old stocks.

Sudan sales show some improvement on last week, but the bulk of the turnover has been in the American Seed variety at prices ranging from 100 to 150 on. The long stapled fine cottons have, to a great extent, been neglected by buyers. The demand for c.i.f. cotton continues to be poor, and it must be some years since so little new crop cotton has been booked at this advanced period of the season. Trade taking last week were 4,033 bales of Egyptian and 2,833 bales of Sudan. Estimated sales, 1,000 bales Egyptian and 610 bales Sudan. Quotations of all grades of Upper and Brown are unchanged, and those of Sakel are reduced 5 to 20 points. F.G.F. Upper, 12.00d. F.G.F. Sakel, 16.20d.

SHARP DECLINE IN IVORY PRICES.

Messrs. Hale and Son's report on the quarterly ivory sales, which were held on July 20 and 21, states that they comprised 47 tons (against 42¾ tons at the same time last year), viz., 16 tons Zanzibar, Bombay, Mozambique, East African and Siam, 5¼ tons Abyssinian, 7¾ tons Egyptian (Alexandrian description), 15½ tons West Coast African, Congo, and Lisbon, and 2½ tons land carriage; also 2½ tons sea horse tusks.

The following was the assortment of the East Indian description: 9½ tons soft tusks, ¾ ton hard and Siam, ½ ton billiard ball pieces, ½ ton bagatelle pieces, ¼ ton cut points for balls, ½ ton cut points off large tusks, ½ ton under-size and defective points, etc., ½ ton billiard ball scrivelloes, ¼ ton bagatelle scrivelloes, 1½ ton cut hollows, and ¼ ton cores, and 1 ton scrivelloes. Of the above quantities 8½ tons consisted of lots previously offered or indirect import, viz., 1¾ tons East Indian, ½ ton Abyssinian, 1½ tons Egyptian, ¾ ton West Coast African and Congo, 2½ tons land carriage, and 1½ tons sea horse tusks.

During the progress of the sales 20 tons were bought in or withdrawn, viz.: 6½ tons East Indian, 2¾ tons Abyssinian, 4¼ tons Egyptian, 2 tons Congo and West Coast African, 3½ tons land carriage and 1 ton sea horse and boars' tusks.

Since the last auctions the trade has been quiet, and the unsettled state of the foreign exchanges, and the continuation of the coal strike has had an adverse effect on ivory as on other luxury articles. Buyers were disinclined to purchase except at a reduction of last rates and prices for large and medium tusks, both hard and soft were lower. Ball ivory was in rather better demand, and sold without material change, whilst scrivelloes were firm to rather dearer. America barely bought up to their usual average, but the Continent competed as usual, the Home trade being quiet.

Abyssinian were partly sold Large and medium tusks were £10 to £12 per cwt. lower. Ball scrivelloes were steady, also bagatelle scrivelloes, while scrivelloes were firm to rather dearer. A large proportion of the offerings of Egyptian were withdrawn. Prices were £10 to £12 per cwt. lower for soft large and medium tusks. Ball scrivelloes were steady, also bagatelle scrivelloes, while scrivelloes were firm to rather dearer. Hard were £8 to £10 per cwt. lower, soft bangle tusks were £6 to £8 per hard bangle tusks were £2 to £4 per cwt. lower.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, August 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Imani for Port Said, Colombo, Madras, and Calcutta (London, August 7).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (London, August 11).

British India Line.—S.s. Malda for Colombo, Madras, and Calcutta (London, July 31); s.s. Trewidden for Bombay and Karachi (London, August 21).

Cunard Line.—S.s. Pavia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Fiume, Trieste, also Algiers and Gruz if inducement offers (Liverpool August 26, Swansea August 31); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Algiers and Volo if inducement offers (Liverpool, Glasgow, Swansea, August 14).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 21); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 18).

P. and O. Line.—S.s. Devanha for Bombay (London, August 6); s.s. Nankin for Colombo, Madras, and Calcutta (London, August 21).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus; s.s. Egyptian Prince for Tunis, Malta, Cyprus, Tripoli, Mersina, Alexandretta, Beyrout, Haifa, and Jaffa (London, August 7).

Ellerman and Papayanni Lines.—S.s. Andalusian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool August 7, Swansea August 7); s.s. Roumelian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*. Venice, Trieste, and Fiume* (Liverpool August 12, Swansea August 16); s.s. Grodno for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 14); s.s. Assyrian for Gibraltar, Malta, Patras, Piræus, Syra, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 28); s.s. Malatian, for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 21). (* Subject to sufficient inducement.) Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

Motors and Motoring.

By G. B. B.

The possibilities of the Ceylon market are persistently overlooked even by those few motor manufacturers who pay a certain amount of attention to India and its needs. Why this should be so is not easy to understand, unless it be that with our singular and characteristic ignorance of matters geographical we fail utterly to realise that the island is as large as Holland and Belgium together, and has a large and, generally speaking, prosperous population.

It may be said that, so far as motor business is concerned, the size of a country or the prosperity of its people matters little as compared with the question of roads. Ceylon is well provided for in that respect as the latest returns show that it possesses over 3,500 miles of well-metalled roads, of admirable surface and easy gradients; the sort of roads that might have been designed specially for British light cars. There are also nearly 700 miles of second-class roads equally suitable for motor transport. A big country with over 4,000 miles of roads should surely not be neglected by those who are anxious to extend their overseas sale of motor vehicles. I gather, further, that the Government has in operation an excellent scheme for insuring that these roads are kept in efficient condition. There are adequate supplies of road metal in the island, particularly of gneiss, and large deposits of good gravel. It may be expected with confidence that in a few years the roads of Ceylon will be equal to, if not better than, those in any other part of the East.

Gradients.

It must not be imagined, when it is stated that gradients generally are easy that the island is devoid of hills or that no steep gradients are likely to be met with in an ordinary day's country run. There are many stiff rises to be negotiated in the centre or mountainous zone of the island, some of which are as steep as one in five and in more than one place are to be found hill roads with four or five miles of a gradient of one in fifteen. Naturally work of that kind would tax an engine unless the cooling and lubrication systems are good, and as a general thing it may be taken that cars for Ceylon, especially those intended for good transport, should have big radiators and an efficient fan cooling system. Forced lubrication should always be fitted, and also an extra air inlet to the carburettor, as in the higher districts the air is so rarified that engines with normal carburettor setting would be running on an over-rich mixture. Brakes should also be adequate and readily accessible for adjustment and relining. These, however, are minor matters, comparatively speakng, and involve no radical departure from standard practice.

As regards the development of the use of motor vehicles in the island, the latest figures are not available but according to the most recent returns there are in service about 8,500 private cars and light commercial vehicles, about 850 lorries, over 400 omnibuses of all kinds, and a large number of tractors. These figures show an astonishing increase over the 1923 returns which gave only about 3,000 private cars and light vans, 300 lorries, and less than 150 omnibuses. Allowing for certain possible inaccuracies in the above classification, we find that a few months ago there were over 9,500 motor vehicles in service as compared with about 3,500 a couple of years ago. Only about 20 per cent. of this present total, or about 1,900 vehicles in all, are of British origin. I think these figures speak more eloquently than I can do, regarding the neglect of the Ceylonese market by the British motor manufacturer.

Steel Bodies.

The steel body is by no means a new thing; indeed, it is commonly believed, though erroneously, that some motor bodies of American origin are of tin. At the same time an all-steel body is still a comparatively rarity in this country, great as are the advantages it possesses. Wood is almost always used in conjunction with steel in British bodies in spite of the high cost of timber, its many drawbacks and its unsuitability for cars for the export trade. It is not easy to understand why the British body builder is so prejudiced in favour of wood. It is more expensive than steel and costs more in labour to work up; it is impossible to join wood parts cheaply and easily, and the joints, when made, are far from strong, relatively speaking. Further, wood is easily splintered or fractured and it is impossible to build up wood parts so that the whole has a uniform strength. On the other hand, steel is easily rolled or brazed at the joints without trouble: it does not require anything like the amount of labour and machining that wood requires, and in the event of accidents, as collision, it bends instead of splintering or breaking. And last, but by no means lest, the cost of finishing a steel body is considerably less than that of finishing one built of steel and wood in the ordinary way.

Company Meetings

BANK OF ROUMANIA.

Economic Position of Country.

The annual general meeting of the Bank of Roumania, Limited, was held on July 21 at Winchester House, Old Broad Street, E.C. General the Hon. Sir Herbert A. Lawrence, G.C.B., presided.

The Secretary (Mr. F. P. Carrington) having read the notice convening the meeting and the report of the auditors.

The Chairman, in his speech in moving the adoption of the report and accounts, said: As you will see, the balance available, after making provision for bad debts and income-tax, amounts to £14,472 19s. 4d. An interim dividend of 3s. per share, less income-tax, was paid on December 23 last, and the board recommends the payment of a final dividend of 3s. per share, less income-tax, which will absorb a further £5,953 2s. 6d., and recommends that the balance of £2,566 14s. 4d. be transferred to contingency account.

The business of the bank continues to be satisfactory. The working expenses, however, are heavy, due to the relatively high cost of living; and the rate of exchange at which we have to convert our lei profits reflects adversely on our profits in sterling.

The exchange on London remained comparatively steady again throughout the year, commencing the year at 920 lei to the £—touching its highest point of 1,080 in April and ending the year at 1,050 lei to the £.

The cost of living in Roumania continued to rise, as shown by the index figure of prices of food, clothing, etc.:—August, 1916, 100; December 31, 1924, 4,225; December 31, 1925, 4,827.

When inflation has once started it is difficult to arrest the movement. The Government of Roumania have declared their intention of following a policy of non-inflation and they have attained a considerable measure of success, in spite of the fact that with the fluctuating rate of exchange the difficulty of arranging their national finances is not inconsiderable.

The note circulation of the National Bank slightly increased from 19,356,437,000 lei on December 31, 1924, to 20,126,370,000 lei on December 31, 1925—that is to say, by about 770,000,000. This increase is represented by increased rediscounts of commercial paper by the National Bank.

Following on the convention between the National Bank of Roumania and the Government for the repayment to the National Bank of the debt of 10¾ milliards during the next 15 years, to which I referred when I had the pleasure of addressing you last year, I would like to draw your attention to the fact that the last weekly statement issued by the National Bank shows that a sum in excess of 260,000,000 of lei has already been paid under this arrangement.

The policy of a restricted fiduciary circulation, while it assists to steady the exchange, has caused a stringency of money The scarcity both of cash and banking credits has continued during the year 1925, and commercial transactions have been restricted.

The unusually limited export of grain last autumn had a pronounced effect on business, and instead of great activity such as is usual in the autumn, general stagnation was experienced. This, of course, has had its effect on the bank's earnings. However, from facts to which I will refer later, we confidently look forward this year to better business.

The value of imports into Roumania from all countries amounted to 30,098 000,000 lei, and exports to 29,025,000,000 lei—showing an adverse balance of about 1,000,000,000 lei. The chief imports consisted of cotton, woollen and metal goods, and the principle exports were grain, oil, timber, and livestock.

Trade between Great Britain and Roumania remains steady, and in fact shows a slight improvement. The exports from Roumania to this country were valued at £2,278,000 as against £2,208,000 in 1924. The chief items were:—Oil, £887,900; grain, £806,890; timber, £515,800.

Imports into Roumania from Great Britain were valued at £3,071,000 (of which cotton goods represented £1,594,000) as against £2,851,000 in 1924.

Taking now the important industry of agriculture, the total area cultivated was greater than that of 1924 (29,670,000 acres as against 28,400,000), and the yield per acre of all cereals was also greater. This was satisfactory so far as it went, indicating that the peasant proprietor is continuing to improve his methods of cultivation; but the exports of grain fell from 1,406,300 tons in 1924 to 841,590 tons in 1925. It is estimated that at least 1,500,000 tons of cereals are stored in Roumania awaiting exportation. This fact has been given in some quarters as the reason for the absence of an improvement in the value of the leu. The falling off in exports of grain may be accounted for by the drop in world prices of grain, the lack of efficient railway transport to the coast, and the heavy export duties. These export duties were reduced in July last and further brought down in March this year, and it is anticipated that this latter reduction will encourage holders to sell their stocks. This year's crop promises to be very good, and the winter weather has been distinctly favourable for the autumn sowings. The manager at Bucharest, in a telegram just received, informs me regarding the present harvest, that—"Crops in general, including Bessarabia, excellent. Estimated surplus wheat for export 140,000 wagons; barley 100,000 wagons. Too early estimate maize, but present indications between 200,000 and 300,000 wagons."

The brightest spot in Roumania's economic life is the oil industry, which is undoubtedly flourishing, and the production for 1925 was a record for Roumania, reaching 2,313,000 tons, as against the previous best production of 1,885,000 tons in 1913 and 1,850,000 in 1924.

Exports of oil went up from 435,000 tons, valued at 3,366,000,000 lei in 1924 to 783,000 tons, worth 5,698,000,000 lei in 1925. It is estimated that nearly double this quantity will be exported during 1926, as the greater part of any increased production will be available for export.

Before resuming my seat I desire on behalf of the board to thank the managers and staffs, both here and in Roumania, for their loyal co-operation in carrying out the affairs of the bank.

The motion was carried unanimously.

EGYPTIAN DELTA LIGHT RAILWAYS.

Success of Tractor Services.

The annual ordinary general meeting of the Egyptian Delta Light Railways, Ltd., was held on July 23 at Winchester House, Old Broad Street, E.C., Sir Montagu Sharpe, K.C. (the Chairman), presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the auditors' report,

The Chairman, in his speech in moving the adoption of the report and accounts, said: The year shows, I am pleased to report, a steady progress towards the financial stability for which we have been working during the past. Both coaching and goods traffic again show satisfactory improvement. The principal difficulties with which we have had to contend were the heavy fall in the price of cotton, and motor-car and water competition. The fall in cotton prices of some 12 dollars per kantar had the inevitable effect of creating a scarcity of money in the provinces, which in turn affected the travelling public and consequently our coaching receipts.

I particularly drew your attention at the last general meeting to the motor-car competition and to the improvement of the public highways in Egypt which fosters it. I also referred to the introduction of rail motors to meet this competition by running a more frequent and economical service, and informed you that the "Sentinel" tractors had been adopted as being the type best suited to our requirements, and that twelve of these had just been shipped to Egypt, the intention being, if they proved a success, to increase the numbers.

I am glad to say that the results of the experiment have borne out our anticipations, and, notwithstanding the improved public roads and competition of motor-cars, and the shortage of money in the hands of the fellaheen, we have carried some 1,288,918 more passengers than during the previous year, which our agent and general manager in Egypt reports—and I quote his words: "is undoubtedly due to the introduction of a more frequent service, which was rendered possible by the twelve new 'Sentinel' tractors from England." I think there is no doubt that, had these tractors not been in service, our passenger traffic would have shown a considerable decrease instead of the increase which I am happy to be able to record.

I must point out that, with so few of these tractors, it has only been possible at present to institute their service over small sections of our system—namely, in the Behera district, where four tractors are running, in the Eastern district, with eight tractors, and in the Gharbieh district, with two tractors. Our agent and general manager also reports that where these tractors are being run in the Eastern district we are holding our own with the passenger steamers. In the Behera province the advent of the tractors is badly hitting the road motor services, where we are also holding our own; but, in order to effect this, we have been forced to cut rates, in one section to as low as the pre-War level.

We have been so encouraged by the good results that an order has now been placed with the "Sentinel" Waggon Works, Ltd., for a further 24 tractors, which should have been ready for shipment by August, 1926, but, unfortunately, the coal strike will delay delivery, though we hope they will be in service in time for the busy season, which begins in October next. I may mention that this competition by road motors is not confined to our system, for I was informed that the State railway was experiencing similar trouble in the Delta district.

An analysis of the balance-sheet before you shows that the company has available for purposes of capital expenditure only the comparatively small sum of £85,000 odd, taking into account all our reserve funds and the balance on revenue account, after payment of the dividend now proposed; in other words, our capital proper is considerably over-expended, and a large proportion of our reserves is also invested in the line.

Our commitments to date, which include the construction of the Dessouk to Berrevit-el-Asseifar extension, the relaying of remunerative sections of lines which were dismantled during the War, and other small extensions which the Egyptian Government will probably require to be built, also the purchase of more "Sentinel" tractors and additional rolling stock to meet the increased traffic demand, amount approximately to £150,000, which, as we have no hopes of being able to raise new capital in the immediate future, must be met, after expenditure of the balance above referred to and after

Digitized by Google

allowing for material in hand, from current revenues. Careful calculations have been made, and, on a conservative basis, making no allowance for the improvement from the new tractor service, or for the increased revenue which it is estimated will be derived from the construction of the new lines contemplated, it is believed that these commitments can be met during the next three or four years from revenue and still allow of the payment of dividends to the shareholders.

You will appreciate, I am sure, that a large proportion of this expenditure is being incurred at the instigation of the Egyptian Government, and, although we should have preferred to have delayed a great deal of it until our financial position was stronger, on the other hand we are of the opinion that the new lines to be constructed will be remunerative, and that we shall have no cause to regret the conservative policy which the exigencies of the case have demanded. You may rest assured that all this expenditure will receive the most careful supervision, and, should it at any time appear likely to become in excess of our revenue resources owing to the falling off in traffic or for other reasons, a revision of our programme will be considered.

I now pass to the net revenue account. After having made allowance for all fixed charges, Government's share of profits, provision for income-tax, etc., as set out on the debit side of the account, and after deducting the balance of £39,178 os. 4d. brought in from last year's accounts from the £97,080 19s. 1d. shown as carried forward at March 31 this year, an amount of £57,902 18s. 9d. remains. We have decided to transfer to general reserve an amount of £10,000 towards the capital expenditure to which I have already referred and recommend that a dividend of 4½ per cent. be declared on the Five and a-Half per Cent. Cumulative Preference share capital, which will absorb £46,835 2s., leaving a sum of £1,067 16s. 9d. of the actual net revenue of the year. This balance, with the amount of £39,178 os. 4d. brought into the account, gives a total of £40,245 17s. 1d. to be carried forward.

The resolution was carried unanimously.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Water Installation at Beba.—Tenders are invited by the Egyptian Ministry of the Interior, Cairo, for the supply and installation of pumping machinery, filters, and accessories required for the Water Works of the town Beba. August 15. (D.O.T.)

Steel Water Tower.—The Ministry of the Interior, Cairo, invites tenders for the supply and erection on site of a steel water tower for the town of Zifteh, contract No. 3. August 5. (D.O.T.)

TURKEY.

Pig Iron.—The Anatolian Railway Administration invites tenders for the supply of 100 tons of pig iron. August 9. (D.O.T.)

ROUMANIA.

Electric Portal Cranes for Port of Constantza.—Tenders are invited by the Port Administration at Constantza for the supply and erection of 8 electric portal cranes for the quays at that port. September 15. (D.O.T.)

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Abyssinia in the Limelight.

Abyssinia and its affairs have probably not received so much attention in Europe since the Battle of Adowa thirty years ago as they are receiving to-day. Once again Italy is the main cause of the stir, but unfortunately this time Great Britain has been brought into the picture. The Abyssinians do not suffer foreigners gladly, and Italians are their pet aversion. In such circumstances it does not at first sight appear a wise move on Great Britain's part to identify herself with Italian schemes in Abyssinia, in order to secure support for the very necessary work that she is anxious to be allowed to carry out at Lake Tana for the improvement of the water supply of the Sudan and Egypt. While limits to the patience of the individual are conceded, they are likely to be denied these days to the patience of Governments. Those who are responsible for British policy in Abyssinia, therefore, must not expect to be accorded much sympathy, however much justification they can show for having lost all patience with the Governmen of Ras Taffari, the Regent of that country, who has given many signs of enlightenment above that of his generation among Abyssinians but who at the same time has proved a past master in the art of exasperating procrastination. Perhaps the present fuss was the only way out of the difficulty. If it was an established fact that, so long as polite negotiations confined to Great Britain and Abyssinia were taking place, there was absolutely no chance of anything being done at Lake Tana, then the British Government will have had a good case for deciding that a rumpus was better than stalemate. In the Victorian game of spillikins the player tries to detach a single piece of wood from a heap without disturbing the others: if there is no chance of his being able to do this, it is often a sound move to disturb the whole heap in the expectation of scoring when his turn to play comes round again. There can be no doubt that the Abyssinian spillikins have been disturbed; it remains to be seen whether Great Britain will score on the next round.

The Long, Long Way to Tana.

The test by which British policy will be judged in the long run is the degree of success in reaching the desired goal, which is that Ras Taffari should agree to the Dam. All that is happening just now has the effect of merely emphasising the obvious. The pooling of their interests in Abyssinia by Great Britain and Italy was bound to be resented by France and to be made the subject of a shrewd protest (in French) by the Abyssinian Government. This protest has been forwarded to Geneva and will presumably come up for discussion at the next meeting of the League of Nations. Such a move may have been foreseen by the British Government, which will have no difficulty in showing that all the Abyssinian insinuations and fears are groundless. Whether the League will be so impressed that it will at once recommend Abyssinia to grant concessions for a British dam at Lake Tana and an Italian railway from Eritrea to Italian Somaliland remains to be seen. In the not improbable event of the League's refraining from doing anything of the sort, the net result of the international flutter may well be that the French Short will oust all the Codlins from Abyssinian favour and the dam at Lake Tana will remain unbuilt; for now the Abyssinians have been informed that, if they give a concession for the quite harmless and probably beneficial dam, they must expect to be committed to the dubiously useful and possibly dangerous railway. A point that seems to have been overlooked by the British Government is that negotiations turn largely on the personal factor. If the ruler of a country hints that he would like a foreign representative changed, it may be inferred that that representative is not very likely to bring negotiations on delicate matters to a successful issue. On the other hand, if another representative is found to be *persona grata*, it

Digitized by Google

may be politic not to force his hand, but to give him ample time in which to see whether his personality is adequate to overcoming difficulties inseparable from the procrastinating East.

France and Syria.

The supersession of M. de Jouvenel as High Commissioner of Syria, if it takes place, will be regarded as an admission that France hitherto has failed lamentably in her Syrian task. It is recognised that the Druse rising was the outcome of too much militarism in the administration of the mandated territory. M. de Jouvenel was sent to undo the evil effects of General Sarrail's régime, and for a time there seemed every prospect of a speedy and satisfactory settlement. A full amnesty on honourable terms, there can be little doubt, would have been accepted by the rebels; but when they learned that their chiefs were to be excluded from its benefits, the offer was indignantly rejected and French mastery over the country has since diminished. M. de Jouvenel's task, within the limits that were apparently laid down for him, was soon seen to be impossible of performance. The alternatives were that France should either acknowledge her past mistakes by granting a pardon to the insurgents and a more liberal administration for the future, or suppress the insurrection and continue to hold the country by force of arms. She has adopted neither course. She has shrunk from giving her complete confidence to the Syrians, and she has not been in a position to quash the rising. The supersession of M. de Jouvenel—it is not clear whether he has thrown up his task or has been relieved of it—implies that France is to fall back again on the application of force. There can be no question of her capacity to conquer the Druses, if she is prepared to face all that the operation entails; but she must not be surprised if her vacillating handling of the Syrian question raises doubts in some quarters as to the wisdom of entrusting a mandate to a Power in the teeth of the expressed unwillingness of a people to accept that Power as the Mandatory.

Economy in Egypt.

The Budget Committee of the Egyptian Parliament has recommended the abolition of the Egyptian Legations in eight countries—Belgium, Czecho-Slovakia, Holland, Roumania, Spain, Sweden, Brazil and Persia—on the ground that they are unnecessary, and that the Egyptian Consulates at London, Paris, Hamburg, Naples, Genoa, Constantinople, Budapest and Salonika should be closed as their work can be done by the Legations in the countries concerned. This announcement may be for many people the first intimation of the wide extent to which Egypt has given effect to her status as an independent country. As only four years have passed since that independence was established, it is difficult to decide which decision will have been taken in the greater haste—the one to establish so many Legations and Consulates at once, or the one to abolish them. The Budget Committee's proposal, however, is an earnest of the thoughtful spirit in which the Egyptians are approaching their responsibilities of administration. In creating Legations and Consulates, so to speak, right and left they yielded to a natural impulse; but four years have sufficed to show that, in spite of the flourishing condition to which Great Britain has brought the Egyptian exchequer, some discretion is required in the expenditure of money, if it is to serve all the purposes required of it. In withdrawing from this year's Budget the credits voted for the White Nile dam at Gebel Aulia the Minister of Public Works is said to be actuated more by a desire to study the whole question afresh than by reasons of economy. His action, therefore, is bound to give rise to protest, as the Gebel Aulia project has been undertaken only in accordance with expert advice, and would hardly seem to call for reconsideration, if the heightening of the Assuan Dam is the sole alternative contemplated. The latter scheme must have been carefully examined in the past. On the other hand, there are known to be other suggestions for a solution of Egypt's water problem, one of which, affecting the Sudd area, has only recently been put forward. Inasmuch as any step calculated to delay the improvement of Egypt's water supply must reflect on the sincerity of arguments claiming paramount importance for the question, it is to be hoped that no time will be lost in reaching a final decision in the matter, so that, unless evidence is forthcoming to challenge the verdict of its former advisers, the Egyptian Cabinet can at once restore the credits to the Gebel Aulia scheme and that work can go forward with the formal endorsement of all shades of political opinion in Egypt.

The Floods in Yugoslavia.

The disastrous floods that have overtaken Yugoslavia this year must prove a serious set-back to the country in its task of reconstruction. Fortunately the harvest in the areas that have escaped are exceptionally good and will, therefore, help to make up for the losses elsewhere: but the Yugoslavs were entitled to expect that they would be able to enjoy the full benefits of any bumper crops as an offset to lean years in the past. One of the districts now under water is the well-known State Domain of Belve, situated in the angle formed by the confluence of the Drave and the Danube, and occupying an area of 330 square miles. Some seven thousand people live on this estate, together with many thousands of cattle, pigs, and sheep and numerous wild animals. Belye has two or three factories, a large central dairy with a daily output of twelve hundredweight of butter, and sixty miles of narrow-gauge railway; the annual profit on its working amounts to over a hundred thousand pounds. Most of this property is now under water, and the extent of the damage done is necessarily very considerable. It can only be hoped that when the waters subside, it will be found that the actual loss is not as severe as the first estimates.

THE ESSENCE OF INSURANCE IS SECURITY.

The Sultan of Morroco left Paris on July 28 for Lyons, on his way to tour in Savoy.

Sir C. P. Ramaswami Aiyer has been appointed an Indian delegate to the League of Nations.

The sitting on July 27 of the Egyptian Chamber was suspended, as an owl, which is locally regarded as a bird of evil omen, had flown into the Chamber while a debate was in progress, and had to be expelled.

It is announced in Madrid that Don Antonia de Zayas y Beaumont, Duke of Amalfi, Spanish Minister in Bucharest, has been appointed Ambassador in Buenos Aires in succession to the Marques de Amposta.

ABYSSINIA AND THE POWERS.

The publication of the agreement concluded last December between Great Britain and Italy regarding their respective interests in Abyssinia has given rise to considerable discussion both in the Continental and British Press. Asked in the House of Commons last week what advantages, if any, had been secured for Great Britain, other than the right to construct the Tana barrage, in return for the concessions made to the Italian Government in Southern and Western Abyssinia, the spokesman of the British Government replied that the latter was not seeking advantages for Great Britain, but the development of the water supply of the Sudan and Egypt on which the future prosperity of those countries depends. The Tana barrage, he continued, is an essential element in this development, and the only object of the recently concluded agreement with Italy was to secure Italian support in subsequent negotiations with the Abyssinian Government, who alone can authorise the construction of the Tana barrage. There is no reason to doubt the literal accuracy of this explanation of the motives actuating the British Government. The time has arrived when it is essential that the flow of the head waters of the Blue Nile should be regulated in the interests of the water supply of the Sudan and Egypt, and Great Britain is naturally anxious to have all possible difficulties likely to retard the construction of a dam at Laka Tana cleared away betimes. It would be idle to deny, however, that the Anglo-Italian Agreement does raise questions that are outside the immediate consideration of the water supply of Egypt and the Sudan, and it is legitimate to consider its terms from the point of view of Abyssinia as well as of Great Britain. As far as the latter is concerned, the problem resolves itself into a delicate adjustment between the importance of the barrage and the disadvantages of being identified with a policy that has been resented in Abyssinia and may ultimately lead to trouble in that country. The terms of the bargain with Italy tend to confirm the single-mindedness with which the British Government engaged in the negotiations; for it is difficult to believe that it would deliberately have imposed such a severe strain both on British interests in Abyssinia and on Anglo-Abyssinian relations, if it had not been wholly absorbed in the urgency of the water question.

The gist of the Anglo-Italian Agreement is that, in return for Italian support and assistance at Addis Ababa with the Abyssinian Government in order to obtain for Great Britain a concession to construct a barrage at Lake Tana, together with the right to construct and maintain a motor road from the frontier of the Sudan to the barrage, the British Government undertakes (1) to support the Italian Government in obtaining from the Abyssinian Government a concession to construct and run a railway from the frontier of Eritrea to the frontier of Italian Somaliland; (2) to recognise an exclusive Italian economic influence in the west of Abyssinia and in the whole of the territory to be crossed by the Italian railway; and (3) to support with the Abyssinian Government all Italian requests for economic concessions in the above zone. These terms give rise to various considerations. In the first place, for such an obviously utilitarian object as the dam at Lake Tana, which must benefit Abyssinia, without in any way injuring her interests, was active Italian support absolutely indispensable? Secondly, even if Great Britain's dam and motor road can be said from a business point of view to be a fair offset to Italy's concession for a railway over seven hundred miles in length, exclusive economic sphere of influence, and indefinite number of unspecified concessions in the future, was it wise of the British Government to associate itself, without very specific safeguards, with Italian designs, albeit labelled economic, for all time in regard to Abyssinia? At first sight the desire to link up two colonies widely separate by means of a railway line seems natural enough on the part of Italy; but it cannot be overlooked that neither Eritrea nor Italian Somaliland is of much economic importance; they are valueless for purposes of colonisation, and are already served by sea communications. The proposed Italian railway would tap the most productive part of the country, and its immediate effect might be to attract most of the Abyssinian trade—admittedly capable of considerable expansion with the opening up of communications—which now finds its way to the Sudan. In the eyes of the Abyssinians, however, the more serious objection to the railway, apart from the bogey of an Italian occupation, is that in the event of war the line might materially favour an invading force.

Now that the Abyssinian Government has drawn the attention of the League of Nations to the Anglo-Italian Agreement, an opportunity will presumably be given to the British Government to explain its position. In the first place, no doubt, stress will be laid on the peculiar attitude of Abyssinia to the Lake Tana barrage. The importance of the work was conceded by the Emperor Menelik long ago, and successive Governments in Addis Ababa have raised no objection to preliminary investigations of the scheme; but as soon as an attempt has been made to give practical effect to the project Great Britain has been confronted with a perverse obstinacy on the part of the Abyssinians. It is unlikely that Abyssinia will find much sympathy in the League for a dog-in-the-manger policy on a matter of such vital importance as the water supply of two countries. The Lake Tana barrage is not on all fours with any other possible concession for which the Abyssinian Government may be asked: on it depends the future of Egypt and the Sudan, and this can be said of no other work in the country. The Abyssinian Government, therefore, has itself largely to blame for Great Britain's action of despair in identifying herself with Italy's aspirations, in order to overcome one obstacle in the way of the Lake Tana concession. As a member of the League of Nations, Abyssinia ought to be able to distinguish between demands that are merely to do with a desire for economic gain and a request in regard to a vital matter. Nothing in the wording of the Agreement implies that Great Britain proposes to lend herself to the support of any political schemes that Italian Fascism may be entertaining these days. If she has given away anything in return for Italian support, it is the economic advantage that she might herself expect to derive from the proximity of the Sudan to Western Abyssinia. The development of Abyssinia by Italian capital need not be prejudicial to the Abyssinians; the League is there to see that it should not be so. Abyssinia, therefore, has no valid ground of complaint against Great Britain, although, as already stated, it may be regarded as a matter for regret that the British Government has found it necessary, owing to the exasperating obstinacy of the Abyssinian authorities, to bracket the Lake Tana scheme with any and all economic plans of the Italians for Abyssinia.

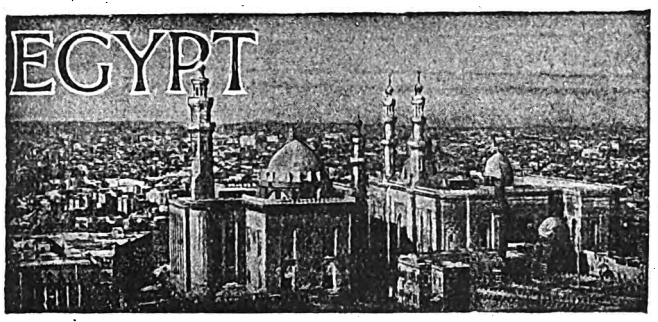
The Near and Middle East*

From Our Own Correspondents.



Cairo, July 24.

The President's Control of the Chamber.

In the interval between concluding discussion of the Finance Commission's report on the revenue side of the Budget and presentation of the Commission's comments on the expenditure side, the Chamber of Deputies during the past week has spent most of its time in asking and receiving replies to questions which had accumulated during the preceding fortnight. One of the most interesting of these interrogations was by Fikry Bey Abaza, a Nationalist deputy, who requested information regarding the resignation of Sir Geoffrey Archer and particularly concerning the dates on which Sir Geoffrey tendered his resignation in Cairo and in London. In its form and apparent intent the question exactly resembled some of the queries which the Nationalist deputies in the 1924 Parliament were constantly putting to Zaghloul Pasha and by means of which they frequently drew him into making anti-British declarations. But this time the Nationalist bait failed to secure a bite. The Prime Minister furnished the desired information, and sat down. When Fikry Bey attempted to use the occasion to make a long speech, the President of the Chamber, Zaghloul Pasha, intervened and told the deputy that he had put his question and had his answer and that now he must sit down and let the Chamber get on with other business. The bulk of the deputies were so clearly of the President's opinion that Fikry Bey immediately did as he was told, explaining half-apologetically that he had meant no harm and that the last thing he had wished to do was to embarrass the Government or to say or cause to be said anything which might interfere with relations between the British and the Egyptian Governments.

It is permissible to think that the Nationalist spokesman had expected to provoke a discussion by his question, and that his subsequent protestations of entirely pacific intentions were in the nature of masking his disappointment. But the significance of the incident did not consist in the attitude of either Fikry Bey or of the Prime Minister, but in that of Zaghloul Pasha. He showed, as he has repeatedly shown during the present session, that he is determined not to allow the deputies' privilege of asking questions to be used as a means of putting the Government into a false position where its relations with the British Government are concerned. Zaghloul Pasha has been so thoroughly criticised by British journalists during recent months that it is pleasant to be able to record that his handling of the Chamber, up to the present, has been admirable.

An Astounding Proposal.

Other questions asked in the Chamber during the week have revealed a frame of mind among deputies which can hardly be considered encouraging for the country's economic future, while one or two proposals made seem to be diametrically opposed alike to national interests and commonsense. An instance of the latter was the suggestion by Tewfik Andraous Bey that the charge for visiting the antiquities of Upper Egypt should be increased from one pound to five. The most astonishing feature of this proposal is that Andraous Bey is the deputy for Luxor, which exists very largely upon tourist traffic. It might be that the increase would not keep away many Americans or other visitors from overseas, but it would certainly be sufficient to kill the plan which the railways and hotels combined have been trying with considerable success during the past two years of issuing to residents in this country cheap all-inclusive tickets for long week-end stays at Luxor and Assouan. By means of these combined tickets a most useful subsidiary tourist traffic has been built up at the beginning and end of the season proper and, with the desire for travel and a knowledge of their own country's beauties and historic sites steadily increasing among Egyptians, the experiment promises to be even more successful in future. Making the trip four pounds dearer would be sufficient to keep away a very large number of people to whom the additional charge would be by no means an inconsiderable item in the holiday budget. The principal sufferers would be the inhabitants of Luxor and Assouan. Yet it is Luxor's chosen legislator who comes forward with the proposal. Truly Egypt is the land of paradox!

Deputies and Foreign Concerns.

Other deputies have shown a keen interest in the relations between the Egyptian Government and various foreign companies which enjoy concessions of divers kinds. Requests for information under this head have been in almost every case much as follows:—"How much does the Government take each year from such and such a foreign company, and cannot it take more?" Similarly animated questions have been put regarding licences issued for prospecting for minerals and other activities. The underlying motive, the opinion that if the foreigner is to be allowed to trade or run public services in Egypt he must be squeezed to the last possible piastre for the privilege, has been evident. Were the foreign companies competing severely with Egyptian concerns, these questions would be more understandable. But, since Egyptians to-day, as ten, twenty or forty years ago, show little ability or desire either to carry on the business of their country or to run its public services, such barbed interrogations seem decidedly misplaced. They appear to ignore the fact that—without mentioning the work of foreigners in the administration—it is to foreign capital and enterprise that Egypt owes her trams, her water, her electric light, her telephones (originally owned by a

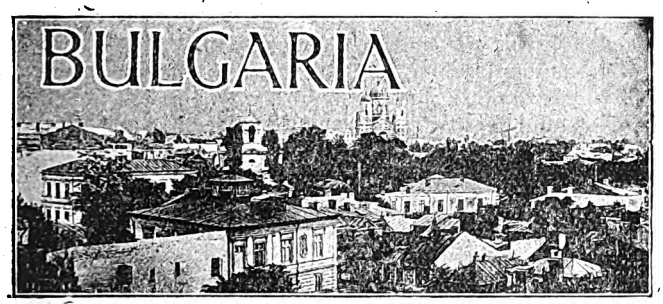
foreign company, before being taken over by the Government), her light railways and most of the other conveniences of civilisation which distinguished Cairo and other principal Egyptian cities from, say Angora, where, until lately, foreign penetration and influence had been negligible.

The Earthquake.

Although the apparent damage suffered in Cairo and Alexandria through the recent earthquake was not very great, it is now evident that many buildings were injured much more seriously than was at first supposed. The owners of some of the older blocks of flats have taken the precaution of having their properties examined by experts, and not infrequently the reports have declared that the buildings are now of doubtful safety and that another earthquake like the last would probably bring them down. This might be thought disquieting news for the tenants of those houses, but even where the landlord has given warning very few of the occupants seem inclined to move. It seems to be the general opinion, therefore, that the recent earthquake was an altogether exceptional occurrence, unlikely to be repeated. Nearly all the buildings which have been damaged are over twenty years old, constructed before the modern plan of using reinforced concrete and going down deep for the foundations, was adopted. Many of the older buildings, indeed, have practically no foundations at all. Nowadays, with steam pile-drivers to do the work, Cairo builders are putting the new six or seven storey blocks upon very firm bases.



Sofia, July 26.

Bulgaria's Foreign Policy.

The foreign policy of Bulgaria has been the subject during the last few days of long deliberations by the Parliamentary Commission of Foreign Affairs, which has indeed devoted six sessions to the matter. This meeting, which naturally took place behind closed doors, was the means of a fruitful exchange of ideas between the Cabinet and the most responsible men of the various parties. It is stated that complete agreement was reached between the Government and the Opposition, and that it was decided that the one main objective of the Bulgarian people must be peace and reconciliation with their neighbours. For, it is argued in official quarters here, Bulgaria, territorially diminished, charged with heavy obligations, disarmed and politically isolated, has no other means of improving her position than to entertain an absolute loyalty towards her neighbours, whose friendship is indispensable to her. She must reconcile herself with them. Towards such a consummation she is aspiring patiently and constantly, in spite of obstacles provided by the ill-treatment of Bulgarian minorities, by the hatreds engendered by the War and not yet dead, and of the justifiable and respectable sentiments of Bulgarians who have sought in Bulgaria a refuge from persecution, and of the inadequate Balkan conscience existing among those who direct public opinion in the Balkans. Moreover, it is officially argued, Europe to-day is animated by an absolute desire for peace, and sympathy with Bulgaria will be furthered if loyalty is shown and the temptation to take advantage of Balkan "incidents" is resisted. This pacific advice is offered particularly to those Bulgarians who, bringing into Bulgaria the memories of wrecked homes, are inclined to rely on old-fashioned methods, which to-day are ineffectual and extremely damaging to the cause of those Bulgarians still living under foreign domination, as well, of course, as to the Bulgarian State itself.

The activities of Bulgarian bands against their neighbours have been unanimously condemned by the Commission of Foreign Affairs. The Government is about to take very energetic measures against the irredentist organisations, of which the most important is the Revolutionary Macedonian Organisation. It intends to proscribe these men—by which act it will once for all dispose of the charges constantly being brought against it by Bucharest, Belgrade, and Athens. This is confirmed by a recent article in the official *Democratitcheski Sgovor*, which spoke of the wrong caused by these organisations as imposing a duty on the State for their extermination.

Bulgarian Minorities.

This does not mean, however, that Bulgaria is on the point of abandoning his minorities living in other States. On the contrary, she is interesting herself increasingly in them, and will be in a better position to defend them when she is out of range of possible reproach by Roumania, Yugoslavia, and Greece.

Under this heading the Bulgarian Press has recorded the great satisfaction that Bulgaria obtained at the conference of the League of Nations Association which was held at London from June 25 to 28 and afterwards at Aberystwyth, from June 29 to July 4. Here the Bulgarian minorities were represented by M. Trifounoff for the Dobruja, and by Professor Lubomir Miletitch, of the University of Sofia, for Macedonia. At this meeting Professor M. Ruyssen, of Geneva, who has recently made a tour of the Balkans, gave a lecture on the general situation which was in all respects a generous defence of rights of the Bulgarian minorities, and which has been widely reproduced in the Press here.

M. Ruyssen showed that all the minorities in Bulgaria, Greeks, Turks, Armenians, Russians were all perfectly content. Only one section, the Roumanians, had lodged a complaint, and this came from Roumanian students, who pretended that there were no Roumanian schools in Bulgaria, whereas in fact there are two, at Sofia, and at Gorna-Joumaya.

M. Ruyssen estimated the number of refugees in Bulgaria at 600,000, a figure which would not appear exaggerated in view of the diversity and the frequency of their emigration. Being questioned on their nationality, these refugees always told M. Ruyssen that they were Bulgarian and that they only asked to be allowed to return to their native homes.

GREECE.

Athens, July 20.

A Time of Stress.

After months of manœuvring with various candidates, who proved either unwilling to hold or unworthy of holding the office, General Pangalos has at last found a politician who will accept the position of Prime Minister and form a Cabinet. What working arrangement has been come to in the course of his conversations with M. Eftaxias is not certain, but the new Prime Minister's first duty will be to prepare for holding elections, and his second, to rescue the finances of the country from the chaos into which they have fallen—an almost impossible task, as the Treasury is empty. The stringent, or "bloody" (as the Greeks call them) economies, of which so much has been heard, have, it seems been counterbalanced by increases of pay to the Army officers and State officials. Greece is, in fact, passing through a bad financial crisis, and it was high time that her haphazard system of taxations was overhauled. One hears on all sides, and on good authority, of great distress and even starvation, especially among the refugees in Macedonia.

Salonika.

Salonika, too, is suffering a period of depression: business is stagnant, and almost all building has been suspended. It is difficult to see how the sumptuous "Mediterranean Palace" Hotel, which has just been opened there, is going to pay. The commercial traveller, who is almost the only person who stays in Salonika, cannot, as a rule, afford such a luxurious hotel, while the rare concession-hunters are not enough to keep it going. Of the three or four churches which attract tourists to Salonika, St. Demitrius is still in ruins, and St. George in the state in which the French excavators left it, after the War. What Salonika has gained in modernity, it has lost in picturesqueness and attractiveness. The minarets are gone, and the half-oriental glamour with which they invested it. The strange medley of costumes has given place to the drab uniformity of Europeanised if not European, dress. Up country, the refugees have here and there brought some of their distinctive costumes, and to the student of dialects Macedonia is now a happy hunting-ground. For within its comparatively narrow boundaries are now concentrated all the scattered dialects of Asia Minor, to track which the scholar had formerly to travel hundreds of miles. In time too, Salonika will have in its new museum (not yet completed) a centre which will draw scholars, for from the excavations which are being carried on, in Salonika itself by the Greek authorities, and up country by the British School of Athens, a great deal of important material, classical, and prehistoric is being concentrated there. However, students and archæologists will not help to keep an expensive hotel runnning, and unless it can establish a claim to be considered a health resort (which is unlikely), or the reputation of possessing a magnificent situation (the view at sunset of Mt. Olympus across the bay is worth a pilgrimage), the Mediterranean Palace Hotel has not a bright future before it.

The Epirus Affair.

The trial of the persons suspected of being implicated in the Epirus affair, has not yet been concluded. Certain of them are reported to have confessed, but the special police sent from Athens to deal with the matter instituted such a reign of terror in the district, that one can only be surprised that more did not do so. Among the unfortunate victims of this round-up of the inhabitants, were two professional brigands, who were quite innocent of complicity, and who normally would have continued to follow their profession, unmolested. To their surprise they suddenly found themselves rounded up; one was killed and the other was wounded but escaped. Another brigand, working in a different area, was so indignant at having the gendarmerie set on to him, that he wrote to the Press, saying there would be trouble, if he was not left alone.

It seems that the isolation of Epirus, and it is to be hoped, with it the brigandage may before long be a thing of the past. A contract has been signed with the Thessalian railways, by which they are allowed to extend their system by building a line from Yanina to Grevena, to connect up ultimately with the Salonika-Monastir line. Epirus will thus be brought into communication with Salonika, and a remote and difficult part of Western Macedonia will be opened up.

IRAQ.

Baghdad, July 21.

The Muharram Celebrations.

The day upon which these notes are written is an official holiday, the tenth of Muharram—a day sacred to the Shiahs, upon which the lamentations for Hussein reach their picturesque if barbarous apex, and the last is seen of the daily and nightly processions which have paraded the capital (and far more the holy cities of Kadhimain and Kerbela) for the last ten days. The Governmen of Iraq is of course officially Sunni from the King and Ministers downwards, but the concession of a holiday to the rival sect, whose following form an actual majority in the country, is natural enough. It is legitimate to hope that the serious religious bitternesses, often accompanied by bloodshed, which used to mar the Muharram celebrations, are things of the past. No Jews or Christians would now be so malicious or foolish as to deride the pageant of the Martyr: the Sunnis are tolerant if mildly scornful: and the only strife which has threatened to disturb the peace this year is among rival factions of the Shiahs themselves at Kerbela. These, probably exaggerated by rumour in Baghdad, have been serious enough to call for the presence in the Holy City of the Minister of Interior and the Director-General of Police, both of whom, as it happens, have a special knowledge of that locality. As far as present information goes, however, their visit was more precautionary than punitive. In general the increasing modernity of Baghdad—its hotels, motor traffic, cinemas, European dress, advertisement placards, electricity, ice,

and the like—cannot but render these more-than-half-barbaric celebrations more and more anachronistic; and since they are patronised by admittedly the most ignorant sections of the population, one wonders how many more years they will survive.

The New and the Old Iraq.

But it is not only in the Capital that the phenomena of progress are strangely mixed with reversion to the primitive. While Iraq's frock-coated publicists call out for modern transport and a place in the modern world, some half-naked savage in the marshes—no less and no less typically an Iraqi—shoots at a passing aeroplane and murders with stupid aimlessness Alan Cobham's mechanic, Mr. Elliott. The regret of the whole more enlightened public is a matter of course; but it does not conceal the strange propinquity of new and old, savage and civilised, education and blankest ignorance, which flourish side by side in this perplexing country. The intelligentsia of the Capital, the respectable tradesmen of the town, the frugal tribal cultivator, are not merely contemporaries and compatriots, but often the close blood-relations of marsh-men and nomad shepherds who have advanced no whit from the régime of desert patriarchy. Indeed, the simple souls who still beat their breasts and howl at the death of the Hussein, still shoot their rifles at passing aircraft, form so great a majority of the populace of Iraq that one wonders for the thousandth time at the wisdom of instituting democratic representative government upon the latest pattern. But this is no place for such reflections, to which the study of day-by-day Iraq constantly recalls the observer.

Miss Gertrude Bell.

By far the most notable, as the saddest, event of the year has been the tragically sudden death of Miss Gertrude Bell. One evening she was bathing, talking, pursuing the many interests of a crowded life: the next morning she failed to awake. Although an attack of pneumonia some months ago had alarmed her friends, yet her restless activity was still felt to imply strength, and her extreme thinness to be compatible with much vitality. Another and more sinister side was to be seen only by her intimates—the extreme fatigue which she sometimes felt, moods of deep depression, and a long period of sleeplessness. The effects of familiarity are well known: and those in daily contact socially and officially with Miss Bell could not be unconscious of her remarkable personality, but could easily forget the exceptional range of her achievements. As an archæologist, she was not among the immortals: yet she could collaborate upon equal terms with Sir William Ramsay, could contribute valuable original papers upon Arab and Sassanian architecture, could be more than respected by excavators, and could fill with conspicuous success the post of Director of Antiquities to the Iraq Government, which she held concurrently with her appointment as Oriental Secretary to the High Commissioner. As an Orientalist, she left her mark—apart from an easy command of spoken Arabic and Persian—as the brilliant and truly poetical interpreter of Hafiz, in which capacity she won the glowing admiration of the late Professor Browne. Her travel books upon Syria, Anatolia and Iraq tower above the emphemeral iottings of all but the rarest travellers: not only did she break new ground, but she recorded her journeys in a style distinguished and delightful, the product of an exceptionally able and active mind enriched with unusual experiences and a genuine culture. Her political work in Iraq, which began early in the War, and is now so abruptly terminated, is most difficult to assess. That she has been a mine of information to successive heads of the Administration, a patient interviewer, a tireless and brilliant compiler of reports, Intelligence, and dispatches, a genuine liaison officer between diverse elements of the Iraq social and political field, is a common-place. It will never be known, because these things cannot be computed, how large a part she played in formulating and directing the successive phases of our policy, in bringing local aspirations to birth, in educating as well as collecting public opinion, and in advising those on whom rested the gravest decisions. In an hour she has left it all; and only now one realises how great a figure has passed from the scene, and what a privilege they may count it who had for years been her associates.

THE WEEK AT HOME.

London, Tuesday Morning.

Emergency Regulations.

Parliament is due to rise to-morrow, but it has, of course, to reassemble each month to assent to the emergency regulations in connexion with the mining dispute. It was over these regulations that a sharp passage arose last week in the House, and, as was to be expected, the Home Secretary was the butt of a charge. Sir William Joynson-Hicks was mentioning a prosecution pending in Warwickshire in connexion with the coal lockout. Such a sense of official responsibility was shocking to the Liberal conscience of Captain Wedgwood Benn, who, mindful of the Home Secretary's recent record (his having said that his audience would be pleased to hear that certain Communists were to be arrested, his having itched to get at Mr. Saklatvala, his having said: "Look at the case of Mr. Cook; that is why I want the regulations," and so on) exclaimed impetuously that the Home Secretary was going about like some hired barrister.

To the loyal Conservative mind, however, these occasional indiscreet comments by the Home Secretary seem to cause no misgivings, although to independent observers they appear to be so unusual as to cause doubt whether Sir William's enthusiasms would not be more wisely employed in some other occupation than that of the Home Secretaryship.

The Miners' Conference.

To those who had imagined that Mr. Cook was the most uncompromising man in the miners' camp, the spectacle must have seemed strange of seeing him, last week, urging upon the miners' conference the acceptance of the Churches' Memorandum, which, of course, has already been rejected by the Government. As a matter of fact, Mr. Cook could not get his conciliatory way at once in this assembly, and the districts are to be canvassed on the question of the peace memorandum. It is expected that the result of this canvassing will be known by next Saturday, when the Miners' Executive will meet again to review the situation.

Even now, with this conciliatory spirit in evidence, it

Digitized by Google

is not easy to be hopeful about the coal position. There is such a gulf between the most compromising miner and the Government on the question, for it is fairly plain that lower wages would be more acceptable to the Federation than longer hours, proposed by Mr. Baldwin. The hoped-for return of the men to the pits, so far from gaining an increasing momentum, has of late suffered a decline. I, at any rate, can observe no real advance towards a settlement. But the country is on holiday, and is in no mood to be reminded of the gloomy side of things.

The Making of Cabinets.

This is the period when political ideas are germinated, that is to say, the time when the Conservative Party appears to be non-existent, and the Liberal and Labour Parties very much in evidence. The Liberals, for instance, are now holding their summer school, and all sorts of wise things are being uttered by men of the calibre of the two Phillips, Messrs. Kerr and Guedalla. But the suggestion that will probably cause the most discussion is one due to be considered by the Labour Party Conference in October—that the members of the next Labour Cabinet (that is, the next Cabinet!) shall be elected by the Party then in the House, and shall consist wholly of members of that Party. This proposal obviously implies a criticism of Mr. MacDonald's Cabinet, which notoriously went for the best brains in the movement, whether they were possessed by Members of Parliament or not. Obviously also, it is a stand against any kind of idea which has been recently accredited to men of the stamp of Mr. Snowden that Left Liberals might possibly strengthen a Labour régime.

But what sort of a Cabinet would this be? One wonders whether the Labour Party is of itself to choose each particular individual for a particular task, or merely to choose a number of men and let them afterwards decide who shall have, say, the Admiralty and who India. Surely the most curious results would be seen. Admittedly our present system of Cabinet making is not perfect, but there is little reason for supposing that a whole Party would select better men than a Prime Minister himself. No doubt, however, when the Labour Party really has a majority in the House, some of the most time-honoured traditions in politics will be modified.

The "Daily Herald."

At least half the fun which journalists of "capitalist" newspapers obtained from the *Daily Herald* came from the fact that it had been edited since 1922 by one of themselves, Mr. Hamilton Fyfe. This versatile journalist, whose abilities were prominent when he was in charge of the *Morning Advertiser* and of the *Daily Mirror*, has now worked four years with the *Herald*, during which time he has raised the circulation from 130,000 to 450,000. The effort has, apparently, proved a little too much; for Mr. Fyfe is resigning. It will be very interesting to see whether the Trade Unionists will again choose a man from the "enemy" Press to keep the *Herald* on those firm feet with which Mr. Fyfe has provided it.

Personally, I preferred the *Herald* in its wilder, Will Dyson days. Of late it seems to me to have fallen between the sentimental, the merely intellectual, and the perverse. But it all is a matter of taste, and certainly Mr. Fyfe's possession of the over zeal of the new convert to Socialism has done the circulation good.

The Sale of Masters.

It takes a shock to awaken the artistic conscience of this nation; the normal passage of English pictures across the Atlantic, for instance, is now so fully realised that it is overlooked. Last week, however, a Romney was sold at Christie's by Sir William Bromley-Davenport for the stupendous sum of £60,900, and it was explained that the owner had to part with the famous portrait of his great-grandmother because of the difficulty of living under the weight of modern taxaton. True, the picture was not immediately bought by an American, but it was purchased on behalf of Sir Joseph Duveen as a speculation. Its natural destiny is, therefore, the United States. English plutocrats rarely display their wealth in exhibiting great pictures, unless they be modern.

It is thought that the enormous price fetched by this Romney will still further denude our country houses of the treasures that they have proudly kept for over a century. Probably, too, the present owners have paid more in insurance than the original artist obtained for his painting.

British Forestry.

The annual report of the Forestry Commissions has just been published, and it is stated therein that during the year ended last September 15,000 acres in Great Britain were added to our woodland districts. It is interesting to note the Commissioner's remark that many parts of Britain are more suited to growing timber, three-quarters of our supplies of which we draw from abroad, than to food growing. Over 32,000,000 trees were planted last year, involving the expenditure of a quarter of a million. That this was well spent nobody who knew the aspect of our countryside, say, just after the War, and who knows it now, will seriously dispute. The tendency to build houses farther away from the towns carries with it a danger to which, happily, the Government is alive. Upon the social importance of this forestry work, in providing small holdings, an addition to the rural population, and so on, I have dwelt before. It is good to know that the policy laid down in 1919 is still steadfastly being followed. That scheme envisaged the afforestation of 150,000 acres by 1929, and it looks as though its aim may be achieved.

A Strange Eugenic Device.

The latest dodge of the health improvers, those amazingly fatiguing people, is to get the British Broadcasting Company to issue commands for physical drill which we may all observe at home. The idea is to get us out of bed early, turn on the loud speaker, and then develop our muscles in accordance with the dictates of some past athlete at Broadcasting Headquarters. I believe that the conception originated in some Liberal newspaper, but it is too hopelessly Teutonic ever to have much chance of succeeding in this country, which has not even yet taken quite kindly to the compulsory health improvement foreshadowed in Mr. Lloyd George's German Insurance Act. Men of the vegetarian type of Mr. Bernard Shaw or of the Eugenic type of Dean Inge may get a thrill when

they hear the sergeant-major's uplifting voice issuing instructions from B.B.C. headquarters, but there are many old soliders in the nation, who manage to keep reasonably fit by other means than "Physical Jerks," as to inhibit the success of this eugenic device.

Russian Cigarettes.

Plus ça change. . . . We are, it seems, going to the fond fashions prevailing before the War. For I see that Arcos, one of the Russian trading organisations, is shortly to reintroduce Russian cigarettes into this country. In the dead days before the War, these cigarettes used to be the mode with those who lunched off liqueurs and grapes, whose taste in literature was "Yellow Bookish," in a word, with the bored æsthetes. Personally, I thought they were to Virginian as Lawn Tennis is to Cricket, a poor but the best second. Of course I am talking of the real thing, which has not been imported into this country, I believe, for many years. Possibly ladies in England will create a boom in these new fancies from the land of the Soviets; and possibly they will be affected only by the "Reds."

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

August 5, 1926 (New Style).
July 23, 1926 (Old Style).
Muharram 20, 1345 A.H., of the Moslem Calendar.
Ab 25, 5685, of the Jewish Calendar.

The King of Roumania arrived at Vichy on July 27.

Sir Ronald Graham left London on July 30 for Scotland.

Princess Victor Duleep Singh has arrived in London from Paris. She is staying at Claridge's.

Mr. Norman Bentwich, Attorney General to the Government of Palestine, left London for Jerusalem on August 3.

Mr. Nevile Henderson, the Acting High Commissioner, was received in audience by the King of Egypt in Alexandria on July 27.

The Marquess and Marchioness of Reading will leave London on August 10 on a visit to Viscount Inchcape at Glenapp, where they will remain for about ten days.

Sir Maneckji and Lady Dadabhoy left London for India on July 29. They have bought Kingsnympton Hall, Kingston Hill, Surrey, which they propose to make their residence on the occasion of their visits to England.

Sir Arthur and Lady Froom, Sir Murray Trotter, and Sir Darcy Lindsay were among the passengers who left London on July 29 by the P. and O. Bombay boat express to join the Kaisar-i-Hind at Marseilles.

King Faisal of Iraq is expected to arrive in London about the middle of this month. After a short stay here he will return direct to Baghdad. It is reported from Vichy that his health has greatly improved.

The Prince of Wales received the Earl of Lytton (Governor of Bengal), Lieut.-Colonel Sir John R. Chancellor (Governor and Commander-in-Chief, Southern Rhodesia), and Sir Ronald Storrs (District Commissioner of Jerusalem) at Buckingham Palace on July 29.

Subih Beg al Nashaat, Iraq Minister of Finance, who is staying at the Hyde Park Hotel, expects to remain in London for about a fortnight. It is understood that the main objects of his visit are to discuss the questions of a new currency, of the payment of a lump sum to Turkey, and of loans. Negotiations are, we learn, so far satisfactory.

Sir Edward and Lady Manville have arrived at the Queen Hotel, Harrogate.

Prince and Princess Andrew, of Greece, have arrived at the Carlton Hotel, St. Moritz, from Milan.

The Master of Elibank and the Hon. Mrs. Gideon Murray have left 187, St. James's Court, for Scotland. They will be away until early in October.

The Maharaja of Alwar has left London for Ben Alder Forest, Inverness-shire, which he has rented for the shooting.

Sir Ronald and Lady Lindsay left Constantinople for London on July 30, where they will spend their leave before proceeding to Sir Ronald's new post at Berlin.

It is officially announced that Mr. Cecil Patrick Blackwell has been appointed to be a Puisne Judge of the High Court, Bombay, in the vacancy created by the promotion of Sir A. B. Marten to be Chief Justice.

Viscount Willingdon, Governor Designate of Canada, and Viscountess Willingdon were the guests of the Overseas Education League at dinner on August 3 at the Hotel Cecil.

A CORRECTION.

We regret to say that owing to an unfortunate error two of the legends of the photographs illustrating Sirdar Ikbal Ali Shah's article in our last issue upon "The Grand Mecca Conference" were misplaced. The explanation of the first picture of a street scene in Mecca should have applied to the second, and vice versa.

A public aeroplane service between Italy, Greece, and Turkey was inaugurated at Brindisi on August 2. Several trial flights have already taken place at regular intervals between Brindisi, Athens, and Constantinople.

The death is announced at his residence at Croydon on August 1 of the Rev. Amos Burnet, Senior Secretary of the Wesleyan Methodist Missionary Society. Mr. Burnet, who was born in 1857, and educated at the Wesleyan College, Richmond, began his ministry in India in 1881. He served twelve years in Mysore.

Book Reviews

THE FINANCIAL ADVISERS OF PERSIA.

"THE AMERICAN TASK IN PERSIA." By Arthur C. Millspaugh. Administrator-General of the Finances of Persia. (London: T. Werner, Laurie, Ltd. 15s. net.)

There is now no question that the astonishing recovery of Persia from its apparent derelict and rudderless condition in the years after the War is due in large part to that American Financial Mission which, at the instance of the dejected but never-despairing Persian people, went, under the direction of Dr. Millspaugh, to Teheran in 1922. At that time things looked by no means rosy for the Persian State, for, although the man had emerged who was to be immortal in its history, the present Shah, there appeared then few of the elements of stability and many of division. Foreign observers, both inside and outside Persia, were rarely optimistic of the future of the country, and the author of this book is by no means unfair in quoting, for example of this feeling, the statement of the Teheran Correspondent of THE NEAR EAST in October, 1922:—"Sceptics give Dr. Millspaugh three months to get to know his work, three months in getting his work in motion, three months in collecting his salary before leaving Persia in despair." In justice to our Correspondent, however, we may point out that ever since watching the American Financial Mission at work in Persia he has, like all informed observers, been constant and enthusiastic in its praise. Dr. Millspaugh and his assistants have indeed stuck to a difficult, and often very disheartening task, most manfully. Part of their work is already accomplished; perhaps an even greater work will be done when Persia enjoys a loan and the luxury of railway travel.

In this volume, which, judging from internal evidence, one imagines Dr. Millspaugh has written rather for informative purposes than for any personal pleasure, the leader of the American Mission tells the story of its efforts from the signing of his contract, in August, 1922, to the condition of affairs last year. For the details of that narrative we must refer readers to the book itself. Suffice it to say that the early apparent optimism suffered a severe strain in the summer of 1924, when all sorts of intrigues were set on foot against the American Mission, but that it refound its justification last year, when the present Shah brought about such uniformity within the kingdom and such good relations abroad as to give Dr. Millspaugh confident hope of the future. For this energetic, persevering, shrewd American has very considerable faith in the Persian people; he insists, indeed, that the financial improvement of the last three years is by no means solely due to the American Advisers.

Particularly interesting points that are touched upon by Dr. Millspaugh are the burning question of the inequality of the tariff imposed upon the goods of the Russians and that imposed upon other peoples, the still more burning question of the Caspian Fisheries, which the author treats discreetly and restrainedly but with unmistakable firmness, the centralisation of opium, and the possibility of other considerations than purely fiscal or business ones entering into the expensive construction of railways in Persia. There are, of course, a hundred other topics treated, but these strike one as having had the benefit of singularly individual and useful analysis.

On one or two subjects, however, it may be doubted whether Dr. Millspaugh's optimistic temperament or the enforced exigency of circumstances in which he wrote his book is the more responsible. For instance, he is by no means inclined, apparently, to disparage the "visions" of the Persians about the construction of a railway from their capital in the north to Mohammerah in the south, although he must be aware that this line has never even been surveyed in its entirety. Again, it is a slip which is more than unfortunate (especially in view of the fact that, in a pamphlet published last year, he should more nearly have approached the true figure) that he should have represented the revenue accruing to the Persian State from the Anglo-Persian Oil Company in regard to labour and supplies as being merely £400,000. The correct figure is something between one and a half and two and a half million pounds. No plea that this is a "personal" as opposed to an "official" record can be adequate exemption for so strange a misstatement as this.

For the rest, how Dr. Millspaugh managed to get the finances into his Mission's hands, its relations with Reza Shah Pahlavi, with the Mejliss, and with the foreign representatives and with provincial potentates, its co-operation with Belgian Advisers working for Persia—all these are described in detail. The impression is dominant that Dr. Millspaugh's aim was constant and consistently pursued; but one cannot help thinking how fortunate it was that he, unlike his predecessor, Mr. Shuster, who wished specially to create a force to collect taxes, had ready at hand as an instrument of his desires the Army and the goodwill of the present Shah. Whatever may have been the relations between the American Mission and the Shah on the subject of the Army, it is at least evident that in these two Persia possesses means whereby she may raise herself to an eminence undreamed of, alike by British and Russian statesmen of a generation ago and probably by the Persians themselves. It is hardly unfair to say that Dr. Millspaugh's studiously sober, even stilted, record of Persia's efforts in the last three years at uniformity, centralistion and stability inadequately conveys the picturesqueness of that unfinished struggle. To those who would get at the facts, however, it is indispensable; and they will be grateful to the busy author for having made the time for the writing of it

THE LURE OF THE ROAD.

"KULLER OF THE CARTS." By John Eyton (London: Arrowsmith. 7s. 6d. net.)

The hero of this book, Drew Bartle, is a small Eurasian boy who, in thought, speech and colour, has thrown back to his Indian forebears and has little in common with the rest of his family, in particular with his three elder sisters who, in tastes and appearance, are purely English. His attempts to escape from the cramping environment of European clothes, discipline and companionship, in which he is aided by the small Indian boy who gives his name to the book, are pleasingly and convincingly told. To anyone with a first-hand knowledge of the Indian countryside, the tale will prove a most attractive one: and its general atmosphere should appeal strongly to the uninstructed reader, even if he is unable to appreciate some of the finer details that are firmly and skilfully touched in by the author, who handles his subject with sympathy and knowledge.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

LORD BIRKENHEAD ON INDIA.

Lord Birkenhead's reply to Lord Olivier's request for "information on such aspects of Indian affairs as the Secretary of State might consider to be of general and immediate public interest" will strike the informed reader as a pronouncement of considerably greater importance than Lord Winterton's recent statement in the Commons. The rather facile optimism of the latter somehow tended to convey the impression that the heads of the India Office are not particularly interested in India just at present, and that a superficial survey of a somewhat tiresome subject was all that they thought it worth while to offer, and all that any reasonable person could expect to hear. It is not unlikely that the difference between the two statements was due to the different atmosphere. One who speaks on India in the Lords addresses an audience containing a large percentage of experts, while one who does the same in the Commons is in a much more fortunate position. Lord Birkenhead's speech, while not covering nearly so wide a field as that of Lord Winterton, went much more into details; and both its matter and manner emphatically refuted any impression, that may have been present in the minds of his hearers, that the Secretary of State himself has lost interest in his present duties. He spoke firmly and convincingly on the questions of the Bengali terrorists and of the malcontent Akali Sikhs: and, in his detailed survey of the communal position between Hindus and Moslems, he dealt faithfully with Lord Olivier himself and his recent ill-informed and very indiscreet excursion into the controversy. Lord Reading, later on in the sitting, added his condemnation to that of Lord Birkenhead, calling attention to the unfortunate effect that Lord Olivier's words were likely to have in India: a suggestion striking confirmation of which must at the moment have been on its way to England by cable, in the form of a plea advanced in a Calcutta court of law on behalf of a Bengali journalist charged with seditious writing. The accused's counsel said that, if the incriminating article amounted to a charge that British officialdom in India favoured the Moslem community, Lord Olivier's letter—that of no irresponsible journalist, but of a former Secretary of State for India—said exactly the same thing: and that, if his client were guilty of sedition, Lord Olivier was guilty of even grosser sedition.

Lord Birkenhead made a notable contribution to the controversy about the connexion between the Reforms and the recent overt outbreak of communal strife in India. After declaring that it was a grotesquely inadequate explanation to attribute the state of tension either to the extent or the nature of the Reforms, and asserting that, even some years before 1914, the Mohammedan had begun to realise that the political future of India was not static and that he could no longer leave that of his own community to the care of chance and of the Government, he went on to say that "one result of the democratic ideals disseminated in India, as elsewhere, as the outcome of the War—that vague and devastating post-War sentiment to which they owed so much disaster—was the realisation of the principle that majority rule had got to be reckoned with, and that in politics, as in warfare, victory tended to lie with the big battalions. To this, he was sure, was due the proselytising tendencies which both communities had so markedly shown during the past three years." Those who uphold the thesis that the present acerbation of communal bitterness is directly due to the Reforms will certainly find confirmation of their view in this passage: and not a few of them are likely to ask whether Lord Birkenhead did not mean to imply that the Reforms themselves were but the realisation of the democratic ideals disseminated outside India by "the vague and devastating post-War sentiment to which we owe so much disaster." As regards the working of the Reformed Constitution, Lord Birkenhead said that it seemed to him a strange policy for those who hold that the Reforms did not go far enough, to try to render ridiculous and futile what they had been given: and added that "the Government had always been open to conversion and conviction if and when they saw, among the many able men who took part in politics in India, a genuine desire to make the best of the existing situation." Here one finds oneself in disagreement with sentiments that, though often repeated, have always failed to carry conviction with those in India to whom they appear to be expected to appeal. The attitude of the Indian "Nationalist" politician has always been one of opposition to the Reforms: not on the ground that they do not go far enough, but on the ground that their whole scheme is unsuitable to India and unacceptable by her "leaders." If, say they, we agree to work the Reforms, we are directly contributing to the perpetuation and confirmation of a scheme that we profoundly dislike: if, on the contrary, we prove them to be unworkable, we take the best method of getting something different, and something better, in their place. This may well be a wrong-headed attitude, but it is at least an intelligible one. It is true that there does seem to be, at the moment, a quite definite intention on the part of the Indian Nationalists to agree to work the Reforms "for what they are worth"; but this intention, if in truth it does exist, is in no way due to any "change of heart" towards the Reforms, but merely to the desire, of Hindu and Mohammedan politicians alike, to "dish" their communal opponents and to prevent them from having things all their own way. Lord Reading joined effectively in the pulverisation of Lord Olivier; but, perhaps rather unfortunately, he was not content to confine himself to that task, but went on to deal with the general situation in India, and with the attitude of himself and of Indian politicians towards the Reforms—an addendum that was rather in the nature of an anticlimax.

There was one point on which none of the speakers touched: one of the first importance, on which one would have liked to hear the opinions of so forceful and dominating a personality as Lord Birkenhead. How far, one would like to know, is the European personnel of the Government of India equipped to deal with the communal crisis? Are its numbers adequate for the purpose, has its distribution been carefully planned, can it be sure of full

Digitized by Google

support in any measures that the man on the spot may find it necessary to take on his own responsibility, in the face of grave emergency? Indian officers are daily being placed in a position of greater difficulty—it must often happen that communal claims on Hindu and Moslem conflict with those of strict and impartial duty. It can be said, to the honour of both, that they have risen finely to the occasion in many recent instances; but the strain tends always to increase and, wherever it is possible to do so, measures ought to be taken to relieve Indian officials from a position that is so invidious as sometimes to become frankly intolerable.

CURRENT TOPICS.

"Racing and the Church"—A Correction.

In his letter of July 1, published in our issue of July 22, our Calcutta Correspondent wrote that the bishop was always asked, and always went, to the Turf Club race-lunch on the day of the Metropolitan Stakes. An esteemed correspondent writes to say that he feels sure that our Calcutta Correspondent is mistaken: and that, though he is correct in saying that the Bishop has been asked to the particular function mentioned, he is not correct in saying that he either accepted the invitation or attended the lunch. The writer of the correction, who speaks with authority, says that he knows that the Bishop of Calcutta "does not think it expedient or right to attend race meeting" (though it is a fact that one of his clergy used to go to the races for the special purpose of "being able to meet in a casual manner men whom he would otherwise seldom come across"): and that, holding such opinions, he would probably be pained to see our Calcutta Correspondent's statement. We hope that this correction will remove any such feeling. Doubtless our Calcutta Correspondent's error arose out of the fact that the Bishop admittedly received, although he did not accept, an invitation to the race-lunch—which, as the letter says, is "almost a function": that is, an entertainment to which persons in authority are automatically bidden as a matter of social courtesy. Or it may possibly be that some one of Dr. Westcott's predecessors held different opinions, and was not only invited—as he was bound to be, in so "official" a country as India, unless he had previously expressed a desire to the contrary—but also accepted and went.

The Future of the Rupee.

An article on the Future of the Rupee, by Professor Stanley Jevons, that appears in the *Manchester Guardian's* International Banking Half-yearly Review, contains some comments on the question of the exchange value of the rupee: which, though doubtless commonplaces to financial experts, should be of interest to those less well instructed. Discussing the various problems on which the Indian Finance Commission will shortly report, he states the arguments for and against an effective gold standard and a gold exchange standard, confessing his own preference for the former: and then proceeds to consider the rating of the rupee in terms of gold. He says that the decision to be taken by the Commission "is between stabilisation at 1s. 6d. or at 1s. 4d."; though one does not oneself believe that these two alternatives really exhaust the possibilities. Whether this is so or not, his arguments regarding the effect of a higher or lower exchange value are not affected.

Professor Jevons says that there are two arguments in favour of a 1s. 4d. rupee. The first of these is that, at that rate, the price of gold in India is comparatively high, so that, if pre-War experience in the matter of the sovereign is to be relied on, gold coins would probably remain in circulation. With a 1s. 6d. rupee, the price of gold would be more than 11 per cent. lower, and this would provide an incentive to hoarding of gold: for "the demand of the Indian people is very sensitive to changes in the relative prices of gold and silver." The second argument in favour of a 1s. 4d. rupee is its "presumed advantageous effect on commodity prices": the fact that the lowering of the rate from 1s. 6d. to 1s. 4d. would have the effect of raising prices in India in the ratio of 16 to 18, that is by 12½ per cent. This would benefit the mill owners and the exporters of raw cotton, which is the reason why the 1s. 4d. rate is specially popular in Bombay; but its advocates lose sight of the fact that the prices of all commodities, and hence the cost of living generally, must in the course of a few months rise in very nearly the same proportion, with the inevitable result of a demand for increased wages, the necessity for which the employers of labour in India do not appear to envisage. "The demand for a lower exchange rate amounts therefore to an attempt to lower the real wages of industrial workers by a legislative change which must result in a higher cost of living." It is also argued that the peasants would benefit by the higher (rupee) prices of crops; though, as they would have to pay more for their requirements of manufactured goods, and would certainly soon be faced by an enhancement of their rents, this advantage would, from the beginning, be less than it looks, and would early tend to disappear altogether. The supporters of the lower rate admit that the 1s. 6d. rupee lessens the burden of the "Home charges" by about £4 millions yearly, which would otherwise have to be raised by taxation; but it has been pointed out, with a large measure of truth, that the saving to Government is no real saving to India; for the amount of wealth which the country parts with in its exports, to secure the services represented by the Home charges, is the same: what the people save in taxation they lose in lower prices for their produce.

The net effect of these arguments appears, to the layman, to be that the actual figure at which the rupee should be stabilised, on a gold exchange basis, is not a matter of particular moment, so long as it is one that bears a fairly close relation to facts. The really important matter is stability, even if only comparative: and the avoidance of violent fluctuations such as those which occurred when the exchange value of the rupee fell from 2s. 10d. to less than 1s, 3d. in 1920-21. The writer of these notes still believes that, if it were feasible, a gold currency and a token rupee would be the best solution; but, accepting the practical impossibility of this, he is inclined to adhere to the view expressed a month ago—that the Commission will not attempt stabilisation at any exact figure, but will recognise the advantage of the rupee being allowed to fluctuate, within narrow limits, without interference.

Reported Find of Gold.

A cable announces that boring operations are in progress in connexion with a reported find of gold in Patiala State. The gold-bearing area, which is believed to be from 12 to 16 square miles in extent, is situated near Narnaul, in a small isolated portion of the very scattered territories of the State which geographically forms part of Rajputana. The existence of copper in this locality has long been known: and preliminary assays of the ore now under examination are reported to have given a result of 6 per cent. of copper together with an amount of gold varying from one to two ounces per ton. It is stated that, if the result of the boring operations justifies exploitation of the area, it is the intention of the State to invite tenders for the purpose.

The Oriental Mind.

In the course of the Lords' sitting—one cannot call it a debate—when Lord Birkenhead made his statement on India, Lord Reading used a notable phrase when he said that the mind of the Oriental was more subtle than that of the European, and that "he was not accustomed to putting in plain precise language exactly what he meant and nothing more." Lord Reading might well have added that the subtle Oriental mind delights to clothe its thoughts in ambiguous words, deliberately intended to confuse and lead astray the seeker after their exact meaning. One remembers being told by the late Dr. Spooner, who went through as thorough a course of Sanskrit, under

Digitized by Google

Indian instructors, as any European can ever have endured, that one of his Pandits once sent him a copy of Sanskrit verses: and later came to ask him what he thought of them. He began the conversation by asking Dr. Spooner if he had understood their meaning: and the latter, supposing that this was the answer expected, replied that he had. But it turned out that he was entirely mistaken, for the Pandit was deeply offended, declaring that his verses concealed so large a number of meanings—I believe Dr. Spooner said 32, though this seem almost incredible—that it was impossible that all should have been appreciated: and he left, in high dudgeon, without any attempt to pursue the subject further.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 15.

The Mad Dog of the World.

We note the questions in the House of Commons in regard to the lecture on Bolshevist activities to a private meeting of the European Association at the Saturday Club. It would be difficult, if not impossible, to avoid some public reference to facts which so intimately affect all of us here when they are revealed by unimpeachable authority, and those present (the large hall of the Club was crowded) felt something of relief when the Press published what is presumably an official version of what may be said openly. We are too near to the frontier, and too closely acquainted with "unrest," to fail to realise something of the Soviet's intentions, and the general feeling is that we are up against it again. The Third International, the revolutionary party, has taken full advantage of the clash of civilisations in China to soak that Empire with communism; steady penetration in Afghanistan, coupled with persistent propaganda, is gradually bringing the influence of Moscow to the border, and air raids from the Afghan bases are now eminently practicable. It is to be hoped that a responsible section of Indian politicians will arise to see that India is not saddled with the whole of the cost of meeting what is openly announced to be an attack on the British Empire at its weakest point; further, let there be an end of pandering to anarchy, and a firm attitude before the enemy within the gates; this is no time to trifle with those who are playing with explosives.

More Political Amenities.

Mud-slinging fills the columns of the Indian Press this week, and courtesies have reached the stage of "liar" and "you're another." Probably both true incidentally, but illuminating as to the mental responsibility of the protagonists. X. threatens to publish private letters showing the ultra-Extremists negotiating with Government with a view to taking office in the event of their being returned on a non-co-operation ticket! Y. dodges the point for a couple of columns; and, as both X and Y are lawyers, in common with practically all the political leaders in the country, the word-juggling is somewhat delightful to watch. Z. stands by and openly jeers at both. Meanwhile Bepin Chandra Pal uses his weekly article to show that they are all after the same things, power and place, and that the only real dissensions are caused by personal vanity and personal jealousies. True again, Bepin Babu; in the end common sense will prevail, even amongst Bengali politicians, and it is of no use calling upon Government to give them wisdom by legislation.

A New Howrah Bridge.

The Howrah Bridge Bill has passed at last and, fittingly and typically, the Bengal Council have accepted the cheapest and least satisfactory form for it. The Council has decided to provide another floating bridge, better than the present one but with an estimated life of only forty years; and nothing could be more appropriate in this Province. The Swarajists turned up in full force in order to do their best to defeat the Bill altogether, or at least to prevent additional taxation being thrown upon the City beyond the one-quarter per cent. recommended by the Select Committee. In the Corporation, Swarajist ridden, suggestions had been made that the City should not be taxed at all but that the whole cost should be thrown upon the Province generally and the Government of India. However, after the Home Member, Mr. James Donald, had proposed three-quarters per cent. on Calcutta taxes, the Council by a narrow majority accepted an amendment fixing half per cent. and so Calcutta local rates will become four shillings in the pound! It is difficult to think of this as a hardship. There does seem to be, however, some justification for the objections taken to the attitude of the Government of India in this matter. It is admitted that Delhi would be prepared to subscribe towards a permanent bridge, but all sections in Calcutta are unanimous in saying that this cannot be afforded. Why should this provoke a refusal to contribute at all? Such an attitude does not suggest popular Government; it is reminiscent of that unpleasant type of form master who has to think about his dignity.

Always "Kutcha."

The rains having only just begun, we have not had any of our annual house collapses; Bombay however reports eight deaths during this week from its first. This is a moderate casualty list when it is remembered that many single houses contain two, three or four hundred inhabitants, while cases are not unknown where in one rabbit warren the numbers are over the thousand mark. Luckily it is seldom that a whole house slides down, damage being usually at a corner or in a verandah. These occurrences are in their infancy. In Calcutta, with our Swarajist Corporation, we have a European City Architect, the only European in his department; last year, during his six months' leave on furlough in England, literally dozens of houses were rushed up in which the "sizes" on the sanctioned plans were cut down in every direction. There are now hundreds of instances where columns and piers are carrying from three to eight times the permissible load. Such, however, are the effects of popular Government, that the Swaraj Party in power will take no steps of any kind until after the elections at the end of this year. Even then, if experience counts for anything, the matter will again be shelved. One further touch, and the picture of irresponsibility is complete; many of these houses are the family dwelling houses of the owners, and they knowingly allow their women and children to live their shut-in lives in such buildings.

Wails from the Hills.

Government is down from the Hills, the rains having broken, and Darjeeling is left to the planters. All accounts agree that its old glories have departed: and it seems doubtful if they will ever return, unless something can be done to raise the standard of the hotels and to turn them into centres of attraction instead of nightmares of discomfort, expense, and awful catering. This does not apply to all of course, but it does to most: and, until something happens to remove the blight that rests upon them, summer visitors will go elsewhere when they do not go home. Reports from Assam tell of a good season at Shillong, the charming headquarters of Government in the Himalayan foothills. The Legislative Council there has just finished its session and, in the absence of both Swarajists and Independents, work was cleared up two days earlier than the programme, and daily sittings were abbreviated also. Fortunately, Shillong is a pleasant place in which to waste time.

Politics.

Mrs. Sarojini Naidu, the President of the Congress, has been visiting Calcutta and taking part in the anniversary ceremonies of the death of Mr. C. R. Das; she is a woman of undoubted charm and capacity, but one wonders why so many of her close connections seem to have found their physical home in Germany.

Digitized by Google

The Moslem Members of the Corporation, having taken time to reconsider their resignations, have confirmed them and asked that they should be finally accepted; still, however, the Mayor is out for peace and the Pact, and he has again succeeded in inducing the other Members to refrain from action while he endeavours to bring the wanderers back to the fold.

The Mohammedan Deputy-Mayor thought fit to raise the question of the riots in the Legislative Council: and he complained strongly of the action of the Police, alleging that, owing to the majority of Hindus in the Force, his co-religionists were badly treated in every respect. He further referred to the fact that, although the arrested of each community were almost equal in numbers, in the majority of cases Hindus were charged with less serious offences than the Mohammedans, the majority of the latter being indicted for offences akin to an attempt to murder. All parties resisted his suggestions: and the mover was cuttingly reminded by a Marwari Member that he had only succeeded in giving publicity to the peculiar handicaps under which the Moslem suffers when he breaks away from civilising influences.

To-day's Rioting in Calcutta.

At the time of writing (11 a.m.) news is through of more riots, but there is no trouble apparent in the business quarters. Barabazar however is less fortunate. It appears that the postponed Raj Rajeswari procession of the Hindus there was held to-day under police licence. The procession started from Harrison Road this morning at 7 a.m.; it had approached within a hundred yards of a Mosque, the music being discontinued as ordered, when some hundreds of Mohammedans rushed out from the mosque, seated themselves on the roadway and stopped the procession. The Police attempted to clear the thoroughfare and, although lathis came into use, the crowd was forced back to the junction of Harrison Road and Central Avenue. Here the Mohammedan mob was reinforced from the surrounding areas, and a serious fight began which eventually led to the Police opening fire. The casualties, as far as can be gathered, number about fifty, most of which have been cleared away by their friends. The procession continued its way to the immersion ghat without further obstruction, but the rioting by this time had spread to north, east and west. The Police were heavily reinforced: and now all affected areas are in charge of the patrols, both motor and lorry, of the Armed Police, Gurkhas and the Military. Some looting is reported in the Marwari areas, but the situation is fully controlled.

Men and Things.

There appears to be general satisfaction that the Rent Act will not be extended. It was passed in a moment of panic, and it has completely failed to control what is the most serious feature for the poor man in Calcutta, the rapacity of the tenant who sub-lets. This is the most expensive accommodation in the City, and the Act does nothing to control it. After the past three years of absolute slump, it will be interesting to see if the death of the Act next spring will have any effect on development.

The railway-wagon makers have been placing their case before the Tariff Board in Calcutta this week, asking for additional protective duties on imported underframes; their principal contention is that the various duties which have been already imposed at the request of other industries have in the end combined to defeat their own particular trade. The Board seemed sympathetic, and Home interests affected will probably have another handicap to face shortly.

In a land which holds a monopoly of jute, it is natural that the announcement of any substitute should attract a certain amount of interest; but "wolf" has been cried so often that at the moment jute circles are unmoved by the claims of two University Professors at Home, one an Indian, to have discovered a means of making fibre from weeds. These things generally break down long before they reach a commercial scale: and it must be admitted that there will have to be many millions behind any rival industry which embarks on a fight with King Jute.

Alan Cobham is rapidly approaching us, and is expected in Delhi to-day. His bad luck in losing his mechanic has prevented him from breaking the record between England and Calcutta; but his achievement in monsoon weather is in marked contrast to that of the gentleman who, a few years ago, left his companions to face the storms while he came on by train. Meantime the flight of two Frenchmen from Paris to Basra in 26 hours has passed almost unnoticed; this indeed is phenomenal.

The Trivial Round.

Tollygunge was looking more beautiful than ever last Saturday and the whole meeting was delightful, in spite of the fact that the bookies went home with most of the money. It is a pity that the fields are not larger; naturally everyone likes to win, but the whole spirit of a Gymkhana Meeting is spoiled if a fair number are not prepared to "have a dash for it."

Astounding is the only word to be applied to the growth of Indian interest in football. The Shield Competition has turned out to be all that was anticipated, and the various teams in Calcutta are now engaged nightly in forging their way towards the Finals. The holders have already gone out, Dalhousie having put up an unexpected victory over them: and Calcutta lost their first match rather unluckily. On special evenings there are probably over one hundred thousand people watching the games, and it is to be hoped that the sporting spirit in which all of them are being played will eventually get over the touch lines.

Congratulations are due to Carr and the team on getting over the unlucky beginning of the Third Test. The agencies should not trouble to send out accounts of why A., B., and C. think that they could run a Test Match better than the Captain; no one here is interested.

R. B. Salisbury arrives to-day with the "Quaints" from a brilliant Eastern tour, where they have played "No No Nanette" to record houses. It is a really smart achievement to run such a show without a chorus, but the "Quaints" have succeeded in doing this to everyone's satisfaction. The Amateurs are busy preparing for a month of shows after the "Quaints" leave.

The cinemas this week are running a laughter week, and certainly something of the kind is desirable to enable us to stand up to the weather we are having; we are getting a half-baked monsoon and are still looking for the three to four days' soaking which will settle things down. At the moment we do not know whether we are hot, cold, or merely horribly wet all day: and everyone is sneezing.

Markets.

The forecast of this year's jute crop has now been published by Government, and the figures confirm those received from the various districts in the previous week. The estimated area under cultivation exceeds that of the former year by about 15.7 per cent.: but, in spite of this

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

For Terms and Conditions apply to the

LADY SUPERINTENDENT, 4, King Edward Road, London, E.9.; or to

J. NEWCOMBE GOAD, Secretary, Foreigners' Branch, Mission House, 3, Bridewell Place, London, England.

Digitized by Google

both the jute and gunny markets have remained remarkably steady at the lower quotations of last week. Business generally is on the small side, but in hessians mills are taking a keen interest forward. The piece-goods markets remain completely paralysed; dealers are now taking a very serious view of the situation, which is not improved by frequent rumours of communal rioting up-country. Little change has taken place in the tea market, and prices have remained much as previously; a decrease in outturn is expected for the current month over that of last year.

In the Stock market, Government Securities have fulfilled their promise, and prices show a strengthening all round. The new loan has been quoted up to Rs.88/9 and the 1945-55 loan found buyers at Rs.108. Business in investment stocks is still restricted by the absence of sellers; the week has been significant for the inquiries for jute debentures, for which there is still an unsatisfied demand. The prospect of a bumper jute crop has made itself felt in the share market and, although an amount of profit-taking resulted on the first rise, the tone is very strong. As has been pointed out before, the present position of the trade cannot in most cases justify the present prices of the shares, which are maintained at their present levels mainly by the large amount of money awaiting investment at a time when only a small return can be obtained from Government Securities: as a result of which, investors turn to jute shares, which have a place above all other industrial investments in India. Rather more attention has been paid to coals, and especially to one or two of the favourite counters which are now quoted at slightly high rates; the cotton section continues lifeless. Tea shares have improved slightly during the past few days, but the news of the large outturn from all the tea producing centres appears to have arrested the recent liveliness in this market. There has been a fair inquiry for rubbers at current rates.

The Exchange market has been very steady but business is still limited: ready T.T. closes at 1s. 5 29-32d.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 16.

The Back Bay Development Scheme.

It is difficult for anyone outside the innermost circles to keep touch of the various committees and commissions appointed by various bodies to investigate the Bombay Development scheme: and it is still more difficult to understand what good can possibly come from their reports.

They will find, first and foremost, that there has been nothing approaching a scandal in the usual sense of that word. I believe that there has not been, except in the wildest utterances of the extremist Press, the slightest suggestion that a single contract has been given out improperly, or that a single piece of material has been improperly passed. That is a very great thing, and I believe most sincerely that it will be abundantly proved. They will find, I believe, that all the schemes were put forward solely for the advantage of Bombay: and it is in my opinion at any rate, still doubtful whether Bombay does not need the elbow room that will be provided by the great schemes of Lord Lloyd, even at the price that will eventually have to be paid for it.

And finally they will find that these schemes were based, first on a miscalculation of the ultimate value of land in Bombay, and secondly on a miscalculation of the cost of reclamation by the dredging method.

If it could be said that these miscalculations were made by any single man, or any group of men, they would no doubt be considerably to blame. But they were in fact accepted with acclamation first by Government as a whole and secondly by the Legislative Council: and all that can possibly be said is that the Government and the Council generally refused to listen to the few who considered the scheme unsound.

So that the Commissions can only apportion the blame to the whole city, and possibly make certain recommendations to the Executive for their future action; though, as the Executive has the sole responsibility for making the best of the bad situation, even this is not a very hopeful outlook.

Government by Commission.

The fact of the matter is, that there are a lot too many commissions in existence just now; and, though we all represent ourselves as impatiently awaiting the epoch-making report of the Currency Commission, I do not think that anyone really expects anything but a string of harmless platitudes. What can the Currency Commission have to say that will affect in any practical way the commercial life of India? Government by Commissions is very popular just now, and seems to be about the high water mark of democracy: and, if they were right in telling one at school that the Greeks had found it to be a universal rule that a democracy expelled a King and a tyrant evicted the democracy, it seems high time for the appearance in India of a Mussolini, who is presumably the modern equivalent of the Greek tyrant.

But, anyhow, we in India are free from the one incredible tyranny of Dora. Why on earth the British taxpayer and elector returns his candidates to Parliament without a definite undertaking from them to secure a repeal of the laws that forbid the British public to buy a drink or a cigarette when they want to, is a thing that passes the understanding of the innocent Anglo-Indian.

We may, of course, sooner or later, if we are not very careful, find that our Indian legislation has thrust the blessings of prohibition on the country; but it is probable that they will be clever enough to avoid proceeding to that extreme. It is much easier and more pleasant to abuse the Government for battening on the disgraceful drink traffic, than to explain to the humble ryot that it is to his Indian representatives that he owes the blessing of the loss of his modest daily ration of toddy.

The Rains.

The weather continues favourable: we have good rain everywhere, and particularly in the Punjab and the North of India generally, where rain is perhaps of even greater importance than anywhere else.

Miss Gertrude Bell.

No correspondent of yours in the Near or Middle East can possibly let this week pass without reference to the death of Miss Bell, the most remarkable Englishwoman since Florence Nightingale.

I first met Miss Bell very many years ago at her Yorkshire home, when Sir Valentine Chirol was also staying there: and even on my very youthful mind her power and personality made a very deep impression. Even if it had not been for the War, she would have made a lasting name for herself by her travels in Arabia and Mesopotamia and her enormous knowledge both of archæological remains and of modern conditions. But the War gave to this one woman, as it gave to many men, an opportunity to make a lasting impression on the history of the world: and how well she has used it will be recorded in the future. In Bombay I have only heard one criticism on her work: and that was based on the way in which she had completely identified herself with Arab views and Arab aspirations: and that criticsm is one that may well be laid to heart by every Englishman in the East to-day.

I do not believe for a moment that Miss Bell's sympathy with the Arab carried her too far: most of us can very well afford to go a great deal further in that direction than we do at present.

THE INDIAN MAIL.

Anglo-Indians for Sandhurst.

It is announced that Anglo-Indians are now eligible for appointment to the cadetships annually reserved at Sandhurst for Indians who desire to enter the Indian Army: and Anglo-Indian youths are invited to apply for permission to sit for the entrance examinations for Sandhurst, held in India, on the same conditions as Indian candidates.

This announcement should go some way to remove a grievance that, for a long time past, has been freely voiced by Anglo-Indians—the fact that a professional military career has not, so far, been open to them. It may, however, be doubted whether they will like the provision that practically classes them as Indians: those who speak for the community have always argued that, in the interests of the India of the future no less than in those of the community itself, it is desirable that an attempt should be made to cultivate the European, rather than the Asiatic, side of the character of those of mixed blood. It remains to be seen how many Anglo-Indian youths will take advantage of the new rule: one is obliged to confess that one does not expect that many—if, indeed, any—will do so.

Communal Rivalry.

The well-known Indian political writer, Bepin Chandra Pal, who contributes a weekly article to the *Statesman*, provides a new argument in favour of "responsive co-operation" on the part of Hindus. He writes: "Everybody knows or suspects that an attempt is being made to form a coalition between the Moslem and the European and Anglo-Indian groups in the Bengal Provincial Legislature, with the object of reviving Dyarchy through a practically Moslem Ministry under Sir Abdur Rahim. This menace can only be countered by representatives of the non-Mohammedan constituencies forming themselves into a consolidated bloc and agreeing loyally to work the present constitution for all that it may be worth, until it is constitutionally changed, and accepting the responsibilities of the Transferred Departments."

Out of evil, good may come. It would be a curious, though none the less welcome, result of the present communal tension if the Swarajists were thereby induced to drop their programme of obstruction and to consent to work the reformed constitution. So far, they have resisted the arguments of their "responsivist" friends and have refused to co-operate with them in any such undertaking; but the pressure of communal jealousy seems quite likely to induce them to change their policy, not from agreement with their "friends," but from fear of their "enemies."

The Howrah Bridge.

The Calcutta mail papers state that the report of the Select Committee on the proposed bridge over the Hoogly, to replace the existing floating bridge, was to be considered by the Bengal Legislative Council on July 6. The presentation of this report, which it was hoped would mark a further step towards the provision of the very urgently necessary bridge, seems likely to have the effect of putting it several steps further away. The Select Committee consisted of twenty members. Of these four have signed the report unconditionally: eleven have appended personal or joint minutes of dissent: and five have not signed at all. To quote the *Statesman*, all are agreed that there must be a bridge; but that is almost the extent of their agreement. The Committee's financial proposals, for the provision of a bridge to cost £1½ millions, have been generally condemned, both from within and without, as not only inadequate but unsound: and it seems inevitable that they will have to be drastically recast, even if the result of the Council debate should not be once again to throw the entire scheme into the melting pot. The two European signatories of the report express the hope that the Government of India will change its mind and agree to bear part of the cost; but the attitude of the Central Government has throughout been the same. For a permanent bridge they are willing to contribute: but for a floating bridge, which is all that the recommended capital expenditure can provide—a new make-shift to replace an old one that is already more than worn out—they will provide nothing.

INDIAN EXCHANGE.

London, July 31.

Rupee Exchange in India has hardly moved since our last report and T.T. is called 1s. 5 15-16d. in Calcutta and 1s. 5 29-32d. in Bombay, with very little inquiry for remittances by importers. In Exports the market in Bombay is quiet, but in Calcutta we learn that shippers have shown more interest in fixing exchange a little way ahead and a fair amount of 3 months' sight commercial paper has been placed at 1s. 6 7-32d. In Bombay merchants have experienced no difficulty in selling their bills for near delivery at 1s. 6 3-16d. 3 months' sight for delivery within a month.

The monsoon news continues good and forward rates are firm. T.T. has been booked in Calcutta at 1s. 6⅛d. for the end of the year, the rate is offering for December and February and we hear of business done at the same figure to the end of March.

The London market is suffering from a lack of orders, and remitters are few and far between. They have usually been able to obtain T.T. at 1s. 5 15-16d. for spot and near, but the general rate is 1s. 5 31-32d.

Some comment has been caused in Manchester circles by the cabled announcement that the Native Piece Goods Association in Calcutta had decided to suspend for three months all orders for stapled goods. It may be recalled that similar action was taken in May last year: and the decision has no doubt been agreed to in the interests of heavy holders of stocks, to assist their clearances by discouraging further arrivals for a time.

THE
EUPHRATES & TIGRIS

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

Conditions in Roumania.

Elsewhere in this issue will be found extensive extracts from the very interesting report which has just been issued on Roumania by the British Commercial Secretary at Bucharest. It cannot be said that on the whole the report is anything but encouraging, though it is only too clear that Roumania has some way to go yet before her economic position can be considered to be really satisfactory. Mr. Humphreys points out that Roumania is still in a period of transition, but that there is a gradual tendency towards normal conditions, and he lay stress on the two things necessary for this end, the stabilisation of the currency and the improvement of communications. As he very justly indicates, these factors are complementary in Roumania's case, for it has been in the main the lack of communications that has prevented the country since the War from reaping the benefit of her vast natural resources. As I mentioned last week, the country at the moment has vast stores of grain which have not been exported, while the oil industry has also been handicapped by the lack of transport facilities.

Roumania and Great Britain.

It is very satisfactory to know that the exports from the United Kingdom to Roumania continue steadily to increase, even if the trade so far makes rather a poor showing. For 1925 the value of the trade was £3,071,400 as compared with £2,857,170, and it is noteworthy that an important factor in the increase was the expansion in the trade in motor cars, which shows that our manufacturers are at last beginning to pay attention to the possibilities presented by the Balkan markets. It is not only in regard to motors that our traders hve been showing special interest in the Roumanian market. Obviously the Roumanian oilfields offer a very special field for the manufacturers of equipment, and it is gratifying to learn from the report that possibilities in this direction have not been lost sight of, though it is pointed out that this trade should be extended by every means. The report discusses the methods of doing business in Roumania that should be followed by British firms, and it may be hoped that what the writer has to say on the subject will receive due attention from our traders. He recommends that British firms should have their own selling firm registered in Roumania and their own resident representative. It is also pointed out that it is often advisable to hold stocks in Roumania so that immediate delivery can be given.

Jerusalem's Water Supply.

The interesting news is forthcoming that negotiations are in train for the formation of a company to acquire the Mavromatis concession for lighting, traction, and water supply at Jerusalem. It is only recently that Messrs. Sir John Jackson, Ltd., completed the works for a temporary water supply for Jerusalem from Ain Farah for the Palestine Government. This was clearly to be regarded as an emergency measure, and it was obvious that as soon as possible steps would be taken to carry out a scheme for a permament water supply. The scheme in view in the formation of this company will, it is estimated, take about five years to complete. It is not possible at present to obtain details regarding the scheme or the company, but it may be stated that the eminent firm of contractors mentioned above is concerned with the project.

Cotton Conference in Egypt.

The coming conference in Egypt of the International Cotton Federation, which, it is announced, will begin at Alexandria on January 24, promises to be of special interest owing to developments in regard to cotton in the last few years. Among the subjects to be discussed which particularly concern Egypt are, it is understood, the falling off in the quality of Sakel and certain other varieties the increasing damp in Egyptian cotton, and the general handling of this cotton.

No Reduction in Rubber Output.

As I indicated was probable, July 31 came and went without the imposition of a 20 per cent. reduction in the output of rubber for the current quarter. There is little doubt in my opinion that, viewing the matter on broad lines, a further restriction at this juncture would have been unfortunate, but it is by no means clear as yet that we have escaped it altogether. New factors have had to be taken into consideration in the last few weeks, and they are very far from being on the bull side. It seems certain that but for artificial support the price of rubber would have drooped below 1s. 8d. in the last week, and this would have provided the fractional difference required for renewed restriction. Now that the necessity for the support of the commodity is lacking it will not be surprising if it declines some way further, and if that is the case the share market, which has been for some time in a rather nervous condition, cannot fail to be influenced adversely. The outlook must remain uncertain until it is evident precisely what effect the coal crisis is going to have on the industrial situation generally. Brisk trade implies a demand for rubber, but the converse is also the case.

Egyptian State Railways' Coal.

A sidelight on the effects of the coal dispute is thrown by the news that while a contract for 150,000 tons of coal for the Egyptian State Railways has again come to this country, it will be American coal that will go to Egypt.

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended July 28:—

Egyptian Futures.—Sakel Contract.—Values in this market show very little change since we last wrote, trading during the various sessions has been of a very quiet character and, with the exception of a decline of 25 points after the publication of the American Bureau last Friday, and a reaction of the previous level the following day, we have had no fluctuations of importance. Whilst the majority of the factors governing the value of Sakel cotton appear at the moment to be of a "bearish" description, practically all attention at the moment is concentrated on the action of the American markets, and sentiment for the time being is likely to be mainly governed by crop reports and price movements from this source. With regard to the local trade situation, we consider that some slight signs of improvement are beginning to be manifest, spinners without committing themselves to any extent are showing increasing interest in their qualities and, should the coal strike peter out quickly as present indications tend to show, quite a brisk, if perhaps only temporary, demand might materialise, as mill stocks are undoubtedly at a low ebb. Crop reports continue to be satisfactory, and provided the next two or three weeks are favourable, the market should begin to meet heavier and consistent "hedge" selling. Generally speaking, we are against the market at the present level and see no reason to alter the policy advised in our recent reports, i.e., to get out sales on strong markets should the opportunity occur.

Upper Contract.—Quiet and featureless markets have been experienced in this department throughout the week. Values have moved closely in sympathy with the fluctuations in the American markets and show gains of 10 to 15 points since we last wrote. Crop reports continue to be favourable.

Egyptian Spot.—A better all-round inquiry has been witnessed during the past week and more business has resulted. Prices have hardened slightly. The reason for this improvement is not very clear, unless it is that a more optimistic feeling now exists in trade circles as to the probability of an early settlement of the coal dispute. Apart from this there is nothing fresh to report in the situation. Spinners generally are still very shy of entering the market until some more definite indication of the trend of events becomes apparent and the bulk of the spot sales, apart from Sudan, have again consisted of small parcels.

In Sakel, the customary Good Fair inquiry has continued, but buyers do not seem disposed to pay more than 14.00d. to 14.50d., whilst the official quotation for this cotton is 15.25d. There has been slightly more demand for Fully Good Fair (with staple) and also for the better cotton at about 18.50. Low cotton, with staple, has been in considerable request at prices ranging from 6.00d. to 11.50d.

In Upper the inquiry has again been centred on Strict Good Fair cotton at about 11.75d. Other qualities have been comparatively neglected. A fair demand for Pilion cotton at from 13.25d. to 13.75d. has been experienced and it is expected that standard boxes for this growth will shortly be available for reference in our market, a departure which should have the effect of encouraging business in this particular growth. Brown and White varieties have been entirely neglected. Sudan cottons have been distinctly popular this week, and it is in these growths that an improvement in actual business has been most marked. In the Sakel varieties the inquiry ranged from the best, at about 18.75d. down to Scarto cotton at 5.00d. In the American seed cotton it has again been the 150 to 250 on cotton which has attracted most attention.

C.i.f. business, on the whole, has continued quiet, but here and there a flicker of renewed interest has been seen and an occasional contract has resulted. Spinners' takings for the week ending 23rd inst. were returned as 7,414 bales (including Sudan). Estimated sales, 1,500 Egyptians and 3,020 bales Sudan cotton. Quotations of Sakel have been advanced 5 to 15 points, with the exception of Fine, which has been exceptionally reduced 5 points on the week. Quotations of Upper have been advanced 10 points. F.G.F. Sakel to-day 16.25d. F.G.F. Upper to-day 12.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 22, state:—

Since our last report the futures market has been quiet and fairly steady. The week's summary of price movements is as follows: Sakellaridis: July, 30.00 dollars, 0.43 dollars up; November, 29.28 dollars, unchanged; January, 28.90 dollars, 0.02 dollars up; March, 28.85 dollars, 0.30 dollars down. Ashmouni: August, 20.89 dollars, 0.30 dollars up; October, 20.91 dollars, 0.31 dollars up; December, 21.08 dollars, 0.30 dollars up.

The less favourable news from America regarding the crop there has raised a hope of higher prices, but nobody has the courage to go long while the position of the textile industry throughout the world is so poor. The demand from consuming centres shows no improvement; tentative inquiries there have been, but at prices too cheap to permit of business. In the meantime the season goes on and the world's cotton carryover into next season is going to be large enough to offset considerably any shortage of prospective crops. The July position went out to-day at about ¾ dollar premium over November, but this signifies nothing but a belated transferring of hedges.

Up country business is very slack and there is little forward buying this year; the merchants lost so heavily through early purchases last season that they are not entering into commitments ahead this season although premiums look cheap. The week's receipts amount to 15,297 krs. against export 78,987 krs.; the stock stands at 1,595,404 krs.

Spot:—There has been a fair demand during the week, but owing to the scarcity of suitable cotton the turnover is somewhat smaller. Total sales amount to about 6,000 bales, of which we estimate 3,400 bales Sakellaridis, 1,600 bales, Ashmouni 800 bales, Zagora 150 bales, Pilion and 50 bales White.

Sakellaridis:—The demand for the better grades continues, but good style cotton is not too easy to find. There has been a good turnover in low grade cottons and there is a fair amount of this cotton still remaining on the market. Business has also been done round about Fully Good Fair, but this grade is not too plentiful. As buyers are now basing their purchases on November contracts, spot differences have eased a little with the exception of Fair and below which are somewhat dearer.

Ashmouni and Zagora: These varieties have been more in favour during the week, especially from Fully Good Fair to Good, and premiums for these grades are consequently a little higher. There has also been quite a good demand for the lower grades, with a stiffening in the spot differences.

Pilion: has also been more in demand, all grades being in request, but the scarcity of this cotton has limited the turnover. Spot differences are dearer all round.

Brown: No transactions have been recorded.

White: A small business has been done at about last week's differences.

Crop 1926:—The crop news continues to be satisfactory and the plants are making normal progress from every point of view. The bolling is quite up to the average—indeed Zagora plants in many cases are showing exceptionally well up in that respect. Temperatures

Digitized by Google

have been variable and morning fogs frequent, but so far the plant has suffered no damage. Water is plentiful and within the next couple of weeks the new flood will arrive. In spite of the good supply of water, we have not come across many cases of over-watering crops.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 3.

The week preceding the August Bank Holiday might almost be described as an uninteresting one for the City. Business in the Stock markets fell off appreciably, as is customary at this time of the year, when a holiday atmosphere begins to pervade the financial world. Nevertheless, the gilt-edged market has maintained a firm tone and, indeed, the general tone of markets has not been unsatisfactory, in spite of uncertainty as to the outcome of the French crisis. Although there appears to have been no definite move towards a settlement of the coal dispute, the City still seems to take a quietly hopeful view of the outlook. Home rails moved irregularly before the announcement of the interim dividends which generally conformed with expectations. In the industrial market a feature has been the weakness of tobacco shares, which appears to be due to reports of a forthcoming "war" between the great combine and three of the outside firms—Carreras, R. and J. Hill, and Godfrey Phillips. At present there is rather a substantial bull account in most of the tobacco shares, and the rumours mentioned above, together with disappointment at the delay in the announcement of an Imperial Tobacco bonus, have together conspired to reduce speculative interest. By the exercise of its fertile imagination the Stock Exchange is already putting up the price of newspaper shares on the theory that the newspapers will gain in revenue from the advertising campaign which it is suggested will accompany the approaching tobacco war.

Ordinary Shares—A Warning.

The recent decline in the Stock Exchange prices of many ordinary industrial securities emphasises the need for care when choosing ordinary shares as a class. Some authorities go so far as to declare that ordinary shares should, by reason of their speculative character, be excluded from the lists of the average investor. This advice, however, is rather too generalised. Moreover, it ignores the recent researches of economists and others, which are claimed to have established the fact that over a period of years a well-chosen list of ordinary shares produces better results for the investor than bonds possessing a much larger margin of security, but bearing a fixed rate of interest at a moderately low figure. Apart from this, the fact remains that every case ought to be considered on its merits. But as this is obviously impossible here, the next best course is to make the most convenient grouping of all the cases.

The Investment of Savings.

If the investor has only his savings available for investment and if, as is probable, the loss of any part of them would be a serious matter, it would be advisable for him to leave ordinary shares alone. At the same time, it must be recognised that many of these investors are anxious to take up ordinary shares, but they should only do so with a full knowledge of the risks which they run. And this, of course, equally applies to the investor with larger funds available for investment. Moreover, every investor should place only a proportion of his money in ordinary shares. While great caution is called for in the purchase of ordinary shares and expert advice is indispensable the shares of certain companies of the highest possible standing, possessing strong reserves—the fruits of the prudent finance of many years—seem certainly worthy of consideration. Such shares would seem to give a significantly higher yield over a period of years than is obtainable on any other class of security. They participate in the beneficial results of skilful administration—which must be a *sine qua non* so far as the investor is concerned—to an extent unapproached by any prior form of security. It cannot be too clearly stated, however, that companies whose ordinary shares fulfil these conditions are few and far between.

In the industrial class every case has to be taken on its own merits. An ordinary share in a first-rate concern is more worthy the name of an investment than a preference share in a third-rate or a debenture in a tenth-rate concern. With very few exceptions no ordinary share in a new company is a fit subject for small investors' consideration. As regards the claims of different industries the experience of the last few eventful years has shown that those which supply the every-day needs of large numbers of people, such as brewing and tobacco, tend to be less liable to reduced earnings in time of trade depression than industries like iron and steel, which provide the raw materal for other industries, or like the cotton and clothing trades, in the product of which consumers, tend to "economise" when bad times come. Some industries, again, cater mainly for the home market, and are consequently less subject to vicissitudes of fortune than those which cater for oversea markets and are liable to be upset by trouble in any part of the world. In short, the greatest possible care has to be taken in the selection of ordinary shares if losses are to be avoided.

NEW COMPANY.

BRITISH-MEDITERRANEAN LIGHTERAGE.

The British-Mediterranean Lighterage has been registered as a private company with a capital of £5,000 in £1 shares. The objects are to adopt an agreement with T. W. Pearce, L. Patterson and the Trans-European Company to negotiate for and acquire rights and concessions for lighterage and stevedoring in the discharging and loading of merchandise in the Port of Salonika, and for that purpose to take over the benefit of and carry through negotiations now in progress between T. W. Pearce and Co., of 24 and 25, Vati Buildings, Piræus, Greece, with N. C. Petropoulos, the director of the Macedonian Stevedoring Company and Refugee Settlement Commission of Transport, Salonika District. The registered office is at 3, London Wall Buildings, E.C.

There has been a recrudescence of the floods in Roumania. The town of Galatz is again partly flooded, and at the river port of Giurgevo the warehouses and wharves are being cleared. The Danube is still rising, and miles of country along its course are under water.

NAIRN TRANSPORT COMPANY'S PERSIAN SERVICE.

The Nairn Transport Company announce the commencement of a new motor service between Baghdad and Teheran, which will be known as "The Nairn Transport Company's Persian Service." This service will carry the British Legation mails between Teheran and Baghdad.

The itinerary of this service will be as follows:—Leave Baghdad Sunday evening by train, arriving in Khanikin Monday morning; thence by car, leaving Monday morning; arriving Kermanshah Monday evening and leaving Tuesday morning; arriving Hamadan Tuesday evening and leaving Wednesday morning, arriving Teheran Wednesday afternoon. Motors will leave Teheran on Sundays arriving at Baghdad on Wednesdays. The above itinerary has been arranged in order that the passengers may connect with the Overland Desert Mail Service, Baghdad and Beyrout. This service which commenced on July 18 will be a fortnightly service until further notice, as it is anticipated that a weekly service will be inaugurated at a later date.

The fare will be £25 each way with a 10 per cent. reduction to bona fide Government officials and Army and R.A.F. officers. This price includes food and hotel accommodation and train fare between Baghdad and Teheran, and, further, it includes hotel accommodation in Baghdad for passengers making a through booking between Teheran and Beyrout or London and vice versa. Special cars available for three passengers can be supplied at two weeks' notice, the charge for which will be £65 either way.

The 75 lb. weight of baggage will be allowed free to each passenger, above which weight excess will be charged at the rate of one shilling per lb.

SHIPPING AT SULINA IN 1925.

Owing to the absence of agricultural and industrial enterprise, Sulina is of interest only to those engaged in the Danube grain trade (say a report by the British Vice-Consul at Sulina). These conditions are due to the geographical position of the town, surrounded as it is by vast tracts of swamp and reeds, and cut off from communication with the rest of Roumania except by water.

The population of Sulina numbers approximately 5,000 and the furnishing of commodities for this small number of people, who are mostly labourers, offers little opportunity for British trade. There are, therefore practically no imports brought here by ocean-going steamers except the small quantity of goods required by the European Commission of the Danube for their own use.

The low depth of water on the bar has been, and still is, a considerable source of anxiety to shipowners. The extension of the piers was completed in July, when the new channel was opened to navigation with a depth of 20 feet. This depth has been subject to fluctuations, reaching 23 feet in August and falling to 21 feet in December. A stable bar-depth of 24 feet should be obtained in 1926, when vessels will be allowed to proceed to sea drawing one foot less. Sulina would then again become the busy loading port of pre-War days, when 50 per cent. of the grain exported from the Danube was shipped at Sulina.

The advantages gained by the shipowner in using Sulina as a loading port are as follows:—(a) There is a saving of three days in the time which would be occupied by a vessel proceeding up-river to Galatz and Braila and returning to Sulina. (b) It is seldom that vessels have to wait for berths owing to port congestion. (c) The cost of lighterage, both in time and money, would be avoided when the depth of water in the river falls below the bar-depth, which is often the case, especially during the periods of flood.

In the year 1925, 825 vessels of a total tonnage of 1,396,769 tons cleared at the offices of the European Commission of the Danube. Of these 130 steamers, representing a total tonnage of 268,058, or 15·75 per cent. of the total, were British. Owing to the low bar-depth, 50 steamers of a tonnage of 131,978 tons were obliged to complete their loading operations in the roads.

The total quantity of grain exported from the Danube during the period under review was 1,175,184 tons, of which 198,340 tons, or 16.85 per cent. of the total, were loaded at Sulina.

The total quantity of timber exported on ocean-going vessels which passed through the Sulina mouth of the Danube was 694,890 tons. Of this quantity 193,758 tons were discharged at Greek ports, while 133,440 tons were sent to Egypt.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, August 6). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Imani for Port Said, Colombo, Madras, and Calcutta (London, August 7).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (London, August 11).

British India Line.—S.s. Warfield for Colombo, Madras, and Calcutta (London, August 14); s.s. Trewidden for Bombay and Karachi (London, August 21).

Cunard Line.—S.s. Tyria for Gibraltar, Algiers, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Corfu and Volo if inducement offers (Liverpool, Glasgow, Swansea, August 14); s.s. Brescia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, and Trieste (Corfu and Gruz if inducement) Glasgow August 21 (Adriatic only), Liverpool August 21, Swansea August 24).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 21); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 18).

P. and O. Line.—S.s. Devanha for Bombay (London, August 6); s.s. Nankin for Colombo, Madras, and Calcutta (London, August 21).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Cyprus, Tripoli, Mersina, Alexandretta, Beyrout, Haifa, and Jaffa (London, August 6); s.s. Cyprian Prince for Tunis Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 15).

Ellerman and Papayanni Lines.—S.s. Andalusian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool August 7, Swansea August 7); s.s. Roumelian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*. Venice, Trieste, and Fiume* (Liverpool August 7, Swansea August 11); s.s. Grodno for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 14); s.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 21); s.s. Assyrian for Gilbraltar, Malta, Patras, Piræus, Syra, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna and Constantza (Liverpool, August 28); a steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, September 2). (*Subject to sufficient inducement.) Transhipments.—Algerian parts via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

Motors and Motoring.

By G. B. B.

Alcohol as Fuel.

The subject of alcohol as a fuel has been dealt with at various time in these columns. The matter would not be referred to again, but that I have just been reading a summary of the paper on Alcohol Fuel recently read by Mr. Ross and Dr. Ormandy before the Chemical Engineers Group of the Institution of Chemical Engineers. The experience which has been gained of recent years with internal combustion engines has served to demonstrate the fallacy, prevalent a quarter of a century ago, that alcohol was a slow burning fuel, only suitable for comparatively low piston speeds. From that it was deduced that long stroke engines would be most suitable for alcohol, and that the hotter the water in the radiator was kept the better. It seems that all these ideas have had to be altered in the light of experience.

There is no need here to go into the reasons which have led to this modification other than to say that the industry owes a great deal to the Ricardo laboratories at Hove, which were the first to show that alcohol could be used at a much higher degree of compression than petrol or any other petrol mixture. For practical proof of the good qualities of alcohol fuel or of a fuel consisting of a mixture of petrol, or benzol, with alcohol one need only go to Brooklands.

The authors of the paper said that in view of its comparative cost the most reasonable opening for alcohol appears to lie in its addition in comparatively small quantities to ordinary petrols, to improve the compression which such petrols will stand. Few modern British private car engines can be run with average petrol at low speeds on a theoretically correct mixture and a spark timing that will produce the highest obtainable power. True, the alcohol to be added is a lower heat value than the petrol to which it is added, but it brings with it a number of advantages which may be expected to counterbalance this, especially on commercial vehicles.

Carburettor Tuning.

Every motorist is, or should be, aware of the fact that an over-rich mixture is a source of many troubles. Not only is too much petrol consumed, with the result that the fuel bill is to high, but there are all sorts of indirect results, such as greater wear of cylinders and pistons, increased carbon deposit, more frequent need to grind valves and seatings, and more crankcase dilution with all its attendant evils. It may be said without fear of contradiction that a mixture which contains just the right proportion of air, or which has perhaps just a suspicion of an air surplus will earn money to an owner by saving repairs. As I said, the majority, at any rate, of motorists are aware of this but how many of them act upon it? I do not suppose that five privately-owned light cars out of every ten have their carburettors so adjusted that no real improvement in the setting could be made.

Some Hints.

Adjusting a carburettor is not by any means the easiest of matters, and it is not one to be lightly undertaken by a novice armed with a pair of gas pliers, a sewing machine screwdriver and a light hammer. The following method is one that can be recommended:

Make all the adjustments, not after the engine has been standing for some hours, but after a considerable period of engine operation, so that stable heat has been established throughout the power plant. Then make the adjustment for maximum power with wide-open throttle on a grade that will hold the car at some desired speed slightly above the legal maximum. After this, select two hills, one to hold the car at approximately half speed and the other to hold it at a satisfactory low speed with a wide open throttle. Mr. D. H. Ensign, who gives this advice adds: "Then make a number of runs up each grade at the same starting speed, with small differences in throttle adjustment, noting the speed at the top and trying by adjustment to obtain the weakest mixture that will give maximum speed at the top. In a level country, the only method that can take the place of the foreging procedure is to adjust for the weakest mixture that will give a reasonable performance slightly under the best of which the car is capable."

YUGOSLAV STUDENTS IN GREAT BRITAIN.

On June 26 a party of twenty-eight Yugoslav students and professors left Liubliana with Miss F. S. Copeland, English Lecturer at the University of Serbs, Croats, and Slovenes, Liubliana, in order to visit the United Kingdom, taking Paris *en route*. The party spent over a fortnight in London, with incidental excursions to Oxford, Brighton, Charterhouse, and nearer places of interest. The original plan was for the whole party to go to Sheffield on July 12, and then for a week-end to Edinburgh; but owing to difficulties caused by the strike and the manifold attractions in and near London, only one-third decided to undertake the northward journey, rejoining the rest of the party in Paris. Serbian students have long been well-known at most of our Universities, but this was the first educational excursion of its kind from Yugoslavia to Great Britain. It is to be hoped that it will not be the last.

The party were made cordially welcome at every place they visited, and were given exceptional opportunities of seeing something of British life, customs and culture. In London they were for the most part the guests of the Catholic Council for International Relations; in Sheffield the Padley Society and Dr. and Mrs. Storr-Best were responsible for the hospitality shown to them; in Edinburgh they were the guests of the students at Masson Hall. During their stay in London the Yugoslav visitors were entertained to tea by Dr. Journitch, S.C.S., Minister in London on July 8. They were also invited by the Viscount and Viscountess Dunedin, who arranged for their visits to the Law Courts and the House of Lords; Dr. Seton-Watson; the Pioneer and Lyceum Clubs;

Mr. and Mrs. R. Braden; Mr. Leahy, Campion House; Mrs. Butterwick (at Eton College); Mr. A. Tressler (Charterhouse); Bishop Burrows (Sheffield); Professor and Mrs. Kemp-Smith (Edinburgh), and Professor and Mrs. Sampson, Royal Observatory, Edinburgh.

Smaller parties were invited by the Provisional, Pioneer, and Alpine Clubs, Endcliffe Hall, Sheffield, the Students' Union, and Women Students' Union, and the Scottish Mountaineering Club. Individual students were afforded oportunities of seeing what would interest them specially, Greenwich Observatory, the Royal College of Surgeons' Museum, town-planning at the Ministry of Health. The party that visited Sheffield was shown over the University experimental laboratories and shops, and Firth's and Walker and Hall's works, which were carrying on in spite of the strike. In Edinburgh the Slovene mountaineers enjoyed a climb on Salisbury Crags with their Scottish *confréres*. Everywhere the visitors found themselves deeply interested and impressed by a culture markedly different from that of the Continent. The party returned to Liubliana on July 23.

Company Meeting.

FURNESS WITHY AND CO.

Board's Conservative Policy.

The thirty-fifth annual general meeting of Furness Withy and Co., Ltd., was held on July 28 at the registered office of the company, Furness House, Leadenhall Street, E.C.3. Sir Frederick W. Lewis, Bart., presided.

The Secretary read the notice convening the meeting. Mr. Ralph T. Warwick, of Messrs. W. T. Walton and Son, read the auditors' report.

Sir Frederick W. Lewis, Bart., in moving the adoption of the report and accounts said:—Dealing with the balance-sheet figures, our preference and ordinary share capital remain unchanged—namely, £1,500,000 Five per Cent. preference shares and £4,000,000 ordinary shares. The general reserve fund stands at £2,000,000, which is equivalent to 50 per cent. of the ordinary share capital. Sundry creditors are down by £534,000 in comparison with last year, and, as I have mentioned on previous occasions, this item embraces a reserve for taxation, as well as provision for the ordinary share bonus which it is now proposed to pay. The profit and loss account I will deal with later.

Our assets—namely, steamship property and investments in associated shipping companies—stand at £4,781,465, a reduction of approximately £100,000 compared with last year, and Government securities and general investments, which figure at £3,706,615, are reduced by £160,000. These reductions are almost entirely due to the depreciation written off. Freeholds, dock, warehouse and wharf property, etc., remain practically at the same figure as last year, while sundry debtors show a reduction of approximately £100,000, and cash, Treasury bills and bils of exchange on hand figure at £1,221,694. Altogether, I think the balance-sheet reflects a strong and healthy position.

As regards the profit and loss account, the credit balance is slightly lower than last year's figures—namely, £523,044; but none the less I feel that, having regard to the conditions that have prevailed, the result will be regarded as satisfactory. With the balance brought forward there is an available balance of £710,303. We have already paid the usual two half-yearly dividends on the preference shares, as well as two dividends at the rate of 5 per cent. per annum upon the ordinary shares, and we have again transferred £200,000 to depreciation. We now propose to distribute a bonus of 2½ per cent. to the ordinary shareholders, making a total return of 7½ per cent. for the year, free of income-tax. The balance of £150,303 will be carried forward to the current year's accounts.

As regards the allocation to depreciation, while it is true to say that our assets are of greater value than the amount at which they stand in our books, we have always set aside a substantial amount for depreciation to enable us to replace wasting assets by new investments, and we have continued this policy in the account now before us.

One of the consequences of this conservative policy has been that, notwithstanding the development and expansion of our business, we have not required to issue any additional cash capital, either in the shape of ordinary shares, preference shares, or debentures, for nearly 20 years, and our new investments have all been financed out of our accumulated resources. Naturally, these remarks do not apply to the whole of our subsidiary companies, one or two of which have made debenture issues within that period, but in each case additional assets have been acquired of a value greater than the amount of the debentures issued, the balance being financed either out of our or the subsidiary company's own resources. As these companies gradually redeem their obligations the value of the equity resting in the ordinary shares held by the parent company naturally increases.

It has consistently been the policy of your directors as opportunity has offered to extend the scope of your company's operations by the acquisition of steamship lines engaged in trading to different parts of the world, whenever such acquisitions could be made on advantageous terms. We have during the past few years acquired the Prince Line, the Johnston Line, and the Rio Cape Line. These purchases closely followed the acquisition of a preponderating interest in Houlder Brothers and Co. and their associated groups, the whole of the share capital of the Norfolk and North American Steam Shipping Company, Ltd., the Warren Line, and practically the whole of the capital of the Neptune Steam Navigation Company, Ltd., all of which have been acquired, as I have already shown, without any increase of your company's capital.

In pursuance of this policy of extending and developing our business, your directors, in conjunction with Messrs. Morgan Grenfell and Co., entered into negotiations some months ago with Mr. P. A. S. Franklin, the President of the International Mercantile Marine Company of New Jersey, U.S.A., for the purchase from that company of the whole of the share capital of the Oceanic Steam Navigation Company, Ltd., generally known as the White Star Line, one of the most prominent passenger organisations running between this country, United States of America, and Canada, and with important interests in the Australian, New Zealand, and South African trades.

It is necessarily a very difficult matter to keep negotiations of this magnitude strictly private, and their existence became prematurely known. The disclosure created a great deal of comment in the public Press, and under the circumstances the authoritative statement, which was published a few weeks ago, was considered desirable. Therefore, you will all be aware of the existence of the negotiations, but I regret to state that it has been found impossible to arrive at a mutually satisfactory basis for the consummation of the transactions.

I am as firm a believer as ever I have been in the future of British shipping, provided the ordinary course of economic laws is not subverted. International trade must continue, and water-borne transport is still the cheapest and best known method of transport, but we are still too heavily handicapped by the past. If I knew when increased trade would overtake the glut of tonnage I should disclose seas and harbours are burdened, I do not suppose I should disclose the fact at this meeting, but the fact that I do not intend to make any prophecy must not be interpreted to mean that I am concealing the information. We can but do our best to keep abreast of the times and prepare ourselves for whatever the future holds. This we are doing according to our judgment, and if in the meantime we can continue to present results to our shareholders on a par with those which we have before us to-day, I think we should not be dissatisfied.

The resolution was carried unanimously.

British Consular Reports

II.—ROUMANIA.

The following extracts are taken from the report of Mr. R. J. E. Humphreys, Commercial Secretary to H.M. Legation, Bucharest, on economic conditions in Roumania for the year to March 30 last:—

Notwithstanding the acute monetary crisis that has depressed Roumanian trade during the second half of 1925, a steady advance has been going on in the economic and industrial conditions during the past two years. The period of transition still continues, but there is a gradual tendency towards a normal state of affairs. To attain this end two conditions are, however, essential: firstly, the stabilisation of the currency, and secondly the improvement of communications. Both are equally necessary, and in a sense the one is dependent upon the other. The natural wealth of the country is such that provided a genuine stabilisation of the currency—which is the aim of the government as well as of the financial and industrial circles—be brought about, an expansion of both import and export trade may be anticipated.

The after-War difficulties in Roumania, both as regards public and private finance, became so great and her credit sank to so low an ebb, that it appeared at one time as if the country could hardly recover. It is, therefore, all the more gratifying to be able to dwell upon the improvements that have taken place.

Immediately after the War Roumania, like many other European countries, found herself heavily in debt. At the same time some of the richest natural territory in Europe had been added to her former area. The addition of Transylvania, Bessarabia, and Bucovina, transformed Roumania from a country scarcely one-third of the size of Great Britain and Ireland, into one of approximately the same area. The population increased from 7 to 18 million. It was thought that with such natural riches Roumania would be one of the first countries to recover from the effects of the War, especially as she was one of the victorious nations. The administrative and financial difficulties were overlooked. Credit was given and goods purchased in the speculative hope that the leu would improve and each buyer would make his fortune. It took nearly four years of a falling currency to destroy this illusion, and the realisation of its futility both by creditors and debtors may be regarded as the first step towards the rehabilitation of Roumanian finances. The next step was the re-organisation of the state finances.

The Minister of Finance has publicly stated that, without recourse to foreign assistance, three successive budgets have shown an actual surplus. Moreover the interest on bonds held abroad is being met and the interior floating debt is in course of being liquidated. As a result of successful negotiations with Great Britain and America regarding the funding of war debts, a special sum has been set aside for inter-allied war debts in the budget for 1926.

As regards private debts—both pre-War and post-War—arrangements have been made with the creditors in Great Britain, France, Italy, Switzerland and the United States, and negotiations are in course with Czecho-Slovakia, Belgium, Holland and Spain. All these arrangements have been based upon those concluded with the representatives of British and French creditors respectively, and though perhaps appearing to favour the debtors rather than the creditors, they are at any rate settlements which leave the way open to renewed business, guarded by greater circumspection. (It may here be added that a law was promulgated in February, 1926, by which all outstanding private debts, for which no other arrangements have been made up to that date, are brought under either the British or French agreements, according to the higher or lower value of the currency involved. No further moratorium will be granted by the government to debtors who have debts abroad.) Several outstanding foreign claims against the Roumanian government, which for a long time have acted detrimentally to the credit interests of Roumania, have either been settled, or payment arranged for over a definite period.

Imports from United Kingdom.

The preliminary figures regarding the balance of trade in Roumania for the year under review were disappointing as they revealed a deficit of about 1 million lei (imports 30,098 million and exports 29,025 million), as against a favourable trade balance in the previous year. In the meantime it is satisfactory to note that the value of domestic exports of merchandise from the United Kingdom to Roumania continued to increase. The Board of Trade figures are:—1923 £2,772,464; 1924 £2,857,170; 1925 £3,071,400. The main items of interest to British traders are textiles (12,631 million lei), metals and other mineral products (5,949 million lei), machinery (1,993 million lei) and vehicles (mostly motor-cars), the value of the imports of which rose from 637 million lei in 1924 to 1,815 million lei in 1925.

The possibilities of business in equipment for the oil-fields have not been lost sight of by British firms, but this trade should be extended by every means. In many cases competitive countries have secured a hold in the past by cheaper prices and to a certain extent by granting credits. The position of the large oil companies is such that no fear need be entertained on the latter score. As will be seen later the production of oil has increased to such an extent that it has over-reached the transport facilities.

Expectations of a good harvest last year were but partially realised, since that of Bessarabia (as in 1924) failed almost completely owing to drought in that province. Nevertheless, the entire production over the whole country was above that of 1924 in every respect. It was believed that the export of cereals would bring into the country much needed foreign payments. Unfortunately, stocks remained unsold, resulting in the severe monetary stringency above referred to. Various reasons have been adduced for this, e.g., the fall in the prices owing to Russian competition, the high export taxes, and the mixed quality of Roumanian grain. To remedy the latter a law was projected and has been placed before Parliament to standardise wheat and erect silos for storage under official supersision.

The present exportable produce consists in the first place of agricultural products and timber and oil. Until, however, the railways are reconditioned, and new lines built to cope with the transport demands, the export trade is bound to suffer. Nevertheless a certain amount of improvement has taken place in this direction during the last year.

Whereas the budget for the years 1919-20, 1920-21,

and 1921-22 were closed with large deficits, those for the last four years were balanced with a surplus, which has been used in each case for granting supplementary and extraordinary credits, principally for the needs of the railways, the army and navy, education, building and the redemption of certain internal and external floating debts. The principal factors in producing the surplus in the last four years have been the gradual economic expansion of the country, and the perceptible improvement in the fiscal organisation. As is seen from the above figures, the revenues during the period referred to have increased progressively each year. In general the State expenditure in 1925 was kept within the estimates and the income increased. During the whole of those periods the salaries of public officials have been—and still are—insufficient for their daily needs, although they were considerably increased each year as the State revenues improved. The railways have been granted credits, but only for their most urgent and indispensable requirements, to enable them to carry on.

The budget estimates for the present year provide for the first time for the payment of inter-allied war debts. The receipts are estimated to balance expenditure in 1926 at lei 29,250,000,000 as against lei 31,750,000,000 in 1925, in which last figure, however, the railway budget was included, while it is separate in 1926. As an indication of the effort that has been made to place the State finances on a firm basis, it is of interest to note the amounts set aside for the liquidation of public debts. In the 1923 budget the sum of 2.6 milliards of lei was earmarked for this purpose; in 1924, 3.3 milliards and in 1925, 3.6 milliards, while in 1926, provision has been made for 4.6 milliards of lei.

Handicaps to British Trade.

British trade with Roumania during 1925 continued to be hampered by the instability of the currency and the fear on the part of British exporters that accounts would not be met. Another disquieting feature, in the textile trade especially, was the tendency of the courts to grant moratoria to well-known firms in difficulties.

The conviction was confirmed that until the monetary unit has been effectively stabilised there will always be some risk to merchants in giving credit to importers in Roumania, as many even of the more reputable importers continue to speculate on the exchange, in spite of their disappointing experiences three or four years ago, when they made their purchases abroad without covering themselves by buying the relative foreign exchange immediately, because they counted upon a rise in the value of the leu. On the other hand, some term of credit is unavoidable if orders are to be secured in face of competition. The interest required for bank guarantees is, however, almost prohibitive.

Terms of grace to Roumanian debtors having outstanding accounts in countries, in which no special agreement had been signed, were prolonged from term to term until the end of the year, but were abolished by a law promulgated on February 5, 1926, as mentioned in the introduction to this report. This, of course, did not affect the British agreements relative to pre-War and post-War debts.

Apart from the question of price, and in some cases in spite of their higher prices, British goods are generally preferred to others in Roumania, owing to their superior quality. In this connection it may be remarked that, in order to avoid the fraudulent sale of competitive goods as "British," it is advisable to have all British goods marked "made in Great Britain."

In the course of the year several British tea importers complained that their consignments had been rejected by the Roumanian custom authorities. The later stated that these teas did not comply with the provisions of the Roumanian law for the control of foods and beverages, acording to which tea imported must not contain more than 15 per cent. stalk. After considerable correspondence, some of the consignments were admitted, but with the proviso that this admission should not constitute a precedent.

Early in January, 1925, the law was reinforced which completely prohibits the importation of synthetic essences, only a few pure essences with no chemical components being allowed. This caused trouble to a British firm, some of whose parcels were rejected as the essences were stated to contain a preservative.

Methods of Business.

For British firms doing or intending to do large business in Roumania, the safest and most profitable method is to have their own selling firm registered there and their own resident representative to act for them. In this way their interests are better safeguarded and commission fees to local agents are avoided. In many cases, it is also advisable to hold stocks in Roumania, so that delivery can be made immediately on receipt of the order, this method being frequently adopted by competitive firms in other countries. For British exporters who do not choose to work on the above lines, it is essential to appoint a reliable local agent to look after their interests.

As regards conditions of payment, though "cash against documents" is no doubt the most satisfactory, it is difficult to carry out on account of the credits granted by other countries. It may, therefore, be suggested that short credits be granted to firms of good standing, but only against acceptance, protestable in Roumania, given in exchange for the documents. An open bill for 20 per cent. or 25 per cent. of the value of the goods should be required on receipt of the order, this bill to become protestable in Roumania if the documents are not taken up, and the necessary acceptances given within ten days of the presentation of the documents.

If the goods are sold "against documents" without any advance payment, it is also advisable to ask for an open bill for 20 per cent. or 25 per cent. of their value, which will become protestable in Roumania, as described above, should the documents not be taken up. Thus shipping and other expenses could be covered if the documents were not taken up and the goods had to be returned to England. The above conditions apply chiefly to the textile trade. Careful investigation is advisable before granting credit terms or entering into business relations, except in cases where the Roumanian importer is known to the exporter.

A complete revision of the Customs Tariff is at present under consideration, and it is stated that high protectionist duties will be introduced for the benefit of Roumanian industries. For goods not manufactured in this country, it is expected that the tariff will be doubled.

The trade between Great Britain and Roumania during the last four years is recorded as follows in the British trade statistics:—

	1922	1923	1924	1925
	£	£	£	£
Imports from United Kingdom—				
Home manufactured goods ...	2,630,491	2,772,464	2,857,170	3,071,400

Roumania have gradually increased each year, while the exports from Roumania to the United Kingdom have remained fairly steady. Competent business men are of opinion that the import of British goods is likely to increase further, as there is already a tendency to purchase in Great Britain certain articles which were formerly obtained chiefly from foreign competitors. If careful methods are adopted, such as those described earlier in this chapter, there seems to be no reason why British manufacturers should not secure a greater proportion of the Roumanian market for cotton and woollen tisues, yarns, sewing threads, jute, metals, colonial produce, spices and exotic drugs, besides many other articles.

Lack of Credits for Industries.

The Roumanian industries generally are suffering from the lack of adequate credits, with the exception of the petroleum industry, which is largely financed from abroad. The "Creditul Industrial" banking institution has greatly assisted the industries with cheap credits, but its available funds are not sufficient for the needs of all and credits are being sought abroad.

Some of the industries claim to suffer from the high export duties and the 50 per cent. super tax for transport of goods for export. They have also petitioned the government for a high protectionist import tariff on the goods they manufacture and for the abolition of all export duties on their products. This applies especially to the metallurgical industry.

Industrialists apparently place great hopes in the efficacy of the reorganisation of the Chambers of Commerce and Industry, in acordance with the law recently promulgated for this purpose, in assisting them to solve the various problems which confront them in this country. The Roumanian industries generally are trying to enlarge their trade on the Near East market, and some are granting credits for three to four months.

All the fuel used by the Roumanian industries is of home production: coal, petroleum residues, natural gas. A comparatively small amount of hydraulic electric power is also used.

The following are some of the industrial products exported by Roumania: Timber, furniture, petroleum products, hog's bristles, sheep casings, sausages, cheese, hides, leather, flour, bran, vegetable oils, alcohol, coal, charcoal, woollen blankets (coarse), cellulose, tarred cardboard, oilcakes, cement, tiles, glassware, bitumen, metallurgical products, pig-iron nails for horseshoes, soaps, caustic soda, carbonic acid, carbide, fertilisers, chemical products, glue, feathers, medicinal plants and roots, spirits, wine, champagne.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Angora Trials.

From a universal point of view the trials that are now in process at Angora much exceed in importance those which the Turkish Public Prosecutor brought to the desired end recently at Smyrna. There it was mainly an exposure of a vulgar conspiracy against the life of the Ghazi that was being made—the greater attempt to link up low criminals with all existing opponents in Turkey of the Kemalist régime ignominiously and quickly failed; but here at Angora the scene shifts from mere private assassins and post-war Progressives to members of the Committee of Union and Progress. At Smyrna the Turks may be said to have been treating with a purely local Turkish question (and, perhaps it is permissible to add, in a typically local Turkish manner), their actions were of little consequence and of no very fresh significance; but at Angora the ground to be traversed is historic. From the usual indulgence of the naive custom of the Turkish Nationalists, foreign observers have been able to learn something of approaching events from the "advance information" of Angora journalists. In that peculiar art of "priming the public" the remotest Angora publicist easily outpaces the busiest American news-getter; assuredly Mustapha Kemal Pasha has no such difficulty with the Press of his capital as has, say, General Pangalos with that of Athens. These trials at Angora are in fact an endeavour permanently to discredit the "old gang" whom the Kemalists supplanted. It was possibly a discreet move to open the ball, so to speak, with a denunciation of the four men most responsible for bringing Turkey into the Great War—Said Halim, Talaat, Enver, and Jemal Pashas; for these men are all out of reach of those whose present efforts to combine historical research with modern justice are being unflaggingly pursued. Whether the present holders of supreme power in Turkey are so convinced of their position as to be able for ever to dispense with the possibility of seeing the services utilised on behalf of Turkey of the surviving members of the Committee of Union and Progress remains to be seen. It would be strange indeed if the Angora Government were to institute legal proceedings (the phrase at least is the same in all countries) against those very persons at Constantinople without whose activities it could never have come into being.

"Eski Hamam, Eski Tas."

"It's the same old bath," says the Turkish proverb, "and the same old bath-bowl." It is difficult indeed not to be reminded of these words when reading the accounts of the Angora trials. The new Turkey—we have, as our readers know, steadfastly tried to believe it—is in process of becoming a fact; the cynical observer is nevertheless tempted to ask: Can there be a new Turkey without a new Turk? For it is obvious that in these trials the Angora Government has consciously or unconsciously adopted the old Constantinople Government as its model, just as, admittedly, the less patriotic opponents of Mustapha Kemal attempted to employ the time-honoured methods against him. Political elimination is in fact an indulgence the oxymoron in which has not, it would seem, yet been realised in Republican Turkey. It is, of course, a feature of many new countries that the respective spheres of justice and of politics are not nicely separated; and in primitive countries, indeed, such confusion is both natural and possibly beneficial. But to those who fain would see Turkey following a Western orbit the inevitable prospect of watching all these comprehensive charges and actions against opponents, whether purely political or impurely personal, redounding on their present agents' heads, is far from encouraging. No one doubts that there are in Turkey those who harbour dreams of a return of the capital to Constantinople, who are convinced that the present Republican régime is but a rapidly passing phase in the country's dwindling history, who hope that "rewards" will once more flow from a Constitutional Sultanate régime; but to suppose that the country at large can be immediately reconciled to the Kemalist régime by the simple method of their removal from active participa-

Digitized by Google

tion in Turkey's life is surely proof of the depth in which at least one foot of the statesmen at Angora is imbedded in the clay of Ottomanism.

Turkey and the League.

What is happening in Turkey to-day is, of course, Turkey's own affair, but it is somewhat ironical that coinciding with it should be made a renewal of the long discussion whether or not Turkey should join the League of Nations. In this regard Turkey is, like Mr. H. G. Wells, "advancing in all directions." She is pulled away from the League, both by Soviet Russia and, perhaps, by her deeper Asiatic instincts; and she is urged towards it, mainly, it appears, by Germany, who would be again her principal ally in Europe, and by the keener or more Europeanised intelligences among her population. However she eventually decides it is quite certain that self-interest will be the governing factor. Turkey knows that it is she as much as any body who has disturbed the placid waters of Geneva in the past; she knows, too, that the League is essentially a Western institution which finds a certain difficulty, through the medium of its Western advisers, in comprehending the Eastern mind. Soviet Russia, she may argue, has done much for the Angora Government; and a bird in the hand, even though it be an eagle from Moscow, is any day worth two doves in the bush from Geneva. Plainly she intends to take time in making the decision for which the West has long been waiting. The probability is that she will, while still outside the League and therefore possessing complete liberty of action, first consolidate her position in the East, with Persia, Afghanistan, Russia, the mandated countries and so on; and, that done, will turn her attention to any possible benefits from the West. It is conceivable, for instance, that if such questions as the future of Kars and Ardahan were at any time to crop up, the opinion of the League might be worth something to Turkey. But her geographical position, together with the apparently implacable hostility of Russia to Geneva, enables her to look more dispassionately at the League's doings than is the fortune of some other countries whose existence depends temporarily on Western financing. And from the purely European point of view, although there is much to be said for Turkey's being present in League Councils, and even for her obtaining a permanent seat on the Council as an Asiatic Power, it is to be feared that her joining at this moment would but accentuate the rivalry already in existence between certain Powers interested in the Near and Middle East, and, therefore, in trying to make either a pawn or a queen of Turkey.

Constitutionalism in Egypt.

It is perhaps not invidious to say that, of all Moslem countries, Egypt and Turkey are the most susceptible to Western influence and example. But a stranger contrast between the Cairo Government's treatment of its predecessor's acts and that of the Angora Government it would be difficult to find. Many hard words have been uttered by Egyptian Nationalists on the Ziwar régime, but, much as they loathed the actions of the anti-Zaghloulists in Egypt, the erection of a special Tribunal of Independence to deal with those whose conception of governance was based on co-operation between Great Britain and Egypt was the last thing that occurred to them. Instead, the Zaghloulists at present in power appointed a Parliamentary Committee to report on the alleged unconstitutionalism of the Ziwar Government. This report recommends that all the decree-laws passed during the Ziwar régime should, with certain specified exceptions, be declared null and void. These recommendations, moreover, were ratified almost *in toto* by the Chamber of Deputies on August 7. The position in Egypt is, of course, not on all fours with that in Turkey, and it is naturally impossible to compare the Ziwar Administration with the C.U.P. Nevertheless, an instructive parallel may be drawn between the respective attitudes towards former régimes of the Cairo and Angora Governments. Recollection of present events will not be absent if or when these two countries apply for membership to the League.

Egypt and the Hejaz.

We referred recently to the outburst caused in Egypt by the Wahhabis' treatment during the *haj* of the Cairo *mahmal*. The rights and wrongs of that unfortunate affair are still in dispute; Moslems generally are not satisfied whether the trouble really arose through the playing of music by the Egyptian escort or through its alleged state of intoxication. It seemed strange, moreover, to cause an international incident because the customary method of distributing the usual Egyptian gifts to the Hejaz tribesmen was departed from. It was manifest, however, that the indignation raging through the Egyptian Press augured ill for the success of King Ibn Saoud in his efforts to restore the Hejaz to its former prosperity and purity, and it was a characteristically wise move of the Wahhabi leader to send his eldest son, the Emir Saoud, last week to Cairo, there to combine treatment for his eyes with exposition of the Wahhabis' attitude towards the *mahmal* and the other normal gifts from the Egyptians to the Holy Land. Important developments may be expected from this meeting, for if the Wahhabis can succeed in persuading the Cairo Government not, as has been suggested, to boycott the Hejaz, a lead will have been given to other, equally perplexed Moslems, and the condition of Islam will, while King Ibn Saoud lives at any rate, have become crystallised. Obviously the talk indulged in some Egyptian papers of following in Mohammed Ali's footsteps and of driving the Wahhabis back to the Nejd is idle in the extreme, but the boycott would probably prove just as harmful to the Hejaz. For the sake of peace in Islam, therefore, it is to be hoped that the Emir Saoud will have been successful in his mission. If no Sunnis say it nay, we may yet see the Hejaz applying for membership of the League of Nations.

The Trials of Greece.

The modern student of Greek affairs is tempted to re-write Byron: "The trials of Greece, the trials of Greece, when politicians oft were hung," poetic license being claimed in the matter both of grammar and of accuracy. Seriously, however, this constant arraigning by General Pangalos of politicians and journalists has in it something of the comic—not yet of the cosmic, for there still are countries in which political opposition is not accounted a crime and freedom of the Press not a danger to the State. On August 8, M. Nicoloudis,

THE MACEDONIAN CAULDRON.

Rumour is once again far too busy with the Balkans. Amid the welter of conflicting statements it is difficult to establish with any exactitude what has actually happened on the Yugoslav-Bulgarian frontier; for, as usual, the wildest statements are bandied about in the Balkan Press, without any attempt to verify the assertions made or to adopt a dispassionate attitude in a matter of admitted gravity. It must be accepted that there was a collision between gendarmes and komitajis at a spot some ten miles from the frontier on the main road between Skoplye, in South Serbia, and Kustendil, in Bulgaria. The gendarmes suffered some casualties, and the komitajis made good their escape, presumably across the Bulgarian frontier, although it is not stated that they were pursued or indeed watched to a point at which it could be established whether they had withdrawn into Bulgaria or remained in the wild country on the Yugoslav side of the frontier. Important details of this nature do not come into consideration in such matters; in their place the Press of each country takes charge of the incident and asseveration is let loose with the object of inflaming passions on both sides. On the one hand it is asserted that the komitajis were armed and dispatched by the Bulgarian Government; on the other hand the Sofia Press declares that the whole episode is invented by the Yugoslav Government, in order to put a spoke in the wheel of the Bulgarian loan. The Belgrade Press gloats over the "ultimatum" sent to Sofia, and already sees Yugoslav armies invading a defenceless Bulgaria. The Bulgarian Press redoubles its protests of innocence, almost to the extent of persuading itself that there are not such things as komitajis. Both countries would be happier, if there were just now a General Pangalos in each, to suspend indefinitely every newspaper that refers to a frontier incident before it has been satisfactorily adjusted between the two Governments.

It is impossible for any foreign observer to regard these frontier incidents in the light in which they present themselves in the Balkans. The first impression is that they are essentially a disgrace to all concerned. Komitajis are people with a political grievance, belonging to a backward state of civilisation. Their nationality is a question of minor importance. If they operate on Yugoslav or Greek territory, their grievance must be against the authorities concerned, and the question at once arises, What is their grievance, and what steps have been taken to meet it? It is not convincing, when these incidents occur year after year, to be told that komitaji bands are formed on the other side of the frontier and are sent across by the Government concerned in furtherance of a deliberate policy of annoying or harming a neighbour. If this is the case, what is to be thought of a country which cannot protect itself against armed incursions of its territory which it has been led to expect? The recent affair in the neighbourhood of Kriva Palanka is said, in a Belgrade report, to have been between ten komitajis and some gendarmes. If Bulgaria, who has only between twenty thousand and thirty thousand troops with which to keep order in the country, is called upon to prevent komitajis from leaving their territory, her neighbours, with many more troops at their disposal, should be able to prevent those komitajis from crossing the frontier or to deal with them effectually when they have crossed. With Bulgarian responsibility we will deal presently. The situation is dangerous and ought to be brought to an end; but there would seem to be little chance of this being done, until all the parties concerned appreciate their responsibility in the matter. Even if it be granted that the komitajis are Bulgarian and live in Bulgaria, it will not be overlooked that in Bulgaria they can pose as unoffending peaceful peasants against whom the authorities are not called upon to take action; it is only when they cross the frontier that they are self-declared komitajis and can be suitably dealt with by the invaded country, if it is able, as it should be, to protect itself. Those who know anything of the military prowess of the Serbs and the high state of military efficiency that the Yugoslav Army has attained are left to wonder how the Press can be allowed to make an international incident out of the movements of a few brigands and to allege that Yugoslavia is powerless to deal with an "invasion" of ten men.

However inexplicable the attitude of the Yugoslav Press may appear, the Bulgarian Government cannot divest itself of its responsibility. It remains its duty to prevent Bulgarian subjects, and to discourage Bulgarian sympathisers in neighbouring countries, from disturbing the peace of those countries. A lax attitude in these matters has been the fashion in the past, and possibly no grave harm resulted from turning a blind eye to komitaji activities. That state of affairs, however, is now at an end: komitajis may be a nuisance to Yugoslavia and Greece; to Bulgaria they are a positive danger and something must be done to eliminate them. Time was—although the present generation of Bulgarians has probably forgotten the fact—when Bulgaria itself was seriously troubled with brigands, and the Governments of the day found it easier to ignore their existence than to suppress them. Ultimately these brigands threatened the safety of the State, and steps had to be taken against them. These were at first unsuccessful, because the sympathy of the villagers was with the brigands, or at least they were afraid to side against the latter. The end of brigandage in Bulgaria came, when the chief band were surrounded in a village and, together with the villagers who were harbouring them, were shot down to a man. From that moment brigandage and the harbouring of brigands became unpopular in Bulgaria, and within an incredibly short time no brigand existed in the country. Equally determined measures, it is to be feared, will have to be adopted towards komitajis, unless the Macedonian Organisation can be brought to recognise that its old tactics have had their day. The task before the Bulgarian Government is not an easy one, and will call for considerable courage. It would be very much simplified, to the advantage of the whole Peninsula, if the co-operation of the Yugoslav Government could be secured. The adoption of a liberal policy to the minorities in South Serbia, and in the last resort, but only after the offer of an amnesty on honourable terms, joint military action with Bulgaria against those who refused to give a trial to the new order would quickly establish peace in Macedonia and pave the way for the political and economic federation among the Balkan States which should be the goal of them all.

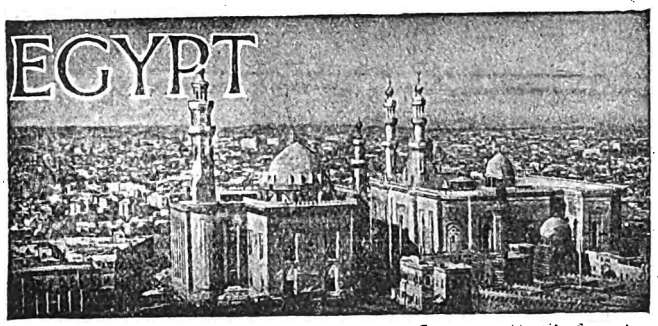
The Near and Middle East*

From Our Own Correspondents.



Cairo, July 31.

Proceedings in the Chamber.

Proceedings in the Chamber of Deputies during the week have been particularly interesting. Having disposed of the revenue side of the Budget, with the exception of the Cotton Tax and a few other items which were postponed for further discussion, the Chamber began on Sunday examination of the other side of the national accounts for the current year. After the recent Ministerial declarations of the Government's intention to effect economies, it was inevitable that the Finance Commission's report should contain numerous recommendations for curtailment of credits. And, as anticipated, Government officials were to be among the first victims of the "axe."

Initiated by Sidky Pasha, Chairman of the Chamber's Finance Commission, a tremendous offensive was launched against the *ronds de cuir*. Sidky Pasha, who should have as intimate a knowledge as anyone of conditions in the Government service, since he has held four different portfolios, including the two very important ones of Finance and the Interior, at various periods, and has been a member of many commissions and other bodies which have investigated various aspects of the service declared that "there are very many officials who do no work whatever, or at least none that is worth taking into consideration." For this, among many other reasons, the Finance Commission proposed that the Government should appoint a commission of inquiry into the whole of the administration. The Commission should be formed of the most competent and most experienced men in the country, irrespective of whether they were officials or not, and should have very wide terms of reference. Its inquiries should envisage the Government service as a whole and should not be confined to ascertaining whether the present total number of officials is excessive, but should be directed towards deciding whether the present distribution of duties is based on the best possible system, whether departments at present attached to one Ministry might not, with a view to greater efficiency, be attached to another, and even whether it might not be advisable to abolish one or more existing Ministries and substitute others. Pending completion of the Commission's report, the drawing up of which was anticipated to take at least two years, the Finance Commission recommended that the Ministry of Finance should proceed with the drafting of a new cadre, based upon the principle that reduction in pay and allowances are necessary in all grades of the service. The new cadre should be submitted to the Commission of Inquiry as part of the evidence on which it would build its recommendations. Finally, the Finance Commission proposed that all normal annual increases of pay should be withheld until the Commission of Inquiry had completed its task and that no appointments or promotions to class three or any higher class should be made except in cases of great urgency, and then only with the approval of the Council of Ministers.

Following the example of Sidky Pasha, a large number of deputies took the opportunity to abuse Government officials in hearty fashion. Never before in Egypt have the country's civil servants been handled so unmercifully. They were lazy, incompetent, careless of the public welfare, ambitious for their own interests, insolent to members of the public having business with their departments, and everything else that was bad.

The Vice-President's Speech.

In the midst of all the destructive criticism there was only one speech which deserved individual notice. This was the contribution to the debate of Wissa Wassef Bey, Vice-President of the Chamber who, not content with merely accusing Government officials as a class of being idle, ignorant and self-seeking, endeavoured to indicate the root of the trouble—the almost universal desire on the part of young Egyptians to secure Government posts in preference to beginning private practice in some profession, or going into business. Explaining the reasons—largely social—for this general ambition to secure Government employment, Wissa Bey went on to indicate some of its results. The most obvious was that the country's commerce was almost entirely in foreign hands, while the few important Egyptian enterprises which did exist had to depend for their staffs on young men who had sought, and been refused, Government posts. Even such institutions as the Banque Misr, which Egyptians regard as the first fruits of their financial and commercial renaissance, had to face the fact, said Wissa Bey, that its best employees deserted it as soon as they found an opportunity to secure Government employment. Those Egyptians who were engaged in business were woefully ignorant of the laws governing their activities. As an example, he, in his profession of lawyer, was constantly being consulted by clients who had found themselves in the Bankruptcy Court for no other reason than that they were completely ignorant of the Bankruptcy Laws. In view of all these facts, concluded Wissa Bey, how could Egyptians hope to compete with foreign banks and business houses, directed by the best and sharpest foreign brains? Not until Egyptians realised that it was disgraceful to seek comfortable Government posts when their country was in urgent need of young men who would accept the risks and struggles of commercial life would there be any meaning in the term "complete independence." Political independence would be an empty phrase so long as Egyptians remained content to be in complete economic subservience to foreigners.

Digitized by Google

To say that Wissa Bey's speech made a profound impression is to state the case mildly. The remarkable thing about it, in the minds of the deputies, was that it affirmed all those unpleasant facts which foreigners in Egypt and the Foreign Press have so consistently asserted. From foreigners such statements could be disregarded, but from the Vice-President of the Chamber, a man who had for years been associated with extreme Egyptian nationalism, these were hard sayings indeed. The Chamber's equanimity was visibly affected.

Officials' Anxiety.

The dismay in the Chamber, however, was nothing to that in the Government offices. Officials who had backed the Zaghloulist cause through thick and thin, who had shouted and demonstrated for it frequently and gone on strike for it when need be, realised that their reward from a 98 per cent. Zaghoulist Chamber of Deputies, was to be the loss of normal increases of pay to which officials are entitled and saying farewell to all hopes of promotion for an indefinite period. The fact that the deputies, so anxious for economies in the Government service, had a month earlier voted the increase of their own salaries to £E600 a year did not at all soften the intended blow to the officials.

A mass meeting of Government servants was arranged to be held in Esbekia Gardens last Tuesday evening. Among the proposals to be put to that gathering was one that all officials should go out on strike if Parliament persisted in its attitude towards the service. But that resolution was never put, nor were the indignant speeches ever read. Before the hour fixed for the meeting Fakhry Bey Abdel Nour was put up by the Wafd to move in the Chamber of Deputies an amendment to the Finance Commission's recommendations. The amendment provided not only for the payment of normal salary increases to the one-third of officials entitled to those additional emoluments who, for motives of economy, were deprived of their "rises" by the Ziwar Ministry. Fakhry Bey's proposal was carried unanimously. The officials assembled in Esbekia Gardens were instantly informed, and dispersed rejoicing, their protests in their pockets and their "tails in the air."

It is possible, even excusable, to regard the whole incident as farcical. But at least it has been amusing, and instructive. Nor can the most captious critic claim that the custom of the country has been in any way departed from.

Liubiliana, July 28.

Yugoslavia's Foreign Policy.

The Foreign Minister of the Kingdom of Serbs, Croats, and Slovenes, Dr. Nintchitch, is a man in an unenviable position. For one thing, it is in no case an easy matter to direct the foreign policy of Yugoslavia, because that Kingdom happens to occupy, geographically, a position of peculiar importance. Its main region belongs to the Balkan Peninsula, taking up its entire centre, wherefore the Kingdom of Serbs, Croats, and Slovenes is the premier Balkan State. In area it is one half of the Peninsula; and by the number of its inhabitants it is as strong as all the remaining Balkan States put together. But a wide region of the Kingdom extends beyond the Save and Danube into the Danubian plain and the Eastern Alpine region, whereby it is forced to take a part in Central European politics. This circumstance is all the more important as these territories were formerly part of the Austro-Hungarian Monarchy, and it is essential to guard them from the influence of reactionary tendencies—strongest in Hungary—which would restore the conditions obtaining prior to 1918. Finally, Yugoslavia's long south-western flank rests on the Adriatic, which, being relatively narrow, promotes, rather than impedes, contact, so that here no less than on the mainland, she borders upon Italy, a great Power with pronouncedly expansive aspirations. The result of the foregoing is that Yugoslavia's foreign policy has three facets—the Balkans; the Danubian, or Central-European, and the Adriatic or Mediterranean. Her Foreign Minister has no simple problem.

Relations with the Little Entente.

During the last month or two the question of foreign policy has come considerably to the forefront. At the end of June there was the Little Entente Conference at Bled in Slovenia. It was an important meeting. The defensive treaties between Yugoslavia, Czecho-Slovakia, and Roumania were renewed—proof conclusive of the stable foundation of the Little Entente. All matters entering into the present general situation were discussed, in so far as they bear upon the position of the Little Entente States, and it was evident that the alliance is well fitted to guard the interests of each and all of the States concerned, both as regards the European problems centred about the League of Nations, and as regards these neighbouring Danubian States on whose account the alliance was in the first place formed. Yugoslavia displayed a praiseworthy spirit of co-operation when it came to appointing a successor to Dr. Benesh in the Council of the League. First it was decided that Dr. Nintchitch should fill this important post; but Roumania expressed the wish that it should devolve upon her own Foreign Minister, Dr. Mitlineu. The Bled Conference published nothing about the manner in which this matter was settled; but privately it was said that Dr. Nintchitch had indeed voluntarily stood aside in favour of the Roumanian Foreign Minister.

With Bulgaria.

In her Balkan politics Yugoslavia has as present two problems which are decidedly in evidence just now. The Council of the League of Nations has permitted Bulgaria a Refugee Loan, with which to defray the cost of settling her unfortunate immigrant question. Yugoslavia has no objection in principle to the loan, but she wishes to see its employment conscientiously controlled; because Belgrade believes that the Macedonian komitaji bands have hitherto been supplied with means and arms from Government sources, and therefore wishes to make sure that the Refugee Loan will not be used to further the irredentist and revolutionary aspirations of Macedonian komitajis instead of being honestly employed in providing *bona fide* refugees with the means of subsistence. Yugoslavia has also proclaimed that every refugee is free to

Digitized by Google

return unless he is responsible for criminal action, and under these terms a large number of refugees have already returned to their native soil. As a matter of fact, Roumania is equally interested in this question of the Refugee Loan, and so is Greece.

With Greece.

Relations between Greece and Yugoslavia are not yet satisfactorily settled. The Treaty of Alliance could not yet be renewed, because the question of the Yugoslav zone in the Salonika harbour is not yet settled. Negotiations concerning this have latterly been resumed with fresh energy between Belgrade and Athens. Once the question of the harbour zone is settled it will be possible to re-establish that Treaty of Alliance between Yugoslavia and Greece which Dr. Nintchitch regards as the indispensable preliminary to the conclusion of a Balkan Guarantee Pact, whereby the idea of Locarno would be realised also in the Balkans.

And With Italy.

On the Adriatic side, in her relations with Italy, Yugoslavia has no allies to strengthen her position. Thus she has been compelled to conclude a series of conventions with Italy, which cannot by any means be considered advantageous to her own interests. As recently as last month the Belgrade Government submitted to the Skupshtina for ratification a series of agreements between the two States to settle their mutual administrative, commercial, cultural, and other relations. Even before the detailed discussion of the terms in Parliament, there arose a wave of public dissatisfaction over these agreements, collectively called the Nettuno Convention—from the spot where the negotiations were conducted. This popular dissatisfaction reached its height in the littoral regions, because it is feared that the convention concedes too great facilities to Italy in the Yugoslav Adriatic territories, without proper equivalent advantages to the Yugoslavs in Italy. The Skupshtina passed only that part of the treaties known as the Belgrade Convention, and the principal part, or Nettuno Convention, had to be deferred and the Skupshtina adjourned. Dr. Nintchtich has no cause to be satisfied with this result, for it is his desire at all costs to maintain friendly relations with Italy, and to carry out loyally all treaties with her, no matter how onerous the burdens they impose upon his own country. And as most of the Cabinet are on his side in this matter, and the majority in the Skupshtina as well, there is no doubt but that in the next session of the Skupshtina the Nettuno Convention will be duly ratified.

Calcutta, Delhi, Simla, Lahore, Rawal Pindi and Murree.

NOTES OF THE WEEK.

(Continued from page 152.)

Editor of the *Politeia*, and M. Angelopoulos, a writer on finance, were court-martialled under the new Press Law, and included in the defence are the now inevitable triumvirate, MM. Michalokopoulos, Kaphandaris, and Papanastassiou, and also M. Rendis and other politicians. It is perhaps hardly fair to suggest, as contrast, the sight of the Crown arraigning, say, Mr. Henderson, Editor of the *Nation*, and Mr. J. M. Keynes, a financial writer, for publishing articles complaining of the official return to the Gold Standard, with Lord Oxford, Sir John Simon, and Mr. Donald MacLean, with sibly Mr. Baldwin and Mr. MacDonald also, as witnesses for the defence. But it would really seem better if General Pangalos were, like Signor Mussolini, to do the business of suppression thoroughly while he is about it, and not periodically to give to superficial observers the impression that he is singling out political opponents for punishment. That there is something to be said for dictators at the present time in certain countries is granted; but dictation must be chronic and not spasmodic. In the months of power that remain to the President of the Greek Republic there is much yet to do, and it would be happier if he could make up his mind definitely to do it either by constitutional or by unconstitutional methods—it does not matter overmuch by which, so long as he does it. But these continual trials and banishments would appear to signify a temper which is neither sufficiently rigorous nor sufficiently generous.

THE GREEK PRESS.

The Greek Government last week decided to rescind the order suspending the *Politeia* and to allow it to resume publication together wih all the other suspended newspapers. Among the latter are the *Dimocrateia*, the organ of the Republican Union, the *Eleutheros Logos*, organ of the Progressive-Liberals, and the Communist *Rizospastis*. The *Eleutheros Logos* has been suspended for the last four months and the *Rizospastis* for much longer. These journals, as well as all others, will be subject to limitations imposed by the special Press Decree which provides a special Court to deal with Press offences, which can suspend a newspaper, and oblige the proprietors to pay the salaries of the staff during the period of suspension.

Two cases of plague at Constantinople have been notified recently.

According to the *Aksham*, of Angora, Iraq is not, owing to financial considerations, sending an Ambassador to Turkey, as it had been thought in Turkey she might, but will be represented by the British Ambassador.

It is stated from Athens that during the work of carting earth from the site of the Athenian Royal stables, which are now being demolished, it was discovered on August 5 that the area was a burial-place, dating back to classical times. Besides a portion of Themistocles' ancient wall of Athens, various archæological finds were made. Further interesting finds are expected.

BOOK REVIEW.

THE POETRY OF ASIA.

"THE SPIRIT OF ORIENTAL POETRY" By Puran Singh. (London: Kegan Paul, French, Trubner and Co., Ltd. 10s. 6d. net)

In what does poetry consist? The answer depends on our idiosyncrasy. One school deduces poetry from music, and refuses the title to thoughts unclothed in melodious rhythm. Another school contemns the rules of prosody, and deems a rugged rhapsody poetical if it be in tune with the Soul of Nature. To this category Mr. Puran Singh belongs. In his eyes the poet is "a man who can by the mere opening of his own eyes enable ours to see the Divine"; he aspires

At one brave flight to climb a high corner of the sky, casting aside the rubbish of dualistic worldly wisdom and clasping to our breasts nothing but love and song and faith.

His study of Asiatic poetry is, therefore, vitiated by excessive mysticism, and shows traces of that contempt for law which has so deplorable an influence on twentieth century art. Judged by his canons Western poetry lacks the inspiration which comes from communion with things of the spirit. Shakespeare is of the earth earthy, despite the universality of his genius; Tennyson is a great artist and nothing more: "he had not the insanity that can break off from finite measures from sheer joy." Wordsworth is a preacher rather than a poet; and Browning is a profound psychologist; but why analyze human nature when we long to transcend it? On the other hand Walt Whitman approaches Mr. Puran Singh's ideal:—

His largeness, his steady gaze on Reality, his unfailing joy of Self-Realisation, his self-contradiction in the unbalanced yet balanced insanity of the Infinite, is very refreshing. His greatest charm lies in the fact that he is neither a musician nor an artist.

The same tendency to idealism is seen in Mr. Puran Singh's analysis of Persian poetry; it leads him to read symbolism into quatrains which sing of earthly love. With Omar Khayyam, forsooth, "the fire of wine is a symbol of life, of incessant prayer, and inspiration," and a cryptic meaning attaches to Hafiz's famous Ghazal, which runs:—

When I ask, do you love me? your angry lips purse up like a flower; and you rebuke me; your words come like the sting of a bee. But your rebuke is my good-fortune, it is Heaven itself blessing me; from your ruby-red, honey-sweet lips a bitter reply but sets off your loveliness.

Mr. Puran Singh's mysticism runs riot when he deals with the Gita Govind. This pastoral drama, the work of a 12th century poet who took the pen-name Jaydev, describes the loves of Krishna and divers mundane maidens in language which to matter-of-fact Europeans seems devoid of spirituality, although it inspires religious fervour in countless Hindus. In his opinion the poetry of twentieth century India sinks far below the level attained by Jaydev. Rabindra Tagore, who has taken Europe and America by storm, finds scant favour in his eyes, but he see a close affinity between Walt Whitman's genius and that of Nazir, a native of Oudh, whose amatory strains he quotes *in extenso*. The following passage from "The Lady of Moonlight" has little in common with the "Leaves of Grass":—

That night into the garden came she, the flower-limbed Lady of the Moonlight, in her white dress interwoven with silver and gold; and as she came every thread of her garments caught fire from the moonlight; and there she stood, blazing from head to foot. That night she and I were alone; it was a night of love, of kisses, of wine-cups; it was a night of pleasure, of rippling laughter, and the old, old music of speech. . . . Just then the cock crew, the flowers woke, the day dawned, the bells rang: and she stole from my side, God knows whither.

The value of Mr. Puran Singh's book is confined to excerpts from the Gita Govind which appear for the first time in English. His bent of mind unfits him to serve as an interpreter of the spirit of Asiatic poetry.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

A LOAN FOR PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Those conversant with developments in Palestine during the past few years will remember that in 1924 the Labour Government of Mr. Ramsay MacDonald announced its approval in principle of a project for the raising of a loan of £3,000,000 by the Palestine Government under the guarantee of the British Treasury. It was understood that a resolution or bill to this effect would give Parliament an opportunity of debating the matter before the Government committed itself to the financial burden involved in the proposal. But the project came in for considerable adverse criticism both in the Press and in other quarters, and the Labour Government, suddenly called upon to fight for its existence on the issue of its Bolshevist policy which also envisaged the lending of British money in unpopular markets, wisely jettisoned a project open to many grave objections. The Conservative Government, when it entered upon office, equally wisely left matters where they were and turned its attention to African fields for the investment of British funds. One might have thought that the proposed Palestine loan would have been left in the decent obscurity of its grave.

It has, however, now been resurrected, albeit in a camouflaged form. The Colonial Office has long been considering the organisation of a substantial loan for the construction of railways, harbours and other development works in the sphere of its imperial and mandatory responsibilities in East Africa. The territories concerned —Kenya, Uganda, Tanganyika, etc.—are apparently regarded by Mr. Amery as jewels permanently set in the British imperial crown; and if, *pace* the objections of Germany, that be so, there would seem to be no obvious objection to the employment of British funds under the guarantee of the British Government in the development of those areas. But there is every objection in the world to the apparently innocent and unostentatious tacking on to the East African development loan project of a loan proposal of a totally different character, to wit a Palestine loan open in 1926 to precisely the same objections as were successfully advanced against it in 1924 and to certain additional objections which have arisen in the interval.

Parliament would be well-advised to challenge the tactics of the British Government which seeks, by coupling a proposal open to serious objections with one which is perhaps open to none, to secure a favourable verdict on the former by threatening the Legislature with the untoward consequence of the rejection of the latter. A reasoned amendment for the separation of the two projects with a view to the independent discussion of each on its merits would surely meet with support in all quarters. The future of the African "colonies" should certainly not be jeopardised by the introduction into the projected debate of the complicated issues arising out of the administration of the Arabian mandates of the "A" class. The African mandates may or may not be considered as permanent, but Palestine is in no sense of the term a British Crown Colony—although it is in fact being administered as one. The British Government holds Palestine in trust under a mandate, for whose administration it is directly responsible to the League of Nations, until such time as Palestine may be able to stand on its own legs as an independent State. That is unquestionably the theory of the "A" mandates system, and it can scarcely be gainsaid that to allow the Palestine Government to raise a loan on the guarantee of the British Government in respect of the payment of the principal and interest thereon would automatically for the period of the currency of the loan—a period of 40 years is suggested—remove that country from the effective jurisdiction of the League of Nations into that of Great Britain. The latter could not and would not guarantee such a loan except on the understanding that its mandate would

Digitized by Google

continue for the period in question. The League then would have to agree in advance that, whatever might happen and however inefficiently or disgracefully the mandate might be administered, it would not claim to discharge the functions placed upon it by the Covenant so long as the British guarantee of the loan lasted. The League might easily enough be induced to do this, but the effect of such action would be to remove Palestine from the "A" to the "B" category of mandates. Palestine would thus become a Crown Colony for the loan period and perhaps for ever. And Mr. Amery would be the last to object to such a result.

The British Parliament has, therefore, a grave responsibility to discharge. If Palestine becomes a Crown Colony there is no reason why Syria should not in due course become a French Colony; and it is inconceivable that our Parliament and the League of Nations should wittingly concur in such a *reductio ad absurdum* of the mandatory system introduced some years ago with so much appearance of goodwill towards the populations concerned. The problem is a political rather than a financial or economic one, but there are at the same time cogent financial and economic reasons to be advanced against the flotation of the suggested Palestine loan under present conditions.

Three years ago, when the project was first seriously mooted, Palestine had, owing to the lax financial administration of the early mandatory régime, found itself confronted by a situation so serious that there seemed to be no cure for its ills but the drastic remedy of a loan to enable it to pay off a considerable debt and to start afresh. It owed the British Government a sum of about £3,500,000 in respect of cash advances and the value of railways, roads, telegraph lines and other utilities handed over to it in 1920 by the British military authorities. In addition it owed a considerable sum—about £700,000, which has now increased to something like £1,000,000—to the Ottoman Public Debt bondholders, and there were various other debts outstanding, admitted or challenged. For reasons already referred to the drastic remedy of a loan was not applied at the time and the Palestine Government was forced back on the only alternative—more efficient and less extravagant financial administration. The result, so far as one is at present in a position to appreciate it, has more than justified the objections raised to the loan proposal. Whereas up to the end of March, 1924, the Palestine Government could show only a nominal surplus of some £600 of income over administrative expenditure it was able at the end of the following year to show the considerable—though still nominal—balance of £530,000 (sic) and at the end of the past financial year—as to March 31, 1926—the accumulated balances of the Government appear to have reached the respectable, thought still entirely nominal, figure of £1,200,000. Sounder methods of finance have unquestionably produced satisfactory results, and it would be a pity if excessive zeal or haste in the matter of developments for which the country is scarcely ripe should be allowed to increase the financial commitments of the Government before it is in a position to provide for them.

If the balance sheet figure of £1,200,000 is to be taken seriously as representing the savings of the Palestine Government out of revenue over and above the actual administrative expenditure incurred up to the end of March, 1926, it is clear that the Government is so much to the good in its uphill task of meeting an actual outstanding debt of not less than £5,000,000. A sum of approximately £1,000,000 of that debt, representing the amount due in respect of the past five or six years to the Ottoman Public Debt bondholders, has already been funded for payment in 20 equal annual instalments, and it may be assumed that the first instalment has been taken into account in arriving at the balance referred to. For the current year a sum of about £200,000 will be payable on the same account and a similar sum for each of the following eighteen years. Assuming an annual administrative saving of say £400,000, it would not seem altogether unreasonable to ask of the Palestine Government to fund the remainder of its debt for payment—without interest be it noted—in say 20 annual instalments of £200,000 each, the bulk of which would be payable to the British Government. The debt position of Palestine would thus be regularised in accordance with the best precedents and the British Government would further be well within its rights as a generous contributor to the current cost of the Palestine Administration in asking that its annual payment of some £700,000 on account of the defence of the country should be progressively reduced each year by say £100,000 through the acceptance of that proportion of the military burden by the local government.

The primary object of the mandatory Power should be to raise its charge at the earliest possible moment on to a plane of financial and economic independence, as, for instance, has been done in Egypt. And it will be seen that the British Government, by forcing Palestine two years ago to adopt stringent measures of administrative economy, has placed it in a position to begin the current financial year with a cash balance of £1,200,000 and a prospect of adding to that balance annually at the rate of, say, £400,000. On the other side of the account it would, under the scheme here envisaged, have to pay to to its creditors a sum of £400,000 per annum over a period of 20 years in final liquidation of its debts, and it would year by year have to assume responsibility for a greater proportion of the cost of its defence. Within a period of ten years at the outside Palestine would actually be meeting out of its own resources the whole cost of its Administration, including defence. In twenty years it would also be clear of all debt, and then the League of Nations might be justified in conferring on it the substance of independence which is both the legitimate goal of Palestine nationalists and the *raison d'être* of the Mandate system. To encourage or to allow Palestine at the present moment to double its debts is to ensure its political subordination for double the period to which it is already committed, and to perpetuate for a similar period a burden of which the hard-pressed British taxpayer would be glad to be rid. Moreover it is premature to consider the grandiose scheme of a modern harbour at Haifa—the *fons et origo* of the loan project—until it has been ascertained whether that port can be the terminus of a practicable railway.—I am, etc.,

PERSONAL AND GENERAL

TO-DAY

August 12, 1926 (New Style).
July 30, 1926 (Old Style).
Saphar 2, 1345 A.H., of the Moslem Calendar.
Ellul 2, 5685, of the Jewish Calendar.

The Crown Prince of Kapurthala arrived last week at Claridge's Hotel.

The Maharaja of Rajpipla and his suite arrived last week at the Palace Hôtel, Biarritz.

The Maharaja of Alwar was the guest of the Governor-General of the Irish Free State at the Viceregal Lodge for the Dublin Horse Show.

The Rev. F. N Didsbury, who has been working in India for twenty years, has been appointed vicar of St. George's, Halifax.

The ex-King of Greece and Queen Elizabeth are the guests of Sir Harold and Lady Bowden at Bestwood Park, Nottinghamshire, this week.

The Master of Elibank and the Hon. Mrs. Gideon Murray have left London for Scotland, and will be at Elibank, Walkerburn, till October.

M. Henri de Jouvenel, Syrian High Commissioner, who is at present in Paris, will sail from France for Syria on August 20, where he has agreed to remain until his term of office ends in October.

The Right Hon. Sir Ronald and Lady Lindsay, who had been making a brief stay in London on their return from the British Embassy, Constantinople, left the Carlton Hotel last week for the country.

Mr. Lovat George Fraser, of The White House, Wellington Street, Slough, journalist, for some years Editor of *The Times of India*, who died on April 20, aged 55, left estate of the value of £1,815, with net personalty £87.

General Sir Archibald Hunter at Lancaster on August 4 handed over the old colours of the 2nd Battalion King's Own Royal Regiment, sent from India to be kept in the memorial chapel attached to the parish church. He also unveiled a war memorial.

M. Marko Juritchitch, the Yugoslav Minister of Justice, died on August 3 from nephritis at Karlsbad. M. Juritchitch was a prominent Radical, and for many years President of the Radical Club.

It is stated in the *Aksham* of July 12, that Herr Meisse (also alluded to as Meister Pasha), agent to the Deutsche Bank, has been appointed General Director of the former Anatolia-Baghdad Railway, in place of M. Huguenin. The Turkish Government has decided to purchase this line, and a Commission under Burhanadin, a former Secretary of Defence, has been appointed to get into touch with the Company. It is added that M. Huguenin was very unwilling to sell this line, but was eventually persuaded to bargain.

The death is announced of Mrs. Archibald Little, traveller and writer, at the age of 81. Most of her works and interests were centred in China, where she settled with her husband, the late Mr. Archibald Little. Her elder sister, Sister Augustine, of the Society of St. Vincent de Paul at Salonika, is a well-known figure in Balkan affairs. It was to visit her that Mrs. Little, at the age of 74, made a journey to Macedonia, and afterwards went on alone to Palestine. Those attending the funeral service on August 5 included Dr. and Mrs. Muirhead Little, Sir Edward Boyle, Miss E. Bunting, the Bulgarian Minister and Mlle. Mischeff, and Mr. Charles Woods.

King Boris of Bulgaria visited Zurich on August 3, and then continued his tour eastwards, driving his own car.

The death has occurred at Peebles of Mr. Fanindra Bose, the sculptor. Born in Bengal, Mr. Bose executed numerous commissions for the Gaekwar of Baroda. During recent years he had exhibited a number of works at the Royal Academy and the Royal Scottish Academy.

Rear-Admiral Aubrey Smith, who met with an accident in Paris when on his way to Geneva to attend the preparatory Disarmament Conference, arrived at Geneva on August 6. He was taken from the railway station to the Hotel Beau Rivage in an ambulance. Immediately Admiral Smith was examined by a leading Genevese surgeon, who found his condition more serious than was thought, and ordered his removal to a private nursing home.

The following are among recent promotions announced by the War Office:—

Lieut.-General Sir J. John Asser, K.C.B., K.C.M.G., K.C.V.O., Governor and Commander-in-Chief, Burma, to be General from November 1, 1926.

Major-General Sir Webb Gillman, K.C.M.G., C.B., D.S.O., to be Lieutenant-General from November 1, 1926.

Colonel H. R. Peck, C.B., C.M.G., D.S.O., to be Major-General from November 1, 1926

Sir Joseph John Asser, who was born in 1867, first saw active service in the Nile Expedition of 1897 and the following year, being present at the battles of Atbara and Khartoum. His promotion was rapid, and in 1908 he became Adjutant-General of the Egyptian Army, a post which he held for seven years, during which period he conducted several campaigns against troublesome tribes, and almost revolutionised the force under control.

Sir Webb Gillman, who served in the South African War and during the whole of the European War, was a member of the Army in India (Esher) Committee, and from 1920 to 1924 he was commandant of the Royal Marines Academy. Since 1924 he has been Inspector of Artillery.

Colonel Henry Richardson Peck, Colonel Commandant Royal Artillery, 2nd Division, Aldershot, served in the South African War, and in the Great War he served in the operations in Gallipoli, Egypt, and Mesopotamia, being mentioned in despatches five times.

PROVINCIAL GOVERNORSHIPS.

The announcement that Sir Hugh Stephenson, the present acting Governor of Bengal, is to succeed Sir Henry Wheeler as Governor of Bihar and Orissa when the latter's tenure of office expires next April, is of interest for more than one reason. One is the remarkably early announcement of the selection—a most welcome departure from what has been, at any rate recently, the general practice in India. Incidentally—though it is true that there were special reasons on that particular occasion—this practice has seldom been carried to greater extremes than in the case of Sir Henry Wheeler himself. Another is the selection of one Bengal officer to succeed another, to the exclusion of the officers on the Bihar and Orissa cadre. No Indian civilian from Bengal, of course, can hope for appointment as Governor of his own Province, since that post is now always filled from Home; but, after all, Madras and Bombay men have been, for a much longer time, in the same position, and one does not remember that any one of them has been selected for a Governorship outside his own Province—though there is good reason to expect a new departure in this respect in the near future. But it is undeniable that Bengal civilians have been specially favoured in "outside" appointments—the Governorship of Bihar and Orissa having now gone to three in succession, while the present Governor of Assam also hails from Bengal. The only Provinces, indeed, that have so far been reserved for their own men are the United Provinces and the Punjab. Of the others, the first Governor of the Central Provinces was a local man, but the present one hails from the Punjab: the present Governor of Burma is a U.P. civilian who succeeded one from the C.P.: and the first Governor of Assam came from the U.P. and was succeeded by a Bengal officer. A third matter of interest is the fact that Sir Hugh Stephenson joined the Indian Civil Service in 1895, so that, when the time comes for him to hand over to a successor, he will have completed the full 35 years' service during which an Indian civilian can, if he so desires, claim to be employed.

The appointment of officers to the highest positions comparatively early in their service has, in the past, sometimes led to difficulty when they claimed the right to serve on for their full 35 years. It was, for instance, generally believed that Sir Reginald Craddock owed his appointment to Burma to such a cause: and it led to a remarkable series of appointments in the case of the man who was both his predecessor and his successor, Sir Harcourt Butler: who was appointed to Burma in 1915, translated to the United Provinces in 1918, and sent back again to Burma in 1923. On the assumption that all the existing I.C.S. Governors serve their full term, Sir Harcourt Butler will have considerably exceeded 35 years' service when his tenure in Burma ceases, and Sir John Kerr, in Assam, will be only one month "shy": but Sir Monty Butler, in the Central Provinces, will have nearly a year, and Sir Malcolm Hailey, in the Punjab, more than a year and a half, still to serve before completing 35 years' service: while Sir William Marris, when he leaves the United Provinces in December 1927, will have only 31 years' service.

The next eighteen months will see a number of changes in Indian Governorships. Lord Lytton is due to leave Bengal, in the ordinary course, in March 1927: Sir Henry Wheeler will hand over to Sir Hugh Stephenson in April; Sir John Kerr leaves Assam in October: Sir William Marris leaves the United Provinces in December: and Sir Harcourt Butler's tenure in Burma expires in January 1928. Should Sir William Marris desire further employment after leaving the United Provinces, it is not impossible that he may be appointed to Burma, which falls vacant at practically the same moment: in which case, it would be a curious circumstance if one U.P. civilian should succeed another in Burma. As to Sir William Marris' successor in the United Provinces, one may feel sure that, if he had elected to remain in the service instead of resigning prematurely, the choice would have fallen on Sir John Maffey; but, as things are, there is no obvious candidate among the U.P. civilians. They would, however, certainly be up in arms if an outsider were appointed, unless from England: and this is, perhaps, the most probable solution. When it was decided to raise the salary of the Governor of the United Provinces to ten thousand rupees, and so to put him on an equality with those of Madras, Bombay and Bengal, it was generally expected that the U.P. would join the ranks of "Home Governors' Provinces" when Sir Harcourt Butler had completed his tenure. That expectation was falsified then, but it looks as if it might be fulfilled now. There are, it is true, two distinguished members of the Governor-General's Council who will have to be provided for in the comparatively near future—Sir Charles Innes, who, when he completes his (extended) tenure of office in March 1927, will have only a little more than 28 years' service; and Sir Alexander Muddiman, who, though his tenure will not normally expire until March 1929, will then have only just 30 years' service. The only appointments to which a retiring member of the Governor-General's Council can look forward are those of Governor of a Province or High Commissioner; but, in the case of the latter, it is unlikely that the precedent of appointing an Indian will be departed from in future. Sir Charles Innes hails from Madras and Sir Alexander Muddiman from Bengal; so that both are debarred from attaining to the Governorship of their own Provinces; and, for the reasons already given, it seems most unlikely that either should be appointed to the United Provinces. Assam falls vacant in October 1927, and Burma in January 1928. The selection for the Governorship of Assam, a notoriously "soft job," is not in itself a matter of much moment; though in the case of Sir William Marris, it was used as a stepping-stone to an important appointment, and may be so used again. If one were inclined to indulge in prophecy, one's forecast would be that Sir William Marris will not desire further employment in India: that the next Governor of the United Provinces will be found from England: and that Sir Charles Innes

Digitized by Google

will succeed Sir Harcourt Butler in Burma. If one were further to venture on a "tip" for Assam, it would be Sir Geoffrey de Montmorency, lately Private Secretary to the Viceroy, with the reversion of the Punjab when Sir Malcolm Hailey leaves in May 1929.

CURRENT TOPICS.

The Currency Report.

The Indian Currency Report is dealt with by an expert elsewhere in this issue. To the inexpert writer of these notes it is chiefly interesting because it shows that his ideas on the subject were wrong—it was particularly annoying to him to think that, if THE NEAR EAST AND INDIA had come out a day later than it did he would have been saved from a further exposure of his ignorance in adhering to his original inaccurate forecast. It is true, of course, that the stabilisation of the rupee at 1s. 6d. will need legislation, and that, in the meantime, it will be allowed to fluctuate between the upper and lower gold points calculated on a 1s. 6d. basis: this particular ignoramus thought that the calculation would be on a basis of approximately 1s. 5½d., and that it would be left at that. What he overlooked altogether was the third alternative between a gold currency and a gold exchange standard—the gold bullion standard that has actually been adopted. After all, as he said in his last note on the subject, the important matter is stabilisation, and not its particular point. The adoption of the gold bullion standard does, at any rate, make it possible that, in time, this may be changed into an effective gold currency; when the gold value of a token rupee will be a matter of small moment.

It is evident that the forecast of the Commission's findings that was cabled to India early in July was an unusually intelligent anticipation of events. This said that the rupee was to be stabilised at 1s. 6d., and that Sir P. Thakurdas, the Bombay representative, had appended a strong minute of dissent in favour of 1s. 4d. Accepting this forecast as accurate—as, indeed, it proved to be—the leading extremist organ of Bombay proceeded to curse it most thoroughly. This paper said that it was all along futile to expect any benefit to India from "this Hilton-Young excuse for squandering some lakhs of Indian money," and told its readers that it would be time enough to discuss "in all its multifarious doleful aspects, the profound mischief that will result to Indian trade and industry as well as agriculture, when the full Report, with all its diabolical reasoning—or want of it—is before the public in India." In an editorial comment on the same forecast, the *Pioneer* indulges in one of the conceits that have lately been characteristic of it. "To suggest that a Commission, however well equipped with English and Indian financiers, can stabilise the rupee is to make an assertion of belief that the time has come when Mrs. Partington may expect to succeed in an enterprise hitherto deemed to be impossible." The cabled reports of the reception of the findings of the Commission in India suggest that it has, on the whole, had a good press, except from the extremist papers, especially in Bombay. It will be interesting to see the comments that will result from a detailed examination of the full Report. One matter on which it is certain that the authorities will have to walk warily is the proposal that the paper currency should cease to be convertible by law into silver coin: that one rupee notes should be reintroduced as full legal tender, and that all other notes should be legally convertible into notes of smaller denominations or silver rupees at the option of the currency authority.

The Nizam.

In the absence of any official statement, it is necessary to receive with caution the reports about a disagreement between the Government of India and the State of Hyderabad. The only thing of which one can be reasonably sure is that they have been greatly exaggerated. It is undoubted that, for a long time past, what *The Times* describes as "the acquisitive temper of the Nizam" has given rise to a great deal of dissatisfaction in his State; but it is most unlikely that the Government of India would go to the length of sending him an "ultimatum" on the subject. Nor does interference on one of the other causes alleged seem any more probable—the fact that the Nizam has lately been changing British officials for Indians. Such a procedure would certainly be welcomed in the State, where there has been an insistant demand for "Hyderabad for the Hyderabadis"—objection having been raised to the employment, in the offices of State, of any outsiders, Indians who are not State subjects quite as much as British officers. The third cause alleged—that the Indian Goverment has taken objection to the activities of the Nizam in "subsidizing Islamic propaganda"—is, of course, merely absurd; though it is probably only too true that the circulation of even so patently ridiculous a report has done a good deal of mischief among Indian Mohammedans who ought to have known better than to listen to it for a moment. It has been left for an English newspaper, voicing the views of that particular section of British Labour that, six or seven months ago, issued a manifesto condemning "the profligate luxury and autocratic rule of Indian Princes, maintained at the expense of a groaning and impoverished population under the direct protection of the British authorities," to discover the true reason for the presentation of the "ultimatum" to the Nizam. "Rajahs who are complaisant in their dealings with the Government of India have little fear of rebuke because of tyrannical behaviour at home. But the Nizam has shown a disposition to assert his treaty rights: and the Government of India has determined to put a stop once and for all to this sort of thing. The Princes are to be shown that, whatever they may be in theory, they are in fact subordinate to the Viceroy and his officers, and enjoy only such autonomy as they are pleased to concede. The Nizam, as the Premier Prince of India, is a test case. The charges of misgovernment merely afford the pretext."

While, therefore, one must dismiss the first two reasons as altogether inadequate, and the last two as the merest balderdash, and must therefore decline to believe that the reports have any but the slenderest basis of fact, one may admit a certain feeling of disappointment that this should be so. There is undoubtedly a great deal of discontent in Hyderabad State, directed at the person of its ruler: and his supersession, by one of the two younger sons of the late Nizam—on the precedent set up in the case of the Moslem State of Bhopal—would certainly be generally popular among his subjects. It is unnecessary to go into the reasons for such a departure from ordinary rule, which are perfectly well known in India; it is enough to say, as one can without fear of contradiction, that, if it were possible to give effect to it, it would not only be in the interests of the Premier Indian State, but would be joyfully welcomed by its inhabitants.

To India by Air.

We have already commented, more than once, on the need for action on the part of the Government of India in order to prepare for the starting of the air-line to India. It will probably be remembered that this was originally announced as likely to occur in "the early summer" of 1926: and that, in April, the Government of India had reached the stage of "proposals" for the barest minimum of buildings at Karachi and for a somewhat unusual method of paying for them—a suggestion that the Air Ministry should advance the money required. As regards further developments elsewhere than at Karachi, it was then stated that these " had still to be considered by the Government." To judge by reports received from India with reference to Mr. Alan Cobham's flight, it would seem that matters are but little advanced now from the state in which they were in April last. "It is understood that the financial difficulties regarding the erection of the Karachi air station have been overcome, and that early progress is likely there." This perhaps means that the

Digitized by Google

Air Ministry has agreed to lend the money: which, if so, is something to the good; though those who have had experience of the Government of India's ideas about "early progress" will not be too optimistic. Incidentally, the same report speaks of "the bog which at present serves Calcutta for an aerodrome at a distance of eight miles from the city," and enlarges on its total unsuitability for the purpose that it professes to meet. It seems fair to suggest, indeed, that the Calcutta "bog" is of a piece with the Government of India's position in the matter of the air-service to India; one from which they are unlikely to extricate themselves unless assisted from outside. One remembers a phrase occurring in one of H. G. Wells' novels, describing how the motor of an inexpert driver, after refusing for a long time to start, eventually did so convulsively, "as if it had been suddenly and shamefully kicked from behind." One would suggest that, if the Government of India find so much difficulty in making a start, someone having authority should be sent from England, with instructions to communicate the necessary impetus.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 22.

The Rajeswari Rioting.

As will have been seen from the letter of last mail, we did not have to wait for Mohurrum in order to get another batch of riots. The reports as they were gathered upon the ground in a hurried survey on mail morning understated the case; the postponed Rajeswari procession was attacked almost as soon as it left the Temple, and these attacks continued right up to the time when the procession was held up opposite the Mosque. Even after the firing had taken place, there was further fighting with brickbats and sticks at various portions of the route: and eventually, when the riverside was reached, the processionists seem to have turned round and endeavoured to square matters by attacking Mohammedan boatmen. Eventually the police managed to get control; but official casualties were 14 killed and nearly 100 wounded. The majority of these cases were in no way connected with the firing, there being a recrudescence of the stabbing mania, and stabbing to kill. It is probable that there were far more people injured than appears from the numbers in the police reports; for a new feature of the rioting is that casualties are removed by their friends and hidden, the fear being that if they go to a hospital they are liable also to be arrested as rioters.

The Mohurrum Outbreaks.

Since then there has been growing aggression on the part of both religionists in the City, which has culminated in a number of serious riots, both in the centres and the suburbs, in connexion with the Mohurrum Processions. The processionists on these occasions are always wildly excited, especially when they include amongst their numbers men who have been flagellating themselves as part of the previous religious rites. The whirling of flaming sticks and the mock fighting, coupled with mad drumming and yelling, rouses the processionists to a state of frenzy, and it can easily be understood that it requires very little to produce communal fighting. In the present instance it is clear that Hindus frequently attacked the processionists, whilst in other cases Mohammedans flung their lighted torches, sticks and brickbats into Hindu houses which were on the line of route. The police have had to open fire on several occasions, but the total number of casualties has not yet been published, although in one case there are six dead and 50 injured. On Sunday morning last there was a military demonstration in force throughout the Indian portions of the City, by all the Regulars and Auxiliary Forces available in Calcutta route marching with their bands. This does not seem to have deterred either community and, although at present the situation is quiet, helped by a terrific storm which flooded the City last night, there is no knowing when or where trouble will break out again.

The Viceroy's Speech.

The new Viceroy's speech pleading for communal restraint and better feeling between Hindus and Moslems is apparently not going to produce any tangible results. The Indian Press has received it coldly, and there is possibly more than a little truth in the suggestion that the reiteration of pious aspirations for peace will make not the slightest difference to the people who are most concerned with the mischief. We see also that the *Manchester Guardian* has approved of Sir Tej Sapru's suggestion that the areas in which riots occur should be disfranchised; this is an indication of pathetic contentment due to another kind of ignorance, for the rioters and all concerned with them are indifferent to the Reforms and everything connected with them. It is not much use disfranchising a district when the elected members already take no part in the proceedings of Government and are pledged to non-co-operation.

The Juggernath Car To-day.

The religious holidays coming near the week-end gave an opportunity for a break at Puri, which has become a convenient sea-bathing resort for the jaded ditcher. A night's journey of 300 miles brings one to fresh air and sea breezes, and surf bathing has a remarkable effect in clearing off the frets and fevers of the Plains. The last day of the Car Festival fell on Tuesday, and it was more than a little interesting to observe the types of pilgrims who were gaping at the flummery. Fifty thousand had remained to help pull back the three great cars, and it was difficult to find an intelligent face amongst them. In vivid contrast were the priests and the hangers-on who, by mad gonging and grossly obscene dancing, worked up the excitement for hours on end: it would be difficult to imagine a more repulsive set of crafty and sensuous faces. As for the ceremonies, they are pure juju, and it is pitiable to think that they are reverenced and imitated by Hindus of all grades throughout the whole country. Exploitation is open and never-ceasing: once, when the government officials in control were Europeans, the journey took a day. Now Indianisation gives another colour to the proceedings; the cars were to start at 11 a.m. but Juggernath did not appear till 3 p.m. and it took three days to get him and his brothers a mile; and every few hours another collection is taken. The best feature of the scene was the presence of a hundred student volunteers from Calcutta working hard in the dusty heat distributing water and carrying off the fainting.

Men and Things.

The Viceroy paid a private visit to Calcutta this week; it only lasted a day, it being understood that he wished to see Belvedere, which is the Viceregal House during the cold weather visits; but it was pleasing to see that many Indians cheered him warmly as he passed through the streets.

Reports are published this mail of the speech of Lord Winterton in the House of Commons reviewing the Indian situation; there are no comments in the Indian Press, as they are not publishing to-day owing to the Mohurrum, so this matter will have to wait until the next mail.

Another police raid has taken place, this time in Howrah, on premises which were reported to be used for revolutionary purposes, and a number of arms were seized as well as quantities of materials used for making explosives and bombs; further searches and arrests are anticipated.

The Tariff Board has decided, and Government have accepted their recommendation, that there should be no protective duty on coal. The wiser heads of the coal

Digitized by Google

industry did not desire it; but a large number of Indian owners of inefficient collieries, war-babies which will inevitably die in the next few years, sought to prolong their existence by penalising all the other industries of the country. The Tariff Board would have none of it, and said so quite plainly.

Alan Cobham is due in Calcutta to-day; he has not had the best of luck crossing India, but his progress in the teeth of the monsoon is easily a record.

The Trivial Round.

There have been two Gymkhana Meetings this week at Tollygunge, advantage being taken of the Mohurrum Holidays to hold an extra meeting yesterday. The going was very heavy, but the rain had taken the temperature down and consequently the attendance was good. On Saturday backers came away feeling very pleased with themselves; but yesterday the exchanges were reversed, the going letting in some outsiders.

The matches in the Association Cup are continuing, with an even greater increase in attendances and public interest; the local military team, the 1st North Staffordshire Battalion, are still in and have a good chance of staying till the end. Mohan Bagan have been playing brilliantly, and it is quite possible that the Final this year will be inter-racial; if so the crowds will be something to be remembered.

A new sports event has been started this season by the institution of a hard court tennis championship on the pucca courts at Cossipore. All the best men have entered, and it has proved so successful that it will probably attract entries from other parts of India next year.

The Quaints have been playing to record houses at the Empire Theatre, and they have certainly improved since they passed through Calcutta on their way out East. The Picture Houses are also doing big business with the return of cooler weather, whilst Firpo's is crowded nightly. The dance-dinners recently started by the Saturday Club are a great success, and are bringing back memories of the days not so long ago, when the Saturday Club dances were the most important functions of the weekly round.

The rains have done their duty at last, and there has hardly been a break for the last 60 hours. The downpour included two first-grade storms, and to-day the streets in the south are sheets of water; but at last it is cool.

Markets.

The jute and gunny markets have opened to-day with prices much the same as were in evidence at the close before the Mohurrum Festival, extending over the last two days, during which business in both markets was suspended. Buyers of jute continue to demand lower prices than sellers are prepared to accept, and as a result only minimum purchases are being made. The hessian section, after a steady rise during the previous week for near and forward positions, has fallen away on fulfilment of requirements, and a quieter tone is apparent as a result. Piece-goods have been affected by further communal disturbances, and inquiry is negligible. The tea market both here and in London is running on quality, with all good descriptions fully firm and fetching satisfactory prices; but anything with the semblance of stalk is regarded with suspicion and is realising lower rates, amounting in cases to as much as a penny and an anna per pound. In regard to outturn, an approximate estimate for the first half of the month gave a decrease of about 1¾ million pounds on the crop for the same period last year.

In the share markets, jutes have shown a further improvement, mainly on the hopes of better results next year and the popularity generally of these shares for investment purposes. A welcome increase in business in coals is to be reported; the demand has been chiefly confined to the best stocks, one or two of which have registered a sharp rise; operators do not, however, anticipate that the improved prices will be maintained, in view of the present outlook for the industry. For teas also, there has been a rather better inquiry, and the prices have in cases of several of the first-class shares been in an upward direction; rubbers have come in for a fair amount of attention, and business has again been done at higher prices. America is being talked of as a likely heavy purchaser of the commodity in the autumn, and it is significant that, whereas spot is 1s. 8⅜d., January—February is quoted 1s. 10d.; in this event, a further improvement should follow. Government Securities have been steady to firm with plenty of buyers, but sellers scarce owing to the lack of other employment for their money, which continues easy at about 1½ per cent.

The Exchange Market has been firm forward with a few more bills showing; demand for remittance has been almost negligible. Money remains very easy.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 23.

Gujerat.

Weather conditions continue to be good over practically the whole of the Peninsula, and there seems little cause for anxiety. If only the rains would extend in real abundance to Gujerat all would be well. There seems no doubt that in that district, originally selected as the site of the first English settlements in India on account of its great wealth, the water level has fallen to an alarming extent in the last few years. It has in fact never really recovered since the great famine of 1897-98, which turned what had been a sportsman's paradise into a desert. Since that time there have, of course, been years of good rains, and about 1912 conditions were almost normal again. But there has never been any reserve of moisture in the soil, and the return of Gujerat to its proper prosperity would be extremely welcome. Gujerat, which extends northwards from Broach, till it merges imperceptibly in Kathiawar and Rajputana, is the home of the most valuable Indian cottons, Broach, Surat and Dhollerah, and at one time it contained the very finest yeoman population in India. In the course of time many of the best of the population have migrated to the big towns, either Bombay or Ahmedabad, and the remnant left on the land have now acquired a considerable reputation for disaffection. In India disaffection and unrest are almost inseparably connected with agricultural troubles: if a man has nothing to do, and very little to eat, it is inevitable, that he should spend his time in complaining of the state of life in which he is placed. Hard work on his fields and plenty of food is the natural remedy for unrest, and it is to be most sincerely hoped that, in a very few years' time, nature will restore the balance that has been almost consistently adverse to Gujerat for thirty years, and bring back prosperity and contentment to a very deserving and capable community.

Charities.

I see that, in Calcutta, the Rotary Club has been discussing the condition of Indian charities. It will probably be impossible ever to co-ordinate the numerous charities of Bombay and Calcutta: but anyone who has become senior enough in either city to be elected to the countless committees which regulate the disposal of the funds of small charities, knows how useful such a co-ordination would be.

There are in Bombay several great family charitable trusts, notably that of the Wadia family, the administration of which is vested in certain members of the community concerned. Arrangements have been made under which the committee of administration has secured to it as nearly as possible a continual succession of capable administrators, and nothing whatever can be said against the working of such trusts.

But there are many other smaller funds, the administration of which is vested in no particular community but lies with a large mixed committee: and it naturally happens far too often, that all the work passes into the

Digitized by Google

hands of one senior man, who is never a permanency. On his retirement there is nobody left who really understands the work, and it not infrequently happens that all interest in the fund and its purposes is lost.

If it were possible to secure continuous administration of all funds by a really strong central committee in a position to leave all detail to sub-committees, it would indeed be a welcome change to many who feel that they are unable to cope with the multiplicity of detail thrown upon them at present.

The Beggar Problem.

A very interesting and successful charity is the Helpless Beggars' Relief Fund. The ultimate responsibility for this Fund lies with the Bombay Municipality, which is, in fact, except for the two or three afternoons a week which it wastes in Council, a very highly efficient body. It has appointed a mixed committee to undertake the detail work, and it has been lucky enough to find at least three gentlemen who are prepared to devote themselves to the work with energy.

The fund has established a camp outside Bombay where about 200 helpless beggars are in residence: and it is, so far, a genuine effort to deal with a problem that is almost insoluble.

We most of us feel that the beggars in the streets of Bombay are a disgrace to any civilised city: and most educated Indians feel it even more than we do ourselves. But they probably feel it most when they have least experience of other cities. After all Bombay cannot be compared with towns of Northern Europe—and when we get down to even Rome and Venice, let alone the towns of Turkey and Asia Minor, Bombay does not show up so badly.

The beggars of Southern and Eastern lands are a problem, apart from all others, because they are almost certainly not nearly so wretched as they look. There is little cold for them to suffer, and they are in no very serious danger of starvation. They may feel ill and miserable, but so, after all, do many who live in houses—and they are in fact nothing but professional beggars who rely on their whines to extract a sordid but fairly full-bellied living from the compassion of others who may be little more prosperous themselves.

It is difficult to get people like this off the streets, where their appearance is depressing and repulsive, because they simply refuse to accept the very moderate amount of cleanliness and discipline that is necessarily required of the inmates of a home of any kind, in exchange for the added comforts of life. With very few exceptions indeed they find the few restraints imposed upon them intolerable, and this fact has given some Nationalists an excuse for attacking the Home which, though not in any way a European institution, is at any rate part of the existing system of law and order. It is a remarkable thing, however, that when these critics have been invited to see the place for themselves, they have invariably had the grace to withdraw their statements, and to express their almost unqualified approval of the work carried out there, by the devotion of a few men with the unparalleled help and assistance of the Salvation Army.

We in Bombay can at any rate claim that not a single helpless, blind, or maimed beggar need remain on the street if he, or she does not want to be there. For the able bodied, there is as yet no organisation, and it is difficult to see how there can be one. The most vigorous methods are said to have failed in certain Eastern cities in the past, and no legislation that is possible in these days is likely to check the Eastern habit of begging.

The Currency Report.

We are all awaiting with considerable interest the report of the Finance Commission though we do not expect anything epoch making. In the meantime exchange has fixed itself, and is more steady, round about 1s. 5 29-32d. than it has been since the 1s. 4d. rupee first got into deep water in the early days of 1918. Cotton mill shares, especially the up-country mills, are rather firm, no doubt on the favourable weather conditions.

THE INDIAN MAIL.

Colonel Saunders' Lecture.

The full reports, that have now come to hand regarding the lecture given by Colonel Saunders at Calcutta, give rise to certain interesting speculations. These are not so much connected with what he said; for the extent of Soviet activity on the frontiers of India is already well known to all those who have taken the trouble to make themselves acquainted with it. The idea behind the creation of the various "Soviet Republics" on the borders of Afghanistan and Chinese Turkistan is, of course, perfectly obvious: it has, indeed, been carried out with even greater thoroughness than appears from Colonel Saunders' actual words. Not only have the Bolshevists created these new Republics to "follow ethnographical divisions," but they have been at great pains to encourage the national spirit among their inhabitants, even going so far as to start newspapers in their various languages and to translate books and pamphlets into them; a task that has never been attempted before. To take one of these new Republics as an example, the Bolshevists hope to create among their Uzbek subjects the idea of an Uzbekia Irredenta across the Afghan border, and among the Afghan Uzbeks a desire for political adherence to the Republic. Should this desire manifest itself, and should the Afghan authorities set their faces against a peaceful secession, the Bolshevists would, of course, merely repeat against Afghanistan the manœuvre so successfully employed in the case of Bokhara: where, having engineered a disturbance on the part of a handful of irresponsible malcontents calling themselves "Young Bokharans," they stepped in to restore order, with decisive results. The Bolshevist "peaceful penetration" of Afghanistan, and its value in furtherance of their propaganda campaign against the British Empire in India, are also well known: as is their capture of the Afghan air-service, and the possibility of their use of it in a more forceful campaign against India.

But, though all these facts are—one cannot say notorious, for few people in England are interested in such matters—at least fully known to those who have thought it worth while to inform themselves on the subject, the question that is of interest is that of the circumstances in which Colonel Saunders gave his lecture. There seem to be only two possibilities: the first, that it was intended to be confidential and that there has been a breach of confidence: the second, that it was delivered, and made public, under specific instructions from higher authority. If the latter, the further question presents itself—Why? It is said that the matter is to be taken up in Parliament: in which case, it is possible that this will furnish the solution of an interesting problem.

The Howrah Bridge.

Last week's comments on the Howrah Bridge Bill prove to have been unduly pessimistic, as the Bill has been passed by the Bengal Legislative Council. One's remarks on the financial aspect of the scheme have, however, been justified. The Select Committee recommended a tax of ¼ per cent. on the value of lands and buildings in Calcutta: and the Government proposed that this should be multiplied by three. This proposal was, however, defeated; and one to double it was only passed by a single vote. Further funds were made available by a decision that the Bengal-Nagpur Railway should contribute on the same scale as the East Indian: for reasons that are not easy to understand, the Select Committee had recommended the exemption of the former. And it was only owing to an accident that the municipalities of Greater Calcutta were not also called upon to pay their share—an Indian Minister, having voted for this proposal, re-

Digitized by Google

turned to his seat in the Chamber through the Opposition lobby, and was therefore ruled to have voted in both; with the result that the proposal was lost by a single vote.

The Swaraj Party, who returned to the Council for the purpose, having failed to throw out the scheme altogether, apparently intend to make themselves as nasty as they can in the Corporation. That body has announced that it will in no case agree to the imposition of a rate of more than ¼ per cent., and will only agree to that on condition that a new authority is substituted for the Port Commissioners, to be in charge of the new bridge. The leading English newspapers of Calcutta comment on the fact that the Swarajists have not deserved well of the inhabitants in whose name they claim the exclusive privilege of speaking, by their attempt to defeat the Bill. This is, of course, essentially, though not superficially, true. The inhabitants of Calcutta certainly desire a new bridge, but only on condition that somebody else shall pay for it—a happy position in which the people of Greater Calcutta now find themselves, thanks to the efforts of the Swarajists assisted by an accident. Thus it seems probable that the destructive policy of the Swaraj Party, though certainly directed against the interests of their constituents, did not in fact run counter to their wishes.

The Transfer of Sylhet.

It will be remembered that the Government of India, some months ago, invited the Legislative Councils of Bengal and Assam to express their opinion whether the essentially Bengali district of Sylhet should continue to be part of Assam or should be transferred to Bengal: and that both Councils voted for the transfer—Assam with the reservation that she should not thereby be deprived of her status as a Governor's Province. The Government of India has now given its decision: that matters shall be left as they are until the Royal Commission of 1929—or earlier—has had an opportunity of considering the matter. It is explained that this decision is the result of a ruling by the Secretary of State, that the question of the transfer of Sylhet to Bengal cannot be dissociated from that of the future form of the administration of Assam: in which he appears to have differed from the opinion expressed by the Government of India, who seem to have held that the question of the transfer should first be decided on its own merits, and the status of Assam subsequently considered in the light of the results of that decision.

The Secretary of State's ruling is of special interest, not so much because of the particular decision as because of the implication contained in it: that part of the work of the Royal Commission will be to consider the boundaries and status of the existing Provinces, and the consequent possibility that it may recommend their alteration. The writer of these notes has all along believed that the Reforms were instituted from the wrong end—from the top instead of from the bottom: his general idea has always been the reduction of the number of the existing Provinces and the division of each into a number of locally autonomous sub-provinces. He believes that such an arrangement would have many advantages, among which may be mentioned the practical training of Indians in the acceptance of responsibility: the grant to them of their legitimate demand for power to be masters in their own house, on a small scale in preparation for a wider one: and the assimilation of the method of governing a sub-province with that already obtaining in the Indian States, whose eventual inclusion in the "Commonwealth of India" is a matter that has to be faced, difficult though it may be. Most likely it is only that the wish is father to the thought; but he imagines that he can read, in the Secretary of State's ruling, a suggestion that the recasting of the Reformed Constitution of India on such a model is not altogether outside the pale of practical politics.

Sind.

Following the example of some even better known newspapers, the *Pioneer* has lately taken to publishing excerpts from its columns of fifty years ago. In the last batch of mail papers received from India, the following note, from the *Pioneer* of July 16, 1876, is reproduced:

"After a series of rumours regarding the immediate transfer of Sind from Bombay to the Punjab, a lull seems to have set in, and it is surmised that nothing will be done until next winter, at any rate, when, on dit, the Viceroy is to pay this province a visit. It is hardly possible not to be of the opinion that such a transfer will be, for political, geographical and physiological reasons, advantageous to Sind, and the only wonder is that it has been so long delayed. The interests of Sind, and especially of its capital—Karachi—are diametrically opposed to those of Bombay; the two cities are sole rivals for supremacy as western ports; an increase in importance to Karachi can necesarily only be attained at the expense of Bombay and it is therefore not hard to account for the jealous eye with which this, her outlying province, has ever been regarded by the Presidency town by its Government and not less by its merchants."

It is interesting to see that the transfer of Sind from the Bombay Presidency to the Punjab was believed to be imminent fifty years ago: and nothing has happened since to alter the position. There can, indeed, be no denying that the people of Sind are naturally much more closely connected with the Punjab than with Bombay. The "province" of Sind contains over 75 per cent. of Mohammedans, and forms part of the only two predominantly Moslem blocks of territory in India—the other being in Eastern Bengal. Its language, Sindhi, is closely connected with the so-called "Lahnda," the language of the Western Punjab: it is cut off from the rest of the Bombay Presidency by a wide belt of intervening Indian States: and, while it has direct railway communication with the Punjab, the only practical way of reaching it from Bombay is by a two days' sea voyage—the railway connexion, though it does exist, involves a long detour, a number of changes, and two breaks of gauge. Its chief port, Karachi, is the natural outlet of the Punjab to the sea, and deals with none of the trade of the Bombay Presidency. It has only been possible to retain Sind as a part of the Presidency by allowing it a large measure of independence: an arrangement which, though doubtless excellent in the case of a homogeneous "sub-province" of a larger Province of which it forms a natural part, is merely irritating in the case of a detached one: and is, moreover, one that has constantly been a cause of friction between the superior and subordinate authorities.

Though the transfer of Sind to the Punjab has hung fire for all these years, one finds it difficult to believe that it can possibly do so much longer; or that the Royal Commission, due in 1929, will not emphatically recommend it for immediate realisation.

THE INDIAN CURRENCY COMMISSION REPORT.

The publication of the Report of the Royal Commission on Indian Currency and Finance has been freely commented upon in the Press during the past week.

It has been issued with commendable promptitude, as the evidence of some American experts was not available until towards the end of May.

The recommendations contain few surprises, as it was generally anticipated that a stabilized rate of 1s. 6d. would be suggested. The other outstanding features are the demonetization of the rupee and the establishment of a Central Bank.

The report is embodied in 90 pages of most interesting reading, of which 33 pages are devoted to the proposed Central Bank and details with regard to its functions.

We can well understand the Commission suggesting the establishment of a central institution to handle the note issue of the Indian Government, but it seems quite unnecessary to encumber the report with pages of details regarding the running of the concern. Of the desirability

Digitized by Google

of creating a Central Bank, the general opinion will, no doubt, be uanimously in favour. The expansion of the Imperial Bank of India into districts in need of banking facilities is the proper field for its activities.

The management of the Government's finances is probably beyond its capacity, and in any case they will be more efficiently dealt with by a bank unrestricted by commercial interests. The withdrawal of the Government balances will be a serious blow which has apparently been fully recognised in India, where the price of the Imperial Bank shares has fallen over a hundred rupees.

The report states that the ordinary medium of circulation in India should remain as at present, the currency note and the silver rupee, but it recommends that the paper currency shall cease to be convertible by law into silver coin.

No change is to be made in the legal tender character of the silver rupee. These measures indicate the gradual demonetization of the rupee, and it is hoped that the vast hoards of silver and silver coin will be disgorged and take their part in the scheme for the country's progress.

It has to be borne in mind, however, that the process of popularising the note issue has been very gradual. The people have had to be educated to their use, and it is common knowledge that the agriculturist invariably prefers the metal currency. He is a small holder, with a small store of wealth which he prefers to keep in coin rather than run the risk of paper, which would be at the mercy of fire and the numerous insect pests familiar in India. The history of the country before the British occupation shows that property was far from safe, and forced the people to hide their savings as secretly as possible, so that the hoarding habit has been an ingrained custom for centuries, and any attempt to interfere with such an old and universal practice should be approached very cautiously.

The suggestion, that the reserves of silver coin, now standing at about 94 crores of rupees, should be gradually reduced, has been received with alarm in the bullion markets of Bombay and America. Their reduction will mean that the Indian Government will be almost continually in the market as a seller of silver for some years. This news has given the metal a shake when the price was none too robust, and a fall has taken place in London quotations of one penny since 28th July. Heavy selling has taken place in Bombay, London and America, and the weakness is still apparent, especially in the Bombay market, where the price has dropped a rupee and a half within the past ten days.

The exhaustive nature of the report commands admiration, but the sixteen-pence rupee has many adherents and there can be no doubt that the dissenting note which appears over the signature of Sir Purshotumdas Thakurdas will find numerous supporters, both here and in India. We shall await with interest the views of the Indian community, and its reception of the report. Although the rupee at 1s. 6d. has imposed no hardship on the exporter, it has provided a premium of 12 per cent. to the importer. This has been of great benefit to Lancashire shippers, who welcome the stabilisation of the rupee at the higher level.

In any case, it cannot be denied that India's greatest need is a stable currency: and, while fluctuations may take place between the gold points of 1s. 5 3/4d. and 1s. 6 3-16d., the uncertainty of wider variations will be removed.

The Government of India announce that they will take the necessary steps forthwith to adopt the recommendations of the Commission.

All advocates of a sound currency system will welcome the report, which honestly aims at establishing conditions which should inspire confidence.

INDIAN EXCHANGE.

London, August 9.

Rupee rates have shown a decidedly firmer tendency during the past week, due principally to the suggestions recommended in the Currency Commission Report.

Although it has all along been assumed that a basis of 1s. 6d. would be decided upon, a feeling of uncertainty existed which has now been dissipated. Merchants, therefore, who may have had some hesitation in fixing forward exchange, have now evinced more courage with the assured prospect of the rupee remaining round about 18d., and a fairly large business has been transacted in India in forward exchange both in T.T. and bills for delivery during the cold weather. In Bombay and Calcutta, ready and near rates have remained very steady at 1s. 5 15-16d. for T.T., while cash business has been done at 31-32d. Buyers, however, have not been eager to work on this level as they are expecting to obtain remittances at 1s. 6d. Commercial bills have been in small supply at 1s. 6d. 7-32d. three months for delivery to the end of August.

In forward rates there has been little change, but fixtures have been reported at 1s. 6 1/8d. T.T. for December, January and February. The London market has remained quiet. Some business was reported early in the week at 1s. 5d. 59-64d., but remitters have since had to pay a little higher and 1s. 5 31-32d. is the best rate available for ready—which is not, however, obtainable freely, as some Banks refuse to sell under 1s. 6d.

NEW GOVERNOR OF BIHAR.

The King has approved the appointment of Sir Hugh Lansdown Stephenson, K.C.I.E., C.S.I., I.C.S., to be Governor of the Province of Bihar and Orissa, in succession to Sir Henry Wheeler, K.C.S.I., K.C.I.E.,, I.C.S., whose term of office will expire on April 12, 1927.

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

The Bulgarian Loan.

The position with regard to the projected Bulgarian Loan is the subject of a detailed reference by our Sofia Correspondent this week. It will be seen from what he says that a rather unfavourable view has been taken of the outlook for the loan on account of the demands of the French banks with regard to the pre-War Bulgarian loans. It was evidently not anticipated, indeed, that acceptable terms would be forthcoming, but the fact that M. Molloff, the Finance Minister, on his return to Sofia has been authorised to return to Paris and London to conclude the negotiations suggests that somewhat more favourable conditions have been put forward. It is obviously a matter of great consequence to Bulgaria not only that the loan should be issued as soon as possible, but also that there should be no delay in the conclusion of the negotiations for an advance pending the issue of the loan so that the work of refugee settlement can be dealt with speedily.

Sudan Cotton.

The cotton progress statement given in the current issue of the report of the Central Economic Board of the Sudan Government may be said practically to complete the record of the past season's crop, since at the time only a few thousand kantars remained to be picked. The crop amounted to about 515,000 kantars, and it is interesting to note that of this total no less than 479,500 kantars were obtained on irrigated land. The Gezireh is, of course, the principal contributor to the total with 304,000 kantars, Berber Province is second with 24,000 kantars, while third comes the Kassala Cotton Company with 22,000 kantars. The rain-grown cotton only totalled 34,500 kantars, and this yield is spread over a large number of provinces. The vast bulk of the cotton is naturally Sakellaridis, the production of which totalled 426,000 kantars, that of American being only about 89,000 kantars. As I pointed out recently an increase in the production of American is a matter of special importance to Great Britain for apart from the fact that it means that Lancashire supplies will be more assured, it is obvious that the less cotton we need take from America the better in view of the strain entailed on our resources by the heavy debt payments each year. All the rain-grown cotton in the Sudan is American, and it is satisfactory to know that there are great possibilities for expansion in this direction, though development is bound to be slow, depending as it does on the improvement of communications.

Expanding Trade of the Sudan.

It was clear that the development of cotton production would ensure the rapid expansion of the trade of the Sudan. A few weeks ago I had occasion to comment on the very favourable nature of the trade returns as compared with those of last year, and the latest statistics fully bear out what I said. There has been a marked increase this year in both exports and imports, but the progress has been much greater in exports, so that for the first four months of this year the Sudan has quite a substantial balance of trade in its favour, whereas for the same period of the previous year, excluding re-exports, there was a small adverse balance of trade. When it is borne in mind that the price obtained for cotton is considerably lower this year than in 1925 and that the Sudan is only at the commencement of its development as a great cotton-producing region, it will be clear that this result is very significant, and points very plainly to the prosperity in store for the region in the future.

Some Figures.

I think it worth while to give the figures for the first four months to illustrate how rapidly the Sudan is now going ahead. The value of the imports was £E2,087,949 as against £E1,663,814, an increase of £E424,135, and both Government and public imports showed a marked rise, which was more pronounced, however, in the case of the former. The figures were £E795,606 for Government imports and £E1,292,343 for public imports as against £E521,610 and £E1,142,204 respectively for the corresponding period of the previous year. The value of the exports rose by £E838,960 to £E2,476,803, cotton being, of course the main factor in this increase. In amount the exports of cotton during this period were more than trebled, but the value was not much more than double the 1925 figures as while the approximate unit value for the first four months of 1925 was £E9.4 per kantar it was only £E6.3 per kantar for Sakellaridis and £E3.8 for American this year. One feature of the returns to which I feel constrained to draw renewed attention is the significance of the expansion of imports. I have often emphasised the point that the Sudan is in the future going to offer our traders a most important outlet for business, and it scarcely needs to be said that as the wealth of the country increases so will there be an expansion in the range of the commodities required.

The Cotton Outlook.

To judge by the latest American Bureau report, it looks as if we shall see still cheaper cotton in the course of the next few months. Last year's American crop was a record, and as it was accompanied by excellent crops elsewhere and there has been at the same time an inadequate demand the natural sequel has been a decline in the prices of cotton. If the present indications in America are fulfilled and there is another record crop it is inevitable that, failing a great expansion of trade such as it would seem too optimistic to anticipate in the immediate future, lower prices will obtain. That of course would affect cotton growing regions outside America, but while the Sudan, for instance, might receive less per kantar than for the

previous season's crop this should be compensated for as a further development in production. The danger of unduly low prices for cotton is that there may be a sharp decline in the next American crop, and this, while it would give a further impetus to production within the Empire, would cause fluctuations in prices which could not fail to be disturbing to trade. Stabilisation in the prices of cotton as in those of other commodities is, of course, the ideal, but it is an end that is probably impossible of achievement except over short periods of time.

To Attract Tourists.

The "Come to Britain" movement was perhaps the inevitable outcome of post-War conditions. Up to 1914 there was no special reason why any particular trouble should be taken to draw the attention of potential tourists to the attractions this country offers. If they came well and good, but if they preferred other countries it was a matter of indifference. But now things are changed, and if we are to enter the field of international advertising it need occasion no one any surprise. Support from British tourists means a very great deal to other countries, and it is only natural that, by drawing attention to the special features of interest here which are second to none, we should seek to obtain compensation for the money that is thus taken out of the country. But it is not only the immediate gain that is in view. Closer acquaintance with this country that would result from streams of tourists would go far to promote a world-wide understanding of Great Britain, and would also tend to have a very direct and most important influence on trade development.

Rubber Fluctuations.

As I anticipated, there was an immediate decline in the price of rubber as the average price for the past quarter obviated the question of further restriction, and the commodity went down to the neighbourhood of 1s. 6d. Then there followed a rise to about the previous level as a result of the statement that the restriction level would operate for the current quarter, though why the price should have been affected in this way I must confess I do not understand. It was very generally imagined that there would be a 20 per cent. restriction at the end of the current three months should the price be below 1s. 9d. for the period, and the fact that the commodity should fluctuate in such a way only serves to show the unstable nature of the market at the moment.

COMMENTATOR.

The Vulcan Foundry, of Newton-le-Willows, have received a contract for seventy-three broad-gauge locomotives for railways in India, while Messrs. Nasmyth, Wilson and Co., Manchester have received a contract for twenty locomotives required for Indian metre-gauge railways.

Three Railway Conventions of minor importance were initialled in Athens by M. Rouphos, the Greek Minister for Foreign Affairs, and M. Avramovitch, the Yugoslav representative, on August 2. The Convention as to transit facilities between Ghevgeli and the Yugoslav Free Zone at Salonika is still under discussion.

CONDITIONS IN THE BANAT IN 1925.

The general economic conditions in the Banat may be described as favourable (says the British Vice-Consul at Timisoara in his report for 1925). The scarcity of money did not make itself felt acutely until the autumn when, however, stringency did not reach last year's proportions. Important new industries include a sugar factory at Arad, which will have an annual production of about 70,000 tons; a starch factory at Lovrin producing maize starch, approximate annual production, 400 tons.

Imports of textiles from the United Kingdom have shown a considerable increase during the year, principally in consequence of frequent visits to the Banat by agents and travellers who have been disposed to give acceptable conditions of payment. Woollens of good quality (price about 11s. to 16s.) were imported, while general merchants in London have also delivered goods. Customs and freight charges approximate to 4s. per metre. These high expenses are, however, willingly met in the case of better quality goods, for which there is a considerable demand. In such qualities British goods are superior to Czecho-Slovak goods, with which they have to compete. More recently Belgian competition has become noticeable, but though the goods look well, they are not of high quality. Fair quantities of macco-zephyrs, canvas, cotton poplins (smooth in one colour and printed), also linen cambrics, were imported from England. Buyers state that the canvas is not finished with sufficient lustre. Czech goods competing are well finished. In poplins, printed and fashionable articles, French manufactures are preferred as they are better suited to local tastes. The import of British drapery, including unions (cotton-linens) (at 5½d.—8d..), cambric chiffons (at 1s.—1s. 8d.), also increased. Italy was often underbidding with union, while Switzerland was the chief competitor in cambric chiffons. Increasing quantities of cotton cloth and serge in various colours were imported from England. Here the principal competitor was Italy. Material for ladies' wear, on the other hand, came mainly from Bohemia and France, their samples better corresponding with Continental taste than the few British consignments. France deliverel crêpe-marocaine, crêpe de chine and half silk manufactures (50 per cent. silk) in fair quantities. Materials with more than 50 per cent. silk pay a disproportionately higher rate of duty. Chiffon handkerchiefs came in fair quantities from England, but this business is capable of expansion. Austria and Czecho-Slovakia are the chief competitors. There is a good demand in the Banat for cotton knitted goods and hosiery, under which heading Great Britain has hitherto done no trade with Transylvania. Goods of this class are chiefly from Bohemia. There is also a demand for woollen cloths, in which the United Kingdom might show interest. In material for bandages British firms achieved some success against keen Italian and German competition. Hydrophyl gauze and calico bandges were also imported from Great Britain, which country, however, has not so far managed to do any appreciable business in medical cotton-wool.

Sofia, July 26.

The Union of Workers' Syndicates.

The pacificatory policy inaugurated by the present Government promises to achieve a notable success in a sphere where it was least to be expected—among the working classes, hitherto divided into rival groups whose antagonism was sustained by the existing enmity between Communists and Socialists who exercised the directing influence. In fact, in Bulgaria, as in all the Balkan countries, the Labour movement has been quickly seized upon on the one hand by the Socialists and on the other by the Communists (formerly doctrinaire Socialists). The capture of its political leaders, and the subsequent rivalries, had had the effect of discouraging the mass of the workers and of turning them from trade organisations. The Socialists patronised the so-called free syndicates and the Communists the so-called independent syndicates. And these two groups contended bitterly among themselves.

Until the disappearance or the weakening of the factors responsible for this perpetual strife—in the case of the Communist party as a result of its revolutionary follies; in the case of the Socialist party as a result of it unending and fatal divisions—the working class was unable to regain its unity. This it has now done in a great union of which the constitution has just been officially announced. Emphasis is laid on its wish to live and to develop independently of the influence of political parties, strictly confining its activity in the direction of achieving the demands of the workers within the compass of the laws of the country.

The union of workers' syndicates finds everywhere here a most encouraging welcome, for it is felt that it constitutes a fact of great importance not only for labour but for the whole country. One sees in it an indication of the sound path that social development in Bulgaria is following with the restoration of peace where civil war, with no conflicting interests to justify it, wrought particularly severe ravages. This change which has taken place in public feeling is undeniably very important. Its significance can be measured by the fact that, only lately, the workers of the independent syndicates would not allow the question of an understanding with the workers of the free syndicates to be spoken of, although at the time the former desired union with much greater keenness than the latter, as the only hopeful way out of the impotence into which the internal strife had thrown the Labour movement and, it should be added, all the Bulgarian people.

So the Press congratulates the Bulgarian workers on abandoning the sad illusions and the spirit of adventure encouraged by the Bolsheviks and on returning to the good sense which characterises the nation. Revolutionary phraseology is a dangerous enemy of the working class, especially in Labour organisations

The Loan in Doubt?

The Refugee Loan granted at Geneva is still the subject of negotiations These negotiations are very laborious because of the double settlements which govern that loan; a political settlement dependent on the competent agents of the League of Nations and a financial settlement arising from the banks which will participate in one way or another.

The political settlement is assured as a result of the late deliberations of the Finance Committee of the League, which, convoked in London, has taken cognisance of the consent given by the Reparations Commission in Paris, though not without some difficulty, to the raising of the general mortgage of the Peace Treaty as regards the excise revenues on spirits and the matches monopoly, these revenues having to serve as the guarantee for the loan in process of negotiation. There was on this point some opposition on the part of Italy, who was for a moment afraid that the service of transfers, required by the Finance Committee, would affect its interests by the ultimate extension of the powers of the arbitrator of the payments not only over the sums paid as interest and amortisation of the loan, but also over the payments under the head of Bulgaria's Reparations, of which she retains for herself only 45 per cent. of the yield. But that opposition was dispelled at once, and the question of control raised by the neighbours of Bulgaria was struck out as being a political question to be determined by the Council of the League next September. At the same time no doubt was left as to the impossibility of confiding the control to others than to a delegate or delegates of the League who ought to be chosen from the States not interested in the matter at issue, that is to say, the neutrals. Accordingly the Committee was able to state that there was no longer any political obstacle to the issue of the loan.

Does that indicate that the loan is assured? Far from it; for it is now that we reach the most difficult part, the demands of the banks, which I have already recorded in part and which may compromise this purely humanitarian undertaking, of which, despite the fears of Bulgaria's neighbours, the Bulgarian State will not touch a centime. These demands are formulated by the French banks who, although unable to take more than a small part in the projected transaction, desired to profit by it to liquidate their previous credits and especially to obtain a higher rate of payment for the matured coupons of the Bulgarian pre-War loans, of which the payment was arranged, two years ago, at a mean rate of 37 centimes per leva and which it is desired now not only to raise to 52 centimes, for a period of six years, but actually after the expiration of that time to raise the rate to parity. Thus after six years Bulgaria would have to meet huge annual payments for reparations of 15 to 20 million francs gold, i.e., more than a half milliard of levas, which, added to the rate demanded for the pre-War loans, would exceed considerably the possibilities of the Bulgarian Budget and

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED
Head Office: 41 Lothbury, London, E.C.2

would bring the country face to face with the impossibility of honouring its signature. That is a grave responsibility to take and M. Molloff, who left here with full powers, will return shortly to Sofia to make a detailed report to the Council of Ministers and to invite their final decision.

If the Finance Minister does not succeed in gaining the sympathy of the French banks he will find at Sofia great hostility to their demands, and already one hears suggestions of which the Government is not unaware, for the abandonment of the transaction on the ground that the financial conditions appear disastrous for the country. In any case, if the conditions remain as they are, it can be said with certainty that they will be rejected by the Council of Ministers.

Shipping Intelligence.

SHIPPING AT CONSTANTZA.

H.M. Consul at Constantza in his report on the trade of Constantza in 1925 states:—

The figures for the year as given by the Captain of the port show a large increase:—

Year.	Vessels entered.	Tonnage.
1913	1,166	1,460,000
1920	544	748,560
1923	858	1,546,207
1924	671	1,185,549
1925	1 040	1,836,980

According to the figures, compiled under Board of Trade rules, British shipping entered shows a large increase, 138 ships of 322,294 tons as against 110 ships of 236,326 tons in 1924, followed by Italy with 140 ships of 287,409 tons. Roumanian, French, Dutch and German shipping also show improvement. The greater part of the cargo was carried in British ships, the Italian, Roumanian and French vessels being passenger steamers carrying only small parcels.

During the year a fair amount of dredging took place. The depth of the port is now 27 feet and the petrol basin 30 feet. Two berths (Nos. 11 and 12) were brought into use. Work was also carried on at berths Nos. 9 and 10, which, it is hoped, will be ready for use in 1926. Repairs were carried out to the large breakwater. Large reinforced concrete posts were placed on the quays for the electric light which has been greatly improved. During 1926 it is proposed to build a warehouse 2,700 square metres and another of 2,000 square metres with one storey. An outlay of one million lei will be expended on the port lighting. If the necessary funds can be obtained it is proposed to buy a large crane.

Direct carriages are now available from Constantza via Medgidie to Varna, Bulgaria. Work on the Constantza-Tulcea line is progressing favourably, and in 1925 the station at Hamangia was opened to traffic. This leaves some 25 kilometres to be completed to Tulcea.

Constantza is the chief maritime port of Roumania and serves mainly as a transit port for the rest of the country. Direct imports are few, local merchants replenishing their small stocks from Bucharest. The decreased value of the lei and the general depressed state of trade has rendered business difficult, consequently no fresh enterprises have been started.

During 1925 imports through Constantza showed a slight increase, 156,273,907 kilogrammes as against 155,005,584 kilogrammes in 1924. Exports show a large increase, 707,292,270 kilogrammes as against 543,068,022 kilogrammes in 1924. In addition, 33,374 live cattle were exported. Principal increases are in the following:—Petrol and petrol products (492,208,688 kilogrammes), timber (37,951,710), miscellaneous (12,346,871). There was, however, a large decrease in cereals, 143,700,249 kilogrammes as against 218,639,588 kilogrammes in 1924. The greater part of the imports were in transit for Bucharest, which is the principal distributing centre.

The harvest was very good, especially in Dobruja, but inferior quality, high export taxes, and plentiful foreign supplies caused a decrease in the export of 35 per cent. as compared with 1924.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, August 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras, and Calcutta (London, August 14).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (London, August 25).

British India Line.—S.s. Warfield for Colombo, Madras, and Calcutta (London, August 14); s.s. Trewidden for Bombay and Karachi (London, August 21).

Cunard Line.—S.s. Tyria for Gibraltar, Algiers, Malta, Corfu, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, also Volo if inducement offers (Liverpool, Glasgow, Swansea, August 14); s.s. Brescia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Fiume, and Trieste (Corfu and Gruz if inducement) Glasgow August 21 (Adriatic only), Liverpool August 21, Swansea August 24).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 21); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 18).

P. and O. Line.—S.s. Rajputana for Bombay (London, August 20); s.s. Nankin for Colombo, Madras, and Calcutta (London, August 21).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, August 15).

Ellerman and Papayanni Lines.—S.s. Grodno for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 14); s.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, August 21); s.s. Assyrian for Gibraltar, Malta, Patras, Piræus, Syra, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 28); A Steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, September 2); s.s. Manchurian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool September 4, Swansea September 8); s.s. Scipio for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 11). (* Subject to sufficient inducement.) Transhipments: Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The Thracian Mining Syndicate has been registered as a private company, with a capital of £30,000 in £1 shares. The objects are to acquire a concession and certain mining rights in Greece owned by A. H. Jackson, and to carry on the business of prospectors for mines, producers, refiners, etc. The first directors are A. H. Jackson, Shord Hill, Kenley, Surrey; C. D. Geddes, 21, Young Street, Edinburgh; Col. J. W. Hamilton, The Cressett, Crowborough, Hants. The registered office is at 20, Copthall Avenue, E.C.2.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

Motors and Motoring.

By G. B. B.

Of the recent events in the internal combustion engine world there is little need to speak; quite sufficient has been said already about the Brooklands meeting in which the French cars did so well and about Cobham's history-making flight. So I will content myself with saying that in both events determination, courage and skill met their due reward, and that further no amount of skill, pluck or endurance can stand up against sheer bad luck. But whilst on the subject of Cobham's flight, I may take this opportunity of dealing with the magnificent production issued by Messrs. D. Napier and Son, Ltd., of Acton Vale, which deals with Napier aero engines. It is moderately priced at one guinea, and is printed in three languages, English, French and Spanish, and it deals completely with a number of types of aeroplane to which the famous Napier engine has been fitted, which means that practically every make of machine is comprised in the list. Napiers have certainly done astonishingly well in aero engine work, and it is largely due to their efforts that British aeroplanes now hold the highest position in the aviation world.

By the way, I hear that a certain famous firm who have made in their time commercial vehicles and the highest grade of quality cars, taxicab engines and engines of amazing horsepower and efficiency for aviation work, are now contemplating bringing out a light car. Indeed, I believe the matter has got beyond the contemplation stage.

The World's Cars.

An analysis of the various import and export figures of different countries, together with the statistics relating to motor licences, registrations and other records shows that, broadly speaking, there are about 27,500,000 automobiles supposed to be in service in the world. Allowing for overlapping and also for cars in disuse, although still registered, we shall be safe in taking it that 25 million motor cars are in regular service. Further, this analysis shows that the increase was greater in 1925 than in 1924, and greater in 1924 than in 1923, and so on. In other words, it is a steady increase which shows no sign of diminution, and one is tempted to ask what the number of cars in commission will be in 1930? Or any other future date, for that matter. The answer is easy, provided no unforeseen circumstances intervene. In 1923 there were, in round figures, 19,500,000 cars in use. By the end of 1924 there were 22,000,000. By the end of 1925 there were 3,000,000 more, and it would seem that 3,000,000 is about the maximum present production capacity of the world. Assuming that does not increase, we find that by the end of 1926 we shall have 28 million; by 1927, 31 million; by 1928, 34 million; by 1929, 37 million; and by 1930 no fewer than 40 million cars will be on the road. The figure seems stupendous, and as soon as one sees it in black and white one's mind flies off instantly to the road question. Shall we be able to build enough roads to take the additional vehicles, and shall we be able to build roads that will bear the strain of the gigantic traffic. Forty million cars! And by 1940 how many?

Taking to-day's figures, we find that America has in service nearly 20 million cars. England, Scotland and Wales have about a million between them, and France has about 750,000, or about as many as Canada. It is rather gratifying to know that Australia ranks fifth amongst the world's users of motor cars.

Price Reduction.

Messrs. Vauxhall Motors, always amongst the first to pass on to their customers any reduction in cost that may be possible, have written to ask me to announce the new prices of their 14-40 h.p. series. It appears that the new price of the "Princeton" five-seater touring car is £495, a reduction of £55. The price of the "Bedford" five-seater saloon, lowered by the same amount, becomes £595; and there are reductions in the prices of all the other 14-40 models: "Melton" two-five seater £495, "Grafton" coupé £695, "Wyndham" saloon £695, "Welbeck" all-weather £720, "Kimberley" enclosed limousine £790. Concurrently with these revised prices the equipment has been extended by the addition of spring gaiters front and back, luggage grid and windscreen wiper. The same high standard of quality is maintained. The new value offered in this car of established merit is of very great interest, inasmuch as it reveals a fresh development of the Vauxhall Company's policy, which has ever been to build genuinely high-grade cars, but to keep the price within reasonable limits, giving an absolute value always noteworthy.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Electric Distribution System for Luxor.—Tenders are invited by the Egyptian Ministry of the Interior (Section des Municipalites et Commissions Locales) for the supply and installation of an electric distribution system for the town of Luxor. The electric energy produced will be three-phase alternating current, 3,300 volts, 50 cycles per second, for transmission by armoured cable through two underground canalisation system. The distribution of the current to private consumers will be effected by an overhead three-phase, three wire, 200 volts system.

The contract involves the supply of the following material:—3,430 metres of high-tension armoured cable, 3x16 sq. mm.; 3,400 metres of high-tension armoured cable, 3x10 sq. mm.; 1,100 metres of low-tension armoured cable, 3x50 sq. mm.; 110 metres of low-tension armoured cable, 3x70 sq. mm.; 6 transformer cabins; 12 transformers (viz., 2 of 10 k.v.a., 1 of 15 k.v.a., 2 of 20 k.v.a., 4 of 25 k.v.a., and 3 of 50 k.v.a.); also copper cable for overhead system, steel poles, cable boxes, brackets, cut-outs, porcelain insulators, lamps, etc. September 15. (D.O.T.)

Steel Sleepers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 200,000 steel sleepers with clips and bolts. September 1.

Wooden Sleepers.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 400,000 wooden railway sleepers. September 1.

NEWS FROM ALL SOURCES.

A slight earthquake shock, lasting for a few seconds, was reported at Galatz (Roumania) on August 6.

A new Bulgarian railway line, 24 miles long, has been opened between Sarambey, near Tatarbazarjik, and Lujenye, in the Rhodopes.

The Palestine Government are reported to have voted £115,000 for the enlargement and improvement of the port of Jaffa. The work is to be begun before the winter.

A Greek Commission has reported that the oil springs in the Island of Zante which have been described as valueless by foreign experts can supply 20,000 tons a year of fuel oil for use in the Greek Navy.

Owing to raids by brigands on the Kasr-i-Shirin road the authorities have proclaimed the frontier unsafe for caravans. Kasr-i-Shirin is the first town in Persia on the road from Baghdad to Teheran.

Two hundred tourists from the Anchor Line steamer California on August 2 visited Baalbek and Damascus, and afterwards left for Palestine in perfect security, thanks to the efficient measures taken by the authorities.

The death is announced of Mr. W. Bussy, assistant editor of the *Rangoon Times*.

The Ephor of Antiquities for Argolis and Corinthia, M. Bertos, has advised the Greek Ministry of Education of important finds during the excavations of the site of the ancient Midea, near Tyryns, where a domed tomb containing the following articles has been opened:—One golden bottle, about 6in. in diameter, decorated with silver bulls' heads and other ornamentations of great artistic interest; one golden necklace of an unusual type, three copper (? bronze) swords with gold decorations, and various other articles of gold.

THE ECONOMIC BOARD FOR PALESTINE.

Owing to a typographical error in the report of the meeting of the Economic Board for Palestine which appears in the issue of THE NEAR EAST AND INDIA of July 29 the word "not" occurs for "now" in the second column on page 117 in line 37. The sentence should read:—"The Palestine Electric Corporation, on the other hand, was now an established business and at a fairly early date the future development and composition of the Company would have to be considered."

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended July 29, state:—

Since our last report the futures market has been quiet but the tendency at the close to-day was better than for some time past. The week's summary of price movements is as follows:—Sakellaridis: November, 29.66 dollars, 0.38 dollars up; January, 29.35 dollars, 0.45 dollars up; March, 29.25 dollars, 0.40 dollars up. Ashmouni: August, 21.15 dollars, 0.26 dollars up; October, 21.30 dollars, 0.39 dollars up; December, 21.46 dollars, 0.38 dollars up; February, 21.66 dollars, 0.38 dollars up.

There has been no new feature during the week and prices have more or less followed the fluctuations of the New York market. The better feeling is a result of the continued wet weather in parts of the American cotton belt and the increase of insect damage. Business with the consuming markets shows no improvement and spinners do no more than buy their absolute minimum requirements; very little new crop business has been put through. The local statistical position is as follows: Stock Alexandria, 1,544,000 kantars; up-country, 191,000 kantars (estimate); total supplies in Egypt, 1,735,000 kantars. This figure is distinctly large and with trade so poor we are not likely to see much reduction during the few weeks remaining to the end of August, as the exports will be to some extent offset by the early arrivals of new cotton. The carryover in Egypt will be in the neighbourhood of 1,500,000 kantars, of which about 550,000 kantars are held by the Government. At the third July tender 5,750 kantars dockets were issued. The week's receipts amount to 18,326 kantars, against exports 70,035 kantars; the stock stands at 1,543,695 kantars.

Spot: We have had a week of fairly good markets, and it is still to a great extent the lack of good style cotton which has restricted the turnover. Total sales amount to about 6,200 bales, of which we estimate 3,600 bales Sakellaridis, 2,000 bales Ashmouni, 450 bales Zagora, 100 bales Pilion, and 50 bales White.

Sakellaridis: All grades have been dealt in and there continues to be some demand for low grade cotton, which can be picked up fairly cheaply. Spot differences remain about unchanged.

Ashmouni and Zagora: The bulk of the business has been in Fully Good Fair and Fully Good Fair to Good although a certain amount of lower grade cotton has also changed hands. The low qualities however are getting rather scarce. The demand for the good grades has entirely evaporated. Spot differences are perhaps a little dearer all round.

Pilion: The demand mentioned in our last week's report still continues though the turnover is small. Spot differences remain unchanged.

Brown: No transactions have been recorded.

White: Very little business has been registered in this variety and there is no change in the spot differences.

Crop, 1926: The crop is progressing normally and, in general, satisfactorily. High day temperatures and very damp nights have been experienced during the past week; these are not ideal conditions but so far the crop shows no deterioration as a result thereof. The pink boll worm attack is becoming more general but nowhere up to the present is the attack heavy. New cotton from Mallawi district should arrive in about a fortnight.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended August 4:—

Egyptian Futures.—Sakel Contract.—The intervention of the usual August holidays has tended to restrict business somewhat since we last wrote, and the majority of sessions have been marked by quiet trading and unimportant price movements. Nevertheless, values have shown a somewhat hardening tendency, mainly owing to straddlers taking their profits on earlier operations done in conjunction with purchases of Americans. There has also been a tendency in certain quarters to buy early new crop Sakel deliveries against sales of Upper contracts. Whilst the above operations have not been done on an important scale they have furnished sufficient support to maintain a very steady undertone, and as we are now at a period of the season when contracts are rather in limited supply, moderate buying orders are sufficient to outweigh the rather "bearish" trade and new crop outlook. Other stabilising factors recently in evidence are the firmness of the American markets and, during the last two sessions, stronger Alexandria reports, the latter market advancing moderately on rumours that the Government were about to issue a report showing a 9 per cent. decrease in the current Sakel acreage. Trade reports would indicate that the slight improvement noticeable last week has not been maintained, and the offtake of "actual" cotton continues to run far below normal; new crop business remains at a standstill, and, if present conditions endure, the early arrivals are going to weigh heavily on the market. New crop reports continue of a satisfactory character, although, in certain quarters, it is claimed that the plant is not bolling as freely as last season. At the time of writing, we see no reason to change our recent opinion of the market, and still consider that conservative "short" operations on strong markets are to be advised.

Upper Contract.—Rather more business has been transacted in this option during the past week, but with contracts on offer from straddle sources, values have

Digitized by Google

weakened somewhat. Some moderate support has been accorded by spot houses covering sales. Crop accounts continue to be highly favourable. Since we last wrote, the market shows declines of 5 to 10 points.

Egyptian Spot.—Conditions ruling in this section show no change. Business has been interrupted by the short August holiday, and the end of the coal dispute is not yet in sight. A fair inquiry has been in evidence, but business is slow in maturing, and the majority of contracts are, as before, for small lots of from 5 to 25 bales only. Competition to sell has been very keen. Practically no forward business has been going through, and interest in new crop cotton seems to be entirely lacking. Reports from Manchester and district have been extremely depressing. The local inquiry has been singularly featureless. Interest in Egyptian cotton (as distinct from Sudan) has been chiefly centred on Upper cotton at from 11.50d. to 12.00d., with an occasional inquiry only for the better cotton.

The medium grades of Sakellaridis have again been prominent at from 14.00d. to 16.00d., but the selection is a very tired one and no weight of business has resulted. Pilion cotton has been in improved request at from 12.00d. upwards. Brown and White (Delta) cottons have been neglected. Sudan cotton has once more claimed the greater share of what trade there has been, and the basis for both the Sakel and White varieties remains remarkably steady. Low cotton, 5.00d. to 8.50d., has continued in request with rather more result.

The Liverpool stock figures published over the week-end show our stock as on the 30th ultimo as 29,949 bales Egyptian and 74,526 Sudan. Estimated sales (4 days), 900 bales Egyptians and 1,500 Sudan. Quotations of Sakel have been advanced 15 points, and those of Upper 20 points. F.G.F. Sakel to-day 16.40d. F.G.F. Upper to-day 12.30d.

The output of the Anglo-Egyptian Oilfields for the week ended July 30 was 3,406 tons.

It is estimated that this year's Cyprus locust bean crop will amount to about 55,000 tons as compared with 50,000 tons last year.

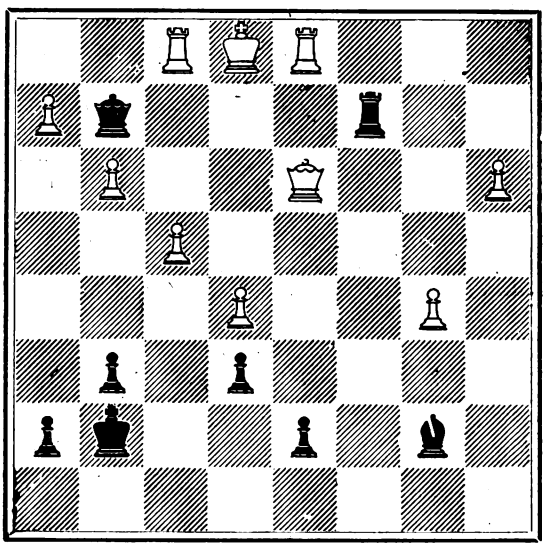
Steaua Romana (British) Limited are advised that the production of the Steaua Romana Company, Bucharest, for July was 34,120 tons.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 20, amounted to £E7,944, making the total from April 1 £E89,231.

An international motor exhibition is to be held in Cairo from February 15 to March 15, 1927. The exhibits will include commercial motor vehicles, motor cycles and cycles, motor spirits and lubricants, tyres and motor tractors.

CHESS.

By "CARO-KANN."



By way of variation from the usual end games, I give this week a rather interesting position in a recent game in the Murton Cup at the City of London Chess Club. Black, who gives Pawn and move, has to play, and has a forced win.

Solution to End-game No. 42.—1, P, Q4, PxP; 2, P—Kt4, K—B3; 3, K—K2, K—K3; 4, K—Q3, P—K3; 5, PxP (ch.), KxP; 6, P—Kt5 and wins.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 10.

Very slack conditions have characterised the week in the stock markets. The sharp recovery in the value of the franc has helped in the maintenance of a fairly firm tone in most markets, but business has been on a very meagre scale. The recent improvement of nearly 100 points in the Paris exchange rate within a few weeks is almost as spectacular as that which occurred in March 1924, when the rate rose from 120 to the £ to 64, in a very short period. Many observers are inclined to think that in both cases a gradual recovery would have been better than these spectacular movements. Many of the proposals of the new Sinking Fund Bill in France are sound and likely to produce a beneficial effect upon the country's credit, but until the actual plans of the new Ministry are more clearly defined it is impossible to say how far the present remarkable recovery in the franc may be justified. French Government bonds and railway stocks have naturally registered a material improvement.

The reductions in the interim dividends of the British railways had been discounted in advance, and actually on the week, prices are a little higher. It is impossible to gauge from the dividend announcements the precise effect of present industrial troubles upon net earnings of the companies. The ordinary dividends of the Great Western and London Midland and Scottish are reduced to 3 per cent. per annum, from 5½ and 5 per cent. respectively, while the London and North Eastern pays nothing on the 5 per cent. preferred ordinary, and has to make "a large draft" on reserves to pay the preference dividends. The Southern alone makes no change, paying the full 5 per cent. on the preferred ordinary. How far losses in traffics have been offset by savings in wages and other costs will not be revealed until the publication of the annual reports in six months' time, but it is obvious that stockholders will have to be content with lower dividends for the full year.

A Tin Famine?

Notwithstanding the hindrance to the consumption of tin in this country owing to the coal stoppage, the visible supplies of the metal at the end of July amounted to only 13,000 tons, a shrinkage of 2,000 tons compared with the end-June statistics, and representing little more than one month's supply. Hence the tin position is in one respect analogous to that of rubber a couple of years ago. In another respect, however, the position is entirely different. The present scarcity of tin arises not from any artificial restriction of production, but from the natural operation of the law of supply and demand. Under the stimulus of the high price of the metal and of the good results secured by numerous undertakings, various flotations have been made in the recent past; while several established companies are adding to their productive capacity. There is, however, no prospect of any appreciable expansion in the supply for some time to come. Hence, if from any cause—say the resumption of work on the part of the miners—there should be a spurt in the demand for tin, an acute shortage might easily be witnessed. Altogether, therefore, it is no matter for surprise that the shares of tin producing companies should be in good demand.

The Ramifications of Artificial Silk.

Investors have doubtless noticed the considerable increase in the number of artificial silk producing companies during recent years, and are more or less familiar with the newer companies. They are less fully acquainted, however, with the international relations of the industry as a whole. It is, indeed, the tendency of the large producing companies to extend their interests overseas which has probably been the most notable of the industry's recent developments. The following particulars, therefore, may fulfil a useful service. In the first place, the German Glanzstoff-Bemberg group has a link with Courtaulds through the Glanzstoff-Courtauld Company. Then we find that the Glanzstoff-Bemberg group is connected with the Dutch-British Enka group, which in its turn co-operates with Spanish and Italian firms. The second Dutch group, the Breda Company, is interested in Spanish, American, and French concerns (S.A. la Soie de Valenciennes). The English Nobel group and the New York Du Pont Company have secured an interest in the Köln-Rottweil and Dynamit-Nobel stock. This transaction may not enter upon the field of artificial silk in the strict sense, in view of the fact that these German firms, as well as the Anglo-American group, specialise in the manufacture of explosives. The Du Pont Company, however, owns 60 per cent. of the capital of the Du Pont-Rayon Company, which ranks second among the American artificial silk concerns. The remaining 40 per cent. is in the hands of the Comptoir de Soies Artificielles Paris.

The French artificial silk industry, besides being connected with American firms, is closely linked with Italy, Switzerland, Spain, and Belgium. The Belgian Tubice concern, in which American capital has also been invested, has subsidiary factories in Hungary and Poland, and several of its own factories in France. The existence of many of these international connections is probably attributable to import tariffs. Hence the Italian Snia Viscosa intends taking up the manufacture of artificial silk in England itself, in order to avoid the high English customs duties. Similarly the Glanzstoff-Bemberg group, to escape the high American protective tariff, has formed the American Bemberg Company, assisted by American capital. This same group also founded firms of its own in France and in Italy, while Courtaulds has plants in Canada and is building new factories in France. Although this does not by any means complete the story, it shows the relationships existing between the most important producers, since at the present time the indirectly or directly connected German Glanzstoff-Bemberg-Farbenindustrie, English Courtauld, and American Viscosa companies command more than one-half of the world's output of artificial silk.

It is reported that the Greek Government, in accordance with its programme of economy, has decided to annul a contract concluded at Geneva for 120 locomotives and 2,000 coaches.

The report of the Darjeeling Himalayan Railway Company for the year ended March 31, 1926, shows a net revenue of Rs. 3,89,910, plus Rs. 3,26,299 brought in. The directors recommend a final dividend of 6 per cent. on the Ordinary shares and 2½ per cent. on the Preference shares for the year, with Rs. 2,87,459 to be carried forward. Interim payments were at 6 per cent. and at 2½ per cent. respectively on the Ordinary and Preference shares.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Russo-Persian Relations.

It is in no sense necessary to be a disparager of the new Shah of Persia to express anxiety on the score of the present relations of Persia with Soviet Russia. Admittedly, the Teheran Government, with the greatest will to independence, cannot, for geographical reasons if for no other, afford to ignore the pretensions or claims of the Moscow Government. But recent events, which it seems to be beyond the power of any other parties than the two mainly concerned to influence, have plainly shown, if fresh demonstration were needed, that Soviet policy towards Persia differs little from the Tsarist policy, which the Bolshevist professed, in 1921, for ever to have abandoned. For instance, the same old bluff which was so conspicuous in the days of the Kajars has been tried in the last few weeks in the matter of the concession for oil by Semnan. This is, perhaps, but an affair of theoretical importance. There may or may not be oil in this province, the boundaries of which the Persians claim have changed during the years since the concession was granted, but that a pseudo-Persian company, with a capital of £1,000,000, should have been allowed to be formed while the concession is still, so to speak, *sub judice*, is scarcely a potent reminder of Persia's determination to resist unjust Russian proposals. Again, and to take a yet more preposterous "ramp," no very sovereign mood can be attributed to the Teheran Government in the problem of the Caspian Fisheries. It appears that the partial embargo which the Soviet Government placed last February on the import of Persian goods into Russia has at last had the effect of rendering desirable or necessary the despatch to Moscow of a Minister of the Court, whose upholding of Persia's indisputable rights cannot, it may be presumed, be more worthily made in Moscow than before the Russian Embassy in Teheran. But, the special mission having been sent, it is permissible to hope that attention will successfully be given to one of the most striking anomalies in Persia, the preferential trade regulations that Russia forced upon the Teheran Administration, which has so far proved, even with the backing of the American Financial Mission, impotent to impose upon the Bolshevists a literal interpretation of their professions of renunciation.

A Persian Pretender.

Turkey is not the only country in which agents in a pre-War régime survive to trouble the new dispensation. From Persia rumour succeeds rumour of various risings against the Government of Reza Shah Pahlavi. It is probable, indeed, that these are greatly exaggerated, but it will scarcely be pretended that the centralising schemes of the Teheran Government are likely to find immediate acceptance among all the tribes. Their occasional resentment, however, is more personal than constructive. It is into another category that the reported rising in Persian Kurdistan of the Salar ed Dowleh must be placed. This "Madcap Prince," the brother of the deposed Shah Mohammed Ali Mirza, is stated to be making yet one more desperate effort to raise the tribes against the Teheran Government. From 1907, when he openly revolted in Hamadan against the authorities in the capital, until the present day, he has, whether inside or outside Persia, been scheming to set up his reactionary hand in Persia. In 1918 he was caught by the British at his stubborn game, and only last year he was severely warned by the Iraq authorities not to meddle with the Kurds on the Perso-Iraqi frontier. It will be interesting to see whether, if the report of his new activity be correct, the Teheran Government will now consent to act in conjunction with the Baghdad Government in the extermination of the two irreconcilables, the Salar ed Dowleh and Sheikh Mahmoud.

The Abyssinian Imbroglio.

It was not to be expected that the British and Italian Governments would not have an extremely good case when they were confronted with the Abyssinian protest at Geneva. Had they themselves arranged for the matter thus to be ventilated, the moment could scarcely have been more opportune. To take first the British Government, which, it will be generally admitted, had since the

Digitized by Google

War shown on the whole an inclination for open diplomacy. Here is a country, it may say, which for years has refused interference with the waters of Lake Tana, although it can be proved that the existence of two other countries, the Sudan and Egypt, depends on them. Every method has been tried to persuade the Addis Ababa Government to allow the construction of a dam at Lake Tana; but in vain. What more natural, then, than to dovetail British interests with Italian interests in the same region; a solider front is afforded, and it may be that where one voice has always been out of tune with other European representatives, two in unison may charm the Ethiopian into granting their desires? As for the conception of keeping these things dark or working against anyone in particular, that negative idea never entered its mind. To this the Addis Ababa Government may reply (perhaps in its best Parisian accent): "But is not Abyssinia a sovereign State, a member, too, of the liberty-loving League of Nations? Who are you, Great Britain and Italy (our enemies during last century), that you should so conspire to penetrate us economically and bring to us those gifts of civilisation which you similarly brought to other countries now under your charge?" And finally (in really exquisite French): "Was it not a common deal arising out of the dispute over Mosul that you arranged between yourselves last December at Rome?"

Italy and the League.

Great Britain has, as we have said, disposed preliminarily of the Abyssinian charge to the complete satisfaction of her officials. Nor is the Fascist Government far behind in protesting its like innocence. The official reply from Rome to Geneva on the subject of the Anglo-Italian Treaty was published on August 13. It complains that the Addis Ababa Government has misunderstood the nature of the agreement between the British and Italian Governments, for this agreement was simply one on procedure, and naturally its application depended on the decision of the Abyssinian Government. Moreover, these things had been explained to Ras Taffari Makonnen, who subsequently stated (last June 19) that he did not doubt the friendly intention of Italy towards Abyssinia. The guarantee was "of an economic nature obtained for Italian enterprises as against British enterprises, in order to avoid competition which might imperil the success of these enterprises." If the facts are as stated in this letter, it appears evident that there has been a clear case of intrigue, which can only gain by being aired in the high atmosphere of the League. But, while admitting that it is not easy to see how the League can disapprove the Anglo-Italian Treaty, we may continue in our regret that through it the construction of a dam at Lake Tana seems to be further off than ever. We can but hope that the opinion is correct of those experts who state that another dam in the Sudan would be more beneficial to it and to Egypt than a barrage at the much coveted and apparently receding waters of Lake Tana.

The Desert Pipe-Line.

No rumour is more consistently spread, no dream more frequently entertained, than that pertaining to a pipe-line between Iraq and the Mediterranean. Across the desert things notoriously move fast, and the fear of this particular oleaginous yarn has not, perhaps, been hindered by politicians with grand prospect of an "All-Red" route for oil and railway from Iraq to the Levant, or by Zionists with premature talk of Haifa as the greatest port of the Middle East. Last week, indeed, a circumstantial statement was published to the effect that the Turkish Petroleum Company intended now to lay down a pipe-line between Baghdad and Beyrout. It is really time that this peculiar fancy were scotched. When the precise location of oil in the Mosul vilayet is known; when the millions of not easily found pounds which the laying of a line from Iraq to the Mediterranean would entail have been put up; when the political stability of Syria is assured—then it may be possible to discuss this many-sided project. But it appears fairly obvious that oil in unsuspected quantities would have to be produced in Iraq to make this line a feasibility, that engineers must carefully survey the uncommon obstacles which the Dead Sea rift is understood to present to the construction of such a line, and that France and Britain must finally agree on the place of its debouching upon the sea, before talk of its being an imminent possibility is indulged.

The New Governor of Cyprus.

It is, perhaps, no coincidence that the real foundation of the history of Cyprus as a Crown Colony should be placed in the hands of a notable pro-Consul, Sir Ronald Storrs, whose experience as a British official in countries the precise status of which was for some time in doubt is profound. Cyprus was, of course, actually proclaimed a Crown Colony last year, but it is no detraction of the work of Sir Malcolm Stevenson, the retiring Governor, during whose régime that long but passionate appeal was made for union with the Hellenic State, and owing to whose efforts the agitation died down, to anticipate that the picturesque personality of the ex-Governor of Jerusalem will quickly make itself felt among the Cypriot population. Sir Ronald is indeed admirably equipped for the purpose of rescuing Cyprus from the backwater into which she has of late years fallen. Its political problem will, we take it, be child's play for a man who ever since the Armistice has had the task of reconciling Arabs and Zionists in Palestine. It is rather on the economic future of the island, therefore, that the new Governor may be expected to concentrate. That the potentialities of Cyprus —to mention but two, cotton and silk—are worth exploiting is the opinion of almost every observer, and one may hope that Sir Ronald may succeed in convincing both the local and the Home Governments of this fact. To take but one small instance of the way in which relations between Nicosia and London could be improved, we may suggest a closer *rapprochement* between the island authorities and their representative in the capital of the Empire. Finally, we wish to Sir Ronald Storrs a successful and pleasant sojourn in a land the historical and archæological properties of which will assuredly be newly adorned or illuminated by this eminent scholar and artist.

The Angora Trial.

The Turkish Revolution differs from the Russian Revolution at least in this—that no Jews are acting as its principal agents. It is, of course, a notorious fact that the 1908 revolution in Turkey was largely engineered by Jews, and it is some of the more notable Semitic members of the Committee of Union and Progress who were

arraigned last week before the Tribunal of Independence at Angora. Javid Bey, ex-Minister of Finance, and Hussein Jahid Bey, the banished Editor of the *Tanin*, have been severely questioned on their alleged activities in undermining the Kemalist régime. The interrogation of these men cannot, however, be said to have thrown much light on the problem; they strenuously denied, indeed, that they ever intrigued against the saviour of Turkey. It is futile to anticipate the verdict of the Tribunal, which may indeed be published by the time that these lines are in print. Most foreign observers have their opinions on the relation of the C.U.P. to Kemalism, and upon what should be done with enemies of the present Angora Government. It will be instructive to observe how nearly the opinion of the Angora Cheka approaches the first and how far it departs from the second.

Egypt Abroad.

It is no business of the outside observer to comment upon the apparent criticism by the Egyptian Chamber of Deputies of Royal expenditure; some such criticism was, in view of its composition, probably inevitable. Suffice it to say that the Zaghloulist conception of the dignities due to be worn by an independent Egypt are not so grandiose as those originally adopted. The Chamber has indeed rejected many of the recommendations of the Finance Commission, which included the abolition of certain Egyptian Legations and Consulates, and the reduction in salaries of Ministers, and passed the credit of £E867,000 for Royal expenditure this year, but it roundly declared that this expenditure was out of keeping with Egypt's international position. Interesting developments, therefore, may be looked for; it may be found, for instance, that Egyptian ties with Brazil are not so intimate as to render an Egyptian Legation there an absolute necessity, or that Egyptian interests in Belgium and Holland, for instance, might gain by being focussed in or directed from one spot. Possibly, however, Egypt has for so long had the benfiet of British financial advice that a leaning towards generosity or magnificence is pardonable or at least comprehensible.

Roumania and Italy.

The Averescu Government is certainly to be congratulated in that it is, at one and the same time, arranging excellent relations with both France and Italy. From the local Roumanian point of view the conclusion of the Franco-Roumanian Treaty must be a feather in the cap of the present Bucharest Government. The text of this Treaty is being filed with the League of Nations, and has not yet been published, but it is said to be based on the principle of the maintenance of a *status quo*, that it fits in with the League Covenant and with the Locarno Agreements, and is valid for ten years. Even more interesting, however, will be the result of General Averescu's present visit to Italy. Without question a new endeavour is being made to join the Italian and Roumanian peoples together. The first instalment of the loan raised in Italy has been placed at the disposal of the Roumanian Government, and the Roumanian Prime Minister is supposed to be seeking a larger loan. Other points of his visit concern the recognition by Italy of Bessarabia, the future of which province still, apparently, is a source of great anxiety to the Bolshevism-hating Roumanians; and the arranging of the official visit to Rome of King Ferdinand and Queen Marie. That the personality of General Averescu will prove extremely winning to the Italians is scarcely to be doubted, but it will be interesting to observe what obligations are to be entered into by the Bucharest Government in the gaining of the friendship of Rome.

Great Britain and the Yemen.

Contemporary British authorities on Arabia are few, but their opinions are many. There are, for instance, those who believe that the future of the Peninsula lies with the Wabhabis, and that the duty of Great Britain lies wholly and solely, therefore, in observing the Clayton Agreements with Ibn Saoud. There are those, again, who assert that in Arabia there exists a mightier man than the great Wahhabi—the Imam Yehia of the Yemen, who, were the Nedjis ever to threaten his existence, would despoil them as he despoiled the Ottoman forces. And yet again, there are those who assert that the most important duty of Great Britain at the moment is to respect the Treaty signed early in the War between the Idrisi of Asir and the British Representative at Aden. Now, as is known, the British Government as successfully concluded recent treaties with the Wahhabis as it failed completely to conclude one with the Yemen. The governing factors in this last failure seem to have been, first, the previous restoration to the Yemen, without British aid, of the port of Hodeida, and, secondly, the violation by Yemeni tribes of the border agreed upon between Turkey and Britain in regard to the Aden Protectorate. In other words, the Imam's hands were full of trumps; and to-day we have no joker in our pack. Yet there is work for British hands still to do in the Yemen; plans already exist, in fact, for making this fertile land once more the prosperous region which the Romans knew. In this connexion we notice, in an article in *The Times* of August 11, a suggestion that a fresh attempt be made to gain the good-will of the Imam. To suppose that this country is willing to assert, by force if necessary (and force would be necessary) its claims to the northernmost border of the Protectorate is incredible; and there is much to be said for a policy of retrenchment and of concentration upon the important element in the relations between the Yemen and Britain. That, at any rate, is the view which presents itself to the inexpert observer who is most impressed with British Arabian policy when it disinterests itself in Arabia. It was in the face of far less complex things than modern Arabia that Walpole uttered his famous dictum, *Quieta non movere*. In Arabia at the present day there are, so to speak, so many horses in the race for local or even peninsular supremacy that it appears the most prudent course to refrain from any further backing of them. To mention but one obscure case: the future of Asir, in a new attempt to control which, we note, the deposed uncle, the Idrisi Seyyid Ali ibn Mohammed, of the ruling Emir, Seyyid Hasan, is just reported to have sought the assistance of Ibn Saoud. These moves are subjects for observation more than for interference. Great Britain's record as a punter in Arabia, indeed, inclines one to disregard any "tips" in favour of any particular potentate therein.

Turkey and Arabia.

The early reports that Turkey was among the countries which did not respond to Ibn Saoud's invitation to attend the Moslem Conference at Mecca prove now to have been false, for Turkish delegates did actually arrive at Mecca, although not in time to hear the significant inaugural remarks of the King of the Hejaz. It is reasonable to suppose, therefore, that Turkey is still sensible of that unique position which she occupies among Moslem nations, however far the reforming zeal of the Kemalists may take her away from the old conceptions of Islam. Nor is it only in the religious sense that Turkey shows her desire to maintain contact with that Arabia which fell, unmourned yet possibly, too, unripe, from the Ottoman Empire consequent upon the War. For it is stated that she has appointed a diplomatic representative, the Consul-General of Tauris, Suleiman Shevket Bey, to the Government of the Hejaz. Events may yet shape themselves in the Peninsula that the goodwill of Turkey towards any aspirant there to hegemony may be a factor of some importance.

H.M. sloop Cyclamen arrived last week of Bahrein, in the Persian Gulf.

The Greek Government has appointed a special commission to be responsible for the education of the minority populations. It will issue instructions on the programme of work and the books to be used in the schools, and will appoint teachers able to speak the languages of the minority peoples.

THE PROGRESS OF IRAQ.

Of all the countries in the East to the administration of which Great Britain is in greater or less degree charged—Egypt, Palestine, Transjordan, India or Iraq—it is probable that the last has approached most nearly to its visible goal. In that mandated country more than in any other the past seems resolutely to have been forgotten; and the obstacles which once seemed, if not insuperable, at any rate firmly set, are one by one being surmounted. Admittedly in places such as Egypt and Palestine British prestige stands higher than it did as a consequence of the new régimes, but it is to be doubted whether local co-operation with the British authorities has therein attained the degree of zeal that it manifested in Iraq. Official confirmation of this hopeful fact is to be obtained in abundance in the Report published last week as Colonial No. 21, of Sir Henry Dobbs on the administration of Iraq for 1925. This Report is to be considered, in the presence of the High Commissioner, at the November meeting of the League of Nations, who, incidentally, will doubtless be more than ever convinced of the wisdom of their decision in the Mosul dispute. It is an admirable document, compiled in just that temper of enthusiasm and caution the constant exercise of which has enabled the present British régime in Iraq to meet with such conspicuous success. That there yet exist plentiful difficulties in the way of Iraq's becoming a homogeneous State is granted—one thinks, for instance, of the divisions between townsman and tribesman, between Arab and Kurd, between mountain and plain, or between Sunni and Shiah—but within the short space of five years quite remarkable progress in the modifying of these has been accomplished. There is now no reasonable ground for decrying the ability of Iraq eventually to satisfy the League of Nations of her fitness to become a member of the League. One may even hope that, although such a satisfying is of considerable importance from the immediate British point of view, Iraq will ultimately be able to pass even more stringent tests than those imposed by an avid Geneva. In this connexion it is to be noted that the High Commissioner, even at the end of 1925, that is, before the Angora Government had definitely removed the shadow which overhung Iraq for so many dark months, could suggest that, once Iraq's frontiers had, by the help of Great Britain, been finally delimited, it was merely a question of a continuance in the right usage of existing institutions in Iraq before Iraqis so merited the form of government that has been given them as to be worthy of the term "civilised."

This Report, as we have said, is an encouraging document; it is well to remember, moreover, that since it was composed events in Iraq have, with the single exception of the Asfar Concession (in which matter the blame is by no means wholly to be apportioned to the Iraq Government), proceeded according to plan. From the point of view of foreign relations affairs are eminently satisfactory, although it is to be regretted that the troubles of the mandatory Power in Syria still inhibit a delimitation of Iraq's western frontier, with the result that tribal difficulties in that region are less easily solved. With Arabia relations have been remarkably well preserved—an improvement which reflects great credit on King Ibn Saoud and on the Baghdad Government. The Bahra Agreement was in fact a landmark in the history both of Iraq and of Nejd. Of the Kurds only Sheikh Mahmoud, who still holds captive two British airmen, remains spasmodically to give trouble; and his star is assuredly waning. On the East, the Teheran Government has for a strangely long time withheld official recognition of the Iraq State, but since this refusal, which frequently is stated to be on the point of conversion into acceptance, has little effect on the relations actually existing between the Governments of King Faisal and of Reza Shah Pahlavi, the point is not to be unduly stressed. As a matter of fact, however, the High Commissioner had last year, when the Teheran Government was striving to assert its authority among long independent tribes living near the Iraq frontier, very delicate work to accomplish, a work for which the Shah had every reason to be grateful, and which, it may be said, was performed in a way that showed Iraq's face to be turned definitely towards Western conceptions of State sovereignty and away from Oriental ideas. It appears that since economic and religious ties are increasingly to draw Iraq and Persia together, it were well for their relations one with another to be definitely coded. The Shiah bond stands for much, and the commercial progress of the two countries must to a certain extent be commonly developed. In short, it may be hoped that during the present year Iraq's connexion with all her immediate neighbours may be literally established.

Nor is the internal position of the new Kingdom less satisfactory. In the administrative sphere, the Baghdad Government's authority over the tribes has generally improved; more taxes have been collected, roads have been made into regions hitherto impenetrable, municipal improvements, in spite of the lack of money, have been steadfastly continued, public confidence in the Police has increased, and so on. In the matter of agriculture, on which, it must never be forgotten, the main future of Iraq must always depend, last year was a time of great difficulty, on account both of the extraordinarily inclement weather and of the stringency of finance. Yet neither cold nor locusts nor the recommendations of the Hilton Young Commission could shake the faith of those who believe in the future in Iraq of such crops as cotton, cereals, dates, flax, wool, and so forth. The same confidence on the part of the British Advisers in the ability of the Iraqis to "make good" is exhibited in those sections of the Report which deal with the Ministries of Justice, of Defence, of Communications and Works, and of Education. In one particular only do we see reason for anxiety on the future. If, as is suggested, the Royal Air Force evacuate Iraq in a year or two's time, what is to take its place? So far as we know, few Iraqis have been trained in the aerial weapon, though there may shortly be a beginning made in this direction. There are those, however, who, while admitting the Iraqis' ability in flying, doubt whether they are capable of the ground-work necessary for the perfection of this arm. It does not seem too early for the authorities to address themselves to this point. Otherwise, as we have said, the prospects of Iraq, although not so rosy as some would have them, are indisputably bright; and for this progress we ought, while praising the general common-sense and co-operation of the Iraqi people, Arabs and Kurds and Christians and Jews alike, to be grateful to and proud of the work of the British administrators, who went to a land bereft of any sort of government, who gave it one, and who now have the pleasure of seeing it enthusiastically obeyed. In sum, Iraq, under the joint ægis of King Faisal and of the High Commissioner, seems likely in the space of perhaps ten years or so to change its extra-mural status, and to find a warm welcome among the graduates of Geneva.

The Governor of Malta, General Sir Walter Congreve, who has been away on leave, returned to the island on August 11.

Owing to the spread of the murrain from Syria into Palestine the Government of Jerusalem has prohibited the slaughter of cattle for food, and has appealed to the population to assist in enforcing the measures taken to prevent "a national calamity."

On August 10, at Baghdad, a dismissed Customs clerk named Hilmi attacked with a razor the Prime Minister of Iraq, Sir Abdul Muhsin Beg es Saadun. The man was prevented from accomplishing his purpose by the driver of the Prime Minister, who has been attended in the Royal Hospital and is stated to progressing favourably from the wounds on his cheek, forehead, and right arm.

MACEDONIA AND THE LEAGUE.

The Collective Note presented on August 11 to the Bulgarian Government by Yugoslavia, Roumania and Greece will have served a useful purpose, if it ultimately leads to the realisation by the League of Nations of the fact that, as far as the Balkan Peninsula is concerned, the Peace Treaties have failed entirely to bring about conditions of peace. Nearly eight years have now passed since the Great War came to an end; but the Balkans remain an element of unrest for Europe. In such circumstances it should be worth the while of the League to investigate the matter closely, with a view to doing everything that is in its power to eliminate a danger spot. An opportunity for an exhaustive inquiry into the Balkan situation will present itself in September, if, as is to be expected, Bulgaria appeals to the League in connexion with this Collective Note. A localised inquiry, such as that which effected a settlement between Greece and Bulgaria over the Petritch incident of last year, will not be sufficient. The problem before the League should be to introduce into the Balkan Peninsula a state of affairs which, even if it does not attain the impossible in establishing peace for all time, will at least put an end to the constant friction of which all the four States are the victims. It would have been better if the countries had been able of themselves to arrive at an adjustment of their difficulties; but at no time since the War have they shown the least capacity to effect the necessary settlement. Each incident as it has arisen has become the object of accusation and denial on both sides; there has been no attempt to investigate in a friendly spirit the root causes of the troubles, still less to take joint action for their removal. If a further appeal goes to Geneva and is held to concern the general situation in the Balkans rather than to turn on the rights and wrongs of a specific episode, the League will be justified in profiting by the occasion to evolve a solution for Balkan unrest.

Those outside the Balkans who are friends of peace are more concerned with removing the evil than with apportioning blame for it. Certain aspects of the situation are obvious. Numbers of people in the region known as Macedonia have been forced by the Peace Treaties under one Government or another with which they are not in sympathy, and, being primitive folk, they are still having recourse to the traditional method of ventilating their grievances, by battle, murder and sudden raids. The gist of the Collective Note presented to the Sofia Government is that in the opinion of her three neighbours Bulgaria is solely and entirely responsible for this state of affairs. So confident are the three Governments on this point that they are able to indicate the precise measures which Bulgaria must take in order to rid them all of the komitaji trouble. It is improbable that the Bulgarian Government will accept the accuracy of this diagnosis. Statements and denials on this particular subject have crossed the Balkan frontiers almost as often as the komitajis themselves, but the position has shown little real improvement. The time has come when a statement carrying more authority than those issued by the interested parties should be made, and if at the same time a solution of the problem can be recommended, then the necessary steps should be taken to see that this solution is effectually carried out. It may be that an inquiry by the League of Nations will confirm the view of the Yugoslav, Roumanian and Greek Governments that the forcible suppression of all the Macedonian organisations is necessary. In view, however, of the certainty that this step cannot be enforced effectually without bloodshed and a serious upheaval in Bulgaria, the League of Nations has the right to satisfy itself whether this suppression alone is necessary for the removal of the evil. To rid the Balkan Peninsula of a chronic sore an upheaval in Bulgaria may seem a relatively mild remedy, and probably will be so, if it prove effective. The League, however, should endeavour to make sure that there is no chance of the upheaval's taking place and of the komitaji trouble's remaining as acute as before. The komitaji is by no means an exclusively post-War product; he is the descendant by the process of normal evolution of those heroes who raised the standard of revolt against Turkish injustice and oppression and carved out the independence of Serbia and Greece. The tradition of taking up arms against oppressive government is too ingrained in the Balkans to make it reasonable to suppose that the killing off of the komitajis of to-day will prevent the appearance of others to-morrow. The impartial League, therefore, should decide what measures, if any, are required to prevent the creation of fresh komitajis, when it endorses the radical, but possibly necessary remedy of exterminating the Macedonian organisations.

Everyone acquainted with Balkan conditions has realised from the first that the crux of the situation lies in the territory known as Macedonia. Its people are supremely tenacious of what they consider to be their rights, and appear to regard killing or being killed as belonging to the category of normal events. Greece has solved her portion of the Macedonian problem by ejecting all those who are not prepared to accept Greek nationality; in the hope of receiving some form of compensation these people have accepted their fate more or less philosophically, and breaches of the peace seem to occur only when the promises of compensation are found to be belied. Yugoslavia has been less succesful in achieving peace within her borders. She has taken over a large portion of Macedonia, has named it Southern Serbia and has persuaded herself that there is, or should be, no difference between the inhabitants of that province and those of any other part of the Kingdom. The claim is not borne out by the event; Southern Serbia has been the scene of constant trouble, and the Yugoslav Government holds successive Bulgarian Governments solely responsible. That there is an anomaly in the existence in Bulgaria of Macedonian organisations which make an open profession of refusing to accept the *status quo* is not denied; but the anomaly should be removed as peacefully as possible, preferably to Bulgaria's convulsion by civil war. It would be as unreasonable for Italy, in taking exception to anti-Italian demonstrations in Yugoslavia, to require the Belgrade Government to dissolve the Croat Peasant Party within a given time, as it is for Yugoslavia to give the Sofia Government a time limit for the dissolution of the Macedonian brotherhoods. Whatever difference there may be in the character of the Croat and Macedonian organisations, the difficulty in suppressing them by force would be approximately the same. It is right, therefore, that the League of Nations should introduce the element of dispassionate detachment required for the settlement of a matter which cannot be adjusted satisfactorily by the parties concerned, and which calls for a speedy and final settlement in the interests of the Balkans and of Europe as a whole.

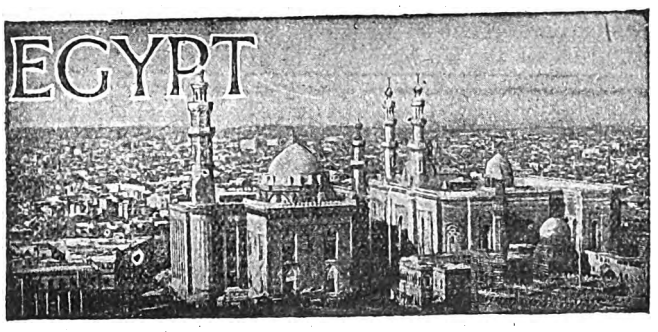
The Near and Middle East*

From Our Own Correspondents.



Cairo, August 8.

Slow Parliamentary Progress.

Parliament during the past week has kept its nose well down to the grindstone. The Budget is not yet half disposed of, even by the second week of August; at the present rate of progress it looks as though the middle of November when, in accordance with the Constitution, the new parliamentary session should begin, will have been reached before the present term is ended. *Al Mokattam* has, indeed, given publicity to the dismal rumour that the Chamber does not intend to rise at all this year, but to go straight on from one session to the next. Little credence, however, is attached to this report, if only because a good many of the deputies themselves are beginning to tire of their labours. During a seemingly interminable debate the other evening the President of the Chamber (Saad Zaghloul Pasha) interposed a rather testy "Do, for heaven's sake, let us get on with this. Here we are in the middle of the summer, and it's getting hotter every day." It was significant, too, that later in the same evening an observant deputy pointed out that the Chamber lacked a quorum, thus bringing the debates to an abrupt end.

Points of Debates.

The budget of the Ministry of Education has occupied almost the whole of the Chamber's time. Financially, the principal result of the ten days devoted by the Chamber to discussion of the "P.I.'s" estimates for the current year was to reduce them by £E79,000 odd to a total of £E2,556,675.

Politically, the outstanding feature of the debates was the ferocious attack launched on both the policy and the personality of the Ziwar Ministry's Minister of Education, Aly Maher Pasha. The debate which ensued upon a proposal to appoint a commission of inquiry into Maher Pasha's tenure of the Education portfolio gave many signs of having been carefully rehearsed beforehand at Wafd headquarters. The motion was, of course, carried unanimously, although a number of deputies were disappointed to learn, in the course of the discussion, that, whatever enormities the commission might discover, it would be impossible to behead Maher Pasha or even to clap him into jail, because the Egyptian penal code most regrettably lacks any provision for the punishment of Ministers of Education whose policy is not approved by the Wafd.

Among the brighter moments of the debate was the occasion when Hafez Awad Bey, Editor-proprietor of the *Kowkab el Shark* ("Star of the East"), proposed the suppression of the Government's annual subsidy of £E1,500 to the Egyptian Students' Club in London. The Editor-deputy's argument was that "the club is simply a place where Egyptian youths learn to play auction bridge and to drink whisky and soda." Since Hafez Awad Bey, in addition to being an accomplished journalist, with an engagingly humorous style, is well known as a redoubtable poker player and no enemy of the genial symposium into the bargain, his suggestion put the Chamber into excellent humour, although the deputies adopted it only to the extent of reducing the annual subvention to £E1,000.

A Zaghloulist Copt.

Another instructive feature of the debate was the contribution of William Makram Ebeid Effendi, a Copt who has been so intimately associated with the Wafd in recent years that Zaghloul Pasha (who is childless) on one occasion referred to him as "my son, Makram." Since then, Makram Effendi has been popularly known as "Young Zaghloul."

Makram Effendi has several times in recent years proved that giving an Oriental the advantages of the best type of education which the West has to offer may often have the opposite effect to that which might have been anticipated. Having been at New College, Oxford, Makram Effendi a few years back displayed his feelings towards the country which had tutored him by publicly casting off the name of William, "because it belongs to the language of the oppressor." The latest attitude of the Wafd has had its effect, it seems, for Zaghloul Pasha, on the not infrequent occasions in the Chamber when he has to request Makram Effendi to be brief, invariably addresses him as "William Effendi."

Quite in keeping with his spurning of the initial appellation conferred upon him by his godfathers and godmother at his baptism was Makram Effendi's attitude during the Education debate. The Chamber's Finance Commission had drawn attention to the fact that students in some of the higher schools cost the Government £E203 in fees. In view of these figures, it did not seem unreasonable that a student who had twice failed to qualify in the final examination of his course should be debarred from further attendance in the schools.

But Makram Effendi would have none of this. Possessed of a really amazing eloquence (whether in English or in Arabic) and a "gift of the gab" which would make the fortune of a cheap-jack selling pills in a country market place or a Sunday orator in Hyde Park, he fulminated against Maher Pasha's abolition of "supplementary" examinations. These astonishing institutions are nothing more nor less than an arrangement by which lads who have idled away their time and have consequently failed in the ordinary examinations are given a second chance, a few weeks later, being allowed to cram intensively in the interval. If Makram Effendi's suggestion were adopted, it would mean students costing the country £E203 a year would have four chances of passing the same examination. But Makram Effendi was not content with this. He thought it most unfair that students should not be allowed to remain for ever in the schools, if they wished, paying £E30 a year and costing another £E203. It is difficult to believe that he gathered these views at Oxford.

Cool Weather.

The weather, notwithstanding the President of the Chamber of Deputies, continues remarkably cool. May was a dreadful month with shade temperatures of 100 degrees Fahrenheit. June was bad too. But since then we have revelled in climatic conditions which would (if there were any such thing) make a perfect English summer.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

IRAQ.

Baghdad, August 4.

An Eventless Period.

Week follows week in Baghdad, and in Iraq at large, with so little incident that it is difficult—especially for one to whom the trees are more obvious than the wood—to know what to record. A profound calm, that of the Silly Season of the middle of the hot weather, has settled upon the capital and the country. Problems are as numerous as ever, but (except perhaps for that of desert raiding and counter-raiding on our large western frontier) their symptoms are mild and chronic rather than acute. Socially, about half the European community is at home on holiday, and the remaining half content to keep going. Officialdom shows no new features, although a few interesting changes in the higher appointments have been made—Naji Beg Shaukat to Mosul, Mahmud Beg Tabaqchali to Baghdad, Abdul Aziz al Mudhaffar to Hillah. The Mutasarrif of the Muntafiq Liwa is said to have tendered his resignation on a point of personal precedence. The Finance Minister, Subih Beg Nashat, would appear from news received to be conducting his deputation in London from triumph to triumph, reception at Buckingham Palace being among its features.

Iraq's Representation Abroad.

So dull is the passing hour in this city that the Nationalist Press—of which the fiercest member, *Al Istiqlal*, has recently achieved re-publication after some five previous suppressions—can find nothing better to attack than the short-comings of Iraq's representation abroad and the slights endured by its citizens. Nothing is made of the fact that one of the smallest, newest, weakest and poorest States in the world has, secured to it by treaty, the protection of the whole British Diplomatic and Consular services in every country: it is more disturbing to the Watani of the coffee shops that Government is slow to fill the attractive posts of Iraq Representatives in the capitals of Europe. Meanwhile, cynical observers here anticipate some pleasure from the installation, which must shortly be, of a Turkish diplomat in Baghdad. Whether he will provide a true spiritual home for the numerous class of Turkish pensioners remains to be seen. If there is prospect of chairs more comfortable than the hard benches of their favourite pavement-side haunts, and of coffee for nothing, they will not be slow to rally round him and comfort each other, probably, with the foolish unrealities and pathetic rumour-fed hopes which have sustained them since the first days of the occupation.

Rumours on Persia.

Of the persistent rumours heard here of military insurrection in Persia, it is hard to form an opinion. These things concern Iraq, since Persia is a neighbour, a purchaser, and the goal of Iraq's very important transit-trade: trouble there, moreover, must have a score of repercussions on the long frontier from Rowanduz to the Karun, as well as in the markets of Baghdad and in the Holy Cities of the Shiah faith. But knowledge of what is passing in Persia is limited—wild rumours apart—to suspicions that the forces of reaction have had time to gather against the new Monarchy, an ebb-tide has replaced the flow, the military machine, created by Reza Shah Pahlavi, is no safe or easy tool even for its creator to manipulate, corruption and self interest—curses of the Persian upper and official classes—are still active and unashamed.

The Problem of the R.A.F.

The recent shocking flying accident at Hinaidi, in which seven men were killed in the crash of a single Vernon just leaving the aerodrome for Kirkuk, is the more lamentable because it is mysterious, and teaches no lesson for future guidance: a mere flaw in metal, it seems, was responsible for this tragic loss of life. If accidents such as this, and that of Elliot some days earlier, call attention to the risks and fatalities of flying, the recent Turkish treaty—and indeed the mere passage of time since the Cairo Conference of 1921—reminds one of a very different aspect of the same subject: how soon, that is, the whole Air Force will presumably be gone. Unless some circumstance makes it entirely impossible to adhere to a programme long ago agreed and visualised, there will be little left of British forces in Iraq by 1929, perhaps none by 1930. How profoundly this will affect the administration of the country, time will show. It is too certain that no local forces can adequately take their place; the hand of Government must be weaker, its reserve of force less, the speed of progress and reform (in so far as this is unpopular) more deliberate.

Iraq's Defence.

Meanwhile the problem of defending Iraq by its own resources alone is believed to be engaging careful attention. Will there be conscription? On what lines, with what exemptions? Is the newly-formed and still scarcely operative Census Department the first step to registering the man-power of the country and calling it to arms? Whatever the future, the forces to-day available in Iraq are in their formation, pattern, and allegiance surely more various than efficiency can approve. Apart from representatives of the British and Indian Armies and the Royal Air Force, there are Police, purely Iraqi in personnel and executive, though assisted and inspected by British officers; there is the Iraq Army of all arms, again purely local except for some British officers on the staff and in the training schools, and latterly for instruction and liaison duties with units; finally there are the Iraq Levies, who are Imperial troops paid and officered (in the higher grades) by H.B.M. Government. It is impossible not to expect the ultimate coalescence of the last two. Yet the difficulties are formidable in the extreme. The marsh-Arabs who form one, and the Assyrians who form the rest, of the Levy Battalions will not willingly accept Baghdadi for British officers. In uniform, arms, drill, conditions of service, outlook and loyalties the two forces have always been widely separated, nor can it be pretended that there is cordiality between them. Nevertheless the organisation of the country's fighting forces into a single Army, as efficient as may be, and extended by conscript classes, is one of the urgent duties of the authorities and an almost certain event of the near future.

ROUMANIA.

Bucharest, August 10.

How Roumania is Governed.

The Parliamentary session has closed, and members have dispersed to their various provincial residences, or to the usual summer resorts. An amusing cartoon appeared in the *Lupta* (organ of the Peasants Party) showing General Averescu, the Prime Minister and M. Goga the Minister for the Interior greeting each other from two stationary trains. *Goga*: Whom have you left in your place on the Council? *Averescu*: No one! *Goga*: Then, who is governing the country? *Averescu*: M. Vintila Bratianu!

There is no denying that there appears to be a great deal of truth in this statement. The Liberals (and particularly M. Vintila Bratianu) govern Roumania, no matter what government is in power. They have far the strongest financial and political organisation; they are the most united, know exactly what they want and have a long experience behind them. It is the lack of experience in handling the machinery of government which is one of the greatest handicaps of the other parties. In view of this fact, it may be expected that, so long as the Averescans conform on the whole with the general policy laid down by the Liberals they may be allowed to continue in office, but as soon as they show signs of trying to knock off the shackles they will find themselves thwarted by some apparently occult power and finally obliged to resign.

Strange things happen in the parliamentary life of this country, which remind one how near it is to the Orient, and which at the same time would afford wonderful scope to the prowess of a political Mr. Sherlock Holmes. There are rumours that M. Jorga's section of the National party is heading towards a union with the Government, and that part of the Peasants' Party has a similar tendency, but the frequent vacillations of both parties make it very difficult to foresee what steps they may take.

Bessarabia.

The burning question of Bessarabia and Italy's refusal to recognise its annexation to Roumania is again on the tapis and General Averescu is said to be taking the matter up very seriously, more especially in view of the new tendencies in Russia. The Bessarabians preferred Roumanian rule to that of the Soviets, but if the latter should be overthrown there is no saying which side they might take. Fortunately the province is rejoicing in a good harvest this year, the first for over three years, so that the population is more happy and contented than it has been for a long time.

Recently, however, the Government has passed a measure prohibiting the distilling of "vodka," the national Russian spirit, which has become dear to the taste of the Bessarabians during their long period of Russian rule. This measure is naturally extremely unpopular, and a great outcry has been raised against it. It may not be a very important matter, but it is such little inconveniences that irritate an alien population, and one cannot help thinking it a short-sighted policy on the part of the Government, not to avoid such irritants unless the benefits involved to the State be important enough to outweigh other considerations.

General News.

A broadcasting company has at last been formed in Roumania with a capital of 50 million lei. The State participating with 30 millions. The remaining 20 millions are offered for public subscription. Private radio sets were prohibited in Roumania until last year, and as there are still no broadcasting stations only powerful and expensive sets have as yet been in use by private persons. The installation of broadcasting stations is, therefore, awaited with impatience by many enthusiasts of moderate means.

Another welcome acquisition to the inhabitants of Bucharest will soon be provided by the electric railway which is shortly to be laid from Bucharest to Ploesti, via Suagon, a fine lake with wooded banks lying about 30 kilometres north-east of Bucharest. It is at present a picnic resort for motorists, but will become accessible to much larger numbers of holiday makers seeking to escape from the dust and sultriness of the town.

Sofia, August 7.

The Balkan Crisis.

My readers will remember that in speaking of the last Conference of the Little Entente I warned them of likely events. For at Bled very Bulgarophobe tendencies were manifested, the Bulgarian success over the matter of the loan having seriously disappointed Yugoslavia and Roumania. It was seen, after the League's decision, that the Little Entente was not supreme in the question of the treatment of the conquered peoples, in Central and South-Eastern Europe at any rate, in which matter it had come to believe that it was the sole arbiter. Ever since that set-back, the military elements in the Little Entente have been making some astonishing gestures.

The dark atmosphere introduced by the Conference at Bled thus prepared the ground for surprises, which assuredly were not slow in coming. They happened on the Roumanian and Yugoslav frontiers, or, more exactly, on the Dubrujan and Macedonian frontiers. The incidents at these places were attributed to komitajis, but in reality they derived from the shameful régime under which the Bulgarian minorities in the Dobruja and in Macedonia had to live. Neither the Yugoslavs nor the Roumanians, however, care to examine this side of the question. All these incidents, Staro-Sele, Sobantzi, Kriva-Palanka and so on, have served to cloud still further the already heavy atmosphere existing in the Balkans. In fact, the intervention of Great Britain and of France and of Italy became necessary, and counsels of calm were preached at Belgrade and at Sofia.

It is curious to note that the recent sabre rattling of Yugoslavia and of Roumania against Bulgaria contrasts singularly with the visible improvements which there have been of late between Bulgaria and her neighbours. Actually, the situation in the Balkans is such that the neighbours of Bulgaria, taken separately, desire nothing but cordial relations with each other. Thus, while it was feared that a *rapprochement* between Bulgaria and Yugoslava might have negative repercussions at Athens, it was at Bucharest that these repercussions were actually felt. Roumania does not wish that the two Slav peoples should come to an understanding, and she manœuvred very cleverly at Bled to play on the hostility of the Yugoslavs towards the Bulgarians, exploiting the Dubrujan incidents in this connexion. And so M. Mitilineu was enabled to side with Dr. Nintchitch in his assertion that Bulgaria wanted a loan . . . to arm her komitajis against her neighbours! At the same time, the improvement of the relations existing between Bulgaria and Greece had an

Digitized by Google

analogous repercussion at Belgrade, where it was suspected that an entente was in process of formation between the two countries—this running counter to the ideas of Yugoslavia.

In sum, one perceives that the anxiety of the Yugoslavs and the Roumanians is not without foundation, although this foundation has little connexion with their declarations. For it appears more and more that Bulgaria has no idea of revenge, but only wishes peace.

The warning given by the Allies, and particularly by Great Britain, signifying that Yugoslavia and Roumania would not be allowed to proceed against Bulgaria without the submitting of their case to a preliminary examination, was welcomed with profound satisfaction in Sofia, for the attitude of Belgrade and of Bucharest during the last few days had excited grave fears. In face of the new situation it only remains for the Yugoslavs and Roumanians to carry their case before the League of Nations, and this they threaten to do. But far from frightening the Bulgarians with this procedure, they have only made the people here rejoice. It is thought here that the League will not render a verdict without going deeply into the whole of this Balkan affair. Moreover, the Bulgarians, sure of their position, ask only for an impartial study—not that they have nothing to reproach themselves for, but because the real reason of these Balkan troubles lies in the treatment inflicted by the victors upon the ethnic minorities in the Balkans. These minorities consist almost entirely of Bulgarians, to whom neither the Yugoslavs nor the Roumanians nor the Greeks are according any of the liberties stipulated in the Peace Treaties, and who are unwilling to resign themselves to accepting the status of pariahs and to be denationalised by the present masters of their homes.

CYPRUS.

Nicosia July 20.

Water Supplies.

The greatest of all benefits to Cyprus would no doubt be found in such an increase of water for irrigation as would render agriculturists independent of a deficient or irregular rainfall. Moreover, much land could be rendered available for agricultural purposes, while the productiveness of the now cultivated area could be doubled, since half of it lies fallow in alternative years under the existing system. The cultivated area in ancient times was probably much larger than it is at present, as in Egypt. It is, of course, very possible that the results of the borings shortly to be undertaken, under the direction of expert British hydraulic engineers, may be disappointing; but interesting and useful conclusions cannot fail to be obtained. And it is highly desirable that the question of supplies by artesian operations should be settled one way or the other, as—up to the present—the tentative work carried out under the Public Works Department has been half-hearted and altogether unsatisfactory, and failure to set this most important problem at rest has been one of the chief causes of complaint.

The Nationality Question.

The Governor recently received the Greek Archbishop and two members of the Legislative Council—one Greek and one Moslem—who urged the claims of Cypriots domiciled in foreign countries, especially Egypt, to be recognised as British subjects. The reply of the Governor appears to have been very similar to that given by Lord Lloyd to the Greek deputation in Alexandria, viz., that the matter would again be carefully considered.

The Patriarch of Alexandria.

The Greek Archbishop, in acknowledging the fraternal greetings of the Greek Patriarch of Alexandria, Meletios, has despatched a long communication expressing the sincere gratification of the island Church and Greek community of Cyprus, and their confidence that the well-tried strength of character and the great services rendered to the Orthodox Greek Church by His Beatitude, are a guarantee of the benefits which will result from his tenure of the high office to which he has been called.

General News.

The Governor, Sir Malcolm Stevenson, proposes to leave the island on the 26th instant. The English Club of Nicosia is holding a reception in honour of Sir Malcolm and Lady Stevenson, to which leading residents of the Greek, Turkish, and other communities have been invited.

There were disastrous rains on July 4, in parts of the island, especially the Central plain, and the Larnaca district, and grain lying on many threshing floors has been swept away. The wheat harvest has been seriously diminished by this, in addition to the havoc from blight; and petitions for relief by delay in tax collection, and in repayment of seed corn issues, will come up for consideration.

The King has been pleased to bestow the order of C.B.E. upon Mr. H. R. Mclaughlan, of the Colonial Secretary's office.

Mr. W. Bevan, O.B.E., has been asked to continue as Colonial Commissioner for Cyprus. His temporary offices are at Avenue House, Northumberland Avenue.

OBITUARY.

The Rev. Herbert A. Boys, whose death at the age of 82 occurred recently, was at one time chaplain to the English Colony at Patras. He was much interested in the Eastern Church. In the last years of his life he marked the 1,600th anniversary of the Council of Nicæa by a pamphlet on the Council and Creed. At Algiers, where he was chaplain from 1875 to 1889, he came into friendly relations with the Latin Church.

Prince Frederick Duleep Singh, who underwent an operation on August 14, died at his residence, Blo Norton Hall, Norfolk, the following day. He was the son of the late Maharaja Duleep Singh of Lahore. He was born in London in 1868.

Colonel Charles Clitherow Gore, formerly a member of his Majesty's Body Guard of the Honourable Corps of Gentlemen-at-Arms, who died in London on August 13 in his 87th year, was a veteran of the Indian Mutiny. Before he was 19 he was present at the siege and capture of Kotah, on March 30th, 1858, also at the affair at Sanganeer, the defeat of the Gwalior rebels at Kotaria, and the attack on the rebels at Sekkur.

The death is announced of Sir William Ridgeway, Disney Professor of Archæology at Cambridge University. He was one of the most prominent Greek scholars of the time, and may be said to have exercised a universal influence in his particular domain of Greek research. His published works include "The Early Age of Greece," "The Origin and Influence of the Thoroughbred Horse," and "The Origin of Greek Tragedy," in all of which he showed extraordinary originality and versatility.

RABBI'S DEPARTURE FOR PALESTINE.

Lord Swaythling presided on August 11 over a representative gathering of London Jewry, at a reception given by the Federation of Synagogues to their Rabbi Dayan A. Chaikin on his departure for Palestine. Lord Swaythling spoke of the veneration and respect in which the Rabbi was held. He had been the minister to the federation for 26 years, and was beloved by the whole of Anglo-Jewry for his erudition and saintly character.

ANTIOCH.

By Norman Bentwich.

Our boat touched at Alexandretta one fine day in May; and to those coming from the thirsty lands of the South the green slopes of the Taurus Mountains were wonderfully alluring. But the special attraction of Alexandretta lies in its being near to Antioch, of which town it was, in ancient days, a port, although the distance between them is some 50 kilometres. The road climbs the southern spurs of the Taurus rising to 2,500 feet, and then drops again to the sea-level, skirting the Lake of Antioch, and finally runs along the fertile plain until it reaches the Orontes Valley, where again the mountains close in on both sides. The ruins of the ancient Seleucid capital tower imposingly upon the mountain side for miles and miles; while the site of the present town climbs but a little way up the hill and is mainly clustered around the river. The huge water-wheels which raise the stream to the aqueducts make their eternal music and turn ceaselessly as they have turned for centuries. There is, indeed, little that is modern in the place save the barracks, which are full of French coloured soldiers, and Ford cars which are fast supplanting camels for all traffic. The French occupation has not made any deep impression here on the popular life as in Beyrout or Damascus; and the town has remained essentially Oriental. The language of the inhabitants and the bazaars is Turkish, and the currency which alone passes is the old Turkish mejidie or silver dollar, which, perversely enough, is no longer accepted in Turkey.

It is difficult to realise in the quiet, rustic ways of modern Antioch that this is the site of the capital of a vast Empire and of what was once one of the greatest cities of the civilised world. The Chinese indeed, in the early centuries of the Christian era, believed it to be the centre of the Roman Empire. Little is left of the Hellenistic-Roman glory—a few columns and fallen capitals, the foundations of some ruined temples, a few sculptured sarcophagi in the garden of the Serai. The circumference of the walls and their massive thickness where they still stand are the most striking relics of the former greatness; and it is at a remote corner of their periphery that the most historic monument of ancient Antioch is to be seen. Beneath a bluff of Mount Cassius, in a recess in the rock, you enter a dark *atrium* in which the remains of a Byzantine mosaic are faintly seen. Here, according to tradition, was the first Christian church, here St. Paul preached the new doctrine to a congregation of the Gentiles; from here he set out to carry his mission to the congregations of the Diaspora.

The Jews of Antioch played a modest part, remote and aloof from the luxurious pagan world which had imitated the material, but not the spiritual, excellence of Hellenism. Around their synagogues were gathered a number of "proselytes of the state" and "proselytes of righteousness" who were seeking spiritual satisfaction and could not find it in the temples of the Greek or the Oriental gods. Although the Jews had formed part of the population of Antioch from the time of its foundation by the first Seleucids, Antioch was not, like Alexandria, one of the great centres of the Diaspora. Nor was Jewish culture a vital element in the intellectual life of the town as it was at Alexandria, where the Hebrew thought was consciously mingled with Hellenic thought to produce a new religious philosophy. The Jews of Antioch were probably small traders and artisans; and their synagogues must have held the same humble place in the religious life of the capital as a Methodist chapel does in a Cathedral town. Hellenised to some extent the Jews were, and they talked and wrote in the forms of the Hellenised philosophy and the mingled Hellenistic and oriental mysteries of the day. They were separate from the mass of the people, but in the easy fashion of the day they were tolerated, and allowed to preach their peculiar doctrines to any who chose to listen. And so in their petty conventicles, unnoticed by the rulers of the place, the doctrine of a new Saviour come to redeem mankind was nurtured, and missionaries went out to spread it to the ends of the Roman world. It is significant that the Christian mission appears to have met with no opposition at Antioch such as broke out in Palestine and at Corinth. The Pharisaic devotion to the Law must have been weakened in the atmosphere of syncretism: and when the fiery preacher came from Tarsus with his apocalyptic visions and his rejection of the old loyalties, there were no outcry and no denunciation.

For centuries Antioch was one of the principal centres of Christian religion and Christian authority. It is said that thirty ecclesiastical councils were held there between the third and sixth centuries: and it was famous for its school of interpreters of the Scriptures. Shaken although it was by many earthquakes and spoiled by many conquerors, it remained a great town till the Middle Ages; and for a period it was the centre of militant Christianity when the Crusaders established their northern kingdom. To-day, however, Antioch is only in small meaure a Christian town. The Patriarch of the Orthodox Church who takes his title from the first centre of Christianity lives at Damascus; and not one of the great basilicas within the city has survived. But there are still at Antioch representatives of that community which has been there since its foundation, and which is responsible for its permanent place in history though all its ancient glory has disappeared. Among the little merchants of the bazaar are a few Jewish dealers and tailors, still remaining aloof from the rest of the people but no longer pursuing any effort to carry their precious truth to their neighbours. Yet even more strikingly than the ruins of the Roman walls, more than the chamber where St. Paul is said to have preached, this little community of men forms a link between the past and the present, between the Empire of the Seleucids and the Roman Empire, the Ottoman Empire and the Mandated State of Syria.

Book Reviews

IN THE OTTOMAN ARMY.

"FOUR YEARS BENEATH THE CRESCENT." By Rafael de Nogales. (London: Charles Scribner. 12s. 6d.)

At the outbreak of the Great War, Senor Rafael de Nogales, a Venezuelan "solider of fortune," offered his services to five of the Entente Powers, but met with refusal. Accordingly, in January, 1915, he joined the Ottoman Army. His four years with the Turks were spent in the Eastern Vilayets, with the Sixth Army in Mesopotamia and the Fourth Army in Palestine, and in various capacities in the interior. The account of his experiences, which might have been a valuable contribution to the history of the War, fails to come up to expectations; for the military operations are described without exactness, and dates—where they are not altogether omitted—are almost invariably incorrect. The errors in the transliteration into English of Turkish and Arabic proper names do not lessen the reader's difficulties. Nasiriyah is called Ain-el-Sheria; Sheikh Sa'ad is renamed Sheik-Zowaiid; and the retirement of Sulaiman Askari Bey's force is referred to as "the retreat from Askeri." Throughout the narrative, it is only the names of the more important places that are easily recognisable. These defects, however, inspire a belief that the author's opinions and information result from his own observations. Had he consulted official records before writing this volume, the majority of the inaccuracies would have been avoided.

The criticisms of the tactics of the British commanders in Mesopotamia and Palestine—which are not without interest—are due, in many cases, to a lack of knowledge on the objectives aimed at and a failure to appreciate our limitations in supplies and transport. Similarly, certain movements of Turkish troops, referred to as brilliant measures initiated by the German Staff, might be better described as eleventh-hour attempts to rectify mistakes. In his account of the political and military successes achieved by his mission in Sinai, in 1917, de Nogales Bey is guilty, no doubt unwittingly, of exaggeration. The subtile Arabs' declarations of loyalty, which he received on behalf of the Porte, failed to withstand the test of time; and the considerable force of cavalry, which dislodged him, was not diverted from the Gaza sector for that purpose, as stated, but in order to destroy the Turkish railway to the south of Beersheba. His detachment was merely swept aside, *en route*. There appears to be no doubt that the description of a battle at Felahie, on February 14, 1916—the only fighting that the author witnessed in Mesopotamia—applies, in reality, to the action which culminated in the Turkish withdrawal from the Wadi position to Umm al Hanna (three miles east of Felahie) on January 13 of that year.

With the exception of definite statements to the effect that there were two brigades of cavalry in Southern Mesopotamia prior to the fall of Kut al Amarah, the references to the dispositions and nomenclature of the Turkish forces are in agreement with the information supplied by the British Intelligence Service during the course of the War. The composition of these cavalry brigades, however, is not mentioned, and there is no evidence that both came into action against our troops. The reference to the 41st Turkish Division, on the Tigris Front, is intended, presumably, for the 51st Division.

The author's bitter hostility towards the Turkish civil and military authorities, and all their ways—explained by the intrigues to which he was subjected—has the advantage of being unconcealed. The unequivocal denunciations of the Turkish régime, and the fulsome praises of the German Staff, leave the reader free to form opinions more modified than those of the writer. Although there are but few references to political and international questions, some attention is devoted to the Christian minorities. The author deplores the cruel fate of the Armenians and the Assyrian and Syrian Christians; and he mentions an occasion, perhaps one of many, when certain Armenians, in fear of their lives, endeavoured to represent themselves as being Assyrians, knowing the latter to be passively loyal to the Government. He gives however, circumstantial evidence of a massacre of Assyrians, at Bashqala, at the end of April, 1915, and he witnessed, but was unable to prevent, the pitiless extermination of the members of the same community at Sairt, about five weeks later. Since it was not until the end of June that the Assyrian Patriarch summoned his Hakkiari clansmen to war on the side of the Entente Powers, it is clear that de Nogales Bey,—in common with all who are well informed on the real sequence of events—would be unable to support the Iraq Boundary Commissioners' opinion that the clans took up arms against the Porte without provocation, upon which grounds it was recently decided that Hakkiari should be retained by Turkey.

The numerous references in this book to the scenery and historical remains betray unfortunate tricks on the part of the author's memory. Could he have seen from the neighbourhood of Khaskhair (called Khisgir)—or from any other point—"in a misty blue world to the south, the Djebel-Tours, snowy white," and, "on the west, the argent towers of Mount Djahudi?" The enjoyment of this vision, and of many others which arouse the reader's *wanderlust*—such as that of "the storied tomb of Zobeide—which shines in lonely splendor on the banks of the Chat-al-Masudi"—would require the employment of considerable reserves of imagination.

In spite of its shortcomings, "Four Years Beneath the Crescent" is a book well worth reading, as a tale of adventure which throws interesting sidelights on recent history. It has many excellent illustrations. Senor de Nogales' readers will retain pleasant impressions of a gallant soldier who conscientiously performed his duty to the country by which he was employed, and to the cause of humanity, in circumstances of exceptional difficulty.

LECTURES ON THE JEWS.

"THE JEWS AT THE CLOSE OF THE BIBLE AGE." (London. Hodder and Stoughton. 5s.)

This volume endeavours to present in popular form the history and literature of the Jews at the close of the Bible Age, and comprises four lectures delivered by Dr. A. Cohen, Mr. H. M. Adler, the late Canon Burney, and the Chief Rabbi (Dr. J. H. Hertz). The introductory lecture opens with the difficulty implied in the title. Scholars are so much at variance and so uncertain about the term "close of the Bible Age" that a more definite title would have been better suited for the purpose. As a matter of fact, the last lecturer, in writing on "Mystic Currents in Ancient Travel," extends the time-limit of his subject to the period of the Bar-Kokhba War, 135 A.D.; while the Introduction is confined to the age of the restoration of the Second Temple.

An excellent paper is contributed by Mr. Herbert M. Adler on the Jewish Papyri discovered about 20 years ago in Assuan (Egypt). The lecturer gives a charming and true account of the religious and social life of the Jews in Elephantine and of their economic and social conditions in the fifth century B.C. He compares also the same conditions prevailing at the same period in Babylonia, based on the cuneiform documents of the Jewish traders in Nippur, Marasu Sons.

The late Canon Burney's paper dwells on the growth

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

and development of the belief in immortality among the Israelites in the Bible. This lecture is a fine testimony to the broad-mindedness of a Jewish audience. Surely, the first chapters of the Genesis bear out eloquently the fact that these problems agitated the mind of the old Israelites. People who believed in an everlasting and eternal God, a religion which shows no traces of "a dying God must have taught and believed in immortality of men made after the image of God."

The last paper tackles skilfully a very delicate problem, the place of mysticism in religion. Mysticism cannot be divorced from religion, but enlightened thought, healthy religious life can be very well imagined without mystic currents and influences. Great religious teachers in Judaism freed themselves from the shackles of mysticism. The latter steps in when legalism and rationalism fail to satisfy the craving of the masses for God. Our time is the best proof for such a failure!

In conclusion, we should like to comment on the inaccuracy of a few details. The name "Isidore" has nothing to do with "the gift of Jesus" (p. 34). Many heathen were called so before the birth of Jesus. Aramaic was the *lingua franca* long before the age of the Elephantine Papyri. Already in the 13th century B.C. Aramaic was the language of diplomacy, as shown by the Tel-Amarna correspondence. Philo was not unknown to Jews for over 1,000 years. Apart from references to him and his works in the IXth century, his views and doctrines were well known to the teachers of the second and third centuries.

THE IDRISI OF ASIR.

The Aden correspondent of *The Times* states that the Idrisi Seyyid Ali ibn Mohamed, who retired to Aden after his deposition from the Throne of Abu Arish and Sabia in Asir, has left for Mecca in order to appeal to the Wahhabi King for assistance against his uncle and successor, the reigning Idrisi Emir, the Seyyid Hasan ibn Ali. It is reported that the Masariha tribe is still faithful to the deposed Emir, and that two others are shaken in their allegiance to his uncle on account of the latter's ill-success in the war against the Zaidi Imam Yehia of Sanaa, against whom the deposed Emir originally invited Wahhabi intervention and thereby precipitated his dethronement at the hands of those who feared that the Wahhabi King would impair the independence of the Idrisi Emirate of Abu Arish and Sabia under colour of protecting it against the Zaidi Imam.

NEWS IN BRIEF.

The Greek Government has allocated a sum of 5,000,000 drachmæ (£11,000) for the assistance of the victims of the recent earthquake.

Locusts have done much damage to the abundant crops in the Sultanate of Lahej and other districts in the vicinity of Aden.

Wing-Commander W. H. Pulford, leader of the Cairo to the Cape flight, has completed his official account of the journey, which will shortly be published by the Air Ministry.

The Ramsay Memorial Felowship Trustees have renewed the Greek Fellowship of Dr. E. Konomopoulos for work at University College, London, for the session 1926-27.

The death has occurred of Colonel Robert Arthur Nugent. His varied service included the Ashanti campaign, 1873-4, the Egyptian expedition in 1882-4, and the Sudan campaign in 1884-5.

The decision was issued at Athens on August 12, condemning M. Angelopoulos, the writer of the articles in the *Politeia* criticising the financial policy of the Government, to six months' imprisonment and a fine of 2,000 drachmæ, for contravention of the Press Law.

Violent storms have continued in Yugoslavia, and railway communications in the north were again interrupted by heavy rain. An express train from Vienna to Zagreb (Agram) was derailed by a landslip near Liubliana, and several persons were injured.

The following are among the articles which have been found in the Mycenæan tomb recently opened at Midea near Tiryns: six golden bottles with silver decorations; two silver bottles; two gold necklaces, one engraved, a gold ring; various cameos and bronze swords with gold ornamentation.

The Maharaja Jam Sahib of Nawangar (Prince Ranjitsinhji) intends, says the *Morning Post* to experiment with growing rice in Connemara, where he has bought Ballynahinch Castle. He considers that the climate is well suited to his purpose.

The Iraq Government has decided that in future all Army and Air Force officers proceeding to that country must hold the passport of their servants, as otherwise admission for the latter may be refused under the Iraq Residence Law. Every passport must bear the photograph of the person to whom it is granted.

The Air Ministry regrets to announce that as the result of an accident at Helwan, Egypt, to a D.H.9A., of No. 47 Squadron, Helwan, on August 10, 1926, Flying Officer Herbert Gerald Slater, the Pilot of the aircraft and Number 342173, A.C.1, Thomas Reginald Harvey, were killed.

It is stated that Lieutenant-Colonel Ian Burn-Murdoch, O.B.E., has succeeded Colonel B. Turnbull as Inspector of Physical Training in India. The new Inspector, headquartered with the Army Staff, will have the grading of a General Staff Officer, 1st grade. His regimental service was with the 32nd Sikh Pioneers. He had employment with the forces operating in the Abor country, and afterwards became adjutant of his unit. His war work in Mesopotamia, Persia, and in the Persian Gulf lasted six years. He was G.S.O.2 with the 15th Indian Division and with the mixed brigade which helped in the clearing up in Iraq. Captain R. C. Fletcher is to be Commandant of the Physical Training School, which post the new Inspector has vacated. Lieutenant E. F. Davies, Royal Ulster Rifles, becomes adjutant of the school.

PERSONAL AND GENERAL

TO-DAY

August 19, 1926 (New Style.
August 6, 1926 (Old Style).
Saphar 9, 1345 A.H., of the Moslem Calendar.
Ellul 9, 6585, of the Jewish Calendar.

King Faisal of Iraq has arrived in London from Vichy.

Princess Brinda Kapurthala last week left Claridge's Hotel for Paris and Venice.

The Gaekwar of Baroda has spent the past week in London, staying at the Hyde Park Hotel.

Sir Frederick Gebbie left London on August 13 for Bombay in the Morea.

The Maharaja of Alwar, who went to Dublin for the Horse Show, left Dublin on August 12 for his shooting in Scotland.

The Marquess and Marchioness of Reading arrived last week at Glenapp Castle, Ballantrae, Ayrshire, on a visit to Viscount and Viscountess Inchcape.

Mr. Robert Hyde Greg, formerly British Minister to Siam, arrived in Bucharest on August 9 to take up his duties as Minister in Roumania.

Sir Ronald Graham, who recently arrived in London from Rome, left 57, Seymour Street, on August 11, on a visit to Underley Hall, Kirby Lonsdale.

Viscount Willingdon, Governor-Designate of Canada, and Viscountess Willingdon will leave Southampton on September 25 in the Empress of Scotland for Canada.

The Wahhabi Crown Prince, the Emir Saoud, arrived in Cairo on August 9, and was welcomed by representatives of the King of Egypt and the Minister for Foreign Affairs.

Sir Geoffrey Archer is now convalescent after his recent operation, and last week left the nursing home to stay at Woldringford, Horsham, the residence of Lady Archer's father, Colonel Charles Godman.

Sir Rajendranath and Lady Mookerjee have returned from The Trumpeter's House, Richmond, to Queen Anne's Mansions, where they will stay until their departure for India on August 26.

Mr. Nevile Henderson, the Acting High Commissioner, and the staff of the British Residency in Cairo have moved into summer quarters at San Stefano, near Alexandria.

Mizra Ali Akbar Khan, Barrister-at-Law, has been appointed a Judge of the High Court of Judicature at Bombay in the place of Abdeali Muhammad Ali Kajiji, who has resigned.

Major R. C. Ruck, O.B.E., who is employed in the General Staff Branch at Army Headquarters in India, has been granted an extension of his appointment on the completion of a four years' tenure.

Colonel S. B. Pope, D.S.O., who has taken up the command of a brigade, has been succeeded in command of the 4th Bn., 19th Hyderabad Regiment by Major J. A. H. Britton, of the 10th Battalion.

Diwan Bahadur Sir T. Vijayaraghavachariar, who was Indian Commissioner at the 1924 Wembley Exhibition, last week arrived in London on his way to Canada in pursuance of an invitation by the authorities of the Canadian National Exhibition to attend the opening of the Exhibition at Toronto on August 28.

Lord Lloyd, High Commissioner for Egypt, was driving in a motor-car in company with his wife and son, on August 12, when, near Inverness, they met with an accident. After medical treatment at the Inverness Infirmary they were able to leave.

Mr. Hugh Hamlyn O'Connell, late of the Madras Public Works Department, died at Southsea on August 9. He was trained at the Royal Indian Engineering College, Coopers Hill, and entered the Indian service in 1878. He was a capable officer and rose to the position of Superintending Engineer in 1904, retiring four years later.

The General Committee of the Church Missionary Society has appointed the Rev. L. Steele financial secretary to the Society. Mr. Steele, who was on the staff of St. John's College, Agra, for 20 years, has been acting financial secretary to the Society since January 1.

The *Daily Telegraph* Athens correspondent states that on the initiative of Dr. Kapps, a former American Minister in Athens, who was actively backed by Dr. Finley, of the *New York Times*, and Mr. Charles Howland, chairman of the Refugee Settlement Commission now in America, a substantial sum was collected in the United States for the re-erection of the Parthenon columns which have lain in ruins beside the famous temple ever since the Venetian general Morosini bombarded the Acropolis occupied by the Turks at the end of the seventeenth century. The work of restoration, which was commenced some years ago, but which had practically ceased owing to lack of funds, will, it is expected, be completed within two years.

ORDER OF THE NILE.

The King has given the following gentlemen authority to wear decorations conferred on them by the King of Egypt, in recognition of valuable services:—

Order of the Nile.

Insignia of the Third Class.—Mr. William Alexander Davie, Assistant Director of Agriculture and Forests, Sudan Government.

Insignia of the Fourth Class.—Mr. Bernard Robinson Hebblethwaite, of the Egyptian Ministry of Public Works, Cairo; Captain Francis Dudley Rugman, M.C., Director of Accounts, Sudan Government; Mr. Charles Herbert Thomson, Deputy Governor, Kordofan Province, Sudan.

INDIAN NATIONAL UNION.

The formation of an Indian National Union to fight Communalism is interesting, as far as it goes; but the names of the signatories do not inspire confidence, as those of none of the really important champions of the cause of either side are to be found among them. The much more representative and much more pretentious "Unity Conference," held in Delhi only two years ago, passed a number of excellent resolutions, including one for the establishment of an "All India Panchayat," to include not only Hindus and Mohammedans, but Sikhs and Christians as well, as a sort of Supreme Court of Arbitration in matters of religious difference; one of whose duties should be the appointment of local Panchayats as "Courts of First Instance" to the same end; but, beyond the passing of the resolutions, it achieved no result whatever. It is safe to say that the present movement, originated in much more unfavourable circumstances, will be equally sterile—only not less so because its achievements cannot well be something less than nothing. Meanwhile the political situation between Hindus and Moslems remains unaltered. The Hindu view, as represented by Madan Mohan Malaviya and Bepin Chandra Pal, has been mentioned recently in these columns: and the Mohammedan view is well summarised in the statement of the Moslem Councillors of the Calcutta Corporation issued on July 12 in explanation of their action in resigning their seats *en bloc*. "Our complaint is not that we are in a hopeless minority, but that a hostile majority is taking advantage of that fact. Our resignation is a positive demonstration of the hopeless condition of the Mohammedan community under Swaraj in the Calcutta Corporation, and the present attitude of the Hindu Councillors is an eye-opener to the Moslems of India about their future fate under the contemplated Swaraj in India."

The difficulty that lies at the root of all attempts to achieve Hindu-Moslem unity is that neither side desires it except on its own terms—a frame of mind between disputants with which we in England have unfortunately been familiarised during the coal strike. It is, indeed, possible to find a parallel between the action of the Prime Minister and of the Viceroy in these two vital disputes—the one as vital for the future of Britain as is the other for that of India—in what the *Statesman* rather remarkably calls "the comparative timidity with which Lord Irwin announces his willingness to call an all-India conference if he sees any real chance of such action effecting improvement." The subsequent remarks of the *Statesman* on the same subject are even more surprising. The paper says that the Viceroy, in denying the allegation that the Government welcomes communal disturbances, said that the great mass of sober Indian opinion still knows and believes that it can trust the pledged word of the British people: and proceeds, "We would say that the promise to India rests on something even firmer than a pledged word; it is founded on the general conviction in Great Britain that the old system of government had exhausted itself, and on a desire to lighten the burden of Empire. There is a weariness of carrying the load and a wish to transfer part of it to Indian shoulders." This strikes the present writer, at any rate, as a total misrepresentation of British opinion; which is not lessened by the *Statesman's* later assertion that the services in India "will not shirk if by Indian obstruction the full task of government is again thrown upon them." The *Statesman* is on firmer ground when it says that "when the British Government desires to make another step forward, it may well be that the loudest voices counselling a step back will be those of Indians who see in communal passion an impassable obstacle to advance." This is the note struck by the Moslem members of the Calcutta Corporation, and much the same as that apparent in Sir Frank Beaman's letter to *The Times* of August 5. He says that, so long as Islam means anything to Moslems, or the ancient faith of India to Hindus, there can never be any genuine reconciliation between the two communities: that it was made temporarily and superficially possible, in appearance only, by the superposition of a strong alien rule, the British: and that, uncontrolled, Islam and Hinduism, so long as both retain vitality, can never exist side by side. Either one must rule the other, or both must be ruled by an impartial overlord who will sternly compel them to keep the peace. He adds that the power of the British Government to do this has lately been "materially weakened by allowing and encouraging Indian politicians to play at being Western democrats, with the natural result that the racial hostility between Islam and Hinduism has recently flamed up alarmingly."

One may agree with this part of Sir Frank Beaman's argument without following him in his further deduction, that the practical impossibility of composing all differences between Hindu and Moslem rules out of court the "impossible chimera of a self-governing India within the Empire." To agree with him there would imply the acceptance of what seems, to the present writer, not a practical, but an absolute impossibility—that the only possible solution is the cancellation of the Reforms and a return to "benevolent autocracy." One may be profoundly convinced that the lines on which the existing reformed constitution was conceived were mistaken, and that any attempt to continue it along those lines must end in failure; but that is not to say that one has not all along been as strongly convinced that reforms of some sort, leading towards the eventual grant of self-government, were an absolute necessity on moral grounds alone—the fulfilment of a debt of honour, with complete repudiation of the "weary Titan" argument. There is still time to correct the form, while preserving the spirit: and this should be the task of the Royal Commission of 1929. If Sir Frank Beaman is right, and nothing but "the superposition of a strong alien rule" can keep the peace between Hindu and Moslem, his view supports that of those who, like the present writer, believe the solution to lie in the creation of "sub-provincial" autonomy in local matters, the extension of Provincial independence, at first under predominantly British guidance, and the retention, in British hands alone, of the central and paramount authority.

CURRENT TOPICS.

The Central Bank Proposal.

The Currency Commission's recommendation that a Central Bank should be established in India, and that the present privileged position of the Imperial Bank should cease, is likely, if carried out, considerably to improve the position of the indigenous banks. The difficulties that the latter experienced in competition with the Imperial Bank, with its average holding of 20 crores of Government money without interest, were stated at some length in THE NEAR EAST AND INDIA of April 1; and the suggestion of an Indian economist, that the work of the Imperial Bank ought to be confined to that of a "banker's bank," was mentioned in that article. This is apparently what the Central Bank is intended to be: and the effect that will be produced in the matter of the competition between the indigenous banks and the Imperial Bank, especially in the case of the latter's branches at the smaller centres, owing to its loss of its privileged position as the banker of Government, is likely to be strongly marked. That this has been already fully realised in India is shown by the immediate drop in the price of Imperial Bank shares by so large a figure as Rs. 100, on the publication of the Commission's report. It is, of course, recognised that the establishment of a Central Bank will take time: and that, in the interim, the Imperial Bank will retain its privileged position—which, incidentally, it is likely to make the most of while it still has the opportunity of doing so; so that the drastic fall in the value of its shares proves that investors are looking pretty far ahead. The article, already referred to, expressed the opinion that "if means can be found to improve not only the security but also the prospects of indigenous banks, a definite step will have been taken in the campaign to induce the small hoarder to substitute economic for uneconomic investment, and towards the great results that success in that campaign would produce." It certainly looks as if the establishment of a Central Bank will have this effect: and it may be assumed that this was present in the minds of the members of the Commission when they made their recommendation.

The Indian extremist newspapers persistently assert that the Royal Commision was a "packed" one, charged with the duty of issuing a report in favour of British interests and in defiance of those of India. It may be suggested that they should ponder its finding in the matter of the Central Bank: and should not lose sight of the fact that, though one of its members was a Governor of the Imperial Bank, and several others were closely connected with it, it has not hesitated to make a recommendation so obviously against the interests of the Bank as to have led at once to a heavy fall in the value of its shares.

"The Small Hoarder."

It is evident that the Currency Commission has deliberately set itself to discourage the small hoarder. The establishment of a Central Bank should, as suggested in the preceding note, do something in this direction: and there are several other recommendations intended to produce the same result. Chief among these is the proposal to re-introduce the one rupee note as unlimited legal tender, coupled with the recommendation that notes of higher denomination should no longer be convertible by law into silver coin, but only into "legal tender money"—smaller notes or silver—at the option of the currency authority. One rupee notes are a most convenient form of currency; but neither they, nor notes of any higher denomination, are suitable for the form of hoarding that usually obtains in India—burying in the ground; nor can notes be converted direct into family jewellery. The "gold bullion standard" advocated in the report allows any member of the public to buy, with any form of "legal tender money," gold bars of 400 oz. weight, but not any less amount. Since the value of such a bar is, in rupees, something more than 22,650, it is obvious that the "small hoarder" will not be interested in such a transaction: and that, if he wishes to hoard gold at all, he will have to do so through a middleman who is in a position to buy it in bulk and to retail it—doubtless at a considerable profit—to petty customers. The Commission also recommends that, in order to bring home to the masses that "legal tender money" really is convertible into gold, the Government should place "on tap" savings certificates redeemable in three or five years in legal tender money or gold, at the option of the holder. It is not clear whether, in this case, the holder will only be able to opt for gold if he can claim a full bar of 400 oz.; but one would suppose that this is what is intended. If so, it knocks out the small man again; if not, it would seem directly calculated to defeat its object. One has seen it stated, by some critics, that the one rupee note has always been looked on by the peasant with distrust. In one's own experience, this has not been so; though its withdrawal from circulation, of which the local money changer doubtless took full advantage by then only consenting to accept it at a discount, may very likely have engendered a distrust of it which it will take time and trouble to remove.

The most doubtful recommendation is the proposal for the eventual demonetisation of silver: for it seems likely that this will prove an incentive to the small hoarder, rather than the reverse; and one cannot but think that the Government will be wise if it rejects it. Even if it does not, it is certain that the "currency authority" will have to exercise the greatest caution in refusing to give silver in exchange for notes: whether legally bound to do so or not, one may be sure that, for some years to come, he will pay out silver on demand. It is most unlikely that the Indian peasant will understand the situation; but one may be sure that the village money changer will do so, and will take advantage of it to charge a small premium on silver. Thus, whether comprehendingly or not, the peasant is likely to hoard silver rupees while he can still get them. If, by any chance, he does not do so, and continues to use them until one day he finds, to his dismay, that he can no longer get them for the asking, the shock is not likely to be any the less because it has been long delayed. After all, hoarding, on a large or small scale, is an Indian national characteristic, and it is no easy task to change the habits of a nation by legislation. The report makes no suggestions to discourage the large hoarder; presumably recognising that, in his case, education is the only remedy. This, in the case of the small hoarder, is of course a much more formidable task; but one does feel that it is not hopeless. The spread of the co-operative movement will effect much; and the Commission's recommendations for the re-introduction of the one rupee note, and for the establishment of a Central Bank, should certainly be helpful. In time, if these produce the expected result, inconvertibility of notes into silver may follow; but one feels strongly that to attempt it now, or even to announce now an intention to do so in future, would be a most unwise step.

The Valour of Ignorance.

One has made one's apology for one's erroneous ideas of what the Currency Commission's report was likely to be; and no doubt one will find, in time, that, as is usual with amateurs when trying to deal with a technical subject, one has misunderstood at any rate parts of the report itself. If so, one will at least be in fairly good company: for one has seen with surprise the following comment in an important commercial journal—presumably written by an expert. "In order to prevent the unlimited melting of rupees for their intrinsic silver value, the exchange value of the rupee had to be advanced in correspondence with the price of silver, reaching ultimately a top price of 2s. 10½d., despite efforts by the Indian Government to hold it back to 2s. at an estimated direct cost of some £55 million." This is a new reading of the "Reverse Councils" fiasco—that disastrous attempt which, one may hope, it will not in future prove necessary to repeat, even on a much smaller scale, to hold the rupee up to 1s. 6d. in the unfortunate, though not improbable, event of a series of poor or bad monsoons. One supposes

Digitized by Google

that the introduction of the gold bullion standard will avert any such possibility; though, as a technical ignoramus, one cannot feel sure even of that.

India and the Coal Strike.

A telegram from Calcutta says that the Swarajist newspaper *Forward* has published an appeal to Indian workers, signed by Messrs. Herbert Smith and A. J. Cook, for help in defeating the attempt of "the Government and the owners to beat the miners by starving their women and children." No doubt at least a summary of the Prime Minister's message to America has also been published in India—though possibly not by *Forward*; so that intelligent newspaper readers will be able to assess the appeal at its true worth. In comparing the reasoned statement, fully supported by ascertained facts and figures, put forward on one side, with the bare assertion by the other that the whole thing is a lie, they may also perhaps remember Kipling's lines about people who "deep in all dishonour stained their garments' hem," and may think that the miners must already be applying the "tag" to Mr. Cook: "we were led by evil counsellors—the Lord shall deal with them."

It is, of course, quite probable that the handful of persons in India who, with one eye on the Bolshevists and the other on the I.L.P., profess to believe in the creed of the extreme left wing of Labour, will think it politic to make at least a show of responding to the appeal for "help to save the children from starvation"; especially as it is accompanied by the statement, obviously inserted in order to stimulate interested as well as disinterested charity, that the miners' leaders are "fighting the battle of the workers of India by refusing longer hours" in Britain. If so, however, it is pretty certain that their response will be confined to an appeal for "funds," with the familiar result. The motto of the "Communist Party of India" has, so far, apparently been that it is more blessed to receive than to give; but this should not, and doubtless will not, prevent them from taking full advantage of the opportunity.

Trepassers will be Prosecuted.

The Government of Bengal seems to have got itself into a fine mess over its prohibition of entry into Calcutta by Messrs. Malaviya and Moonje. The former openly announced, and confirmed in writing, his intention of disobeying the order; even going so far as to inform the magistrate who issued it of the train by which he proposed to travel and the address in Calcutta at which he proposed to stay. He received, *en route*, and disregarded, three separate official warnings of "the serious consequences that would ensue" should he persist in his defiance: and arrived at Howrah to find, among the distinguished company assembled to meet him, a police guard and a prison van. As these were not brought into use, one may perhaps conclude that the Calcutta authorities, desiring to do the thing in style and being in possession of the information regarding the Pandit's Calcutta address, had intended to offer him the van as a conveyance thither, in case he should be unable to obtain a taxi. The report does not state whether, when the Pandit left after fulfilling his programme, the prison van was also sent to see him off; if not, the Calcutta authorities would seem to have missed an excellent chance of an effective curtain to a highly successful farce.

Dr. Moonje, with a caution that one cannot praise too highly, waited to see what would happen to his brother "martyr": and, finding that nothing had happened, announced that he too was "going to begin." This second act of the farce, though successfully carried through, seems to have been less of a draw—perhaps because the star turn, that of the prison van, was apparently omitted. It seems that there is a third act still to come; for it is announced that summonses have now been issued agains both trespassers. It does not look as if it would be easy for the Bengal Government to make this as successful as the other two; but no doubt they will do their best.

It has been the custom, in similar circumstances in the past, to remove the trespasser from his train at the "frontier" station, and to transfer him to one going in the opposite direction. Perhaps the Government of Bengal would have done this in the present case, had it not been for their warning about "the serious consequences that would ensue" if the Pandit persisted. Mere removal would not have been serious enough; they doubtless wished to make good their words by showing India in general, and Bengal in particular, how incredibly foolish it is possible for a Government to make itself look.

Tea.

The *Produce Markets Review* of August 7th contains some interesting statistics on the tea trade of India and Ceylon. The shipments of tea from India during 1925 were just over 336¼ million lbs., compared with nearly 344½ million in 1924, and their value fell from 3328¼ lakhs of rupees to something less than 2837 lakhs. The exports of tea from Ceylon continue to expand, being 209¾ million lbs. in 1925, an increase of five million lbs. over those of 1924. During the first seven months of 1926, over 150,000 packages of tea in excess of last year's quantity have been auctioned in London, and they have realised an average advance of 2.6od. over the 1925 price; though the 40,000 packages of new season's tea have fetched nearly 1¾d. per lb. less than last year. The average price of all grades is .56d. higher than at the end of July 1925.

The United Kingdom has for some years past been the greatest tea importing country in the world, and carries the largest stock. Her total imports of tea during 1925 were 491 million lbs., valued at £37½ million, compared with 510½ million lbs., valued at £40½ million, in 1924. The total output of Indian tea in 1924 was 375¼ million lbs.; a figure which shows that nearly 31 million lbs. were consumed in India. The efforts that are being made by the Indian Tea Association to popularise tea drinking in India were mentioned some months ago in The Near East and India: and these figures show how very large a market still remains to be cultivated in India with its 320 million inhabitants.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 29.

The New Retailer.

Possibly the most important item of news from Calcutta this week is that the Sales are on in the "Stores," the large concerns which have within comparatively recent years come to be the successors of the old type of British retail trader in India. A gradual change has been taking place in the familiar shopping names, although Hamilton the jeweller and Ranken the tailor still carry on in the positions they occupied a hundred years ago; many of the older firms have disappeared or they have changed their type of trade. It is found that the wealthier Europeans are giving up the old practice of running great houses; most of the modern houses are more "homely," but this is predominantly the day of flats; glass and china, silver, napery and wine on the old scale are purchased, if at all, for the English home of the merchant prince, and what is required for India is bought with a close watch on prices and paid for in cash. Whiteaways, Francis Harrisons, the Army and Navy, Hall and Andersons, all work nowadays on the "Stores" lines at Home, and all prefer cash to vouchers. Prices are cut, but the trader flourishes and does larger, if different, trade; but a new body of purchasers has arisen. Hall and Andersons are now erecting a building that will compare with some of the largest stores in London. For whom are they catering?

The New European.

The fact is that there is a new Anglo-India (old style): and it is amusing to note that, while Kipling is being honoured for his services to literature, an India that h

Digitized by Google

hardly knew has come into being and is rapidly influencing the whole tone of European life in this country. The Reforms and Indianisation were bound to minimise the influence of the official, but this change is mostly due to other causes; it is partly a question of money; partly of greater facilities for getting Home and back again quickly and the increased popularity of the Continental tour as part of the journey; but it is probably most due to a change in the character of the mercantile community. No longer do the Managing Agents sit down and draw commissions with their hands folded. Increasing competition from all quarters has forced a quickening up: and, although most of the principal houses are too well dug in to have to worry about bread and butter, the fact remains that more than one has undergone reconstruction within recent years. The principal change however is the great increase in the number of firms who are establishing their own offices in the city. Anyone familiar with the managing agency system can quite understand the desire of a Home firm, working on modern lines, to control its own affairs and push its own interests rather than rest content to be a member of a large group, frequently including other conflicting interests; so the day of the smaller man has come, and there are now literally thousands of young, commercially-educated, successful engineers and such, who are running responsible branches: and this applies to firms and companies of almost every type and kind.

A Clear-Eyed Crowd.

These are the people who comprise the majority of the enormously increasing crowd on the Club side of the football ground: charming, well set-up, clear-eyed, predominantly English, far above the Home average in physique and, dare it be said, in looks and smartness. Their children are sent Home to be educated, the son going into his father's firm and the daughter coming out, holding her head high but with a healthy contempt for her idle sister of Kipling's world; and she boldly becomes a typist or secretary in Clive Street and earns her pocket-money. The family goes to the theatre, to the cafés and to Firpo's, rather than to the Clubs; they regularly patronise the pictures; they do not read much but the newspaper, but it would be a mistake to think that they are folk of narrow views. They have had a far better education in the school of Life than most of their predecessors; if they are sometimes less tolerant of political experiments and concesions, they are strongly imbued with a commonsense English point of view. Of course the Scots have always been with us, making their money and going back to stolid comfort as soon as possible, and they are not a small part of the new community. Sensible, ordinary, small family people, tinged of course with "social nonsense"—who is not?—golfers rather than race-goers, and extraordinarily good fellows; they are intolerant of flummery in social or business life, and their influence has hardly yet been felt in public affairs. These are the makers of European public opinion in the future; these are the people who will bring better understanding at Home as to what is going on in India. These are the people who come out from Home trained to the "Stores" habit, for whom the sales are now being held.

The European on the Pictures.

The Indian is franky puzzled in regard to them. The Home-going Indian meets but few of them in his boarding houses or at the Universities; if he succeeds and gets into the Services, he tends to be more official than the Englishman, and he is uncomfortable because he does not understand them. The stay-at-home Indian finds a white man who does not worry himself with other people's affairs, who keeps himself to himself, and makes friends but slowly; when he does, however, he takes a very real interest and he shows no snobbery. It is this Indian, however, who is probably most puzzled, especially as he goes to the Pictures and there sees what really goes on in England and America. He meets this straight, sane, ordinary man going about soberly with his wife, while advertisements shriek at him to come and enjoy two hours' flickering realisation of "Youth—Joy—Jazz. Cigarettes—Cocktails. White Kisses—Red Kisses. Rollicking Dances—Riotous Flirtations. Pep—Verve—Spice. Flapperism on a Spree. Pleasure-Mad Daughters—Sensation Craving Mothers." Is it any wonder that there is misunderstanding between Europeans and Indians?

Hindu-Moslem Relations.

Communal troubles have almost been washed out by the heavy rains. Seven inches fell on the night before last mail day, and the fact, that there has been nothing more than a few stray stabbings and a broken head or two during the week, is direct evidence of the influence of the weather upon behaviour. There can be no doubt either, regrettable though it may be to the sentimentalist, that the prompt display of crushing force in the last outbreak did immediately put an end to major troubles, and stopped them at their birth. There will always be a section which insists that India is held by the sword: and this was largely reinforced, in its contentions as to how the riots should be handled, by-the accession of numbers of Indians of all classes, who believe that Lord Lytton hesitated to grasp the nettle in the first riots, and also that it was due to his reluctance to give orders that prompt action was not taken to suppress the troubles immediately they broke out. These people are now saying, "I told you so," in no indefinite terms. Certain it is that in one's ordinary life, in the home and in the office, the strong hand is found to be more comfortable for everybody concerned. The houses that are best run in Calcutta are those which are run on autocratic lines, and it is in these that servants stay a life-time, and man and master grow to a mutual respect and affection; introduce "concessions," and the whole thing goes to pieces promptly and inevitably.

Politics.

There is nothing to report in politics. The present position is that the three principal groups are quarrelling amongst themselves and indulging in mutual mild abuse. The *Bengalee* says that Mr. Sen Gupta is an autocrat far more objectionable than any civilian in his district. He is stated to be trying to assume absolute control of the Congress by preventing any discussions that do not meet with his approval; he simply pushes the subject off the agenda until the next meeting—a method not altogether unknown elsewhere. *Forward* in the meantime is cursing the Responsivists, another re-shuffle of the Nationalists, the Independents, the Co-operating Congressites and others of that kidney; hypocrisy, says *Forward*, and treachery; no Government is of any use and all Governments should be opposed. Meantime the *Amrita Bazar Patrika* appears to be regaining some of its old popularity by merely assenting to Lord Winterton's summary of the political outlook, which is plainly an indication that the general run of Indians is getting tired of Extremist futilities. It is true that the *Amrita Bazar Patrika* does not suggest that the statement of the Under-Secretary for India is satisfactory; special attention being called in its leading article to the communal tension which, it is suggested, is due to Government indifference; but there is a refreshing absence of the usual violent abuse of anything that is said by a "foreign" official. Commonsense is creeping back.

Men and Things.

Practically all the Members of the Railway Board are in Calcutta this week, a camp office having been established in an old Government of India building opposite Government House. Sir Clement Hindley, Chief Commissioner of Railways, has been personally giving evidence before the Tariff Commission in regard to the claims of the railway wagon manufacturers for protective duties; the general opinion is that it is doubtful whether the Tariff Board will pay much attention to the point of view of the consumer. Rumours are also rife that a close scrutiny has been given on the ground to the question of the proposed electrification of the Suburban railways, which is coupled with the scheme for a Central Station.

An interesting case has been started in the Law Courts,

Digitized by Google

where one of the leading barristers has brought an action against a member of the Bench in respect of mortgage and share transactions. The trying Judge has adjourned the case till after the Long Vacation, by which time it is possible that the defendant will have ceased to occupy his position as a temporary judge, and things will then presumably be less awkward!

Alan Cobham has passed through Calcutta, just staying one night. He made a brilliant flight from Allahabad, passing round a number of rainstorms and right through others, and he states that the monsoon should have no terrors to the modern flying man. He lost himself on his way to Rangoon but found his position after alighting on a creek. We learn this morning that he has reached Victoria Point. Good luck to a very fine sportsman and good fellow!

Most of the Moslem members of the Corporation have agreed to re-consider their resignations, and so the Pact will not be unduly fractured at this point.

Mr. Justice Greaves has been made a Doctor of Laws at the Calcutta University, a just recognition of his valuable services in pulling things together as Vice-Chancellor. He will be much missed when he goes on long leave shortly.

Possibly you have already had an account of the experience of the passengers on the French mail boat which caught fire in the Red Sea. A number of these were returning to India, and they all agree that the behaviour of the Captain and crew were as exact a contrast to the tradition of British seamen as they could be. This is the one "snag" in using the Continental services, although the chance of an emergency arising in these days is very remote.

The Trivial Round.

The scores of the Fourth Test Match were as closely watched as ever at this end; whatever may be the result of the fifth, presumably no one will be satisfied. We are glad to see that the M.C.C. have definitely decided on an Indian tour, and all the Clubs are now being asked to put up their share of the guarantees; there will be no difficulty about this.

Tollygunge was storm-swept last Saturday, and even before this the going was particularly heavy; three of the rankest outsiders romped home, and once again the bookies came away with most of the money; they have had a very good season there. Next Saturday the Monsoon meeting begins, and the class of horses working on the track this week appears to be better than last year; no one is anxious at present to join the ranks of the prophets.

The Soccer Cup has seen four soldier teams in the semi-finals, the ground being too much both for H.M.S. Effingham, a fine set of men and most attractive players, and for Mohan Bagan, who have been more brilliant this year than for some time past; incidentally they have also been playing a distinctly cleaner game. The finals take place on Saturday between the North Staffords and the Hampshires. It has been a really good year, and last Saturday Calcutta dined the whole of the visitors and took them on to the theatre afterwards; a judicious word had been passed round among the men from the officers as to the credit of the New Army, and the result was a perfectly cheery and delightful evening.

The Hard Court Tennis Tournament has finished successfully. The polo enthusiasts are still at it on heavy ground, but there is quite a good turn out every playing evening.

Rugger has begun, and two teams are already showing up well, the Services and the Prince of Wales' Volunteers who are much favoured; the latter won the Cup last year, and it is obvious that they will take a lot of holding. We shall be having some good games later, as the teams harden to it.

The Merchants' Cup is nearly finished and, in the last round, a record was set up by Orr Dignam's backmarker, who managed to get round in eight strokes under 200; he had never played before! After the second round the betting on Ralli's for the wooden spoon fell to 100 to 1 and somebody is going to lose money now.

The Quaints finished an excellent season on Tuesday at the Empire, and it is now a matter of dress rehearsals for the forthcoming three weeks' amateur season. The new Calcutta Operatic Society, with a company of real beauty, lead off with "The Boy"; then come the old C.A.T.S., with a Pierrot Show; and lastly the A.D.C., which is almost a U.D.S., puts on "The Dover Road"; Mrs. "Pat" Deane, the wife of the popular starter of the C.T.C., is again producing for the last, and her shows bring back the days of Arthur George.

Markets.

A further easing of prices has been in evidence in the jute and gunny markets during the past week; as regards jute, rates are now from Rs. 9/5/3 to Rs. 13 as against Rs. 14/8 to Rs. 18/11/3 at the same time last year. Hessians are dull owing to the meagre demand from consuming markets, but for forward deliveries there is a slight improvement at the close. The piece-goods market shows no change. Heavy stocks are accumulating: and, in order to find a means of minimising loss so far as possible, it is rumoured that a meeting will shortly be held by the Marwari Chamber of Commerce; but it would seem that, so long as the coal strike continues, no increase in business with Manchester can be expected. The results of the tea sales both here and in London indicate a better market, especially for common kinds, which show quite an appreciable increase over previous prices. A feature of the sale here was the keen bidding for certain Darjeelings which were eventually bought at prices well in advance of those paid for a considerable time.

On the Stock Exchange, the main feature has been the maintenance of the higher level of prices for jute shares, coupled with a further expansion of interest, which has resulted in some cases in additional rises in prices; the more speculative favourites, Howrahs and Clives, close a shade below the best. Business in coals continues to be done on a larger scale, but rates show little alteration. Apart from Government Securities, which are firm after opening weaker, there is little to report; teas and rubbers remain somewhat in the background, although there is a better inquiry for the latter shares, but without much business resulting.

The Exchange market has been conspicuously dull and inactive, with Ready T.T. firm at 1s. 5 15-16d. Money is nominal at 1 per cent.

THE SUNKEN EGYPT.

(By Amateur.)

At seven o'clock in the evening of the 20th May, 1922, the P. and O. liner Egypt, while proceeding in a thick fog at a rate of about three knots, was run into off Ushant by the French tramp steamer Seine and sank within twenty minutes in about 64 fathoms. Seventeen out of forty-four passengers and 71 out of a crew of 294 lost their lives. The Egypt, 7940 tons, was a sister ship of the Persia, Arabia, India, and China, the first three of which were sunk during the War. At the time, the sinking of the Egypt attracted a great deal of attention owing to the heavy loss of life and to the fact that over a million pounds' worth of gold and silver was on board.

Before the War no diving apparatus had been invented which would permit of divers working at more than about 20 fathoms of depth, and the recovery of the Egypt's treasure seemed hopeless. The first of the modern diving suits was invented by a German in 1819: and now, a hundred years later, German inventors claim to have almost perfected a new apparatus which will enable divers to work at depths of even 80 fathoms. The salvage of the sunken treasure has therefore become a possibility though not a probability, as an unusual spell of fine weather and a good deal of luck will be necessary before

Digitized by Google

success can crown the plucky and persistent efforts that are being made by salvage companies to locate and get to work on the sunken ship. The pressure at the depth of nearly 400 feet is about 170 lb. per square inch: and, even if the apparatus including the steel diving armour can withstand this, the work is liable to be upset by unfavourable surface conditions.

The enterprise has already assumed something of the nature of an international competition. The control of the whole salvage scheme is vested in the Salvage Association acting jointly with Lloyds. British, French and Dutch firms have been taking part in the preliminary operations, as the result of which it is believed that the exact position of the wreck has been located. For the actual diving work German divers using the new German deep sea diving apparatus will be employed; but in case they do not succeed a Japanese salvage concern is waiting anxiously to try its own quite different methods. Success in this most difficult and hazardous undertaking will give the whole world a thrill and open up most romantic possibilities.

The writer thinks it may be of interest to record a personal experience in connexion with the sinking of the Egypt. He was in India in May 1922 and, on the 17th of that month, an up-country Marwari in the course of conversation told him that there would be a big rise in the price of gold in Bombay in the next three or four days. Such a rise looked extremely improbable on the general conditions and latest news, and the Marwari was pressed as to the source of his information. He said it was his astrologer who had been that morning unusually confident in his prediction of a rise in the price of gold very shortly in Bombay. The writer chaffed the Marwari; but a few days later the latter informed him triumphantly that, owing to the loss of the Egypt, there had been a sharp rise in gold and that he had made a very handsome profit in consequence. The writer did not know what the vernacular word for "coincidence" was; but, even if he had known it, he would have wasted his time and breath in attempting to convert his Marwari friend to any such theory.

THE INDIAN MAIL.

The Mineral Wealth of Afghanistan.

Recent mail papers have contained several references to the mineral wealth of Afghanistan, a detailed account of which appears in the *Manchester Guardian* of August 9. The conclusions of the writer of this account are that, though the wealth is there, transport difficulties make its realisation impossible. In addition, the Afghan Government is most averse from granting any kind of concession to foreigners; with the result that, in the absence of indigenous capital, there is no present prospect of the country being able to develop its mineral resources: but, though the opportunities offered are now small, they may become enormously important in the future. The absence of transport facilities has, indeed, led to the abandonment of the gold, ruby and lapis lazuli mines previously worked. Copper, lead, iron, mica, asbestos, petroleum, lignite and coal are known to exist, but all remain untouched—though enormous seams of coal, estimated to contain 500 million tons, have been located in the north, a small cement factory in Kabul, with a daily output of ten tons, has to use charcoal as fuel because of the absence of available Afghan coal and the heavy cost of that imported from India.

Stress has lately been laid on the activities of Russian engineers, particularly in the matter of a motor road from the northern frontier of Afghanistan to the capital. If the Afghan Government has so far got over its suspicion of foreigners as to allow these activities, it will perhaps not be long before it agrees to their extension. No doubt the Russians are more interested at present in road making with a strategical, rather than a commercial, object; but it is not to be expected that they will neglect the latter if they think it worth their while to undertake it. There is every reason to suppose that they will think so: and it is quite likely that the Afghan Government will encourage the idea—each party having its own views as to which is likely to reap the ultimate benefit. Russian exploitation of the mineral resources of Afghanistan would not be viewed with benevolence by the Home or the Indian Government; but, if neither are in a position to prevent it, and if Afghanistan should desire it, it might well turn out, in the end, to be of advantage to the country and therefore to those who, like ourselves, wish to see it prosperous and strong.

Afghan Emigrants.

In commenting, in a recent issue, on the Soviet attempt to recruit some of the inhabitants of northern Afghanistan to their newly constituted border Republics, the writer of these notes remarked that the Afghan Government would be unlikely to acquiesce in a peaceful migration. Confirmation of this view is brought by the last Indian mail: which reports that some of the Afghan Hazaras, having had the worst of tribal fighting against some of their neighbours, were offered asylum by Persia: and that the Amir has issued orders that any of his Hazara subjects who may attempt to avail themselves of the invitation are to be "forcibly detained" on the Afghan frontier.

Indian Cadetships at Sandhurst.

The number of vacancies annually offered to Indian cadets at Sandhurst is ten; but, owing to a shortage of suitable candidates, it has been decided that unfilled cadetships will, for the present, not lapse, but be "carried forward." At the last examination, twelve vacancies were available; but, though 17 candidates entered, only eight of these vacancies were filled, none of the remaining candidates being considered suitable. The scheme has not been working long enough for the authorities to arrive at definite conclusions regarding the number of vacancies for which suitable candidates can be expected to be regularly forthcoming: and, for the present, it has been decided that the "carry over" shall continue. But it is obvious that such an arrangement cannot last indefinitely: and, unless greater keenness is shown by suitable youths from India in the near future, it may very likely become necessary to reduce the number of Indian vacancies. It is to be hoped that Indians interested—including the politicians who are always urging acceleration of the Indianisation of the commissioned ranks of the Indian Army—are awake to the facts. Even those who support the demand for an Indian Sandhurst are ready to admit the advantages of a training, at least partial, in England: and the failure—let us hope, only temporary—of the Indian cadetships at Sandhurst to attract a full quota is not a good augury for the success of an Indian Sandhurst, should it be decided to start one.

Vizagapatam Harbour.

The construction of the new harbour at Vizagapatam, on the east coast of India about half way between Calcutta and Madras, which is being undertaken by the Bengal-Nagpur Railway, is reported to be proceeding apace. It is not yet possible to suggest any precise date for the opening of the port, since this is largely dependent on the progress made in dredging and reclamation: and the dredgers, though they have been ordered, are not yet at work; but it is expected that ships will be berthed in the harbour within the next five years. Arrangements have been made to carry on trade in the port during the process of its development, and a good deal of work has already been done in the construction of revetments: town-planning schemes are well advanced, and a system of water supply is being worked out. The natural advantages of Vizagapatam are great—much greater than those of either Calcutta or Madras: and the promoters of the harbour scheme look confidently forward to a great future for the port—an expectation that is shared, though not with pleasure, by its existing east coast rivals.

The Army Polo Team.

The Army in India polo team having been definitely selected to represent Hurlingham for the Westchester Cup in 1927, on condition that the team receives sufficient financial backing, a special appeal for subscriptions has been issued in India. The sum asked for is three lakhs of rupees, or about £22,500: calculated on the basis of the ascertained cost of the last team sent from England to America for the Cup. The estimated cost of 30 ponies, of their fares and those of the players to America, and of maintenance there, is 2¾ lakhs of rupees: and the balance, plus Hurlingham's share of the gate money, is expected to meet the cost of the return fares to India. Subscriptions already received from the Army in India make it probable that the total receipts from this source will come to half a lakh of rupees: and several of the Princes have come forward with generous donations, an example which, it is hoped, will be widely followed.

Since the team will represent "England," that is to say the British Empire and not India only, it seems reasonable to hope that support will be forthcoming at any rate from Great Britain, and that India will not be left to finance the effort alone. The challenge has to be issued in the autumn, so that the matter is urgent: it would be a thousand pities if the project should lapse owing to a failure to raise the necessary money—a contingency that is by no means unlikely, if India is left to find the whole of the money as well as the players. It must be remembered that the team selected consists of British officers of the Indian Army, so that the proposal makes no such direct appeal to the rich Indian as it would if the team were representative of the whole of India, including the Indian States, when its composition would, of course, be quite different. In such a case, finance would probably present little difficulty; but, as it is, it presents a very serious one.

Mortality from Wild Beasts.

The "sheltered people" of England, though their mortality tables generally include a few deaths from the stings of hornets or wasps, and even occasionally one from the bite of a mosquito, probably seldom realise the number of fatalities caused by wild beasts in India. The annual return for 1925 gives the reported deaths from this cause as 21,282: 19,308 of which were due to snakes, 974 to tigers, 265 to wolves, 181 to leopards, 98 to crocodiles, 82 to bears, 78 to elephants, 73 to wild boars, 6 to hyænas, and 217 to "other animals" unspecified. The recorded figures of wild animals destroyed show that, at least in the cases of those included on this side of the report, the balance was very largely against the man-slayers: they include 41,004 snakes, 4660 leopards, 2485 bears, 2361 wolves, and 1609 tigers. The total sum paid by Government as rewards for their destruction was Rs. 157,246; though, of this total, the rewards for snakes came to only Rs. 1579, or an average of a little more than a halfpenny each. A good many years ago, the Government reward for a dead snake was considerably higher than it is now. It became necessary to reduce it when it was found that some enterprising people had taken to breeding poisonous snakes in order to obtain the reward, the amount of which made the industry quite a profitable one.

INDIAN POLICE SERVICE.

The following are declared by the Civil Service Commissioners to be the successful candidates at the competition held in June for appointments in the Indian Police Service. The names are in order of merit:—

Johnston, M. K.; Saunders, J. P.; Tomlinson, W. J. C.; Cartland, D. G. M.; Pratt, E. B.; Shooter, B. J.; Lloyd-Rees, S. V.; Daubeny, R. G.; Jakeman, A. R.; Lewton-Brain, G. E.; Bolam, J. W.; Rouse, W. P. M.; Holliday, G. D.; Beadon, E. H. F.

INDIAN EXCHANGE.

London, August 16.

The news regarding the progress of the Monsoon continues satisfactory in most districts, and this, in conjunction with the effect of the Currency Report, has imparted a much firmer tone to Exchange. The Calcutta market has led the way, and business was done there towards the close of last week at 1s. 6d. for ready T.T., and higher rates a little way ahead.

Bombay has been quieter at about 1-32d. under Calcutta quotations, but the tendency has been very steady in both places. To-day, however, we learn that 1s. 6d. has been established in Bombay as well as Calcutta, but buyers are now looking for 1-32d. higher.

Three months' commercial credits were quoted at the beginning of the week at 1s. 6 7-32d., but this rate disappeared, and although good bills have been placed in Bombay last week at 1s. 6¼d., it was impracticable to obtain anything better in Calcutta than 1s. 6 9-32d. The advance in selling rates has carried the quotation for mercantile paper higher, and the quotations received by telegram to-day indicate that the best rate available is 1s. 6 5-16d. three months' sight. The volume of business, however, on the export side has been rather limited, and the firmness may be ascribed in some measure to the hardening tendency of the London discount market.

Forward rates in India have been further advanced. We hear that T.T. has been done for the latter part of October at 1s. 6⅛d., and from December to the end of February the quotation is 1s. 6 5-32d., with very little business passing.

In the London market remitters have been holding off, and business, after having been done at even money, is now offering sparingly at 1s. 6 1-32d. for spot and delivery within a week. Higher rates are going for forward, without attracting buyers.

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

Cotton Growing in Iraq.

The details given in the Report on Iraq (for 1925), which has just been issued, with regard to cotton growing rather confirm the view that the development of that region as a cotton area is going to be an arduous task. The crop for 1924 amounted to 2,400 bales, but, owing to the decline in cotton prices, the lack of plough cattle, and the comparative failure of the winter cereal crop which tended to an expansion of the area under food crops, the issues of seed fell from 305,585 lb. for 1924 to 177,934 lb. for 1925. The 1925 season was, however, good, and yields were high, and the deliveries to the ginnery were not far below the 1924 level. A tribute is paid in the report to the efforts made by the British Cotton Growing Association to tide over the depression by buying in August last year at Rs500 per ton "a price certainly not justified by the ruling price of raw cotton," by reducing their ginning and baling charges, and by reducing the price of selected seed. The cotton grown is American upland, and the fall in the prices, coupled no doubt with the fear that even lower levels might be reached, has led to a further investigation as to the possibility of introducing Egyptian types. Experiments were therefore again conducted with Ashmouni, but it is stated that this type cannot cope with the climatic conditions in July and August.

Turkey and Foreign Traders.

It cannot be said that the latest development in regard to trade in Turkey will do anything to dispel the anxiety that has not unreasonably been created in commercial circles by some of the measures that have been taken in that country in the course of the last year or so. At the same time there is no need to jump hastily to the conclusion that the action with regard to the foreign Chambers of Commerce is one more step in a campaign designed to make conditions in Turkey as difficult as possible for any traders who are not Moslems. It seems that the Turkish view of a Chamber of Commerce is that it is an official body and not, as it actually is, an organisation of traders, and it is possible that this mistaken idea has something to do with Angora's action, and if so that the situation might be eased by the Chambers of Commerce being given another name. There is also the question of fees which again may have had something to do with the case. Admittedly this is hypothetical, but it seems more rational to look in one of these directions for the reason than to imagine that Turkish policy is dictated purely and solely by the desire to handicap the foreign trader. Were the Chambers to be definitely closed for whatever reason it is obvious that Turkey would be making a most serious error. Where a country is undeveloped the function of Chambers of Commerce in developing trade cannot be over-estimated, and I imagine that it will not be maintained that Turkey's need for assistance of this nature is not at least as great as it was before the War. The fact that the reports with regard to the closing of the Chambers have been conflicting rather suggests that considerable doubts exist in Turkey as to the advisability of this step. It may be hoped that the protests that are to be made against this action will have the desired effect, and that Turkey will abstain from a departure which would not only have a detrimental effect on the country's trade but would also go far to diminish confidence in Turkey abroad, and by so doing would greatly decrease the possibility of financial assistance which sooner or later must become a necessity.

Persia's Improving Finances.

The latest of the quarterly reports of Mr. A. C. Millspaugh, the Administrator-General of the finances of Persia, covering the period down to March 21 last, gives a most encouraging survey of the financial situation of the country. He is able to state that payments have been made on the arrears of 1922-23, that there has been a further reduction in the public debt, and that the year closed with a credit balance. The comparative figures given show the remarkable improvement that has been effected in the last few years. For 1922-23 there was a deficit on the Budget of 26,363,612 krans, and for 1923-24 one of 10,192,246 krans. For 1924-25 the revenues totalled 237,499,048 krans while the expenditure amounted to 234,988,177 krans, there being thus a surplus of 2,510,871 krans. For the past year the revenues are estimated at 247,675,940 krans which compares with 228,714,299 krans three years ago, and while the receipts have steadily mounted there was an equally regular reduction on the expenditure side. If the trade position of Persia has not also improved correspondingly it is largely due to external causes. The past year saw a marked increase in the adverse balance of trade, and Mr. Millspaugh points out that it is evident that the Government and Persian merchants should take active steps to promote the export trade. One measure already taken to this end has been the decision to have a Persian building at the Philadelphia Exhibition this year.

Bulgaria's Economic Crisis.

The unfortunate situation in Bulgaria at the present time is dealt with by our Sofia Correspondent elsewhere in this issue. The country is going through a period of economic depression, which is marked by the stagnation of business and the increase of unemployment. While the causes of the world trade depression have affected Bulgaria in common with every other country our Correspondent points out that special causes have operated in the case of Bulgaria. Those of an economic character have been the failure of the cereal crop, necessitating the importation of wheat, and the surplus production of tobacco. All countries dependent on raw commodities for their wealth have to face periodical crises occasioned by

fluctuations of prices as in the case of cotton. Tobacco is, or should be, a more stable commodity because of its universal use and because its consumption is continually on the increase and does not appear to be affected by periods of trade depression. Unfortunately Bulgaria's good tobacco harvests have coincided with excellent crops elsewhere—in short, production has for the moment outpaced consumption—and the result has been that the tobacco has either not been sold or that it has been disposed of at unremunerative prices. The effect on the trade returns of the importation of wheat coupled with the decreased export of tobacco has naturally meant a large adverse balance of trade. Actually for last year it was one millard and two hundred millions of leva. Linked with the economic crisis is a serious shortage of credit. Our Correspondent points out that the floating of the Refugee Loan will help to relieve the situation both by providing work and by increasing the amount of money in the country.

The Rubber Position.

For the past few days the price of rubber has been fairly steady, though in view of the way it fell at the beginning of the month to recover after the official statement with regard to restriction it is difficult to feel confident that it stands at present at a price which is justified. The future course of the commodity seems to depend entirely on whether there is continued expansion in the motor industry. Sooner or later, of course, the price of rubber will again soar upwards, but in default of unexpected developments I am inclined to think that it is not likely to happen nearly so soon as has been anticipated. Still, one must always look for the surprising in connexion with this commodity. COMMENTATOR.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended August 7:—

The arrivals of sultanas since the opening of the season are estimated at 160 tons, and the sales to date amount to 45 tons. Closing prices Smyrna, per cwt. c.i.f. London/Liverpool, Gamma 56s., Delta 53s.

The new fruit reached the market about a week earlier than last year. Prices have opened at a moderate level. Consuming markets are passing few orders for early shipment, and shippers in consequence are acting with reserve, restricting consignments of unsold fruit to a small scale. Drying operations are now beginning, and will continue in full swing over the next four or five weeks. The weather, for the time being, is favourable. The crop estimate is 45 to 48,000 tons. The first arrivals of figs are stated to be due on the market about August 11.

The Lloyd-Hellenic Navigation Company has ordered 18 vessels of from 3,000 to 6,000 tons from Vickers for trade between Greece, Egypt, Italy and the Black Sea.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, August 7.

The Economic Outlook.

Bulgaria is at present passing through an economic crisis and especially a financial crisis which requires all the attention both of the Government and the political parties and the professional organisations of the country. There is general stagnation, and unemployment is on the increase. That situation is due in the first place to the causes that are to be noted in all the European countries. But there are also causes peculiar to Bulgaria of a political and economic character. The political causes are of two kinds: (1) the disorder resulting from the agrarian régime under which the peasants were favoured to the extent of not being forced to pay their taxes, while capital was unfortunately driven out of the country; that had the effect of upsetting the national economy. (2) The sanguinary strife which followed the *coup d'etat* of June 1923, exhausting the country already ruined by the War. The economic causes are the poor cereal harvest of 1925, which imposed the necessity for importing wheat to feed the people, and the over-production of tobacco during the last two years, of which a large part has either not been sold or has been disposed of on very disadvantageous terms as a result of the abundance of the commodity (the chief article of export of Bulgaria) on the world markets. The consequence has been, on the one hand, a marked increase in exports, and on the other an equally notable decrease in exports, so that the balance of trade has been completely upset. Last year the imports exceeded the exports by one milliard and two hundred millions of leva, which is an enormous adverse balance for a small country like Bulgaria.

That adverse balance threatened to endanger the stability of the Bulgarian exchange, safeguarded by the monopolisation of the business in foreign exchange in the hands of the Banque Nationale. In order to avert that possibility the Government attempted great economies in the public expenditure, and achieved a balanced budget, allocating a credit of one hundred and fifty millions as the commencement of the repayment of the floating debt to the Banque Nationale. Actually it had been the custom, during and after the War, to cover Budget deficits by a recourse to the bank, and thus a floating debt was accumulated of about five milliards of levas, which, so long as at least a great part is not repaid, prevents the bank from operating freely. Further, to safeguard the lev a reduction was effected in the fiduciary circulation, of which the total is now about three milliards and a half, while the maximum permitted by a special agreement with the Reparations Commission is five milliards six hundred millions. That measure contributed, it is true, to strengthening the exchange, but it has also had the effect of increasing the shortage of money which has accentuated temporarily the economic crisis.

Another important measure which the Government has taken has been the reform of the customs tariff. The new tariff voted by the Sobranye is essentially protectionist, and provides for very high and almost prohibitive duties on all imported articles which can be made in the country. The statistics published of the exports and imports for the first three months of the current year show that for that period there was a decrease of more than three hundred millions in imports as compared with the figures for the same period of the previous year. It will be gathered from that that the country imposes on itself heavy restrictions, even privations; it has reached the extreme limit of the fiscal yield—the Finance Minister has been compelled to stop the public works commenced during the preceding financial year because he saw the impossibility of finding by new taxes the resources necessary for their completion.

One looks for an improvement on the imminent conclusion of the Refugee Loan, which, apart from its humanitarian ends, will not fail to have a favourable repercussion on the general economic and financial situa-

Digitized by Google

tion of the country. For one thing it will create work where it will be possible to use labour which is now unutilised, and for another it will enable the Banque Nationale to utilise the influx of foreign money to relieve the fiduciary circulation and to enlarge its credit operations. It is said in this connexion that an issue will probably be made of two milliard leva to attain the legal limit established by agreement with the Reparations Commission. So the loan authorised by the League of Nations, while assuring the settlement of the refugees and their transformation into factors in production, will indirectly reanimate the economic life of the country. But one must harbour no illusions as to the exact bearing of this provisional result. It will suffice to glance at the Budget to realise the gravity of the situation in Bulgaria. Out of the total receipts of seven milliards of leva 1,450,000 go to the service of the pre-War debt and to the execution of the Peace Treaty, 1,234,000,000 are taken by the War Ministry because of the very costly system of the volunteer army, 2,450,000 cover the salaries, which are very poor, of public officials, of which the number is 78,000 in the State offices without counting the departments of the administration, municipalities, and communes. There remains then less than two milliards for the carrying out of public works, the maintenance of the railways, and the satisfaction of the national needs. It is a situation which cannot fail to cause disquiet both to Bulgaria and her creditors, and it can be perfectly well understood why the Council of the League of Nations, having given its consent to the loan, should have recorded in its resolution the right that Article 122 of the Treaty of Neuilly gives to the Reparations Commission of carrying out a new investigation into the resources of Bulgaria, and of authorising either a reduction in the quarterly payments, which will increase rapidly in the next few years, or a postponement of these payments, or finally a reduction or a postponement of the amount due by Bulgaria under the head of reparations.

The Loan.

The Finance Minister, M. Molloff, returned to Sofia some days ago to make his report to the Council of Ministers on the difficulties that have arisen in the negotiations of the loan—difficulties which concern especially the settlement of the pre-War debts. The debts are at present governed by a special arrangement which expires on March 31, 1927, and by the terms of which the annual payments are divided into two parts, of which the one, representing the interest matured, is repaid at a fixed rate of 37 gold centimes for each gold leva, while the payment of the other, representing the capital to be amortised, is provisionally suspended as a result of a moratorium granted by the banks. This is purely a temporary arrangement for which the creditors wish to substitute a definite or at least more final régime than at present, to which end they have sought to take advantage of the conclusion of the Refugee Loan. They have proposed the raising of the mean rate from 37 to 52 gold centimes for a period of six years, at the expiration of which it would attain gradually the normal rate of 100 centimes per gold leva. The Bulgarian Government at first refused to agree to this proposal, but afterwards accepted the terms without the rates of payment foreseeing the insurmountable difficulties which Bulgaria would have to face after 1932, when she would have to pay more than 43 million gold francs per annum, that is to say 1,300,000,000 paper levas for reparations alone. The banks modified the terms, and asked for the establishment of a progressive scale for the payment of the coupons, of which the rate should be increased every three years, and a suitable system for the payment of the amortisations. It is on that point that there is the present disagreement, the Bulgarian Government being unwilling to bind itself for a long period. There is great hope, however, that the difficulty will be overcome by reciprocal concessions, and once an agreement is reached on this matter it will be possible to proceed to the conclusion of the Refugee Loan, in regard to which no complications are anticipated. The Council of Ministers has now directed M. Molloff to return immediately to Paris and London to resume and bring to a conclusion the negotiations which have been temporarily interrupted.

COMMERCIAL BOOKSHELF.

Motoring in East Anglia.

"ON THE ROAD." The Dunlop Pictorial Road Plans. Vol. VII. (Ed. J. Barrow and Co., Ltd. 6d.)

This is the seventh and concluding volume of the series of the Dunlop pictorial road plans. In this volume East Anglia, including the Constable country, is dealt with, and it is not too much to say that the attractions of the routes described are such as to induce the most ardent motorist to make the journey a very slow progression. Seven routes are given from London to East Anglia, the respective objectives being King's Lynn, Norwich (via Thetford), Norwich (via Ipswich), Clacton-on-Sea, Harwich, Ipswich, and Lowestoft, while extensions of some of these routes to centres such as Cromer and Hunstanton are also detailed. The tours are outlined in 47 of the strip maps with which the series has rendered the motorist so familiar, while there are plans of Cambridge, Norwich, Colchester, and Ipswich, and a small-scale map of London. The writer has only one criticism to pass on this very excellent little guide, and that a very minor one. In the plan of Cambridge the Oxford spelling of St. Catharine's has been adopted. The college at Cambridge should be spelt as above.

Egyptian Securities.

"HANDBOOK OF EGYPTIAN SECURITIES, 1926." Compiled by G L. Mortera, Alexandria and Cairo. (A. Lencioni and Co.)

This little handbook is a mine of information with regard to Egyptian securities; in fact, it might not incorrectly be described as the *vade-mecum* for all concerned, or likely to be interested, in investments in companies operating in the land of the Pharaohs. The details given regarding the various companies include the authorised and issued capital, the dividends that have been paid, and an extract from the balance sheet showing the liabilities and assets. A table is also given showing comparative quotations of Egyptian securities. An addition to the handbook that one would like to see would be a summary under each company of the maximum and minimum prices of the shares for each year. Perhaps this hint will bear fruit in a subsequent issue.

The production of Minerva (Roumania) Oil Company, Ltd., for July, including oil received from royalty wells, is 3,134 tons gross.

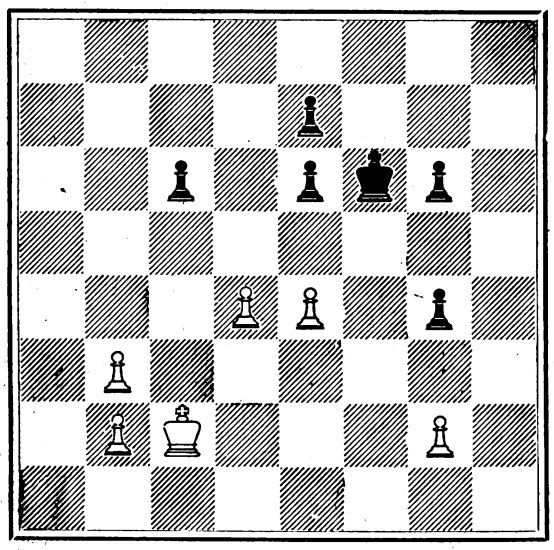
CHESS.

By "CARO-KANN."

I think my readers will admit that the position I gave last week was not very easy. The difficulty is to find the first move for Black, which is B—Q4, after which the game wins itself so to speak. The play actually ran as follows:—1 . . . . B—Q4; 2, Q—K3 (presumably with the idea of returning the exchange, B—B5!; 3, RxP (ch) (there is nothing better), K—R3; 4, P—B5 (dis ch), P—Kt4; 5, K—Q, R—K7; 6, Q—KB3, B—Kt 6 (ch)!; 7, K—B, R—B7 (ch); 8, K—Q, R—B8 (double check) and mates next move. The only variations in the play which seem to call for reference are at 2 Q—K3 and at 5 . . . . R—K7. If White played 2 R—Q2 then 2 . . . . R—B8 (ch); 3 R—Q, B—B5; 4, Q—KB3 and loses a piece. At move 5 Black cannot take the Rook in reply to K—Q for if BxR; 6, P—R4 (threatening mate), and Black would have nothing better than an exchange of Queens, which, though it would leave him a Bishop up, would not be good enough in view of the extremely unfavourable pawn position.



PROBLEM No. 43.
White to play. What result?

The traffic receipts of the South Indian Railway Company for the week ended July 17 amounted to Rs. 9,71,044, making the total from April 1 Rs. 1,60,53,351. The corresponding figures for 1925 were Rs. 10.24,803 and Rs. 1,64,35,854.

THE REFORM OF CHESS.

(From a Yugoslav Correspondent.

[In view of the international character of the game we feel that this article is likely to be of considerable interest to our readers.—Ed.]

A certain decline in the matter of originality and cleverness has become noticeable in some chess problems of late. They are assuming a more stereotyped character, so that their solution offers neither entertainment nor any special satisfaction.

It seems as though problemists, speaking generally, had exhausted the resources of the chessboard, and were obliged to rely on forms grown old. Discontent with present day problems shows itself, moreover, in the increasing publication of studies of the game, whose thoroughness is in refreshing contrast to the superficiality of so many problems of the day. Nor is there lack of other symptoms—inventors of chess problems are obviously eager to find something new in order to bring fresh life into the building up of problems—which confirms the impression that the world of chess is not satisfied with problems of more recent date.

Having regard to this, it is worth considering whether problems should not be placed on a new basis. With this end in view I venture to suggest the introduction on the board of a new factor, which I will call the Imaginary Piece. This piece would be utilised as follows:—

(1) It would be stationary, i.e. a move could not be made with it. The only contingency in which it could be moved would be when a hostile piece came within its danger zone and must be taken. With the capture the piece would cease to exist, being removed from the board with the captured man.

(2) The square occupied by the piece would be closed to any other piece, black or white.

(3) The lines crossing the square occupied by the piece would be free for the operations of the queens, bishops, and rooks of both colours, just as if the piece did not exist. It would be an obstacle only to kings, knights or pawns.

(4) In the case of a discovered check, the piece moved could be placed within the danger zone of the hostile Imaginary Piece.

(5) In a finished problem no hostile piece might stand within the danger zone of the piece.

(6) The piece would not be able to take *en passant.*

(7) Any piece, black or white, except the king, might be taken by the piece.

(8) Only one Imaginary Piece might be used in a problem—one black or one white.

Inventors of chess problems will realise that the use of the Imaginary Piece would open up a new and wide field for the inventing of problems. Many of the obstacles often confronted in problem composition would be obviated by its employment. It would, for instance, often serve to prevent threatened mates. Further, barricades by more or less indifferent pieces could be replaced by the Imaginary Piece, whereby problems would gain in simplicity and lucidity. "Time problems" would gain much in neatness by the introduction of the Imaginary Piece.

One might go on specifying the advantages offered by the Imaginary Piece; but I think that those I have mentioned are enough to demonstrate its utility in regard to problems.

(To be concluded.)

Mr. J. S. Wardlaw Milne, M.P., has been appointed a representative of the United Kingdom on the Imperial Economic Committee in the place of Mr. W. S. Crawford, who has resigned in order to devote his time to the work of the Empire Marketing Board and its Publicity Committee.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 17.

Queitude has been the keynote of markets during the past week, with prices in most directions quite steady. The gilt-edged market, and especially 5 per cent. Loan, has been exceptionally firm. This may be partly explained by relief from the pressure of constant new issues, and is not an abnormal feature at this period of the year. A reduction in Bank rate is now quite unlikely. It is true that the Bank of England has of late been steadily acquiring gold, the net efflux since the re-adoption of the gold standard eighteen months ago having been reduced to only a little over two millions. But autumn demands in connection with payments for imports of grain and cotton, principally from the United States, have soon to be met. At this time last year the Bank had gained over eight millions in gold since April, but by the end of the year this was changed into a deficit of over eleven millions. Exports of gold this year are not likely to be on quite such a heavy scale, but the Bank of England has to protect its gold reserves, and is therefore unlikely to make a change in its minimum rate of discount at the present juncture, even apart from consideration of the continued coal deadlock, the effects of which are beginning to tell upon the sterling exchange, which this week has shown signs of weakening. The raising of the New York Federal Reserve Bank's rate to 4 per cent. makes such a possibility still more remote.

The trade figures for July may perhaps be described as not so bad as might have been expected. As compared with June exports show an advantage of seven millions, but July contained an additional working day. As compared with July 1925, exports are seven millions lower and imports 1½ millions higher, the surplus of imports being £33½ millions as against £22½ millions a year ago.

The Rubber Situation.

The recent announcement made by the Colonial Office that no change would be made in the percentage of standard production of rubber allowed to be exported during the current three months tended to depress the share market, which has been very idle, but a further statement in regard to the pivotal price, which shows that the authorities intend to retain their powers, had a steadying influence. While the outlook is still uncertain, it seems highly probable that the price of rubber will remain fairly steady, not far from 1s. 9d. per lb., the pivotal price. This means that both consumers and producers can look to the future with some measure of confidence. Many qualified observers are inclined to think that the share market has seen the worst for the time being. With rubber at 1s. 9d. the majority of producers can make a profit of 1s. per lb., and although this is below the exceptionally high earnings of last year, it should be sufficient for the payment of dividends which give generous yields at present prices.

Grand Trunk Pacific Negotiations.

The holders of Grand Trunk Pacific 4 per cent. Debentures will feel some satisfaction at the latest turn of events. Optimism is, of course, misplaced, but the latest move is perhaps the most hopeful for some time past. The Stockholders' Committee announce that they were recently in communication in London with representatives of the Canadian National Railways to explore means towards negotiations for an amicable arrangement. These negotiations will be entered upon at the earliest possible moment, but the Committee is at pains to point out that it has no means of knowing at present whether a basis of settlement can be arrived at.

It will be recalled that in June last the Committee submitted a case to counsel for his opinion thereon. That opinion was a very strong endorsement of the contentions which the Committee have always urged against the Canadian authorities' claim to subordinate the Grand Trunk Pacific Debentures in the way which they have done. Counsel in his conclusions stated that "the only way to deal effectively with the arguments put forward by the Canadian Railway authority is to commence the proceedings necessary to obtain a judicial decision on the various points at issue." It is understood that the Canadian authorities recently approached a prominent banker and invited his co-operation towards the desired settlement. Having assented, one of his first acts was, it is said, to call together some of the members of the Stock Exchange interested in Grand Trunk Pacific Debentures. The feeling of the Stock Exchange is that it would not be satisfied with less than the stipulated 4 per cent. interest, with the guarantee of the Dominion Government. It may be added that the outstanding amount of the Grand Trunk Pacific Debenture stock is £7,176,801. The stock has a conditional guarantee from the old Grand Trunk Railway which, with the Grand Trunk Pacific, now forms part of the Canadian National system. Interest was paid under the guarantee down to March, 1919, when stockholders received 4 per cent. for the twelve months ended February 29 of the same year. It is not unreasonable to conclude, from the appointment of an intermediary, that the Canadian authorities have taken cognizance of the declared antagonism of British investors towards Dominion securities as a result of the Grand Trunk affair.

Archdeacon John Caley, of Bradley Rectory, Grimsby, Lincs., Rector of Bradley since 1905, and formerly Archdeacon of Cottayam, South India, a C.M.S. Missionary in Southern India for 33 years, left estate of the gross value of £3,687, with net personalty £2,167.

The High Commissioner for India has placed a contract with the English Electric Company for electrical equipment for the Kalyan extension of the Great Indian Peninsula Railway, comprising 15 motor coach and 42 trailer coach equipment. The High Commissioner has also placed a contract with the company for 12 750-volt rotary converters, to be coupled in series for 1,500 volts. The company is supplying 22,000-volt transformers and automatic d.c. switch-gear for three complete units.

Shipping Intelligence.

THE TRADE AND SHIPPING OF BRAILA IN 1925.

The following extracts are taken from the report for 1925 of the Acting British Vice-Consul at Braila.

The imports of general merchandise during 1925 amounted to 49,411 metric tons, as against 72,706 metric tons for 1924. Of the imports during the past year, roughly 30 per cent. were brought by British vessels, as against 18 per cent. for 1924. The fall in the imports of general merchandise for last year must again be attributed to the depression in trade which has been prevailing in the country for the last two years. Besides general merchandise, there was imported a quantity of 17,967 tons of wheat during 1925. Of this quantity, 13,487 tons were for consumption in Roumania, and the rest, 4,480 tons, was sent to Austria by lighters. The import of wheat into Roumania is an exceptional occurrence, but it was necessary in 1925, as the wheat crop of 1924 had been deficient in one or two places, and particularly in Bessarabia, where there were many districts menaced by famine. There was also a general shortage of wheat in the country before the 1925 harvest.

The following figures show the exports of grain in sea-going vessels during the past three years (in tons):—1923, 895,324; 1924, 699,270; 1925, 869,429. The increase in 1925 over the figure for the previous year is due to the fact that lighters with grain from Yugoslavia and Hungary have been arriving regularly at this port since December, 1924. It is estimated that about 450,000 tons of grain came down during 1925 from Yugoslavia and Hungary, the bulk of it coming from the former country.

Last year a fair quantity of Roumanian barley was exported, but when exports from Russia were offered on the markets of the continent, prices fell to such a low figure that exports ceased. Home prices of wheat were higher than those prevailing in other countries, and there was consequently no export. The high prices were due to the failure of the crop in Bessarabia, which for the second year in succession was destroyed by drought. There was also a partial failure of the crop in the north of Roumania. Wheat from districts where it was plentiful had to be forwarded to the districts in the north and to Bessarabia, and heavy export taxes were imposed by the government.

Last year's maize crop was satisfactory, but export was hindered by delay in reducing the export tax. When, in the middle of October, the tax was reduced, the prices of this commodity had so fallen abroad that it was very difficult for the exporters to do any business, as the peasants were holding out for about the same price as they had been accustomed to receive before.

The number of British vessels which called at this port last year was 85, an increase of 12 over the number calling the previous year. The following figures show the cargo discharged and landed at Braila by British vessels (in tons):—Discharged: coal 13,190, coke 400, general merchandise 1,517, wheat 2,500. Loaded: cereals of all kinds 229,909, other exports 4,836. Maize is still the principal export; 209,162 tons were shipped in British vessels during 1925, as against 123,271 in 1924. Next comes barley, 11,770 tons, as against 23,522 for 1924. There was an increase in the quantity of exports loaded into British ships last year compared with the previous year: nearly 27 per cent. was shipped, as against 22 per cent. for 1924.

The number of sea-going vessels, other than British, which entered this port during last year was 379 against 382 in 1924: the number of departures was 378 against 384 in 1924.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, August 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (London, September 4).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (London, August 25).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, August 28); s.s. Manora for Bombay and Karachi (London, September 18).

Cunard Line.—S.s. Pavia for Gibraltar Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Gruz, Venice, Trieste and Fiume (Glasgow, August 17 (Adriatic only), Liverpool, August 21, and Swansea, August 24). S.s. Brescia for Gibraltar, Malta, Patras, Piraeus, Salonika, Symrna, Constantinople, Bourgas, Varna, and Constanza—also Algiers and Volo if inducement (Glasgow, Liverpool, Swansea, September 18).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 21); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 18).

P. and O. Line.—S.s. Rajputana for Bombay (London, August 20); s.s. Nankin for Colombo, Madras, and Calcutta (London, August 21).

Prince Line.—S.s. Lancastrian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, and Tripoli (Manchester, September 8).

Ellerman and Papayanni Lines.—S.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa, and Haifa (Liverpool, August 21). S.s. Assyrian for Gibraltar, Malta, Patras, Piraeus, Syra, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, August 28). S.s. Flaminian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, September 2). S.s. Manchurian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona,* Venice, Trieste, and Fiume * (Liverpool, Sept. 4; Swansea, Sept. 8). S.s. Scipio for Algiers,* Malta, Piraeus, Volo,* Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 11). (* Subject to sufficient inducement.) Transhipments: Algerian ports via Algiers, Moroccan ports via Gibraltar, Tripoli (Barbary)via Malta, Syria and Cyprus via Alexandria, Greek outports via Piraeus or other convenient port, Fiume via Trieste.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Steel Bridge.—Tenders are invited for the construction of a steel bridge over the Ibrahimieh Canal at Beni-Suef, under the lines of the Egyptian State Railways. October 11.

Safes.—The Surveyor-General of Egypt, Giza (Mudirieh), invites tenders for the supply of 12 metal safes and 80 metal cabinets for binders. November 3.

Textile Machinery.—The Controller of Technical Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of (1) Textile machinery for Assiout Model Workshops. (2) Machinery and machine tools for Boulaq Technical School. October 16.

Motors and Motoring.

By G. B. B.

Some little time ago I dealt very fully with the subject of gas-driven commercial vehicles. I followed very closely the French tests made two years ago on vehicles driven by gas generated on board, and emphasised the, to my mind, remarkable results obtained. Of course, the tests were under good conditions; every vehicle and its engine were tuned up to the limit; every driver was on his merit. The results obtained were such as, in my opinion, could not be obtained in commercial practice. But making a full and adequate allowance for all conditions, I was impressed with the results obtained. I had a long talk with the driver of one of the successful vehicles, and gathered from him that he had done far better than he thought he would do; in other words, the lorry driver himself was more than favourably impressed.

It will be asked, probably, as to the most successful form of plant used and the best fuel that can be employed, but I think it is rather early in the day to attempt to answer such questions. I have seen in France lorries driven hundreds of miles on coke, and in Egypt I have seen them driven over bad roads for considerable distances on gas generated from leaves, stalks, bark and other vegetable refuse. Charcoal, where cheap and plentiful, is an excellent fuel for gas production, and I understand that spent sugar cane is being used for the purpose in parts of Latin America.

It goes without saying that there would be a splendid market overseas for this type of vehicle could the prospective buyer be assured that the engine and suction gas plant was reliable and trustworthy, and that it would carry out its work for a reasonably long period at a reasonable minimum of upkeep cost. In the East generally, from China to Ceylon, from Burma to Bulgaria, commercial vehicles of this type would certainly be in great demand provided buyers knew that such vehicles were obtainable, and that they were all they were represented to be.

I am not exaggerating when I say that the suction gas plant will produce fuel at a moderate cost and I do not understand why some attempt is not made to turn out suction gas lorries for overseas use at a reasonable price. Why should not exhaustive and competitive trials be organised in this country for light, medium and heavy commercial vehicles equipped with suction gas plants, the vehicles being subjected to long distance reliability, hill-climbing and fuel-consumption tests? I am certain that overseas buyers would follow such tests very closely, and would buy the successful types of vehicles readily, provided they were offered at a reasonable price.

This is admittedly one of the greatest problems of the day in the motoring world, but I have an idea that it need be by no means as pressing as it is. There is a certain amount of selfishness in us all, I suppose, and it comes out in people in whom no one could have believed it to exist in connexion with car parking. More room than is needed is taken up; entrances and exits are blocked; and cars are handled with complete indifference to the ease, comfort and convenience of anybody else. The older I grow the more I realise that motoring is a pastime which, in some people, inevitably leads to snobbishness, which is one of the most stupid and least justifiable frames of mind into which one can get. Just recently I have been across to the North Devon coast, following a brief holiday in the north country, and at present I am making a visit to every watering place on the South Coast between Folkestone and Bognor, and I am inclined to agree with *The Motor* when it says that a nuisance which is particularly prevalent in holiday times, both at the seaside and in the country, consists of cars which have been left by their thoughtless owners in places where they constitute an obstruction and a menace to passing traffic. In the course of a long run on country roads one sees numerous examples of this thoughtlessness, particularly by picnic parties who leave their cars on the road, sometimes not even near to the kerb, although it is nearly always possible to select a place where there is a strip of grass upon which the car could be parked with safety. The other day, running from Durham to York, I had only just passed Thirsk when I came across a big empty four-seater stuck just round a left-hand blind corner, in the middle of the fairway, whilst its driver and passengers sat by the roadside lunching. Only the fact that I was going slow saved me from the obstruction. There were inches of road and yards of road-side, but the driver, instead of putting the car where it could be seen or where it would be out of the way, stuck it just where some other driver, had he been equally careless or thoughtless, would run a grave risk of colliding with it. If a car must be left on a road for a short time, a spot should be selected near to the centre of a straight run, so that the obstructing vehicle is clearly visible to drivers coming in either direction. It might be thought, says the writer in *The Motor*, that this rule would be obvious to the meanest intelligence. Certainly one would, but the expression "meanest intelligence" implies some measure of comprehension. My impression is that many car owners lose every scrap of intelligence they ever possessed when they get out, in holiday mood, on one of the main roads. I was reading an account the other day of a drive along a well-known main road. The writer was one of our oldest and most experienced motorists, and he was lamenting the fact that 95 per cent. of the car drivers he met or overtook, or who overtook him, were driving without sense or reason. I can quite believe it; I do not know that I should have put the figure at above 75 per cent. myself, but I am quite prepared to accept his estimate. And I think it is this careless and thoughtless spirit which has suddenly been let loose on the road that is responsible for the appalling growth in the number of street accidents. Of these I am certain that a very high proportion would never occur were all the parties concerned driving with care and foresight. But care and foresight seem to have passed with the snows of yester-year so far as car driving on the public roads is concerned. Which is why the saner minded motorist makes no secret of the fact that he would view with approval stronger action, on the part of the police, against careless, thoughtless and dangerous drivers.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 5, state:—

The market during the past week has been moderately active with a fairly steady undertone. The week's summary of price movements is as follows:—Sakellaridis, November, 29.38 dollars, 0.28 dollars down; January, 29.08 dollars, 0.27 dollars down; March, 28,86 dollars, 0.39 dollars down. Ashmouni: August, 21.45 dollars, 0.30 dollars up; October, 20.88 dollars, 0.42 dollars down; December, 21.02 dollars, 0.44 dollars down; February, 21.15 dollars, 0.51 dollars down.

The outstanding feature of the week has been the publication by the Ministry of Agriculture of a statement to the effect that the acreage under Sakel shows a decrease of 9 per cent. from the Sakel acreage of last year.

Another feature of the week is the communique issued last night to the effect that the Government will buy 55,000 August docket cotton at a price of 25 per cent. over the spot price of American in New York. The immediate result of the latest declaration has been to put up the price of August to a premium of 0.50 dollars over October, whereas yesterday's close was 0.30 dollars discount.

The demand from spinners is perhaps slightly better than it was last week, but the improvement is not very marked and will not go very far to lighten the statistical position. Spinners are buying only their absolute requirements and reports do not indicate any prospects of an improvement of yarn conditions in the near future. A demand exists for yarn and cloth but buyers' and sellers idea of prices differ considerably.

At the first August tender, 5,250 kantar dockets were issued. The week's receipts amount to 10,938 krs. against export 134,549 krs.; the stock stands at 1,420,084 kantars.

Spot: In spite of the lack of demand from spinners, the Minet el Bassal market continues to register a fairly good turnover. Total sales amount to about 6,000 bales, of which we estimate 3,300 bales Sakellaridis, 1,900 bales Ashmouni, 600 bales Zagora, 150 bales Pilion and 50 bales White.

Sakellaridis:—The chief feature of the week has been the increased demand for the good grades, but it is with difficulty that this cotton can be found on the market and holders are daily demanding higher premiums. The business in low grades still continues but there is always a fair amount of this cotton on the market, though the major portion of it is not of very good style. There is a brisk demand for cotton round about Fully Good Fair but sales are restricted by the lack of cotton of this class.

Ashmouni and Zagora:—The latter variety has been rather more in favour during the week. All grades of both varieties have been dealt in and there is still a good demand for the lower grades which, as we have mentioned before, are not too plentiful. Spot differences remain about unchanged.

Pilion:—There has been a small busines done in Fully Good Fair and Good. This variety is now becoming difficult to find in the market and spot differences have consequently hardened somewhat.

Brown:—No transactions have been recorded.

White:—A few lots of Good Fair and Fully Good Fair have changed hands at about last week's differences.

Crop 1926:—Crop news continues to be good. The flood water has already arrived in the Delta—rather earlier than usual this year. Temperatures have been variable and heavy night dews persistent during the week. The pink boll worm attack is developing normally and the next week or two should give some idea of what damage will result from the attack.

The report of the Ministry of Agriculture for July reads:—Weather was on the whole favourable to the growth of the plants and formation of bolls. The crop is, however, still about one week backward. Complaints of shortage of water were received, specially from localities situated at tail ends of canals; necessary compensations were given. Boll formation is progressing in early sown and normal crops. Cotton worm attack ended in the first week of the month. The wilt disease is reported to be severer than last year in some localities of Lower Egypt. Pink boll worm attack is a little severer this year in Lower Egypt and is less in Middle and Upper Egypt. A slight attack of Hibiscus Mealy Bug was reported at Faiyum. The aphis attack is normal. The area under Sakellaridis is expected to be about 9 per cent. less than that of last year.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended August 11:—

Egyptian Futures.—Sakel Contract.—From the date of our last report to the publication of the American condition and production figures on Monday evening, prices in this market remained at a very steady level, the continued depressing trade situation and lack of demand being counterbalanced by small but consistent covering operations. The sharp drop in the American markets following the Report was fully reflected in this department, and, with stop-loss orders and fresh straddle selling against purchases of American in evidence during the past two sessions, values have had an easier tendency and close at declines of 53 to 65 points for near and 52 to 53 points for distant positions on the week. The decline in values has enlisted a slight increase in trade support, but there are distinct signs that little confidence in present prices prevails in trade circles; probably stocks in both spinners' and manufacturers' hands have rarely reached the present low figure, but per contra supplies of actual are exceptionally heavy, and even should the present promise of the growing crop not be realised in entirety there would still be more than ample for all requirements. Outside speculation in this contract has been much restricted for some little time, and, latterly, trading has been mainly of a professional character; the supply of floating contracts is rather limited and until new crop hedging operations start to be in evidence the tone is likely to show a misleading steadiness. The Alexandria Produce Association monthly report for July shows a very favourable condition. Broadly speaking, we are still against the market, and consider that sales, should prices show any reactionary tendency, be recommended.

Upper Contract.—Confirmation of a report that the Egyptian Government were prepared to take up 55,000 kantars of August dockets at 25 per cent. premium over New York spot values caused a minor advance in the earlier days. More latterly, under the influence of the sharp decline in the American markets, values have shown weakness and close to-night at a decline of 10 to 30 points on the week. Crop reports continue very favourable and indications at the moment are for further price reductions.

Egyptian Spot.—The general spot inquiry has shown signs of broadening, and although no real weight of cotton changed hands, a certain amount of improvement has actually to be recorded. The bulk of the purchases continue to be in small parcels only, and spinners, for the most part, appear to have little confidence in current rates, a belief which has recently been strengthened by the issue of a further American Bureau Report, reference to which will be found in another section of our report. Local conditions have remained much the same, except,

TEXTILES.

IF you are dealing in Textile goods, you will be well advised to try K. Jebara, 62, Princess Street, Manchester. (Established 1887).

Digitized by Google

perhaps, that there has been apparent, since the Bureau Report, an increasing presure on the part of holders to push sales.

Sakellaridis has attracted slightly more attention, chiefly for the Good Fair/Fully Good Fair qualities at from 14.00d. to 15.50d. The better grades have been in only moderate request. Uppers have been in good request cotton about Good Fair (Liverpool) with staple attracting most interest. At the moment, such cotton can be bought here at 11⅜d. to 11⅝d., but the selection at this price is a narrow one likely to be quickly exhausted. Cotton at anything over these prices is proving extremely difficult to move.

The inquiry for low cotton of all descriptions continues to grow in extent and rather more business has been reported at from 5.00d. upwards. At the commencement of the week, a fair business in Sudan Sakel was reported, but during the last few days the inquiry has rather fallen away. White Sudan also has not been in such good request latterly. C.i.f. business has been very quiet and little interest has been evinced as yet in new crop cotton. Forwardings to spinners for the week ending 6th inst. were returned as 4,829 bales (including Sudan). Quotations of Sakel and Upper both show a reduction on the week of 20 points. F.G.F. Sakel to-day 15.60d. F.G.F. Upper to-day 12.10d.

NEWS FROM ALL SOURCES.

Avions Michel Wibault of Billancourt, Paris, have received an order for their all-metal monoplanes from the French Government. The machines are similar to those being built by Messrs. Vickers at Weybridge for a foreign government.

Well No. 210 of the Steaua Romana, Bucharest came into production on August 11, and is now producing 1,000 tons daily. This well is situated on a block of State Lands at North Moreni recently acquired from the Roumanian Government.

The twin-screw vessel El Amir Farouq, which has been constructed by Messrs. R. and W. Hawthorn, Leslie and Co., Ltd., for the Coastguards and Fisheries Service of the Egyptian Government, ran an extremely successful trial off the Tyne on August 6.

A Court-martial at Jassy, Roumania, has been trying the Bessarabian peasants accused of co-operating with Bolshevists from Russia in the rising of January, 1919, at Hotin during which the Roumanian commander, General Poetas, and many soldiers were massacred.

Consider Value in Buying

To the uninitiated all bicycles look pretty much alike, but there must be a reason to make the Raleigh by far the most popular bicycle in the world. There is. It lies in the inherent qualities, the many speoial features and the superb construction. By these the Raleigh can be Guaranteed for Ever all over the world. Every machine is made to last a lifetime.

Send for "The Book of the Raleigh."

RALEIGH

THE ALL-STEEL BICYCLE

THE RALEIGH CYCLE COMPANY, LIMITED, NOTTINGHAM, ENGLAND.
LONDON: 41, Holborn Viaduct, E.C.1

The all-steel construction (no malleable iron castings as in other bicycles), the liquid-brazed joints, the tubular fork-crown and many other special features make the Raleigh unique. With Sturmey-Archer 3-speed gear and Dunlop tyres it runs like silk over the roughest roads.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Turkey and the Foreigner.

The observer of foreign affairs who had not studied psychology will be at a sad loss in comprehending many of the recent actions of the Angora Government. The instance of the threat to close the Foreign Chambers of Commerce is but a symptom, or rather an ebullition, of that elementary yet perfectly understandable mood which has dominated the counsels of the Kemalist Administration ever since the Treaty of Lausanne. With the European estimate of this matter everyone must be familiar—right, both legal and moral, is on the side at any rate of some of the Chambers—but it would be very foolish to forget that there is a reverse side to the question, the side on which, moreover, the local officials of the Angora Government concentrate their unceasing gaze. That Chambers of Commerce generally do good to the country in which they operate is commonly admitted, even, probably, by the Nationalist Turks; but by English observers it is sometimes forgotten how such Chambers may occasionally be made to further other activities than purely commercial ones. It is the British custom for a Chamber of Commerce to abjure politics, but it is only fair to the Turks to point out that our national custom is not slavishly imitated by all other countries. Probably, therefore, it is this view of the question, rather than a disposition to pretend that the work of the Chambers could equally well be performed by Turks, which the Turks have been entertaining. There is in fact more mood than method in the conduct of Turkey's foreign policy at the moment; it would appear, indeed, that this threat to close the Chambers arose on a local official's misinterpretation of Angora's intentions. That, after all, would be nothing very startling in the exaggerated nationalisms of the Near East. In Albania, for example, the local Italian representative recently over-interpreted the general policy of the Duce: and the second-thoughts of General Pangalos are, or were, notoriously better than his first. Similarly in Turkey, where the original command to the Chambers to close seems to be whittling down into a request to change their names. It would be strange if the Turks persisted in regarding the Foreign Chambers of Commerce as undesirable middlemen, and in putting them into the same category as the Greeks and Armenians whom they have ejected.

The Angora Trial.

There is no reason in the world for anyone to suppose—save those who believe in the speedy Westernisation of Turkey—that Occidental judicial methods should prevail in the crisis through which the Nationalists feel their country to be, or recently to have been, passing. Just as in the French Revolution there were men to whom the success of democracy was the one thing that mattered, so in Turkey there are men who hold Kemalism alone to be a sacred thing, the only existing truth in Anatolia, the sole hope of the nation. To them no other institution is worth caring for, and if other Turks or pseudo-Turks are to be found with opposed or even modified opinions, it were better to have them out of the way. From the point of view of Western notions of justice, the Angora trial may be a mockery, although that is by no means synonymous with saying that justice will not be done. No doubt on this matter such defendants as Javid Pasha or Dr. Nazim Bey will differ from the sense of the Turkish nation (assuming, that is, that there is in Anatolia such a thing as a national sense), but they would be the last, presumably, to demand a popular verdict upon the present Administration's actions. In Turkey the ordeal which in the West used to be by fire is replaced by ordeal from the Presidential Chair of the Independence Tribunal. Now the historian of modern Turkey may be inclined to think that the Kemalists, having found their ideal working at a friction, have looked round for scapegoats, and, like the French revolutionists, have pursued their search no farther than their personal enemies: he may judge, in other words, that the vulgar Smyrna conspiracy was a godsend to the dictators at Angora. But to those actually in the struggle for Turkey's independent existence it may well seem as if banishment to the heart

Digitized by Google

of Anatolia were scant reward for the nefarious agents of the C.U.P. So long as the Turks are content with the increasing despotism of Mustapha Kemal Pasha and of General Ismet Pasha these trials and banishments are likely to continue. The hopes of those, however, who fain would see Turkey developing along more European lines (or, perhaps, it would be more accurate to say, along British lines) must in the meantime be held in anxious reserve.

Disturbances in Persia.

Although there is no ground for anticipating that the risings of Dost Mohammed in the region of Kwash and of the Salar ed Dowleh in Kurdistan will cause more than local trouble, they are, perhaps, significant of the difficult period through which Persia is now passing. While Reza Khan was consolidating his power and rallying the Persian nation against the abuses of the Qajar régime, things proceeded hopefully enough. After his accession as Shah, however, the hand of reaction has shown itself. This is to be observed not only in the reassertion of corruption but also in a fresh disposition on the part of the tribes to resent the domination—oppression as they call it—of Teheran. But some idea of the power of the Shah is to be gained from the fact that risings against him are chiefly being made in places most remote from Teheran, with the unpleasant circumstance that both Iraq and Baluchistan may be involved in these untoward events. At present it is impossible to gauge how far the anti-Pahlavi sentiment is in fact a pro-Qajar one; and it is equally impossible as yet to assign any foreign support to these revolts against Teheran. If the Shah is wise, however, he will treat them as a sign of the times; that is, he will assume a new and badly wanted lease of energy, and, by vigorously quelling them, re-establish his not wholly certain position. The present confused situation of Persia makes the attitude of countries well disposed towards her existing régime more delicate than ever.

Arabs in Palestine.

There are certain signs in Palestine at the present time that the more moderate section of Arab opinion—that is, that section which envisages co-operation with the British Administration—is pulling a fair weight against the extremist section, which has consistently refused co-operation while a Zionist policy was being officially pursued. Now such signs have manifested themselves before; hopeful prognostications were indulged in at the time, for example, of the formation of the "National" and "Peasant" Parties; and one should be chary of imagining that Arab intransigence, or steadfastness, is at last breaking down. Such an all-Palestine Arab Congress as is now proposed has been proposed before; and the non-political Arabs have more than once disclosed possibilities of triumphing over the political Arabs, only, when the testing-time came, to fall back into the arms of the extremists. Nevertheless, things have prospered so well and so peacefully under the able régime of Lord Plumer that the present decision of the Arab leaders to "take stock" of existing possibilities is to be welcomed. Indubitably there is now a more friendly attitude existing between the irrconcilables and the Administration; and the negotiations which are said to be in progress in the hope of finding a formula whereby co-operation may be made possible may at any rate be said to be sincere. It is even stated that these have gone so far as to entertain the proposal of the formation of a Legislative Assembly; whereat the Zionists are greatly frightened. In view, however, of Colonel Symes' explicit statement to the League of Nations on this subject it would scarcely seem probable that a prolonged trial will not first be given to the holding of merely municipal elections.

The Woes of Syria.

It is with something like a pang that one realises that the struggle for Damascus has been going on between Syrian and Druse and Frenchman for nearly a year. Desolation appears to have invaded that lovely town, and although progress in subduing the "rebels" is officially recorded from time to time, spasmodic fighting in the Ghouta seems to be a chronic fact. Four military posts have been established therein, and it is said that General Vallier has allowed the inhabitants to re-occupy the much disputed Maidan. Even if the report of this comparative peace be true, however, the appalling conditions of daily existence remain. Of these perhaps the most trying is the cost of living, for although the League of Nations expressly recommended the formation of a new currency for Syria, the French authorities have so far been able to effect nothing in this direction. Whether with the return of M. de Jouvenel anything will be accomplished probably is doubtful, in consideration of the confused situation in Syria. His aims were notably conciliatory, but his achievements, so far as one can judge at present, were not great. The woes of Syria can scarcely be said to have decreased since the work of pacification was perforce entrusted to French Generals, who, as it would appear, must for some time to come continue to keep a stiff upper lip, or else suffer some decline in their prestige and assent to the Druses' terms. We notice, however, that M. de Jouvenel recently spoke in France in optimistic terms of the future of Syria. An Organic Statute, he said, which would fix the relations of France, Syria, and the Labanon, would be presented to the League of Nations next month. It remains to be seen what comment the League will have to make when this presentation is duly made.

Iraq's Defence.

The problem of defending Iraq, which was referred to last week both in our article upon "The Progress of Iraq" and in our Baghdad Correspondent's letter, appears to be receiving increasing attention. We observe, for instance, the reports that twenty-eight Iraqi pupils will be sent next year to a British Air Force school in Egypt, in anticipation of the evacuation of Iraq by British forces and of the formation of an Iraqi Air Force. The judgment, moreover, that the newly established Census Department in Iraq was the herald of conscription in that country seems to be generally held; there is a definite rumour that a Conscription Bill will be introduced next November into the Baghdad Mejliss. But whether or not there be truth in these statements, the question of the defence of the new Kingdom must and does continue to give anxiety. It is incredible that so young and so fine a State should begin its independent career either with inadequate protection or with a military burden too great to be borne, but it cannot be too often emphasised that the time for evolving a solution is the present, before the Royal Air Force has gone from Hinaidi and while the tribes are still as hostile to the idea of conscription as they are likely for many years to be.

THE BALKAN PEACE MAZE.

A tantalising maze hedges the peace of the Balkans round about. It has many entrances, and all the Balkan States, we believe, are genuinely engaged in a conscientious search for the haven in the middle. They have, however, no clue to the right path, and much time is spent in vain wanderings to and fro, which result occasionally in collisions between the seekers and in loss of temper. So long as the peoples are content to remain in the maze and to continue their search on no definite plan, the chances of their finding the centre are not bright. If they could withdraw from its passages and look down on them from a height, the problem would be simplified; they might even gain their goal, if they would for a moment surrender their own judgment and follow the guidance of those who, raised above the maze, are in a position to help them in their quest. The convention between Yugoslavia and Greece can be regarded as meaning at least that the two countries, instead of conducting their wanderings in the maze independently of each other, have resolved to pool their experiences, in order to reduce the number of wasted efforts and to avoid collisions between themselves. The former treaty of alliance between Yugoslavia and Greece, which was held technically to have lapsed many years before, was formally dissolved last year as a reminder from Yugoslavia to Greece that the latter's method of approaching the question of the Bulgarian minority in her midst did not meet with the approval of her powerful neighbour. At the same time it was hoped that Greek anxiety over the denunciation of the treaty would prompt the Athens Government to adopt a more complaisant attitude towards Yugoslav demands in regard to the Free Zone at Salonika. For many months the Greek Government made no attempt to disguise its uneasiness over the unsatisfactory nature of its relations with Yugoslavia; but in the end the determining factor in the conclusion of the treaty has been Yugoslavia's desire to strengthen her own position in the Balkans.

Whatever the immediate causes that prompted the change of attitude on the part of the Yugoslav Government, the outcome must be regarded as a further effort to achieve general peace in the Balkans. Whether it will have the desired effect will depend on a variety of circumstances. The chief significance of the new agreement lies in the fact that whereas a few months ago the Belgrade Government refused to be convinced that Yugoslav interests could ever be safe while the Ghevgeli-Salonika railway was under Greek administration, it has now acknowledged that its views on this point were wrong and it has accepted an arrangement which last year would not have been considered for a moment. There can be no doubt that second thoughts have been responsible for the wiser decision. The anomaly between insistence on the maintenance of the *status quo* in the Peninsula and a claim to modify existing conditions in regard to the owership and administration of an important railway was too glaring to escape challenge, and Yugoslavia has decided that the Balkan situation is sufficiently intricate of itself to make it desirable that it should not be further complicated by strained relations between Greece and herself. So long as the four countries of South-Eastern Europe refrain from composing their differences and pulling together, the door is left open for interference from without. At one time it was apparently believed that the conclusion of the Little Entente and its adherence to the orbit of France completely disposed of the Balkan question. If any further policy of insurance were required, it was to be provided by an improvement in the relations between Yugoslavia and Italy. The latter country, however, has shown a tendency to test the legitimacy and the strength of all artificial barriers to its political and economic influence. Behind the loose screen raised by the Little Entente it found a considerable extent of more or less unoccupied land, on which it has been busy staking out claims. When, therefore, circumstances tended to bring matters between Yugoslavia and Bulgaria to a head, it became necessary to restrict the area within which Italy had secured freedom of movement in the Balkans. However sincere General Pangalos might be in wishing to see relations between Greece and Italy improved, he could not be insensible to the major importance of winning for his country complete immunity from any menace from Yugoslavia. Accordingly the Yugoslav agreement has secured priority of place in Athens, and the Belgrade Government sees no reason to be dissatisfied with its last success in a long-drawn struggle.

The pact between France and Roumania might be regarded as a further strengthening of the Little Entente, were it not for the fact that the value of these separate understandings which France has arranged with States impinging on Central Europe is more apparent to the French scheme of things than to her several partners. Yugoslavia indeed has as little reason to be elated over the Franco-Roumanian Agreement as she has to be disturbed by the prospect of an understanding between Roumania and Italy. Neither of these arrangements touches the kernel of the problem, which is the attainment of peace in the Balkans. If it is the right diagnosis of the situation to regard this peace as something held in durance vile and Bulgaria as the Minotaur of the Balkans, then there is much to be said for a policy of drawing a ring fence round the monster, until his lair can be rushed and his captive liberated. Those, however, who hold this view need feel no surprise that it is not shared in Great Britain, where old-time myths have been found to be unsatisfactory and unpractical attempts to account for simple phenomena. British post-War policy does not, as has been suggested, tend to lighten the obligations imposed upon the defeated countries by the peace treaties in order to have a free hand in making new political combinations; it is based on the simple demonstrable fact that peace proves far more effective when it is secured by agreement than when it is sought to attain it by force. It may be hedged about by a maze in the Balkans; but there is no monster guarding it that requires to be slain first before its blessings can be enjoyed. The key to the maze is that the centre, where peace is, can be found only by the four countries reaching it hand in hand together; so long as three of them believe that the fourth is the monster whom they are called upon to slay, they will continue to wander aimlessly in the labyrinthine passages. Great Britain seeks to form in the Balkans no new political combination of which she is part, but to help the countries concerned to keep the Balkans to themselves.

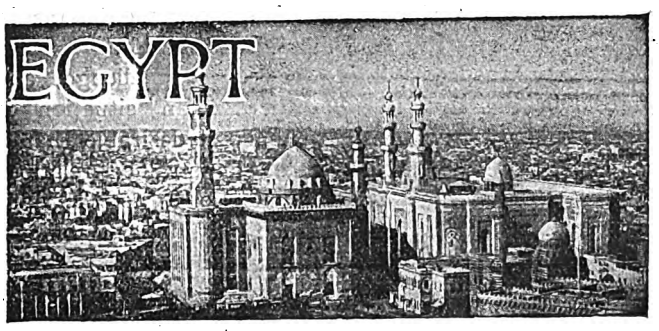
The Near and Middle East*

From Our Own Correspondents.



Cairo, August 15.

The Fellah's Fatalism.

Again this week the Chamber of Deputies has given proof of an encouraging ability to realise Egypt's most pressing needs. On Monday the expenditure of the Ministry of the Interior was being discussed. That portion of the Interior budget devoted to the Department of Public Health aroused lively debate. The Department was subjected to very severe criticism, some of it, perhaps, justified, but much originating in the Chamber's failure to recognise that many of the evils for which they blamed the Department of Public Health, are due primarily to the ignorance and carelessness of the Egyptian fellah. The ignorance, it is to be hoped, will gradually decrease, thanks to the efforts of both the Educational and the Public Health branches of the Administration. But the carelessness is largely a matter of Oriental fatalism combined with the popular misconception of Moslem teaching which makes precautions of any kind to be regarded as superfluous, if not, indeed, directly challenging to the will of Allah. It will be many years, perhaps centuries, before the Egyptian fellah will cease to regard with mistrustful eye the injunctions of sanitary science.

Public Health.

The Finance Commission of the Chamber had recommended the addition to the budget of the Department of Public Health of a credit of £E20,000 for five new hospitals to treat ankylostomiasis and bilharziosis, the modern plagues of Egypt. Not content with passing this new credit, the Chamber also voted the opening of a further credit of £E24,000 for the creation of three child welfare centres. The Prime Minister (as Minister of the Interior) offered no objection to either proposal. Moreover, he promised that the Government, during the recess, would give its closest attention to matters of public health and, at the opening of the new session in November, would present to Parliament a comprehensive programme, as part of which would be included the creation of a Ministry of Public Health, in place of the present department. The Chamber seemed well pleased with Adly Pasha's statement.

Royal Expenditure.

The atmosphere of the Chamber was electric on Wednesday evening, when the budget for the King's Civil List and other royal expenditures came up for discussion. The total cost to Egypt of the pomp and circumstance of monarchy is this year nearly £E800,000, a sum which, it may be noted, is nearly ten times the amount which Abbas Hilmy, who was never accused of being a niggardly spender, cost Egypt in 1914. The great increase in royal expenditure has for some time past been severely criticised in the local Press. Actually, the sums shown in the Budget do not disclose the full cost to the country of maintaining a King and a Court. Public works of various kinds, including the building of more roads, have been put in hand during the last few years in order to provide better means of communication with His Majesty's estates in various parts of the country when, apart from the situation of these lands, the expenditure would have been hard to justify.

Popular feeling found expression on Wednesday evening in a proposal by Mahmoud Wahba Bey el Kadi that the portion of the budget including the royal expenditures should be returned to the Government, for substantial reduction. To pass such a resolution would have been obviously impolitic, and the Wafd had wisely arranged beforehand that a less truculent course should be taken. Three deputies moved that "the Chamber notes the great increase in the royal expenditures during recent years, considers that a figure has now been reached which is inconsistent with either the country's resources or its international position, and prays His Majesty to cause reductions to be made, so that the administration of the royal revenues may be an example of economy and good management to the country as a whole." Having passed this resolution, with one dissentient, the Chamber voted this year's royal credits, intact.

Al Azhar Officials.

The Rector of Al Azhar and the Grand Mufti were next under the microscope. The Minister of Wakfs had to confess that he did not know just what these two dignitaries received as remuneration, since no details could be obtained of the disposal of certain wakfs' revenues which were in the Chancellor's and the Grand Mufti's sole charge. The Rector of Al Azhar received from the Ministry of Wakfs the following emoluments:—£E2,000 per annum as salary proper, £E432 per annum as a member of the Senior Ulema's Council, £E240 per annum as Sheikh of the Malakia sect, £E150 per annum as travelling expenses in his capacity as member of the Higher Wakfs' Coucil, from 60 to 80 loaves of bread weekly in the same connexion and, in addition, two bread allowances of a total of about £E5 annually, and also two other daily bread allowances, one of 30 loaves, the other of 64 smaller loaves daily. The Grand Mufti received total emoluments of about £E1,800 annually.

The Chamber showed clearly that it considered that, apart from the unknown proceeds of the private Wakfs mentioned, the quantity of actual loaves and figurative fishes received by these pious men was excessive. It insisted, furthermore, on the Minister's finding out just what those private Wakfs do produce. One deputy, Hussein Bey Hilal, suggested the abolition of the appointment of Grand Mufti. His proposal was not adopted, but it was a sign of the times that it should even have been made.

Drownings at Alexandria.

Ten drownings in eight days is the mournful record of Alexandria's bathing beaches. The public is getting restive at alleged municipal indifference to bathing dangers, and the correspondence columns of local newspapers have lately been full of letters of complaint. This seems to have some justification, though the Municipality can point to the fact that unusually high seas have been running for weeks past. Apart from the increased dangers of bathing, Alexandria welcomes the boisterousness of the Mediterranean, for it is the result of abnormally strong north winds which have made the summer, since the end of June, most agreeably cool.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

Jerusalem, August 11.

Arabs' "Rapprochement."

The heyday of political agitation and of the political agitator in Palestine may be over and gone, but there has been no truce to political negotiations—behind closed doors. Arab leaders seem to be doing an uncommon amount of talking among themselves on the perennial subject of *rapprochement* between the various and varying parties. There has been also much talk with Government officials about setting up some constitutional and representative body. If their plans do not miscarry, there is to be a meeting in a few days of leaders of most Arab factions to fix a date for the All-Palestine Arab Congress. This is the result of several months' effort, inspired mainly by Arab leaders abroad, to bring together round one table the politically-minded men among the Arabs. One may be pardoned for indulging in some scepticism over the successful issue of these meetings, for they have been too numerous to warrant excessive confidence. And there is not at the moment any decisive issue common to all Arab politicians. Recriminations against the Government for countenancing Zionist activity have, of course, not ceased. But the time has long passed when criticism of Government policy was an adequate adhesive for all fractures in the Arab body politic.

An Elected Legislative Council.

Similarly, it is extremely doubtful whether the negotiations with the Government initiated by National Party leaders, who are opposed to the "Palestine Arab Congress," will lead to more than a slight intimation of what Arabs may want by way of constitutional Government, if all of them could be got, as nearly as possible, to want the same thing at as nearly as possible the same time. Briefly, what has been proposed is an Elected Legislative Council to consist of an overwhelming Moslem majority with a mere shade of representation for the Jewish and Christian minorities—and no official British members. Over this Council, a nominated "Senate" is proposed with adequate British representation, but no veto powers. The Jews have naturally shown some concern over these parleys, and the Zionists are understood to have been reassured officially that the conversations have not proceeded beyond the "unauthorised" stage. In any case any such proposal would have to be passed finally by the Colonial Office.

A Railway Rumour.

"Unauthorised" also are the persistent reports that the Palestine Railways' management have discovered that it would be to the profit of the Railways to have *the* Palestine port not at Haifa, but at Port Fuad! What basis these reports may have in the face of the unequivocal statements of the Secretary of State for the Colonies in the Commons, that money is wanted for port development at Haifa and Jaffa, is hard to guess. Possibly the Director of Railways may favour Port Fuad as an addition to and not as eliminating Haifa. These reports have not in any case been denied in the official *communiqué* on the subject, but are declared to be unauthorised, which may mean that they are only premature. On this point, too, London, which will be asked to underwrite the Palestine loan, will undoubtedly have the last word.

Sir Ronald Storrs.

As I am dealing with perennial rumours, it may be just as well to pass to the one relating to the resignation of Sir Ronald Storrs, who has been Governor and District Commissioner of the Jerusalem District ever since the British Occupation. People here are linking up his acceptance of the Governorship of Cyprus with the reported desire in official quarters to make Jaffa the seat of the Southern District. One can readily understand that to Sir Ronald Storrs such a decision would be a very severe blow. He has laboured much in the interest of a cleaner, more artistic and more prosperous Jerusalem, and the idea of being a successor of Pontius Pilate seemed always to have appealed to him more than the instrinsic importance attached to the post. The Governorship or Commissionership of the Southern District with Jaffa as the centre can hardly be the same to anyone, least of all to Sir Ronald Storrs. Aside from the sentimental value, it is saddening to think that the authorities, instead of doing all in their power to enhance the importance and increase the prosperity of Jerusalem, may be deliberately heading toward a step which will have the opposite effect. If the Government persists in its reputed intention to transfer the District office to Jaffa, it would occasion no surprise to learn that Sir Ronald had resigned, perhaps in protest.

A Plague from Syria.

There is a plague now in Palestine, which has come not from Egypt to the South, but from Syria to the North. The foot-and-mouth disease among cattle has assumed such proportions as to compel the Government to prohibit not only the import of cattle from Syria, but also the slaughter, the sale or exhibition of cattle throughout Palestine. The strictest quarantine measures are being enforced, and it is a matter for comment on the stage of civilisation achieved by this backward country that measures which depend for their ultimate enforcement on the co-operation of all concerned, are being taken with the knowledge, consent and assistance of the people. Lord Plumer has addressed a warm appeal, pointing out that anything short of these measures might lead to a "national calamity." As it is, the situation is very grave,

as Palestine has to depend for its meat on imported tinned and frozen supplies. Transjordan, to which the quarantine regulations also apply, has been badly hit, if not worse than Palestine. Transjordanians are said to have bought up much cattle from Druse war refugees from Syria, who were compelled to sell out cheaply, and now the purchasers have on their hands these stocks threatened with disease and, at any rate, not to be disposed of on the Palestine market.

A Dispute in Tel-Aviv.

English law decided an important dispute between the landlords and the town council of Tel-Aviv, a contest started by the landlords in the High Court with the object of proving that the present Council was illegally elected, since the majority of the voters at the last elections were persons who owned no property and paid no rates, and as such were not entitled to vote. Behind this issue, there was the longstanding struggle of the landlords against the Labour majority on the Council. The contest was ably fought, both sides engaging the best legal talent in the country, until the issue was narrowed down to a question of who is a ratepayer. The Chief Justice, in handing down the definition, said that the term is taken from English law and should be interpreted in the English sense. In English the term "rate" is always used in relation to some rate or tax levied on owners or occupiers of immovable property. He held accordingly that it was not intended by the Tel-Aviv Municipality Ordinance to give franchise to all persons paying any sort of tax, but only house rate. At the same time, the Court took the larger view that the term includes all persons liable to pay and not only those who do actually pay. The following ruling in this case is of extreme importance, because it may hold for all town councils in Palestine! "We include for the purpose of voting at township elections all persons of either sex, who are of or over 21 years of age, and are liable to pay or do actually pay rates assessed on immovable property, whether as owners or occupiers."

It was felt from the start that any definition would be bound to deprive of their franchise a fair number of Tel-Aviv residents who voted in the previous elections. Disappointment, therefore, is not as keen as it might have been, thanks to the liberal English law. The township and its supporters nevertheless are very angry with the landlords for raising a problem which might have been solved much more disastrously. As it is, the Council has agreed to hold new elections in October, and upon that undertaking the landlords have withdrawn their case, which sought to invalidate the Council and its activities.

Sofia, August 18.

The Return of King Boris.

King Boris, who has just spent six weeks abroad, returned to-day to Sofia, hastening his return on account of the grave situation created in the Balkans by the Balkan Allies' Note concerning the action of revolutionary organisations. It was noticed that his Majesty did not travel through Yugoslavia, but went by sea to Constantinople and entered Bulgaria via Adrianople.

The Balkan Allies' Demarche.

On August 11 the three representatives of Roumania, Yugoslavia, and Greece handed to M. Bouroff, Bulgarian Minister for Foreign Affairs, a Collective Note, in which they stated that:—

1. Since the spring of the current year, the activities of revolutionary organisations having their headquarters in Bulgaria, which had never ceased during the years following the Great War, had shown a serious recrudescence.

2. The activity is manifested by the attacks of bands, isolated assassinations, robberies, etc., which, especially in Serbo-Croat-Slovene regions and in the neighbourhood of the Roumanian frontier, have latterly assumed a character of exceptional gravity.

3. That inquiries made by the respective authorities have everywhere established the fact that these misdeeds were the work of agents affiliated to Bulgarian revolutionary organisations, acting by order of the respective committees prepared and armed in Bulgaria, and passing the frontier under the protection or tolerance of the Bulgarian frontier police.

4. The three Governments have not failed on several occasions to draw the attention of the Royal Bulgarian Government to the danger of these acts troubling the good relations which ought to exist between the neighbouring countries.

5. Unfortunately the Royal Bulgarian Government does not seem to have accorded to the reiterated protests of the three Governments all the attention that they deserved, and events have demonstrated and do demonstrate every day that efficacious measures have never been taken by the Royal Bulgarian Government; indeed, on the contrary, the activities of the said organisations have but increased latterly.

Consequently, "animated by a desire to maintain good relations with Bulgaria, the three Governments think they ought once again to draw the serious attention of the Royal Bulgarian Government to the necessity of itself checking the activities, equally prejudicial to the neighbouring countries as to Bulgaria, of the revolutionary committees which, under different denominations, exist in Bulgaria and use her country to organise there the incursions of armed bands or for isolated crimes in the neighbouring countries" and they collectively ask, in addition to the measures that the Royal Bulgarian Government may decide to take in the object indicated:

1. That the Royal Bulgarian Government invite the frontier authorities to execute their duty not only as required in the interest of good neighbourly relations, but also in conformity with the arrangements concluded for the pursuit of the bands; and 2. that the Royal Bulgarian Government, which is well aware of the sources of the evil and the circles which organise all the crimes, take the severest measures in order to render impossible, in future, such activities.

The Note ends with this scarcely concealed warning: "The three Governments hope that the Royal Bulgarian Government, itself also inspired with the desire of maintaining good relations with its neighbours, will not fail to give practical proof by the rapid accomplishment of the demands formulated above."

Such was the Note that Yugoslavia and Roumania had long ago prepared and which, as may be seen, had in no way the threatening tone that was attributed to it in advance in Belgrade. The intervention of the great Powers, due in the first place to Great Britain, had an efficacious and salutary effect in their counsels of moderation and had warded off the ultimatum which it is understood was originally meditated. But if in form it was correct and rather friendly, the affair was none the less very serious and created a situation the gravity of which escaped no one. The very clever drawing up of the

Note was such that any threat was only to be read between the lines or possibly in the verbal communication of the representatives of the States interested. Consequently, not being in the presence of an open conflict which might lead to complications, Bulgaria seems debarred from having recourse to the League of Nations, to which her neighbours declare that they do not wish to carry the dispute. The League of Nations will not be able to arbitrate without the consent of both sides in the dispute.

Having placed unlimited confidence in the League of Nations, this circumstance deeply irritated Bulgarian political circles which, otherwise, received their neighbours' Note with remarkable *sang froid*. Public opinion was naturally moved by the *démarche*, and has made up its mind that the Note is to be regarded as preparation of the ground for ultimate action against Bulgaria, by making her responsible for all the attacks and political assassinations committed by affiliated revolutionary organisations. Both the Press and political circles were unanimous in demanding the finding of another tribunal in default of that of Geneva and, as the Great Powers (Great Britain, France, Italy) had already intervened once in the dispute, there is a general demand that the Government should address itself to them.

Government Measures.

Before doing this the Government, resolved to act with the greatest energy, took a series of measures of the highest gravity, in order to prevent any new incident on the frontier or in the neighbouring regions, which could provoke disastrous complications. To this end it despatched additional troops to the department of Petritch, which is the only Macedonian region incorporated in Bulgaria, with a view to repressing the activities of any illegal organisations in the district. It has also appointed the veteran general Thodoroff, who was Assistant-Commander in Chief during the War and who enjoyed profound esteem in the regions where he operated as Chief of the second Bulgarian Army, to the post of prefect of Petritch with discretionary powers and formal instructions to do everything to obstruct clandestine crossings of the Yugoslav frontier.

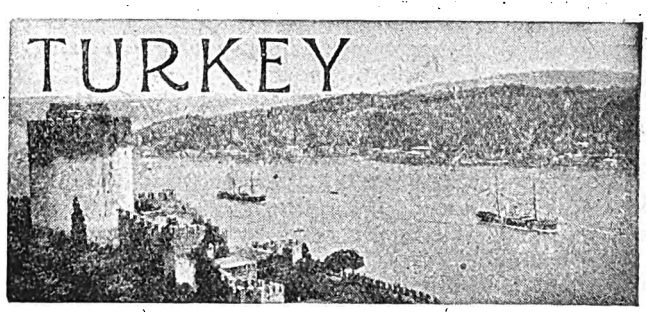
Thus guaranteed against every disagreeable eventuality on that side, the Government began to elaborate Bulgaria's reply to the Balkan Note.

The Bulgarian Reply.

The Bulgarian reply constitutes an answer to the accusations of the three neighbouring States and contains a detailed explanation of Bulgaria's goodwill, supported by arguments which cannot be disputed. It is thus intended both for the signatories of the Balkan Note, who are the immediate recipients, and for the three Great Powers who are called upon to arbitrate the dispute, at the same time there is the underlying hope that the League of Nations will take action, should the march of events necessitate such a step.

In the reply, the Bulgarian Government begins by examining the case of Roumania and of Greece, whose participation in the collective *démarche* is not justified, inasmuch as Greece has never had cause to complain of frontier invidents or of komitaji incursions since the famous Petritch affair of last autumn; on the other hand, Roumania, who has so often denounced the aggressions of bands lately has profited by them to proceed to a recrudescence of persecutions against the Bulgarians of the Dobruja in the too self-evident aim of making them emgirate from their homes and installing in their places Koutzo-Wallachian farmers. The sad Staro-Selo massacre still remains to be inquired into. Next the Government enlarges upon the situation created on the Yugoslav frontier, discussing the Macedonian revolutionary movement, and sets forth the causes which render this revolutionary activity possible. The reference is, of course, to the question of Bulgarian minorities, the settlement of which would suffice to solve the majority of Balkan differences.

On the other hand the Government explains the great difficulties against which it has to contend owing to the insufficiency of armed forces in the task of a rigorous supervision of its frontiers. Bulgaria, by reason of the Treaty of Neuilly, can arrange only for a contingent of 3,000 men to guard its frontiers, the extent of which is more than 2,000 kms., whereas its neighbours have forces at least 5, if not 10, times as numerous. Thus, to take only a few examples, it is sufficient to cite the situation in the Trn sector, to the west of Sofia, where 47 Bulgarian soldiers have to protect the frontier which is 42 kms. long, that is practically 1 man per km.; in the Kustendil sector, between Gueshevo and Mt. Ruen, opposite Kriva-Palanka where the last komitaji fight took place, on a stretch of 15 kms. of mountainous country 5 posts who merely serve as an inadequate protection with 4 or 5 men apiece, while the Serbs have 3 armour-plated blockhouses over against each Bulgarian post with a garrison of from 15 to 20 men apiece, and they are actually on the point of establishing a second line of blockhouses on either side of the fortress of Sultan Tepe. Finally, a short distance away on the Greco-Bulgarian frontier in the region of Dospat there are 130 Bulgarian soldiers who have to guard 70 kms. of the frontier, which is equally mountainous. Bulgaria claims that if she is to increase her supervision of the frontier she ought to be given the means of doing so. The goodwill is there, but the guards are lacking. At the same time she points out that if her neighbours, who are equally interested and well armed in addition, have not been able to prevent the movements of komitajis, they should have a share in the responsibility. It is possible that the evil is greater than appears on the surface and cannot be dealt with solely by police measures. Bulgaria is only too anxious to deal with the disturbers of her peace, but her efforts are stultified to a very great extent by the attitude of her neighbours on the question of the minorities under their jurisdiction.



Constantinople, August 17.

The Chambers of Commerce.

A question of considerable importance which has cropped up during the last fortnight is that of the closing of all foreign Chambers of Commerce. From the outset this question has been dealt with in the most extraordinary manner. First came the persistent rumours that the Turkish Commercial Authorities in Constantinople had been informed of Angora's intention, and then came the news that telegraphic instructions had been received here to proceed at once with the execution of the measures. Meanwhile, declarations were being made by competent officials that no such action was contemplated, and just at the time when the institutions in question were beginning

to persuade themselves that everything was well, the police got effectively to work and soon disillusioned them all. Up to the present no reasons worth more than a moment's consideration have been put forward for this unprecedented and arbitrary action. As the Turkish Diplomatic Representative here rightly declared: there certainly has been a muddle somewhere.

Following on this admission and a request not to take the police action into consideration the offices of all the foreign Chambers which were summarily closed are, for the moment, again at work. It is improbable, however, that these Chambers will be allowed to continue their activities under their normal conditions for more than a week at most, as the Ministry of Commerce is about to request them to change their names.

Superficially this is all that is necessary to put matters on the previous smooth-running footing, but in reality it needs little to prove that that is a false impression. Had this alone been the intention of the Authorities, it could be contended that the measures adopted to bring about the desired charge were, at the least, slightly disproportionate and somewhat unconventional. The wording of the police agent's verbal communication to the several Chambers was to the effect that their existence now being considered illegal, they must cease to function forthwith. In view of the fact that Government Departments have recently officially corresponded with the British Chamber of Commerce, this communication appears inconsistent. Manifestly some new law must have been hatched very recently. Unfortunately the changing of the Chambers' names will in no way immediately end the matter; on the contrary, it will merely constitute the beginning of the end. With a new name will come taxes, submission to the Turkish Chamber of Commerce, restricted activities, and consequently an existence rendered futile.

The action of the Turkish Commercial Department is particularly incomprehensible when consideration is taken of the detrimental effect such measures will have on foreign confidence in Turkey. The Turks are, without doubt, unaware to what extent they are obliged to these institutions for the services they render to this country—which include, among others, the recommending of capable representatives abroad to handle Turkish exports.

The Angora Trials.

The principal figures of the Angora drama have now all made their appearance and nothing but the chorus remains to be put through its paces before the final act is staged. Without doubt the final act will prove the drama to be a tragedy with its inevitable bitter ending. The Press has gone "all out" to justify its own existence, but all that it has really succeeded in doing is to have reproduced pages upon pages of apparently irrelevant questions and replies and information so extensive as to render its subject so complicated as to be utterly incomprehensible. What is clear, however, is that all those who can be considered to have had any connexion whatsoever with Oppositionist groups, which in their turn are all alleged to have had something up their sleeve, are in for a very rough time. After this tremendous effort it is impossible to believe that the Tribunal of Independence will be able to find any more work to do, as all Oppositionists, conspirators and their sympathisers together with all reactionary and detrimental elements will, within a very few days, have had their accounts "seen to."

A LOAN FOR PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The fault is, undoubtedly, mine; but there are several points in Mr. Philby's letter in your issue of August 12 which tend to leave the purport of that letter obscure. As to the legitimacy or desirability of bracketing for purposes of discussion a Palestine and an East African loan, that is surely a matter of parliamentary procedure. In the actual debate speakers would naturally discuss the two loans separately; if weighty objections were offered to one or other, they would receive just as much attention as if the loan projects were distinct; possibly more, for the reason that Government would be the more anxious to meet criticism on either loan in order not to jeopardise both. In any case, I imagine that it is inconceivable that the Government should be turned out of office over an adverse vote on either of these loans, and consequently in the last resort, if it were necessary, the parliamentary majority could be mobilised for one as easily for both.

To turn to the Loan itself. Mr. Philby seems to shift his ground so frequently that it is not easy to follow him. The proposed loan, he tells us, "came in for considerable adverse criticism" in 1924, but he does not say on what grounds it was adversely criticised. If it was because Palestine was not then paying its way, and its capacity to meet the interest on the loan was problematical, the objections of 1924 would seem to fall to the ground in 1926 when the country shows a surplus of revenue over expenditure of £1,200,000.

Mr. Philby refers to "an actual outstanding debt of not less than £5,000,000" and says later on "to encourage or to allow Palestine at the present moment to double its debts," etc. But surely the proposed loan is to liquidate the greater part of whatever its outstanding debt is? Mr. Philby alleges that the grandiose scheme of a Haifa harbour is the *fons et origo* of the loan project, but one seems to have heard of a loan's being necessary long before the Haifa scheme came to the fore. Were not advances made by Crown Agents on behalf of Palestine? These conceivably constitute the "financial burden" which weighs so heavily on Mr. Philby as a taxpayer in his first paragraph; but it is difficult to see why any burden should be involved, if Palestine obtains a loan in the open market and is able regularly to meet the interest and amortisation of that loan.

Mr. Philby omits to state what is to happen to Palestine's outstanding debt, a considerable part of which is accounted for by the advances made by the Crown Agents, if the normal process of raising a loan to fund it is not adopted.

Again, it is not clear why a loan should affect the period of the Mandate. The statement that Great Britain could not and would not guarantee a loan except on the understanding that its mandate would continue for the period in question is entirely gratuitous and far from convincing. Great Britain's anxiety over the sum of £4,000,000, which Mr. Philby thus stresses, could easily be allayed by the repayment of that amount obtained, if necessary, by loan from any other quarter. It is difficult to imagine that, if at a certain date Palestine and the League of Nations were seriously concerned to terminate the Mandate, they would allow themselves to be checkmated by Great Britain's claim for £4,000,000. Of course, for a mind that can envisage the Mandate's being administered "inefficiently or disgracefully" there can be no knowing what the League might not be "induced" to do, and that mind arrives at the general conclusion that all's for the worst in the worst of all possible worlds, that everything and everybody are wrong and that the most wrongheaded of all is the miserable country to which Mr. Philby has the misfortune to belong.—I am, etc.,

PERSONAL AND GENERAL

TO-DAY

August 26, 1926 (New Style).
August 13, 1926 (Old Style).
Saphar 16, 1345 A.H., of the Moslem Calendar.
Ellul 16, 5685, of the Jewish Calendar.

Adly Pasha, the Egyptian Prime Minister, arrived last week in Paris.

M. Venizelos arrived last week at Wengen, in the Bernese Oberland.

The Gaekwar of Baroda last week left the Hyde Park Hotel for the country.

The Maharaja of Alwar left London on August 17 for Dalwhinnie, Inverness-shire.

Viscountess Goschen will sail for India in the Rajputana to-morrow (August 27) on her return to Madras.

Sir Charu and Lady Ghose, who have arrived in London from Calcutta on a short visit, are staying at 102, Ashley Gardens, S.W.

The Emir Saoud, the Wahhabi Crown Prince, who is visiting Egypt, was received by King Fuad at Montazah Palace, Alexandria, on August 18.

Sir Ernley Blackwell and Lady Comyn-Platt were among the passengers in the P. and O. steamship Rajputana who left London on August 20 for Marseilles.

The Egyptian Minister, Aziz Izzet Pasha, accompanied by Madame Izzet Pasha and his son, left London for the Continent on leave on August 22.

Yassin Pasha and Mizahim Beg Pachachi Zada, who were respectively Prime Minister and Minister of Communications and Works in the Baghdad Cabinet of 1924, are now in London.

Mrs. Annie Besant, President of the Theosophical Society, left Southampton on August 19 by the White Star liner Majestic for New York. She was accompanied by Krishnamurti.

The King has approved the appointment of the Lord Sinha and Sir John Edward Power Wallis to be members of the Judicial Committee of the Privy Council under Section 1 and Section 30 respectively of the Judicial Committee Act, 1833.

General Averescu, Roumanian Prime Minister, after visiting the Alto Adige where he travelled as far as the Brenner Pass, arrived last week at Acqui, Piedmont, to take the cure. He will attend the meeting of the League of Nations in September, but it is not known whether he will go to Rome to meet Signor Mussolini before or after his visit to Geneva.

The King has given the following gentlemen authority to wear decorations conferred on them by the King of Egypt, in recognition of valuable services:—

Order of the Nile.—Insignia of the Second Class.—Mr. Harold Preece Hewins, Director of the Commercial Intelligence Branch, Central Economic Board, and member of the Governor-General Council, Sudan.

Insignia of the Third Class.—Mr. John Murray Ewart, C.I.E., on completion of Special Service under the Sudan Government.

Insignia of the Fourth Class.—Mr. Clermont Grantham-Hill, M.B., Bch., of the Sudan Medical Service; and Mr. Edwin Stephen Lemass, Assistant Legal Secretary to the Judicial Adviser, Egyptian Ministry of Justice, Cairo.

Ex-Queen Elizabeth of the Hellenes, who has been suffering from an attack of influenza, left London on August 21 to join ex-King George of the Hellenes at Cromer, where they consented to take part in a Fête and Carnival which took place yesterday.

Lord Sinha of Raipur gave a dinner party at Claridge's last Thursday. His guests included the Hon. Charu and Mrs. Ghose, Sir Arthur Hirtzel, the Hon. Sir Rajendra and Lady Mookerjee, Sir Campbell Rhodes, Sir Malcolm and Lady Seton, Sir Basanta and Lady Mullick, Sir Binod and Lady Mitra, Sir Atul and Lady Chatterjee, Mr. N. Gupta, Mr. and Mrs. H. C. Chunder, Mr. and Mrs. N. C. Sen, and the Hon. Sushill and Mrs. Sinha.

GALLIPOLI PILGRIMS.

Among those who left London on August 25 on a pilgrimage to the war graves in the Near East are the Dowager Countess of Longford and her daughter, Lieutenant-Colonel and Mrs. Rainsford-Hannay, and Mr. S. J. F. MacLeod, K.C. The pilgrimage, which numbers about two hundred and sixty people in all, has been organised by the St. Barnabas Society, sailing from Marseilles in the Stella d'Italia, which has been specially chartered. Two days will be spent at Salonika. Rupert Brooke's grave in Lemnos will be visited. It has been arranged to make the landings on the Gallipoli Peninsula at Suvla, Anzac, and Cape Helles, where a Memorial Service will be held. On the return journey one day will be spent at Athens, and the party return to London overland from Trieste on September 11.

THE KING OF IRAQ.

The King of Iraq arrived in London on August 17 and was welcomed on behalf of the King by Viscount Gage, who conducted his Majesty to the Hyde Park Hotel. King Faisal during his brief visit fulfilled many unofficial engagements; he left for France and Switzerland on August 25. Objects of his visits included the Test Match at the Oval on August 18 and the banknote factory of Messrs. Bradbury, Wilkinson and Co. on August 20.

NOTES OF THE WEEK.

(Continued from page 208.)

Another Greek Revolution.

The dispassionate observer is inclined to classify the revolutions in modern Greece with the marriages of Henry VIII.—as an incurable habit. Except, possibly, in the point of view of the Greek who is so near to the tribulations of Greece that he cannot see the wood for the trees, the nocturnal pleasantry by means of which General Kondylis has just deposed General Pangalos will cause but a cynical smile. The defects of the ex-President were, of course, generally recognised; his impetuosity had of late become indeed so complete a quality of his character as to deserve the reproach, and sometimes the charge, of being feminine. His tyrannies were in the main the tyrannies of a little man, and on that account perhaps were the more irksome. It was the misfortune of his people that he could not fill the rôle of Signor Mussolini, whom he so much admired: the difference between Corfu and Petritch was no unfair measure of the difference between the two men. One thing, however, General Pangalos did achieve—the uplifting of the Greek Army; this achievement will not soon be forgotten either by his own people or by his neighbours. Into the protestations of his successor, and into his promises of constitutional practice, it may not be well at this stage to inquire too closely, for such self-justification seems in all the Greek revolutions to be made after the same pattern. If General Kondylis equals the energy of General Pangalos and abjures his occasional fantasies, he will, even if he fails to fulfil his needlessly abundant promises of obtaining popular support, not have deserved ill of the long-suffering Greek nation. But as one General succeeds another in Greece, the impression is bound to grow that there is not in the country one man alone capable of saving it, but that it were better, as in former days, for the people themselves to take a hand in their Administration.

The Yugoslav-Greek Agreement.

The Treaty of Friendship and Conciliation between Greece and Yugoslavia, and the four railway and commercial conventions that were signed between the two countries on August 17 reflect great credit on the Foreign Ministers of both States. Both parties to the agreement had to proceed slowly and very cautiously, owing both to internal and to external causes. The Treaty itself, a purely defensive one, is to last for a period of three years, but is renewable. In the Convention it is decided that the railway between Salonika and Ghevgheli is Greek, and Yugoslavia agrees to cede to Greece, in return for 20,000,000 French francs, the rights formerly vested in the Oriental railways over that line. In other words, the legal recognition of proprietorship is now secured to Greece. The line is to be controlled by the Greek Director of Macedonian Railways in co-operation with a Yugoslav representative. The frontier station at Ghevgheli will be common to both parties. It is pleasing to note that the extension of the area of the Yugoslav Free Zone at Salonika is accepted in principle, and that the contracting parties agree to an equality of tariffs in their respective Free Zones, as well as railway tariffs. It is to be hoped that the recent revolution in Greece will have no effect upon the ratification of this Yugoslav-Greek Treaty. Possibly it might be a wise move on the part of the Kondylis Administration to preserve M. Rouphos at the Ministry for Foreign Affairs, were it only to reassure Yugoslavia.

Egypt in London.

In its zeal for economy the Egyptian Chamber of Deputies has laid a heavy hand on the expenditure on Egypt's representation abroad. The Legation in London in particular has come in for severe criticism, on the ground that the sum spent on the purchase, reconstruction and furnishing of Bute House is excessive. In the years to come it may well be that some of the severest critics of to-day will experience a sense of pride on finding that their country's representative is so worthily housed in the world's metropolis, and will point to that portion of London which is Egyptian soil as a tribute to the vision and confidence in Egypt's future that was shown by those who had charge of her destinies in the early days of her independence. For Bute House, without question, will stand comparison with any other Legation in London, and the existence of a suite of rooms for the exclusive use of Egypt's Sovereign not only lends it a distinction of its own, but also suggests that even now some Egyptians have found it possible to contemplate the time when it will seem quite natural that the King of Egypt should have a second home at his disposal in the British capital. Not for the first time has the purchaser of a house found himself obliged to exceed the original estimate of expenditure, and it cannot be argued that Bute House has proved a cheap purchase; but in a less critical mood the Egyptian Chamber will perhaps reflect that it is a courteous and graceful act, entirely in keeping with the proud traditions of the Orient, for Egypt, who has benefited so much by Great Britain's long guardianship of her finances, to devote just a small portion of the substantial wealth accumulated for her to her representation in London. To challenge the subsidy to the Egyptian Students' Club in London, and reduce it from £1,500 to £1,000 a year was, it is to be feared, a niggardly act conceived in spite and one which will, no doubt, be disavowed by a later Chamber when the ragged tempers engendered by a late summer session have been smoothed out into that cheery optimism that the world associates with the banks of the Nile.

On August 23 the flag of Iraq was flown for the first time by a ship of war, the Royal Indian Marine Ship Lawrence. In honour of the anniversary of King Faisal's accession to the Throne, the Lawrence also fired a salute of 21 guns.

The summonses against the Pundit Malaviya and Dr. Moonjee, a Swarajist leader of the Central Provinces, who entered Calcutta two weeks ago in defiance of the Magistrate's prohibition, have been withdrawn.

In accordance with the decision taken by the Egyptian Chamber of Deputies on July 13 the Ministry of the Interior has instructed the municipalities to transfer their funds from the National Bank of Egypt to the Bank of Misr, which is a purely Egyptian institution. The funds in question amount to about £E2,000,000.

LORD IRWIN ON INDIA'S FUTURE.

Lord Irwin's speech at the opening of the Legislative Assembly will be closely examined in India for indications of the policy that he is likely to pursue during the next five years. The Viceroy of India is no mere figurehead, nor, in spite of masterful Secretaries of State, is he only an agent of the India Office: should he develop a policy of his own, he has a very considerable chance of carrying it through, so long as it contains nothing actually incompatible with the general policy of the British Government. It is, however, not at all improbable that Lord Irwin will be the last Viceroy to whom such a description can apply; for, though in the past India has never been a party question, there seems every prospect of its becoming one in the near future. It is this possibility that makes the present tenure of the Viceroyalty so peculiarly important; since it will be during its currency, if nothing unforeseen should occur, that the Statutory Commission will sit and, it is hoped, report. Lord Irwin's remarks on the South African question and on the arrangements for the future recruitment of the All India and Provincial services, though important enough in themselves, are therefore of less interest than those in which he referred to the communal question and to the progress of the reformed constitution. These two questions are indeed so bound up with each other as to form, in fact, a single one: the interesting speculation is the manner in which the attempt to answer this composite question will be made. It is possible that the ultimate policy will be to proceed with the reforms while practically ignoring the Hindu-Moslem division, in the hope that it will right itself in time—a result to which such a procedure may be considered likely to contribute. Or it is possible that, the existence of communal division being recognised as one of the most important factors in the political progress of India, an attempt may be made to alter the scheme of the reformed constitution so as to allow for it. One may perhaps conclude that Lord Irwin's ideas tend towards the latter solution, from the words used by him on the present occasion. "I should be the last," he said, "to desire that, in taking their share of the common task for the service of India, any should be required or expected to abandon principles which they revere. For peoples, as for individuals, the qualities which are needed to shoulder responsibilities are the qualities which would be strangled by the denial of individuality, and it is no part of the British purpose to seek to force India into a mould unfriendly to the main features of Indian life and character." In another passage he spoke of the determination of the British Government to "lead the Indian peoples by the safest and surest path towards the goal which they desire to reach"—which, in a subsequent sentence, he described as the obtaining by India of "an increasing share in her own government."

It is here that we are faced with the real difficulty—the profound distinction that lies between "India" and "the Indian peoples." Speakers in India are apt to use the terms as if they were interchangeable: and, so long as they continue to do that, we get no nearer to the root of the matter. "The Indian peoples" are many and various; but, for consideration of their place in an India whose feet have been set on the road towards self-government, one may ignore all other divisions and fix one's attention on that which is by far the most important—the division between Hindu and Moslem. In the remarkable article in *The Round Table* commented on elsewhere in this issue, its writer says that realisation of Indian citizenship is still a long way off: "and yet, until it is reached, there is nothing to stir the Moslems into friendly rivalry with the Hindus and into fitting themselves for something better than a fixed fractional share in the work of government." The fact is, of course, that Hindus and Moslems take views of "the goal which they desire to reach" that are so divergent as to be mutually destructive. The Moslem does not object to democratic reform, while the whole idea of it is utterly repugnant to the Hindu: who, if he should consent to work it at all, would only do so with the fixed intention of getting rid of its authors and then recasting the form of government to suit his own ideas. The Moslem dreams of the day when he may rule India, and the Hindus, in accordance with his own formula of government: which would not, perhaps, be very different from ours. Until that day comes, he will be content to fit himself into our scheme so long as British control is there to ensure that he forms an important component of it. When Lord Irwin spoke of India obtaining an increasing share in her own government, he may be construed as suggesting that Hindus and Moslems might both look upon this as a desirable goal, so long as the British remain at the head of affairs, not indeed to assist each of the two great communities to progress towards the true goals of their respective desires, but to prevent either from obtaining a disproportionate share of power. One may hope that one has read Lord Irwin aright: and that what he meant was that, so long as the Hindu-Moslem difference exists, the only political future that can be envisaged for India is something considerably less than self-government: "an increasing share in her own government" the actual direction of which will remain in British hands.

In another part of his speech, Lord Irwin deplored the fact that the two great communities showed no sign of approaching the communal question "in that spirit of mutual tolerance which alone can put an end to discord." These are friendly words, of a sort to which it is customary, and indeed desirable, to give utterance; but they are no more than words. They lead nowhere: they profess to envisage a possibility that is non-existent. After thus displaying the velvet glove, he went on to show the hand within it. "The antagonism, which some members or sections of the communities concerned have recently displayed towards the observances of others, appears to some extent to be based not so much on traditional loyalty to any creed as on new assertions of abstract rights which it is sought to invest with the sanctity of ancient principles. It cannot be too clearly emphasised that the Government has no intention whatever of allowing any unjust or un-

Digitized by Google

reasonable claims, still less any violence or threat of violence, to deter them from their clear duty of maintaining the public peace." One may believe, therefore, that one has correctly read Lord Irwin's exposition of the faith that is in him if one takes his reference to "the peoples of India" literally; and if one concludes that his own ideas are in favour of their obtaining an increasing share in their own government, without any diminution—even, perhaps, with an increase—of British control and direction at the centre. One may also assume his recognition that Hindu-Moslem differences are, so to speak, endemic—the virus is there, and will remain, so far as can be foreseen, indefinitely: the disease may die down for a time, but will be certain to break out again with renewed virulence whenever circumstances favour its recrudescence. To combat it, he relies on the retention, if not the extension, of effective British power to ensure that would-be disturbers of the peace shall restrict their activities to the breaking of each other's heads, and even that to the barest possible minimum.

CURRENT TOPICS.

The Punjab Royal Family.

With the death of Prince Frederick Duleep Singh the male line of the short-lived royal family of the Punjab comes to an end. Ranjit Singh, the Lion of the Punjab, was one of the last in the long list of Indian adventurers to carve out a kingdom for himself. He was originally in the service of the Durrani kings of Kabul, from one of whom he obtained the grant of Lahore in 1799: ten years later, he had conquered the northern part of the Punjab and, as an independent sovereign, entered into treaty relations with the East India Company: and, in 1818, he was undisputed master of practically the whole of the Punjab, including the Frontier Province and Kashmir. When he died in 1839, he was succeeded by a son who only survived him for a year: and the period of dissension that followed was brought to an end by the First Sikh War of 1845, which terminated in the surrender of Lahore after the complete defeat of the Sikhs at Sobraon. Duleep Singh, the surviving son of Ranjit Singh, an infant six years old, was recognised as Maharaja, the government being carried on by a Sikh Council of Regency assisted by the British Resident Henry Lawrence. In 1848 the treacherous assassination of two British officers at Multan brought about the second Sikh war, which ended in the battle of Gujerat, where the Sikh Army was absolutely destroyed. The annexation of the Punjab followed, in March 1849: Duleep Singh was given a pension of £50,000 a year, on which he lived the life of a country nobleman—with a few stormy interludes—at Elvedon in Suffolk until his death. At the time of the annexation of the Punjab, Duleep Singh resigned, for himself, his heirs and successors, all right, title and claim to the sovereignty of the Punjab or to any sovereign power whatever. He had two sons, Albert Victor who died without issue in 1918, and Frederick, who never married. He had also three daughters, one of whom is married to an officer of the Indian Medical Service, but has no children: the two others are unmarried.

Prince Frederick was a man with many-sided interests, the chief of which was archæology. He volunteered for service in the war when nearly 50 years of age, and acquitted himself well in France. Like his father and his elder brother, he had been a noted shot. Speaking from memory, one believes it was his father who once backed himself to kill a thousand pheasants to his own gun in a single day's shooting over his preserves: and, though he lost his wager, he actually killed well over nine hundred—920, if one remembers rightly: a truly astonishing performance.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 5.

Commissions and Courage.

The report of the Currency Commission is refreshing. Long before this you will have read the report itself, or at least the Press summaries of it, and will be familiar with the resolution of Government in regard to it. At present the currency experts at this end have not had time to spread themselves over the details, and intelligent anticipation had already enabled them to exhaust the main points of the report; so we have yet to hear how prices will be affected, how hoarding will be diminished and banks appear in every village, and how we have to get used to still more paper money, which will presumably follow tradition and generally be very dirty paper money. But at last we have a Commission which is not afraid to take its own line into new country when it has seen that the old course was wrongly laid; and it has the courage to be humdrum and leave stunts alone. A certain Commission due in 1929 may find more than a little encouragement to clear thinking in the present report; and, given clear thinking, we who wish primarily for sanity in government know we have nothing to fear.

More European Police.

As the outcome of the 1926 riots, the European element in the Calcutta Police is to be considerably strengthened, and not a voice is raised in dissent. A hundred sergeants from British regiments were placed on police duty when it became impossible to carry on any longer without the regular force breaking down, and of these fifty were to be retained for the next few months until the new six inspectors and fifty sergeants are ready to take up duty. It is possible, but not very probable, that the lessons of the last few months, when the British soldier has been hysterically welcomed everywhere and all creeds and classes have called for troops—and troops with fixed bayonets—at their doors, will not be altogether lost. The new army sergeant, as we see him here, is a fine, clean, good-humoured, sensible fellow; when he becomes a policeman he changes his uniform but little else and all the sergeants in the Calcutta Police are ex-Army men. Yet the extremist Press never ceases to vilify them, although it must be admitted that recently matters have somewhat improved in this respect. If the public will remember what the Police have done and try to appreciate their difficulties, it will soon be found that they "are but men like you," and mutual understanding will breed mutual trust. And, if the Labour Party want to interfere in Indian affairs, let them agitate for police sergeants to be paid enough to enable them to marry English girls and breed English children; the Anglo-Indian community does not need recruits in these days of Indianisation.

The Folly of *Forward*.

Forward is losing touch with reality, but it still has a ready pen for abuse. This week the Secretary of State is in the stocks, and it will not be the fault of Mr. Sen Gupta and his satellites if some mud does not stick. "Black lie," "a gross injury and a grosser insult," come out of the usual gutter; but the climax is to dub him "Birkenhead, Impudence I and Clemency II," for daring to defend Lord Lytton's work as Governor of Bengal. "F. E." can smile at this for twenty reasons; but what a fool is the attorney who abuses, not his opponent, but the president of the tribunal. The judge may smile and may ignore the yelps, but at the back of the mind a grey cell has recorded the facts, and they will stick even if they do not rankle. *Forward* is still probably the most influential Indian paper, and it undoubtedly speaks for a type of mind very common in Bengal; "slave mentality" did not G. W. Steevens call it? Older and saner heads are shaking: and slowly, but steadily and surely, the *Amrita Bazar Patrika* is recovering its former influence, by advocating watchful co-operation and a constructive

Digitized by Google

policy. At the moment it is non-commital between the new Indian National Union, which is to bury communal differences for the good of the national cause, and the Hindu Political Party which has been formed by prominent ex-Congressites and Moderates; making even two more parties. Meanwhile a by-election is proceeding, with six candidates, each with his own party platform, contesting one seat.

Sir Hugh Stephenson for Bihar.

Sir Hugh Stephenson will not have long to wait before assuming another Governorship, and no one here will be surprised if there is no break between his present appointment and his succession to Sir Henry Wheeler in Bihar and Orissa in April next. Unlike the latter, whose brilliance illuminated all-India counsels at Simla for a time, his service has been confined to Bengal, and he has a reputation for caution and soundness and almost a genius for friendship with his opponents. Both he and his popular and talented wife are sincerely congratulated by hosts of friends. The appointment has other bearings, which are of more than passing importance: there have been strong rumours that an Indian was to be the next Governor of Bihar, but probably the communal situation has put this out of the question for the time being. Further, the appointment of a civilian to succeed a civilian indicates the possibility that such posts may continue to be amongst the service prizes; as three governorships are shortly falling vacant, the new appointments will be awaited with considerable interest in this connexion.

Men and Things.

Orders have been passed prohibiting Pandit Madan Mohan Malaviya and Dr. B. S. Moonjee from entering Calcutta for two months. The open communal dissensions are less evident at the moment, but political re-orgnisation is being pushed forward vigorously on both sides on racial lines, and the proposed visit was in connexion with the Hindu movement. The usual storm of indignation is being worked up in the Indian Press.

The Corporation Swarajists are learning to take broader views; they have just accepted the recommendations of a drainage committee of experts to reconstruct the sewerage system of the city at a cost of over £600,000, although it was pointed out that this would increase the rates. Incidentally, the debate again showed the confidence reposed by the Indian members in Mr. S. W. Goode, I.C.S., Chairman of the Improvement Trust, who patiently explained the report to a full and most attentive "House."

Sir Edgar Jones has been giving evidence before the Tariff Board on behalf of the Welsh Plate and Sheet Manufacturers' Association (London) against the protection proposals of the Indian Tinplate Company of Tatanagar. His evidence was largely technical, but he maintained that the Indian Company was merely a branch of the Burma Oil Company and not a genuine open trading concern. Sir Edgar's example will be more closely followed when the danger of the Indian protective policy to Home manufacturers is realised.

A leading Indian steel merchant has also been giving evidence before the Tariff Board, suggesting anti-dumping legislation against Continental steel. It is beginning to be increasingly evident that in the Steel Stakes the placings are to be: 1, Tatas; 2, The Merchants; Consumer also ran.

The Trivial Round.

Racing started at Headquarters again on Saturday, but the attendance was not good. Three bad upsets again put the bookies on top, but it was an enjoyable afternoon with a fair breeze; a delightful sky throughout recalled an English April, but most people were watching the figures skied in the Tote, and elsewhere. Really, these new dresses——

At the same time the Sherwood Foresters were beating the Camerons 2—1 in the Shield Final. A fine, clean, sporting game on heavy ground, both teams fought all out to a standstill. The winners are a magnificent team and, if what we have seen here this year is typical, Army football is getting cleverer and cleaner.

Rugger is in full swing, and honours are well divided at the moment. Calcutta ought to have a really good team for the "Quadrangular" at Madras later; last night the Club and the "Griffins," the newcomers, had it out without gloves: and, although the babes began with the match in their pockets, they only just got away with it at two tries to nil. A gruelling game on a perfect ground which, by the way, recovers now more quickly than ever.

The probables for the M.C.C. tour have been published, and they are a tough lot. Still, we'll see what happens. The visit is already exciting considerable interest, and the teams had beter start practising sitting up late—reading, shall we say!

So Suzanne has turned "pro." It's a long lane that has no turning.

Hoare Millers have carried off the Merchants' Cup this year, and Orr Dignams have the wooden spoon. The proposal for a handicap event to run with this is to be adopted, and next year a sweepstakes on these lines will add to the excitement.

The School of Music's Chamber Concerts have commenced, this year at the Saturday Club. Both players and programme want strengthening, but a full house attended the first concert. The new India again!

The new Calcutta Operatic Society has put up a remarkably good performance of "The Boy." A company of delightful people, they have a chorus of youngsters whose singing and dancing are equally "fresh," and the show is pure joy. Next week the C.A.T.S. are pierrotting again.

Markets.

The beginning of the week saw a good business for loose jute; but at the close sellers were firmer in their ideas, with the result that less business has been transacted. It is the opinion that rates have reached about bottom: and, if prices remain at round about the present levels for the next week or so, a better demand may be anticipated. In the gunny market prices weakened at first; but, with North America and the Plate showing signs of interest, a better tone has been in evidence. Mills have continued forward selling, and quite a considerable business has been recorded up to June. The piece-goods market has already benefited from the resolution passed by the Marwari Chamber of Commerce, prohibiting dealers from entering into fresh arrival contracts for the next four months; although the demand is still meagre, the downward tendency of prices has been checked, and a revival of inquiry should effect better prices. The tea sale here this week was satisfactory; buying was more universal, and most descriptions were bid for in excess of previous prices. The outturn figures for July are not yet to hand, but it is anticipated that they will show a decrease of something between five and seven per cent. on those for the same month last year. Owing to excessive rain in most of the tea gardens, prospects for August are said to be not too good.

In the share market, jutes were weaker at first on an easier hessian market, but later the tone improved, and prices close almost unchanged. Coal shares have been less active except for one or two of the more popular shares, and cottons have scarcely been mentioned. On an improvement of the commodity market, tea shares have displayed a slight improvement: and, if the next few tea sales produce further improvements, as is anticipated, the share market should benefit and the buying become more general. For rubbers there has been more inquiry, with a resultant increase in prices. Government Securities have been dull, especially the 3½ per cent. paper and the new Loan: one of the reasons for the dullness of the latter is that a big Bombay operator has failed to take up his commitments. The sellers agreed to cancel the contracts, but the result has been that a considerable amount of loan recorded as sold has now come on to the market again. Short dated loans remain strong, in view of the request for short investments owing to the small demand for

Digitized by Google

money and the low rates obtainable. In the investment stocks the feature has been the relapse in Imperial Banks, on the report of the Royal Commission recommending the setting up of a Central Bank.

The Exchange market opened dull, but the last two days a decidedly steadier tone has developed, and this has been further accentuated by the publication of the report of the Currency Commission. Money continues very easy, being nominally quoted at 1 per cent.

"THE INWARDNESS OF THE INDIAN PROBLEM."

The *Round Table* for June contains an article of exceptional interest under the above heading. The writer, starting with the postulate that "no effort of synthesis can bring the Hindu and the Mohammedan mind under one category," proceeds to examine the attitude of each of the two great Indian communities towards the British Government of India and the reformed constitution: and his conclusions merit close attention. The belief of the Indian Moslem, that the British Government's neutrality in communal questions was something more than friendly towards himself, was rudely shaken by the revocation of Lord Curzon's partition of Bengal; and the misfortunes of Turkey in the Tripoli and Balkan wars were attributed to a departure on the part of England from her traditional friendship with the Commander of the Faithful. The entry of Turkey into the War produced "a temporary paralysis of feeling"; though, in fact, it is permissible to believe that, after the first shock occasioned by it had passed, it was looked upon as the natural result of England's recent failures in practical friendship. Then followed the revolt of the Sharif of Mecca, the treaty of Sèvres and the Greek occupation of Smyrna; all of which raised anti-British feeling to fever heat. But the victories of Mustafa Kemal relieved Indian Mohammedans of the fear of the effacement of Turkey, and allowed their feelings to flow back into their natural channel—a disposition to resume friendly relations with the British and to concentrate against their hereditary enemies, the Hindus. Our ideas of democracy are in no way repugnant to Moslems, for Islam is, in practice no less than in theory, the most democratic religion in the world; so that the Reforms would, on the whole, be acceptable to them were it not that they see how greatly they would be in the minority if the reformed constitution proceeds according to plan. In this difficult position "their only abiding consolation is the thought that they are the subjects of a wider empire than that of India, the world empire of Islam. This to them is not only what the *civitas Dei* is to the devout Christian: it is also a conception of temporal power which once was, and will be again when the Caliph of the Prophet comes into his own."

The attitude of the Hindus is very different. Among them, though much has changed, "two essentials survive—the stratification of human society and the function of the priest to think for the people." The successive waves of Mohammedan conquest only resulted in the tightening of the bonds of the Hindu social formation, in self-defence against the proselytising forces of Mohammedanism: and the domination of the priesthood, "the intellectual counterpart of the social tyranny of caste," has almost abolished the capacity of the Hindu masses to think for themselves, while it has led the Brahman to neglect the material and to devote himself to contemplation of the spiritual. "Hinduism has, in its day, defeated and absorbed the reforms of Buddhism: it withstood and outlived the attacks of Islam: it is convinced that it will similarly dislodge the British dominion, after extracting from it whatever may be most useful for its own purpose." And the idea of democracy is altogether foreign to the orthodox Hindu, to whom it means the antithesis of all the essentials of social existence. Our theory of the sovereign people means nothing to him: our parliamentary form suggests to him only "an assembly of the natural leaders of the people, scrupulous to consult the country's welfare, but in no particular sense answerable to the people for their decisions. To give equality, even of opportunity, to the fit and the unfit, the twice-born and the outcaste, is to him unthinkable." The *Round Table* writer speaks of the misleading nature of the chronicles of Indian events served up by the daily Press in England, even though these are the only chronicles that the Press can possibly supply, for they narrate the public progress of the vehicles into which we have tried to pack Indian public life; but the manœuvres of political parties, the patching up of legislative compromises, are of little moment in comparison with "this solid rock athwart the stream of our hopes"—the orthodox Hindu's negation of all our ideals and theories.

As regards the Indian temperament in general, the article contains a specially illuminating passage. "Even the collapse of Mr. Gandhi's non-co-operation movement can be rated too high. An emotional appeal in India is easily started and rapidly disseminated, but it has not the same potency for results as in the West. There is something in the climate or in the latitude or in the blood which prevents it from enduring. Neither climate, however, nor latitude nor blood can avail to dilute the deeper feelings from which the emotion was drawn and into which it returns." In the last sentence of this, one finds the explanation of much that is perplexing to the Western observer. The deeper feelings of Indians include the Hindu belief in caste and the supremacy of the priesthood, the Mohammedan belief in "the wider empire of Islam," and the unquenchable antagonism between the two great communities: and all these are ineradicable. It is on this note that the writer ends his article—Such being the fundamental position, how is the 1929 Commission going to direct its inquiries? Will it confine itself to the examination of diarchy, to the further transfer of subjects to Ministers, to an extension of the bicameral system? "Or will it have to probe deeper and examine whether responsible government, in our sense of the words, is a goal towards which India can move? "

COUPON RAILWAY TICKETS.

The Eastern Bengal Railway has put forward a suggestion for the issue of first-class coupon books for the use of commercial travellers: and this proposal has been discussed by the Bengal Chamber of Commerce. The abstract of the proceedings of the Chamber for the month of June shows that the original proposal was confined to the Railway making it: and was, that the tickets should be issued in coupon books representing 2000 miles: that the charge per mile, though slightly less than the ordinary single rate, should be considerably more than the return rate: and that there should be no refund on unused coupons. All these proposals the Chamber considered to be capable of improvement. It suggested that the scheme would have much greater advantages if it could be extended to all the railways in India, because it is obvious that the travelling representatives of business firms cannot restrict their activities to the use of a single line. The Chamber also thought that 1000 miles would be a more suitable unit than 2000; but that, if the latter were insisted on as a minimum, the coupons representing the total mileage should be issued in four separate books of 500 miles each, to allow of four representatives of a firm using them simultaneously and independently. It also thought the proposed rate too high, and that it ought not to exceed the existing return rate: and that, in certain circumstances, it would only be fair to allow a refund in respect of unused coupons. It also suggested that the scheme might be widened so as to include second and intermediate class passengers: and thought that the currency of a book of coupons ought to be a year, not six months as suggested in the original proposal.

A good many years ago, one of the great English railways—the Great Northern, if one's recollection is correct—issued coupon tickets for use by first-class pas-

Digitized by Google

sengers, at a charge per mile that was only slightly higher than that for an ordinary third class journey—if one remembers rightly, about 1¼d. first class for every 1d. third class. For all one knows to the contrary, this arrangement may have persisted up to the outbreak of the War—one's personal knowledge is confined to a certain "5000 mile ticket" in use, in the early nineties, between London and Northumberland. The tickets were issued in the form of books of perforated "labels," like postage stamps, each representing one mile. The owner presented his book to the booking clerk, who tore out the proper number of "labels" and issued the required ticket. The minimum was either 500 or 1000 miles—one does not remember which; but one does remember being struck by the value of the arrangement, and of the great increase in value that would have accrued if the tickets had been made interchangeable between the various railway systems instead of being confined to only one.

It is probably necessary to retain at present first class carriages in England, though "all one class" seems a probability of the future; but it is certainly necessary in India, and second class equally so. In India—and doubtless in England also—it is the third class traffic that pays, the first and second class traffic being run at a heavy loss; and the scheme put forward by the Eastern Bengal Railway, if generally taken up, ought to do a good deal to minimise the inevitable loss on running the first and second class carriages. Journeys in India are usually much longer than in England, and 2000 miles would be quite a reasonable minimum there; one would in fact, not be surprised if it were put higher still. The charge for a coupon book might be at the rate of about 125 per cent. of the ordinary rate for the next lower class, supposing that it were applied both to first and second class; though, to begin with, the experiment might well be confined to the former. The fact that about half the railways in India are State railways, and that this percentage will increase in future; also that the grouping of the lines avoids wasteful competition; would make it comparatively easy for the books to be made "universal"—available for use on any Indian railway, possibly with an exception in favour of a few of the hill railways, whose rates are a good deal higher than the ordinary: and, if the currency of a book varied with the amount of mileage represented in it, it would probably be easy to arrange a satisfactory period, without much reason for refund of unused coupons save in exceptional cases, such as the death of the holder. But there does not seem to be any reason why the scheme should be confined to "*bona fide* commercial travellers"—its application should be universal. It seems that there are great possibilities in the suggestion, if carried out on practical lines; and, if an experiment in India should prove successful, it might well stimulate a similar move in the United Kingdom, where a re-introduction of the old arrangement, broadened to meet the new grouping system of railways, would almost certainly prove popular with the travelling public as well as remunerative to the railways.

THE INDIAN MAIL.

To India by Air.

It is announced that the passenger aeroplane service from Egypt to Karachi will begin next January. The *Pioneer* says that the site for the civil aerodrome at Karachi has been chosen, and that the construction of a hangar will be started shortly; but that its completion is likely to be delayed owing to a shortage of steel. "The steel used is of sizes unobtainable in India, and supplies from England are at present interrupted owing to a general shortage caused by the recent strike." If by "the recent strike" is meant the existing coal strike, this news is of a piece with all that has gone before. The announcement of the signature of an agreement with Imperial Airways for a regular fortnightly air service between Egypt and India, with its Indian terminus at Karachi, was made in December. It must, of course, be assumed that this arrangement was reached with the previous agreement of the Government of India, who must thus have had at least a year in which to prepare the Karachi base. But they evidently waited till the last possible moment before placing their order for the materials necessary for the building of a hangar—what the *Pioneer* rightly describes as "this all-important factor" in the starting of the service: and have thus been brought face to face with the unexpected, in the shape of the strike that started at the beginning of May. The *Pioneer* goes on to say that, if the hangar is not completed by January, the Royal Air Force will "probably" allow Imperial Airways to use the adjacent R.A.F. aerodrome and housing accommodation; but it does not suggest what will happen if this probability should fail to materialise. When the Government of India, in March last, invited the Standing Finance Committee to approve a grant of a lakh of rupees for the provision of a hangar and hutments at Karachi, they explained that "it had unfortunately been impossible" to include the allotment in the Budget estimate: and this was apparently accepted as a complete explanation. No doubt, if the absence of any facilities at Karachi next January is made the subject of unfavourable comment, the Government of India will offer the same explanation—that it has "unfortunately been impossible" to get the necessary steel: and for the same (apparent) reason—lack of ordinary foresight.

So long ago as December 24 last, THE NEAR EAST AND INDIA wrote, "If India will bestir herself betimes, so as to have her arrangements for dealing with internal air traffic ready by the time that the first fortnightly aeroplane lands at Karachi, all should be well." So far from making any attempt in that direction, the Government of India seem to contemplate, with complete equanimity, the absence of any facilities for the landing of the first fortnightly aeroplane: and to be prepared to leave it to the Royal Air Force to decide whether it shall land at all. If this attitude should lead to a blast of censure, the Government will doubtless treat it in the manner traditional to the East—"with patient deep disdain": and then continue to follow precedent by becoming "plunged in thought again"—if, indeed, to "plunge" is not too virile a word to describe the leisurely, complacent sinking into "consideration" which appears to be the only effort of which the Government of India are capable in this very important matter.

Destruction of Animals.

The unexpected difficulties that constantly present themselves to the Western reformer in India are often mentioned in general terms, though seldom, perhaps, are actual examples quoted. One such occurred in the Bombay Legislative Council recently, in the course of the discussion of an amendment to the Bombay City Police Act by which it was sought to give permission for the destruction of badly diseased or severely wounded animals. A Hindu speaker "lamented that sentiment and interest in the hereafter were lacking in the hearts of the officials, and begged them to consider the souls of the poor creatures who were to be killed."

To the "material West" this sounds nonsense; but, in fact, it is no such thing. To an orthodox Hindu who believes in the transmigration of souls, the matter is a very serious one. One feels that, in time, under very stringent safeguards, a panel of specially selected medical men will be legally empowered to end the sufferings of a human patient in a hopeless case; but, even in the material West, public opinion will have a long way to travel before it reaches such a conclusion. It is not to be wondered at, then, that in the spiritual East perfectly humane people look with horror on the idea of shortening the existence of an animal, even when in an extremity of pain or disease, which may very likely contain a human soul fighting its way upward to a higher incarnation.

This repugnance to the taking of animal life is not, of course, confined to cases such as that discussed in the

Digitized by Google

Bombay Council, but extends to all animals, however noxious. The average Hindu has realised that rats are vermin—that they carry plague, and do enormous damage to stored grain; but, if left to himself, he will take no part in a campaign of rat destruction, and very cordially dislikes any attempt to make him do so.

INDIA OFFICE COMMUNIQUE.

Agricultural Situation in India.

At the end of July in India the monsoon was sufficient in North and East Bengal, Bihar, Central Provinces, Western India States, Lower and Upper Burma and the majority of the Punjab States. In Assam and parts of Madras the monsoon is fairly satisfactory. The rainfall is below normal elsewhere, and more is needed.

Standing crops are generally fair. Food supplies are adequate, except in parts of Burma. Fodder and water are sufficient, except in Sind and parts of Madras, Bhopal, Indore and Rajputana. The condition of the cattle is good, except in the desert tracts of Sind, parts of Bhopal, Indore, Rajputana and two districts in Burma. Severe cattle disease prevails in the Chittagong district of Bengal. Some cattle disease also exists in Assam, the Central Provinces and three States in Rajputana.

In Assam the prospects of tea, jute and cotton are generally good. In Bengal, there is an increase of about sixteen per cent. in the area under jute, the condition of which is generally good. The gradual rise of the rivers in East Bengal is expected to facilitate retting operations. In Bengal the price of jute continues to fall in anticipation of large supplies, but the price of rice is rising slowly. In the Punjab, the price of wheat is lower than last year. In the North West Frontier Province, grain is being exported to Afghanistan from the Kurram, but there is no appreciable change in prices. In Burma, the prices of rice and paddy and other food grains are generally higher than those at the corresponding period of the previous year. The rise may be due to heavy buying by China and the Far East, and to the last harvest being poorer than in 1924-1925. Prices are higher than last year's in Bihar and Orissa, generally lower than last year's in parts of Madras, steady in Bombay, a tendency to fall in the Western India States. Elsewhere prices are fairly normal with a tendency to rise.

Economic conditions and the agricultural outlook are satisfactory, except in Sind, where there has been a general decrease in the area under cultivation, and one tehsil of Ajmer-Merwara, in which scarcity works have been opened owing to the failure of the crops.

INDIAN EXCHANGE.

London, August 23.

During the past week the firmness in rupee exchange has been less pronounced, chiefly owing to the lack of business in India. Markets there are more quiet than easy, although Bombay quotations were marked down on Friday to 1s. 5 31-32d. T.T. remitters have found little difficulty in obtaining 1s. 6d. which has remained the official rate in Calcutta, until to-day. A slight reaction has set in owing to the rumours from India that the adoption of the Currency Commission's proposals will be postponed. It may be safely assumed however that Government will announce measures meanwhile which will dissipate any doubts as to their intentions to stand by the rupee at 1s. 6d. Mercantile bills have been steady at 1s. 6 5-16d. for delivery to the middle of September, but with nothing doing in exports. On the Bombay side, we hear that good paper could have been placed there on Friday—the day before the mail—for ready delivery as low as 1s. 6¼d. three months' sight; and 1s. 6 9-32d. is possible in Calcutta to-day for mail bills.

Forward rates are quite firm. September T.T. is 1s. 6d., October 1s. 6 1-32d. to 1s. 6 1-16d., November 1s. 6 3-32d., December 1s. 6⅛d. and January-February 1s. 6 5-32d.

In this market, the week has been featureless, only a trifling business having been transacted round about 1s. 6 1-32d. T.T. We heard of some special amounts having been fixed for cash at 1s. 6 3-64d., but easier conditions prevailed to-day and 1s. 6d. appears to be the general rate for spot and near. In the forward market, sellers predominate; 1s. 6⅛d. has been done for December to a small extent.

In India at present, call and short time money is 1½ to 2 per cent. per annum, and the weekly statement of the Imperial Bank shows that the trade demands for funds have fallen away during the past few weeks very considerably.

These conditions are seasonal and usual at this time of the year, and continue until jute begins to move, which is the first crop claiming attention. This is followed by the cotton crop, which in recent years has shown a tendency to drag on to the next monsoon, partly owing to more facilities being available for finance and partly due to falling prices, which are not likely to improve this year in view of the heavy crop in America.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

Yugoslavia and Salonika.

The railway conventions signed with the Treaty which has been negotiated between Greece and Yugoslavia are of special importance, signifying as they do the settlement of one of the principal problems of the Balkans since the War. It is provided in the conventions that the railway between Salonika and Guevgeli shall be Greek while Yugoslavia is to give to Greece the rights over that railway formerly vested in the Oriental Railways. Further, with a view to facilitating the Yugoslav transit trade to and from Salonika a representative of the Yugoslav State Railways will co-operate with the controller of the Salonika-Guevgeli line. The area of the Yugoslav free zone at Salonika is to be extended, and will include warehouses and adequate sidings. It follows that this development will lead to considerable improvements of the port of Salonika, and plans in this connexion are already in train.

The Gash Flood.

Very satisfactory reports are forthcoming as to the prospects of this season's cotton crop in the Gash Delta. The past season's crop was below expectations owing to the very poor Gash flood, which was both bad in volume and in the manner of its arrival. This season the flood up to the present time has been particularly good. By the end of July some 7,000 feddans had received adequate water, and it is estimated that the continuance of the flood to the end of this month will result in the irrigated area extending to between three and four times that figure. Given that that happens, one may confidently look for a great development in the cotton yield from Kassala this season. This exceptionally good flood of the Gash will naturally raise expectations above the immediate prospects. The Gash, as I need scarcely recall, has its source in Eritrea, and the agreement reached with Italy for the division of its waters has given rise to considerable anxiety as to the outlook for irrigation in the Gash Delta. If, however, we may assume this year's flood rather than last year's to approximate more closely to the normal, then it would seem clear that there should be water and to spare both for Italy in Eritrea and for irrigation in the Gash Delta.

Motors in the Near East.

I have several times had occasion to deplore the lack of initiative of motor manufacturers with regard to the markets of the Near East. There has undoubtedly been an improvement in this respect in some directions, but even now it is only too clear that in some of the most important outlets British cars are not playing the part they should. An American report on the Roumanian market which I have just received states that in the first three months of the present year about 1,800 motor vehicles were sold in that country and that "practically the only competition encountered by American cars at present comes from an Italian make in the medium-priced class and from the French in the low-priced class." That is not a very encouraging picture from our point of view, and it is the more deplorable since Roumania ought to be one of our best markets in the Balkans. Trade between Great Britain and Roumania has been steadily increasing in recent years, but from what other countries are doing it is very evident that our trade relations with Roumania ought to be much more important than they are at present. Another report, also American, gives a not very much more encouraging picture of the Egyptian market. It is anticipated that Egypt will import in the current quarter about 700 motor vehicles, and it is estimated that 500 of them will come from America. It is satisfactory to learn from this source, however, that British motor cycles are holding the lead in Egypt, but one would like to hear that British motors are equally prominent throughout the Near Eastern countries.

Near East Tobacco Production.

Reference was made in these columns last week to the economic crisis in Bulgaria, and it was pointed out that one of the main causes has been the failure of Bulgaria to dispose of her tobacco advantageously if at all because of the surplus tobacco on the world's markets. It is not at all surprising that tobacco production in the Near East should have been rapidly developed in the last few years, for it is a remunerative crop, and it has the advantage, as I have pointed out, that consumption is unimpaired to all appearances in times of economic stress. But at the same time while the world's tobacco requirements tend to increase steadily and will doubtless soon exceed production, for the moment production has gone ahead of consumption, and it is Bulgaria's misfortune that she should temporarily have to suffer from this fact. A few figures will serve to illustrate the expansion of tobacco production of late. The tobacco output of Greece last year amounted to 55,771 tons as compared with 38,910 tons for the previous year, Yugoslavia produced 32,000 tons as against 27,000 tons, Roumania 19,000 tons as against 13,000 tons, while Bulgaria and Turkey, who each showed a sharp decline in production, had respective outputs of 30,000 tons and 47,000 tons. These five Near Eastern countries between them therefore produced 183,771 tons during the past year.

Government Advertising.

It is impossible not to deplore the proposed use by the Post Office of envelopes for the purpose of general advertisements. Trade in this sense is not the field of a Government. It is one thing to stamp "British Goods are Best" or "Visit the Exhibition" or "Come to the Fair" or

similar things on an envelope and quite another to put particular advertisements on it. Imagine a case of a newspaper covering a special field whose letters were stamped with a glowing advertisement of a rival. The fact that that kind of thing is bound to happen in all trades is to my mind the surest reason why the proposal will not lead to anything permanent. There should be no need for the black envelopes which, it is said, one firm proposes to adopt (a device which, by the way, might lead to the use of red ink for cancellation purposes), for in my opinion the project is likely to die a natural death. Logically it must be assumed that the idea is due to the pressing need for more revenue; the alternative to further taxation and to encroaching on a field which should be outside the scope of Governmental intervention is further retrenchment in expenditure.

Sudan Trade Development.

The figures for the trade of the Sudan for the first five months of the present year show that the development of the country's commerce to which I have frequently drawn attention of late continues to progress to an extent that can only be regarded as most satisfactory. For the period in question there was an increase of £E460,820 in the value of the imports, while that of the exports showed an expansion of £E1,246,830. It looks from this as if the Sudan is going to have a substantial trade balance at the end of the year, and now that cotton has begun to play a really important part in the trade returns the economic position of the Sudan should tend steadily to improve. It is impossible to emphasise too often the potential importance of the Sudan market. As the country's resources increase so will the range of its requirements, and in the next few years it should provide a constantly expanding outlet for British goods. COMMENTATOR.

COMPANY NOTES AND REPORTS.

IMPERIAL BANK OF INDIA.

The report for the half-year ended June 30, states that at no period during the half-year was the demand for money for trade purposes more than moderate, and all requirements were easily met from the cash reserves without having recourse to borrowing from the Paper Currency Department against trade bills. The half-year opened with the Bank Rate standing at 6 per cent., at which rate it remained until May 20, when, on easier conditions setting in, it was reduced to 5 per cent., followed by a reduction to 4 per cent. on June 10. The half-year closed with money very easy and remunerative employment difficult to find. The average rate for the half-year was 5.651 per cent. The net profits of the bank for the half-year amounted to Rs. 74,27,354, which, with Rs. 10,22,919 brought forward from the half-year ended December 31, 1925, made a total of Rs. 84,50,273. This sum the governors of the bank disposed of as follows:—1. In payment of a dividend to the shareholders at the rate of 16 per cent. per annum free of income tax Rs. 45,00,000; 2. transferred to reserve fund 10,00,000; 3. carried forward to the profit and loss account of the current half-year Rs. 29,50,273; total Rs. 84,50,273.

NEWS FROM TURKEY.

The following items of news are taken from recent issues of the Angora journal, the *Aksham*:—

A Commission in Angora is considering the literature to be used in primary and secondary schools. The Minister of Education is to deal with literature used in Foreign and non-Moslem schools, and he will appoint a Commission to select only those books which do not contain anti-Turkish sentiments.

It is reported that the Turkish Embassy in London has applied for the extradition of Reouf and Adnan Beys, sentenced by the Tribunal of Independence. Neither has any intention of returning to Turkey, but it is said that the former has sent, and the latter will send, an explanation or answer to the Grand National Assembly.

The Persian Government has been requested not to allow Persian rebels to cross the frontier into Turkish territory.

An incident calculated to offend Turkish national susceptibilities occurred at a soirée given by the French School at Lougoldak, when the "Marseillaise" was played before the Turkish National March. This has caused great resentment.

The Commission of Maritime Commerce draws attention to the uneconomic way in which Turkish Fisheries are being worked, and suggests studying foreign methods.

In a reference to the Damascus riots reported from Alexandretta on July 14, it is explained that the French policy is to assimilate Moslem and non-Moslem, and that it has decreed that Moslems returning on safe conduct are to restore all loot, that no more charges of killing and wounding by either side will be heard, and that guarantees will be taken for the safety of Moslems returning to non-Moslem villages. The French authorities, noting the feeling of unrest caused by alleged Wahhabi depredations, have issued a proclamation denying these reports.

The *Aksham* severely criticises the action of the Commission appointed to regulate the eastern vilayets, in forcibly deporting innocent people, and gives a list of the more important people thus dealt with.

The agricultural schools of Broussa, Smyrna, Angora, Erzinjan, Karasi and Adana have given 148 diplomas in 1926, and recipients are being appointed to posts by the Ministry of Agriculture.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follow for the week ended August 14:—

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 630 tons and the sales to date are put at 510 tons.

Closing prices Smyrna per cwt. c.i.f. London/Liverpool type 13 50s., type 14 52s., type 15 55s., type 16 59s.

The market is quiet with a weakening tendency. Prices over the week declined 4s. per cwt. The actual decline in local currency is only 2s., but a sharp improvement in the exchange reduces quotations in foreign equivalents by a further 2s. The demand from abroad remains inactive. The general feeling is, however, that prices are reaching an attractive level.

ECONOMIES IN ADMINISTRATION.

The Prime Minister's Instructions.

The Prime Minister, M. Uzounovitch, addressed a short time ago the following letter to all the members of his Cabinet:—

Your Excellency,

The debate on the estimates for the Budget Act 1926-7 confirmed without doubt the following conditions:—

1. As a result of long and serious wars the country has been left deficient in the most vital essentials in the matter of communications, sanitary and cultural services, as well as in the most indispensable armaments and means of national defence. In every single branch of State administration the needs are great.

2. These needs, administrative reforms, the creation of the new State administration, the high cost of living, all these contribute so greatly to increase the figure of personal and material expenditure that the expenditure figure of the Government Budget has reached the total of 12,500,000,000 dinars. The inadequacy of all the sources of revenue for meeting this expenditure has necessitated taxation of the population to the utmost of its capacity.

3. In every agricultural country the estimated income depends on the fertility of the year. It is essential to avoid upheavals in the economic life of the country by the disturbing of normal financial operations; therefore to maintain a balanced budget and to cope at the same time with the above-mentioned conditions, the only apparent solution seems to be the exercise of rational economy in every sense and in every department of the nation's life.

In order to effect the necessary savings in the Budget for 1926-7 I have to ask your Excellency imperatively to effect by the end of this year in the budget of expenditure of your Department a total economy of 10 per cent. of the estimated total of expenditure.

In considering how, by what means, and on what items of expenditure this economy has to be effected, I beg you to revise all the needs of your Department and all those items which are not indispensable or whose execution can be delayed for another Budget year, and to make your reductions on a basis of non-existence of the already approved figures to the extent necessary for the saving of 10 per cent. on the expenditure of your Department.

The execution of this scheme I leave your Excellency to carry out with the assistance of your experts and accountants and, if necessary, through an understanding with the Minister of Finance.

To avoid the incurring of expenses and the starting of new works which will be postponed or reduced, it is essential immediately to put into effect this reform and to inform the Prime Minister of the measures adopted.

Statement by the Minister of Finance.

The Finance Minister, Dr. N. Peritch, has begun to put into practice the decision of the Government to effect economies in the Budget by the reduction of the number of superfluous officials. Immediately after taking office Dr. Peritch went into the question of the reorganisation of the administration of the Ministry of Finance. The result was that a short time ago he signed an order for the suppression of two departments: (1) the Department for Direct Taxation, which is incorporated with the Department for Indirect Taxation, under the name of the Department for Taxation; and (2) the General Direction of State Domains, which is transferred to another Department of the Ministry.

The Finance Minister is considering the further reorganisation of his Department, and hopes that his colleagues will follow his example either at once or after the preparation of the scheme for the re-organisation of Ministries, which will be ready shortly, and on which all Ministers are working. Each Minister is to submit a scheme for his department, and on the basis of these

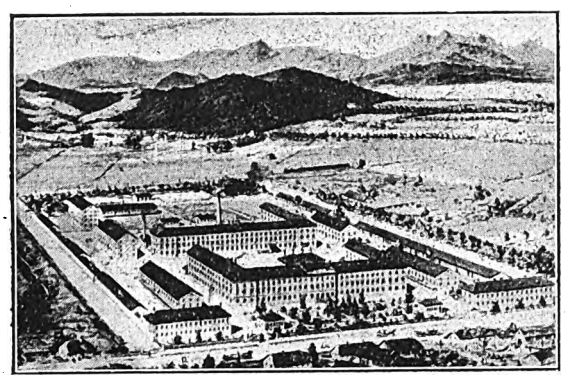
State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes



State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

proposals a general plan of reform will be elaborated.

In connexion with this first step in serious retrenchment in the Government administration, Dr. Peritch made the following statement:—

As you see I am putting into practice the projected scheme of economy. Complete success will only be possible when the law for the formation of Ministries, providing for the exact number of departments, sections, and officials in all Government institutions, has been passed. Naturally the elimination of superfluous officials will be insisted upon, and if the project can be carried through according to my ideas the savings on many items will be so great that it will be possible to improve the remuneration of those officials who are retained in the State service. Thus the status of the officials will be raised and a suitable standard of life will be assured to them.

I hope that young and efficient officials will not be pensioned or removed from the State service, other than political or military, so long as they are fit for work. Naturally I exclude cases when they retire or commit acts which prevent further service.

Economy can and must be effected in yet another way. The State Budget is too heavily burdened with the pensions of officials. In future, vacant posts—if they have to be filled—should be filled first from the ranks of pensioned officials. In this way the present expenditure on pensions can be decreased.

I intend to carry out the much-needed revision of the classification of officials. Some of the failings of the present system have come to light. I want to make it possible for men of university training to advance in all the branches of the financial service, as in other professions, and I desire to improve generally the position of all officials who remain in the Government service after a thorough revision has been made. I have already started this revision in my own department without waiting for the regulations for the re-organisation of Ministries, since the Finance Act gives me power to do so. And I shall continue to work on these lines, but without haste, so that the results of every development may be appreciated.

Naturally I appeal to all my colleagues in the Government to work also along these lines, and I trust that they will carry out the necessary reforms in their administration and so effect economy in expenditure.

YUGOSLAVIA'S HARVEST.

The average yield of wheat per hectare increased in 1923 to 10.87 cub. met., from the average of 8.66 for the years 1920-1922, so that the pre-War average was very nearly reached. In 1924 this average fell to 9.26, but in 1925 it rose to 11.83, which is very little different from the average of pre-War Hungary, the granary of the Austro-Hungarian monarchy.

The yield of the lands of the State of S.H.S. depends very much on the weather, that is on the quantity and season of the rainfall. Hence the difference between the maximum and minimum yearly yield is relatively greater than in lands where the supply of moisture is better utilised (through the deep or more suitable cultivation of the soil, through intensive manuring, and through the use of very selected seeds—that is through factors which in a moist spring season always hasten the growth of plants).

Digitized by Google

First then in importance for the year's harvest is the weather. 1926 is a much wetter year than 1925, and the rainfall continued to a great extent throughout July. The rainfall has been so profuse that it has caused local floods of more or less importance, the most extensive of which have been the floods at the bend of the Danube from the southerly to the easterly direction, opposite the mouth of the tributary Drave. Including local floods, about 200,000 hectares have been under water. The total area of the cultivated land in this country is about 6,000,000 hectares and the percentage of the area damaged by flood is about 3.3 per cent. Let us consider to what extent this percentage will affect the export of the harvest.

Profuse rains extended over the whole Kingdom so that they have been of great benefit to the usually dry, hilly, regions which suffer from drought in normal years, and which for that very reason are called passive. They are especially the mountainous districts of Dalmatia, Herzegovina, Bosnia, Old Serbia, etc.

These regions will be passive to a considerably lesser extent than in normal years, to judge by the present state of their crops, so that there will remain to the productive regions for export some surplus which in other years went to these areas.

In quantity the crops of those regions where the harvest is not destroyed by flood will be at least equal this year, if not superior to, those of 1925. The use of artificial manure has increased by at least 30 per cent. during 1926, especially in wheat growing parts, and great success has resulted. In Voivodina, the greatest wheat growing province, about 1,600 trucks of artificial manure were used this year, mostly 16-20 per cent. superphosphates (about 1,200 trucks).

According to the figures of the largest peasant co-operative societies in those parts the produce per hectare of the land not artificially manured is 1,565 kg. wheat, of the land manured with 250 kg. superphosphate it is 2,695 kg. (almost double), and of land manured entirely i.e. it is 4,500 kg. i.e. treble.

From these figures it is clear that this year's produce is greater this year than last even without artificial manure (about 1,400-1,500 kg. per hectare) and in areas artificially manured it is doubled. The S.H.S. Kingdom exports cereals to the extent of 100,000 trucks in the least productive years, when the average yield per hectare has been about 8 cub. met. In my opinion the destruction of the harvest in the flooded areas will not materially affect the export of the Kingdom and I think that this export will equal that of so-called productive years.

The quality of the wheat has deteriorated to a limited extent in those areas where the cut crops have suffered from the rain. Such cases are of local extent only, and otherwise the quality is faultless. The condition of the maize is excellent, and a larger harvest is expected this year than last. Cattle fodder is very plentiful owing to the profuse moisture. Locally the quality has suffered through unfavourable weather for drying and handling.

The yield of fruit is especially good, particularly plums, which are the most important export fruit product of the Kingdom. A good harvest of commercial produce is expected, such as flax, hops, and sugar beet.

The cattle produce will probably be still better than last year. The improvement in pig-raising will be notable, for this year infectious disease has not been so widespread; and the pig industry has recovered relatively well from the effects of the infectious diseases of the year before last. In the cattle industry there is an increase in the formation of dairy co-operative societies and in the dairy industry. Still the agricultural crisis goes on, for this crisis is not due to harvest produce but to the unduly low prices of agricultural products.

The Ministry of Agriculture and Waters is working intensively on a scheme of reforms which in the first place will deal with the question of cheaper methods of production. Low cost of production would certainly be the most suitable solution for overcoming the crisis caused by low prices.

DR. LUDEVIT PROHASKA.
Secretary of the Association of Co-operative Societies of the S.H.S. Kingdom.

THE MONOPOLY ADMINISTRATION.

For the month ending April 30, 1926, the Yugoslav Monopoly Administration shows receipts amounting to 193,876,920 dinars, as compared with 188,020,691 dinars for the corresponding month in 1925, and an estimated revenue of 200,408,333 dinars. To the total the Tobacco Monopoly contributed 138,898,034 dinars; salt, 21,758,227; kerosene, 9,906,646; matches, 10,933,535; and cigarette paper, 11,824,360 dinars.

The statement of revenue and expenditure issued by the Monopoly Administration for the month of April, 1926, was as follows:—

REVENUE.	Dinars.	EXPENDITURE.	Dinars.
Monopolies	193.876,920	4½ %Loan (1906)	5 074,266
Customs	157,393,985	Annuities Expenses	53,451,281
Stamps & Duties	96,938,551	Current a/c (Min. of Finance)	358,776,236
	448,209.456	Balance of Cash in Hand	30,907,673
			448,209,456

YUGOSLAV EXPORTS IN THE FIRST HALF-YEAR OF 1926.

Custom returns give the following totals for exports during the current year.

	Tons	Gold Dinars
June 1925	358,697	59,159,221
June 1926	402,321	55,815,577
1st 6 months 1925 ...	2,145,337	379,699,815
1st 6 months 1926 ...	2,616,625	359,377,159
1st 6 months 1926 plus (+) or minus (-)	(+) 471,288	(-) 20,322,656
	or	
	(+) 21,96%	(-) 5.35%

The above figures show that Yugoslav exports in June and the first six months of the current year are greater in quantity but less in value when compared with the figures of the same period in 1925. The decrease in value is explained by the fall which started last autumn in the prices of agricultural products on the world markets, and secondly by the increase in the value of the dinar this year. The dinar has increased in value in the course of the first six months of the year by 8.19 per cent. compared with the value of the same period of 1925.

The chief articles of export during the first six months of the current year were:—

Article	Units	Amount	Millions of gold dinars
Maize	Tons	709,644	94.7
Wood: —for building ...	,,	606,638	41.4
—for fuel ...	,,	143.454	2.7
Eggs	,,	21,062	35.3
Corn: —Wheat	,,	105,342	28.8

The destinations of the chief articles of export were as follows, in millions of gold dinars:—

Maize.—Down Danube via Braila 43.9; Italy 21.2; Czecho-Slovakia 12.8.

Wood (for building).—Italy 27.9; France 3.5; Hungary 2.9; *(fuel)* Italy 2.1; Hungary 0.5.

Eggs.—Switzerland 13.7; Germany 8.5; Austria 8.2.

Corn (wheat).—Down Danube via Braila 9.4; Italy 8.6; Czecho-Slovakia 3.5; *(other corn)* Greece 1.0; Austria 0.6; down Danube via Braila 0.4.

Meat (fresh).—Austria 8.0; Germany 3.8; Italy 1.5; *(meat products)* Austria 0.7; Italy 0.5; Germany 0.2.

Live Cattle.—Italy 9.4; Greece 2.4; Austria 2.2.

Crude Copper.—Germany 8.6; France 4.9.

Live Pigs.—Austria 6.8; Czecho-Slovakia 2.3; Greece 0.1.

Cement.—Egypt 2.3; Greece 1.1; Italy 0.7.

Live Horses.—Italy 4.3; Austria 0.7; Greece 0.5.

The chief countries receiving goods from Yugoslavia during this period were:—

	Millions gold dinars	Percentage
Italy	106.1	29.52
Austria	62.1	17.28
Roumania	54.9	15 29
Germany	29.1	8 10
Czecho-Slovakia ...	27.9	7.78
Greece	18.5	5.13
Switzerland	16 9	4.70
Hungary	14.4	3.99
France	10.9	3.04
England	3.7	1.04
Other countries ...	14.8	4.13
Total	359.3	100%

During the first quarter of the current year percentages were.—Austria 20.4; Czecho-Slovakia 19.2; Italy 14.8; Germany 12.4; England 6.6; U.S.A. 4.3; France 4.1; Hungary 3.6; Roumania 2.7 and Greece 2.4.

NEWS IN BRIEF.

The Turkish Ambassador in London left on August 21 for the Continent. He will be absent for some time.

Mr. James John Abraham Penney, of Ealing, late of the British Indian Steam Navigation Co., Bombay, left £5,210.

A Greek naval aeroplane crashed at Tatoi aerodrome on August 20. The machine burst into flames and the pilot was killed, his body being terribly burnt.

According to statements from Constantinople, Turkish newspapers announce that negotiations are taking place in Moscow for the conclusion of a pact of guarantee between Russia, Turkey, and Persia.

Prince Cyril of Bulgaria, his sister, Princess Nadejda, and her husband, the Duke of Wurtemberg, arrived on August 21 by boat at Rustchuk, whence they proceeded with King Boris and Princess Eudoxie to Varna.

The Roumanian Minister of Foreign Affairs presented the Franco-Roumanian Treaty to the Council of Ministers in Bucharest on August 20 and stated that publication of the full text would take place immediately French agreement was obtained thereto.

A seismic disturbance shook the Island of Cephalonia on August 18 at 7.15 p.m. At Argostoli, the walls of several houses cracked. The shock was felt also at Missolonghi, Zante, and Leucade, and a new shock was felt at 6.45 the following morning at Argostoli.

In the Egyptian Chamber of Deputies on August 19 the Minister of Public Works stated that after the Ministry had concluded the examination of the project for heightening the Assuan Dam an International Commission, including the most prominent experts, would be assembled to give its opinion.

In the municipal elections on August 15 throughout the Serbian, Macedonian, and Montenegrin provinces of Yugoslavia the Radicals won most of the seats, but, owing to a split in the Radical vote, the Democrats were able to return their candidate, M. Kumanoudi, a former Minister of Finance, as Mayor of Belgrade.

The will of Mr. Albert Birmingham Miller, of Kensington Park Gardens, barrister-at-law, lately a director of the East Indian Railway Co. and of the Mengkibol (Central Johore) Rubber Co., Ltd., formerly chairman of the Bengal Coal Co., and president of the Bank of Bengal, for many years Official Assignee and Official Trustee of Bengal, and professor of Law at University College, Calcutta, has been proved at £22,610.

The death occurred at Tenby on August 17 of Brigadier-General Charles Prideaux Triscott, C.B., C.M.G., at the age of 69. He joined the Royal Artillery in 1876, and saw much service in Afghanistan, where he participated in Lord Roberts's famous march from Kabul to Kandahar. For his services in Burma in 1887-8 he was awarded the D.S.O. Afterwards he was successively instructor at Woolwich, D.A.A.G., India, A.Q.M.G. with the Tirah Expeditionary Force, and A.A.G., India.

Dr. Bernard Pyne Grenfell, of Elie, Fife, formerly Fellow of Queen's College, Oxford, Hon. Professor of Papyrology at Oxford, who died on May 18, aged 56 years, left estate of the gross value of £5,271, with net personalty £5,190. He left: To the Ashmolean Museum, Oxford, a set of Egyptian gold ornaments now loaned to that Museum by him; to Professor Josiah Gilbart Smyly, of Trinity College, Dublin, all his Egyptian Papyri found in Egypt in 1894-95, and after Arthur Surridge Hunt has made a selection of his books and pamphlets he gave to Queen's College, Oxford, such of the remainder as the Provost of the College shall desire.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 24.

A considerable amount of optimism as to the financial and economic outlook is now abroad, but how far it is justified time alone can show. Even if the coal stoppage is speedily brought to a conclusion, as everybody is now hoping, the fact cannot be overlooked that it has dealt a severe blow to British industry, recovery from which will be slow and prolonged. But while the seriousness of the position must be recognised there are certain factors in the outlook which may be taken as a basis for restrained optimism. When the coal dispute is settled a temporary all round fillip will be given to trade. But that will be a temporary matter. As regards the longer view an important influence is likely to be the favourable harvests of the Western Hemisphere, promise of which has already produced optimistic business forecasts for the winter in the United States. Europe's harvests, too, are likely to be well up to the average, and as a large food importing country these factors are of direct importance to Britain, and should help to stimulate her export trade.

The domestic monetary situation is sound. There is now no likelihood of a change in Bank Rate in a downward direction and the possibility of cheap money in the autumn has practically disappeared. But the position of the Bank of England is at present very strong and with the gold reserve but £2 millions short of the amount in hand when the gold standard was restored, eighteen months ago, it is probable that the autumn drain of gold can be met without recourse to a higher Bank Rate. A matter for speculation in City circles is the manner in which the Treasury will tackle the problem of next year's maturities of short term bonds which are on a big scale. In some quarters it is expected that a scheme of conversion will be announced in the autumn.

Argentine Railway Dividend Prospects.

Although the final dividends of the Argentine railway companies will not be declared until the end of next month, the stocks of the four leading companies have lately enjoyed a considerable amount of activity on the Stock Exchange. With the exception of the Central Argentine, traffic receipts for the year ended June 30 last, showed substantial increases. This is one of the factors in the present Stock Exchange movement, while another is the fact that there should be little loss in exchange owing to the improvement in the Argentine dollar. It seems likely that the Central Argentine and the Buenos Ayres and Pacific companies will maintain their rates at 6 and 7 per cent. respectively, but there is a chance that the Buenos Ayres Western will restore its rate to 7 per cent. from which it was reduced to 6 per cent. a year ago. The Buenos Ayres Great Southern, whose ordinary stock has been prominent in the recent rise, showed a traffic increase for the year of £1,120,000 and this has given rise to a hope that the ordinary distribution may be increased to 8 per cent. The directors, however, are more likely to follow a conservative policy and maintain the rate at 7 per cent. for another year. Although the time appears to be approaching when a dividend will be possible on Cordoba Central Ordinary, it is hardly probable that shareholders will receive anything this year. Entre Rios Ordinary received an interim dividend of 2 per cent. and a final distribution of 3 per cent. is within the bounds of possibility, making 5 per cent. for the year. As compared with the lowest quotations of this year latest prices of the ordinary stocks show the following rises; B.A. Pacific, 8½; B.A. Western 11¼; B.A.

Great Southern 11⅝; Central Argentine 7½; Cordoba Central 10¾; and Entre Rios 13¼. Some of the companies have recently extended their capital, and further issues will have to be made for extensions and developments known to be in contemplation.

Distillery Development.

A certain amount of hesitation has been evident among investors in late years to take up the shares of distillery companies because of the possibility of the extension of prohibition. It is true, of course, that such a development would adversely affect the earnings of the companies, but, at the same time, it would probably be found that the results would not be so serious as many people believe. Taking the case of the United States, the consumption of alcohol has not been affected to nearly the extent that at first seemed likely. This is because of the wider use of alcohol for power purposes. The War taught us that it was advisable for every nation to develop its own services of power especially in countries which had no control over their petroleum supplies. As is well-known, realisation of this fact has greatly helped along research work as to the possibilities of oil distillation from coal and the production of power alcohol. In this connexion, the London General Omnibus Company recently conducted some experiments which indicate certain directions in which power alcohol can be profitably employed. Yields in the Ordinary shares of most distillery companies are on the generous side, and most investors will probably prefer to hold the lower yielding Preferences. Of these Distillers Company 6 per cent. cumulative preference give a return of approximately £5 13s.. The 4½ per cent. morgage debentures also yield £5 13s.. Higher returns are obtainable on Buchanan-Dewar's preference shares, the 6 per cent. cumulative first preference yielding £5 16s. and the 7½ per cent. cumulative second preference £6 13s.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK

Head Office: 41 Lothbury, London, E.C.2

ROUMANIAN INDUSTRIES.

The geographical situation of Roumania affords her an excellent opportunity for the export of her timber products, especially to the Near East (says the British Commercial Secretary at Bucharest in his annual report). The oak timber of Old Roumania is inferior in quality to that of Transylvania and the Banat, known before the War as Hungarian oak. The oak timber industry has not developed as it might owing to the exceedingly high export duties in force, and it may even be said that its importance has declined. It has been stated in defence of these restrictive measures that they were taken to prevent abnormal exploitation. The export of oak sleepers is still prohibited. The beech timber industry also lacks development, the only products of this wood being railway sleepers, staves, etc., and furniture. Most of the beech, which is the most abundant of any timber in Roumania, is used as firewood. As regards resinous timber, the exploitation of this has been carried practically to its furthest limit, and various kinds of pine wood constitute the great bulk of Roumania's timber exports. Large quantities are also used on the home market. The increase of timber exports is prevented by lack of transport and production has had to be restricted. The exports of timber during the last three years have not varied greatly in quantity. The following are the figures (in metric tons):—1923, 2,224,935; 1924, 2,483,377; 1925, 2,467,197.

There are in all 104 mills producing coarser woollen goods and yarn, the wool being supplied mostly from home sources. This industry is increasing, but goods of fine quality are not produced, and the market for these is held chiefly by British manufacturers, whose fine woollen goods are generally preferred to all others.

The following aggregate figures relating to the 13 most important cloth mills in the country may be of interest:—Spindles, 72,040; looms, 2,028; h.p., 12,085; workmen, 7,213.

There are 15 ropeworks in Roumania, the products of which are chiefly made of hemp, and the greater proportion of this raw material is supplied from home sources. Good quality ropes, such as Manillas, are imported.

There are 66 knitting mills working at the present time. Most of the yarns used by these mills are imported. Some of the wool and silk yarns used are supplied from raw materials produced in Roumania, but the finer yarns, both wool and silk, are all imported, as also vegetable silk and cotton yarns. The articles manufactured consist mostly of underwear, sweaters, jumpers, dresses, shawls, ties, stockings, blouses, gloves, vests, etc. These, however, are not goods of fine quality, and the high-class goods of this kind are all imported.

There are in Roumania 29 felt hat factories, of which the most important produces wool and hair velour hats, and of these considerable numbers are exported. Most of the hats on the market of this country are, however, imported. Many of the local factories import felt "clocks," and only shape them.

There are 20 workshops producing ready-made clothing. The most important makes chiefly military clothing and underwear. The others make clothing and underwear. The cloth used is mostly imported. The market for ready-made clothing is not very large, and little is imported from abroad.

The materials used for the various workshops producing head-kerchiefs for the peasants, ribbons, carpets, etc., are to a great extent imported. The finer qualities of ribbons, bootlaces, cords, ties, trimmings and artificial flowers, etc., are also imported.

In 1924 the production of flax fibre amounted to 6,369 metric tons and of hemp fibre to 13,780 metric tons, according to the statistics of the Ministry of Agriculture. The number of sheep in Roumania in 1924 was 13,611,902, and the wool produced amounted to about 25,000 metric tons, of which 20 per cent. was graded as first class, 40 per cent. second class, and 40 per cent. third class.

The quantity of raw skins annually produced in Rou-

Digitized by Google

mania is about 18,620 tons, of which 12,490 tons consists of thick leather. This amount does not meet the requirements of the home market, and small quantities of thin skins of horned cattle and calf skins are imported from South America, Sweden, Denmark and Holland. Roumania exports some sole leather and black box calf leathers, and imports coloured box calf and ox hide leathers, besides patent leather and antelope skins.

The coal output of the Roumanian mines is progressively increasing yearly to such an extent that at the beginning of 1924 the state railway authorities decided not to purchase any coal supplies from abroad, and during the year 1925 the Government imposed a high import duty to prevent the import of foreign coal. The authorities were doubtless influenced also in taking the above decision by the continued increase in the supply of petroleum residues, which the State railways use in large quantities. Very little of the indigenous coal is of good quality. In view of this fact, metallurgical coke imported direct by an industrialist for the use of his industry is not subject to the increased duty above referred to, as no coke suitable for industrial uses is produced in the country.

According to the figures of the Ministry of Industry and Commerce, the annual coal output for 1924 was as follows (in metric tons):—Lignite of 3,000 to 7,400 calories, 2,479,083; stone coal and anthracite of 6,000—8,000 calories, 297,288; total, 2,776,371.

The production of the following minerals did not vary much in 1924 from that of the previous years. The official figures are:—Gold, 1,311 kilogrammes; silver, 2,246 kilogrammes; iron, 46,081 metric tons; lead and antimony, 433 metric tons; copper, 89 metric tons; rock salt, 302,761 metric tons.

Various pyrites are also extracted in sufficient quantity to supply the home market and leave a small margin for export. Manganese is found, but not in sufficient quantity to allow of export. Antimony and chrome ore are also found (60 metric tons of chrome ore in 1923), but not exported. Amber is found in the Buzau district (230 kilogrammes in 1924), and some is exported in the form of made-up articles. Mercury is produced—1,583 kilogrammes in 1924. Asphalt—19,731 metric tons were produced in 1924, part of which was exported. Graphite of rather a poor quality is also produced, as well as mica and phosphorus.

The metallurgical industry is relatively of great importance, but is suffering owing to the monetary stringency and also to the lack of orders from the State. The Government has already been asked to increase the import duties on the articles produced by the home industry and to purchase home products, whenever possible, rather than import metallurgical goods of foreign manufacture.

The flour milling industry is naturally a very extensive one in Roumania, which is mainly an agricultural country. Sunflower seed, hempseed, linseed and rapeseed form the basis of most of the vegetable oils produced. There is a considerable exportable surplus and oil cakes are exported in large quantities. Owing to a considerable increase in the area sown in beet and to a satisfactory harvest, the home requirements will be more than satisfied this year, and there will probably be an exportable surplus of about 40,000 metric tons of sugar.

Roumania's export tax on wheat has been reduced from 18,000 to 13,000 lei per truckload as from August 15.

For next year's British Industries Fair a special showcard in Arabic has been prepared for use in North Africa, Egypt, Turkey, and Persia.

The traffic receipts of the the South Indian Railway Company for the week ended July 24 amounted to Rs. 8,99,821, making the total from April 1 Rs. 1,70,55,652. For the corresponding periods of 1925 the totals were Rs. 9,79,413 and Rs. 1,74,15,267.

Motors and Motoring

By G. B. B.

In spite of the apparently busy state of the British light car industry, there is some indication that efforts will have to be made shortly to increase our sales by widening our markets, and I anticipate that before long British motor manufacturers will be wooing Colonial and overseas markets with an assiduity never previously made manifest. Of course it did not require a prophet nor even a particularly wise man to see that with all this hire-purchase a time of saturation would draw near. When a man has bought his car on the instalment plan, spreading his payments over two, or perhaps three, years, he is somewhat in the nature of a "dead" customer for a time. On the other hand, a man who pays cash at the beginning of a season frequently throws his car on the second-hand market in the following spring and buys another car. From the manufacturer's point of view he is a "live" customer, and were all customers of that kind, motor manufacturing firms could go on indefinitely. But as it is, astonishingly big and perhaps even record-breaking sales during one season may mean two or three lean years to follow. Which is one of the many reasons which have driven me to the considered conclusion that a big effort is to be made to increase overseas sales.

As everyone knows, or should know, there is an immense scope abroad for all kinds of cars, from the little low-horse power runabout to the biggest type of motor lorry. In our Colonies alone use can be found for any and every kind of self-propelled vehicle, both for pleasure and business use, from the light car and delivery van to the luxurious six-cylindered car with saloon body and the half-track lorry. All the overseas market asks, and that they have a perfect right to ask, is that certain modifications in design shall be made to suit their particular conditions as regards roads and gradients, and that the vehicles offered to them are well designed and are constructed in accordance with the most advanced principles. What we have to remember is that in many of our own overseas markets a van or lorry is an absolute essential; it is not by any means a luxury which a man enjoys when he thinks he has earned it; it is something which cannot be done without. In the past we have overlooked that fact altogether, and, by not catering for overseas trade in other than the most perfunctory manner, we have allowed the foreigner to supply a very large proportion of those to whom motor vehicles are essential. We have much leeway to recover and much lost time to make up, and we have got to work extremely hard, advertise as we never advertised before and keep down prices to the lowest figure if we mean to succeed. Fortunately in India and the East generally a market offers itself to us in which price is less of a consideration and more regard is paid to finish and excellence of construction. But even in the East price is considered, and it will be

of no use for the British motor manufacturer to follow when seeking to sell his cars, the disastrous plan followed by so many manufacturers of other goods, who in the past simply used to offer whatever commodity it might be to the buyer and say in effect, "There you are: take it or leave it, as you please."

Tyres.

Few will need reminding that a law of nature appears to be that as soon as some particular thing has reached or almost reached perfection, something comes along and supersedes it. Motor cyclists will remember that the rubber belt was always giving trouble, and that we never had a really good one offered to us until the chain drive showed its great advantages. As soon as battery ignition became thoroughly reliable it was superseded by the magneto, and, as a writer in the *Light Car* remarks, something similar seems to have occurred with high pressure tyres. Friends of mine whose cars are equipped with tyres of this type report extraordinary mileages, much to the envy and chagrin of the low pressure brigade who have to be content with performances only half as good. In a garage the other day I heard a car owner openly boast that a set of semi-balloons, which he was renewing, had run 11,000 miles. "Is that all?" queried another, "Why, those high pressure tyres of mine have done over 20,000 miles and are good for many more yet." This fact was corroborated by the garage manager. Undoubtedly, low pressure tyres confer an advantage in the matter of comfort, but for owners who do big mileages, the cost becomes serious.

The Cost.

There is no doubt that the cost of tyres is a serious item; indeed, it has been said that it costs more to keep a light car in tyres than it does to keep it in petrol. I have just been glancing at some figures issued by the Royal Automobile Club, dealing with a 2,000 mile test on a 9 h.p. car. The fuel cost was 41s. 9d., per 1,000 miles, using fuel at 1s. 8½d. per gallon. For a 10,000 miles journey this would work out at £20, 17s. 6d. Now there are very few light car owners who get more than 10,000 miles out of a set of covers, and a glance at various price lists shows me that a set of light car covers, 27 inches by 4.4 inches, cost about £25 10s. From a practical point of view the matter is even worse, for few light car drivers use fuel as expensive as that mentioned above, and very very few of them get 10,000 miles out of a set of covers. Of course, makers are now putting 4-ply casings in balloon tyres, but will that answer all the arguments about tyre cost? Probably the succesful light car of the future will be well sprung and fitted with cushion and not pneumatic tyres.

For the second quarter of this year Roumania had a favourable balance of trade of 2,740 million lei.

THE TURKISH MARKET FOR LEATHER.

The Turkish market is an active and important potential field for the sale of foreign sole and especially upper leather of various kinds, says an American Consular report. Lacking a tanning industry for upper leather, the country is practically dependent on foreign markets for its supplies. Except for a few hundred thousand okes (the oke equals 2.8264 pounds) of oiled kip upper leather, some 80,000 or 100,000 square feet of low-grade kip box, and about 200,000 square feet of low-grade black boarded calf upper leather, none of the important shoe upper leathers are produced in Turkey.

In view of the reduced purchasing power of the population, and the rather low standard of living of the masses in the interior, Turkey imports to a greater extent the cheap and low grades of foreign upper leather, and must be considered as a price rather than a quality market. This feature has attracted the attention of European tanners, who for many years have made strong efforts to secure all possible business on this market—with the result that very keen competition has developed among foreign tanners operating locally.

Shipping Intelligence.

NEW BRITISH INDIA VESSEL.

There is now approaching the launching stage, in Messrs. Barclay, Curle and Co.'s west yard at Scotstown, a new steamer, the Rajula, which is being built for the British India Company. The vessel will be put into the water shortly. Another boat, of a somewhat similar size, is now well plated up on the stocks and preparations are being made for laying down another ship on a neighbouring berth.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, September 5). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (London, September 4).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (London, September 8).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, August 28); s.s. Manora for Bombay and Karachi (London, September 18).

Cunard Line.—S.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, Fiume, also Corfu and Gruz if inducement (Liverpool September 18, Swansea September 21); s.s. Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Glasgow, Liverpool, Swansea, September 18).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 18); s.s. Kenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 25).

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 12 state:—

The futures market during the past week has been moderately active and steady. The week's summary of price movements is as follows. Sakellaridis: November, 28.28 dollars, 1.10 dollars down; January, 27.97 dollars, 1.11 dollars down; March, 27.77 dollars, 1.09 dollars down. Ashmouni: August, 21.00 dollars, 0.45 dollars down; October, 20.05 dollars, 0.83 dollars down; December, 20.26 dollars, 0.76 dollars down; February, 20.46 dollars, 0.69 dollars down.

The decline in prices is nothing more or less than the usual reflection of the drop in New York as a result of better crop prospects as forecasted by the Bureau report issued on Monday last, which gave the condition of the crop on August 1 as 69.8. No new local factors have developed, but in view of the continued good progress of the Egyptian crop and the poor Sakel offtake the market was not in a position to maintain prices in the face of an American decline. There has been some trade buying in the market, but not of any volume, and not sufficient to absorb the selling orders by Liverpool and local spot interests. The demand from abroad shows a slight improvement but it is still very far from being even moderate. We are still of opinion that Sakel prices must decline before the cotton can come into favour again, and failing any really unfavourable news regarding the crop in the ground, we look for sagging markets for the time being.

The week's receipts amount to 12.671 krs. against export 39.910 krs.; the stock stands at 1,392,845 krs.

Spot: The market has shown considerably more activity during the week. Total sales amount to about 7,800 bales of which we estimate 4,200 bales Sakellaridis, 2,500 bales Ashmouni, 800 bales Zagora, 150 bales Pilion and 150 bales White.

Sakellaridis:—The demand has been concentrated chiefly on the medium grades Good Fair/Fully Good Fair and Fully Good Fair, and spot differences are consequently rather dearer for these cottons. There is still a small demand for the lower grades at about last week's differences.

Ashmouni and Zagora: The demand for these varieties has considerably increased and covers all grades. Low grade cotton is now extremely difficult to find on the market. Spot differences are dearer by about half a dollar all round compared with last week.

Pilion:—A small business has been done in this cotton at about last week's differences.

Brown:—No transactions have been recorded.

White:—A retail business has been done, without much change in differences.

Crop:—The news from the interior is uniformly good. The crop in the Delta is making good progress and all varieties are showing well: in Lower Egypt, however, we have still to pass a critical period during which much may happen. The temperature has been slightly below average, but the humidity has been less than last week and morning fogs not so prevalent. Pink boll worm attack is normal and the percentage of attacked bolls is not much larger than it was last week. The bolling is up to the average but whether the yield will be up to last year depends upon the weather during September and October. Two bales of new cotton from Minieh district were received in Alexandria to-day and sold at 4 dollars on October.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended August 18:—

Egyptian Futures.—Sakel Contract.—During the sessions closely following our last report, the tendency of this market continued on the easy side, and with some fresh straddle selling in evidence prices ran off to the lowest of the week, 14.22d. for the November position. At this point, the market showed signs of a rather congested short position, and under the influence of some fairly heavy covering operations, coupled with a turning movement in the American markets, prices sharply reacted 50 points. More latterly, the tone has reverted to the quiet side, and without any features developing to encourage fresh support, values have fallen away somewhat, to-night's close showing gains of 25 points for near and 23 points for distant positions since we last wrote.

The spot demand for cotton covered by this contract continues on a very moderate scale, and new crop purchases by local users have hardly ever been so restricted at this late period of the season. Mainly owing to this and the poor outside demand, the Alexandria market, even in face of the upward movement in operations in the American departments, continues to show little recuperative power, and has lost ground somewhat in comparison with the local option during the week. We still consider that general conditions warrant sales on advances.

Upper Contract.—Few features of interest have developed in this market since we last wrote and only isolated transactions have been recorded. The spot demand continues on a fairly satisfactory scale and local stocks are rapidly diminishing. New crop reports remain very favourable, and to this we ascribe the fact that values incline to the heavy side. Price movements on the week show gains of 25 to 30 points.

Egyptian Spot.—On the whole, the general inquiry has continued to be of fair dimensions, and the daily sales again show an average in the neighbourhood of 500 bales, approximately half of which has been provided (as is usual these days) by Sudan cotton. As far as the ordinary Egyptian growths are concerned, purchases have continued to be for the most part in small lots only, and it is quite an event when a lot of 50 bales or over changes hands. A more optimistic outlook is now apparent in trade circles, and it is hoped that the new plan of fixing

minimum selling rates for yarn, which is now in force in the American section, may reflect favourably on sellers of Egyptian counts. The tendency throughout the past week has been for the prices of spot cotton to harden. This tendency, however, owes its origin to the firmer front recently displayed by the American markets, and whether it will be maintained or not depends largely upon the nature of the Bureau report due on Monday next.

The Sakel inquiry, apart from the small constant inquiry for the inferior qualities at from 10.00d. to 12.00d., has been chiefly concerned with cotton round about the Fully Good Fair mark, at from 15.50d. to 16.50d. As we have frenquently pointed out, the market here is very lacking in this quality. A few inquiries only have cropped up for the Good cotton at from 17.75d. to 18.25d. Uppers have again been in considerable request at from 11.50d. to 12.00d., and what looks like very reasonable cotton can be bought at about these prices. Pilion cotton has been in improved request at 12.50d. to 13.00d. and at 13.75 to 14.00d, with a restricted turnover. Brown and White cotton have been neglected. Very low cotton, of any description, has again been frequently asked for at from 4.00d. upwards.

Forwardings to spinners for the week ending 13th inst. were returned as 7,280 bales. Estimated sales 1,200 bales Egyptians and 1,270 Sudan. Quotations of Sakel have been advanced 10 points. In Uppers, Good Fair and Fair have also been advanced 10 points. Fully Good Fair Sakel to-day 15.70d. Fully Good Fair Upper to-day 12.10d.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Masonry Work, Etc.—The Inspector of Irrigation, Third Circle, 53, Boul. Ramleh, Alexandria, invites tenders for work at Kafr Bulin, on the Rayah Behera, Behera Province:—(a) Construction of masonry work for a lock, regulator, and subsidiary works. (b) Steelwork and ironwork for the lock gates, sluices, swing bridge and accessories. November 1. (D.O.T.)

Internal Combustion Engine.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection of one internal combustion engine directly coupled to a D.C. generator at Helwan les Bains Electric Sub-station. October 11.

Bagouria Canal Bridge.—Tenders are invited for the construction of the Bagouria Canal Bridge. September 11. (D.O.T.)

ROUMANIA.

Tools.—The Bucharest Tramway Company invites tenders for the supply of hand reamers, twist drills, wood boring bits, taps, stocks, drill chucks, and hack saws. (D.O.T.)

White to play. What result?

Solution to problem No. 43:—1, K—Q3, P—K4!; 2, P—Q5, PxP; 3, PxP, and wins.

THE REFORM OF CHESS.

(From a Yugoslav Correspondent.

(Concluded from page 200.)

From problems to the game itself is but a step, and if the alteration I have suggested were introduced into problem compositions it is at least likely that it would not be long before the Imaginary Piece was introduced into the actual game. Beyond a doubt, in the writer's opinion, the great masters will not be content indefinitely with a game in which the first twenty moves or so are all analysed, as it might be said, up to the hilt. The Imaginary Piece would break down the existing limitations on opening strategy, and would give free play to the inventive mind. Its introduction would at one stroke put out of court all existing theories of the opening, thereby bringing about a consummation much desired by many players wearied of the eternal Ruy Lopez and Queen's Pawn openings, and would have the effect (until new opening theories had been worked out) of placing all chess players on an equality at the commencement of a game. In the nature of the case, even when new openings theories had been elaborated they would of necessity be sketchy, and in the new atmosphere that would thus surround the game players who have no time to familiarise themselves with the openings would have a much better opportunity of doing themselves justice.

The numerous elaborate books on the openings have imparted to the game of chess the character of a feat of mnemonics, which is anything but welcome to players of the imaginative type. It is well known that the middle and end game play is inexhaustible, and that there is no danger that these parts of the game, at any rate for generations to come, may become systematised. The Achilles heel lies in the opening, and it is a matter for wonder that so far there has been no concerted effort to rid the game of its over-theorisation. Dr. Lasker has protested rather strongly against the spread of theory, at the same time making several suggestions for the reform of the game, with the idea of avoiding too many draws, and a number of masters have supported him, being convinced that reform is necessary. I am not sure, however, that the suggestions put forward by Dr. Lasker are practical. It may, I think, be taken as axiomatic

Digitized by Google

that reforms must not touch upon essential parts of the game. On this ground Dr. Lasker's proposal that casting should be abolished is open to objection. Further suggestions to award points for the game and to establish values for the various types of draws (by awarding 3, 5, or 6 points) are not very feasible. I am inclined to think, however, that Dr. Lasker did not put forward proposals so much with the idea that his suggestions should be adopted, but rather to draw attention to the need for reform. It seems to me that what is desired could well be accomplished by the introduction of the Imaginary Piece, whereby no rule, essential or unessential, would be affected. Hitherto there has been one obvious drawback on the chess-board, there being no square which can be made, even for a time, inaccessible to the pieces. By the use of the Imaginary Piece this would be obviated, for one square on each side would not be available to the pieces. A comparison is often made between chess and warfare. In chess there are no fortresses, i.e. squares which can be taken only at a sacrifice and by siege. The piece would provide the fortified square, and the war-like character of the game would be yet more strongly accenuated.

The actual employment of the piece in the game would be a very simple matter. Besides the chessmen in use at present, each player would be given a pawn subject to all the rules applying to the Imaginary Piece. This pawn would be placed by both players simultaneously, i.e. each player would write on a slip of paper on which square he would place his pawn, there being sixteen squares available for each pawn.

After the pawns are placed the game would begin as usual. As Black would be able to study the unusual position while White was considering his first move, it would be advisable that Black should be debited with half the time used by White for his first move. But even so it is probable that Black would still have some slight advantage over White, since he would make his first move when the position has already grown a little clearer. At any rate it can be said that the respective advantages of Black and White would be equalised, which few would venture to maintain is the case at present.

The result of the use of the pawns would be that the initial position on the chess-board would be entirely different from what it is at present, and it would be a situation to which all existing theories would cease to apply. The new position on the chessboard would clearly be dependent not only upon the variable positions of the individual pawns, but upon their positions in regard to each other; and the consequence of these factors would be that the number of possible openings would become practically limitless.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Angora Executions.

So Javid Bey, Dr. Nazim Bey, Nail Bey, and Hilmi Bey have been hanged. None but a Constantinopolitan could have doubted their fate. But there is irony in the fact that Ali Bey of Kerasund, the President of the Tribunal of Independence, who is the Fouquier-Tinville of the Turkish Revolution, should have so consulted the susceptibilities of the Turkish people as to order the executions to be performed a few hours before the Moslems' holy day. Such niceties would appear superfluous. Who is this Turkish people that public executions may not take place on its Sabbath? Scant regard had the Chekas of Smyrna and of Angora for it in other matters; why have consulted it now? There is something of mockery in this, that an atheistic group of debauchees, toiled they once ever so valiantly for their country's independence, should now bespatter their monstrous decisions with the unwonted oil of holiness. Not that a Western observer can hold any brief for those men whose bodies swung in significant obscurity until the morning of Friday, August 27: they were none of them of heroic mould. The occult methods of the C.U.P. were offensive to every decent instinct; under its cosmopolitan shadow Turkey could never hope to blossom out into the real sun of independence. Nor could the fact that the financial expert, Javid Bey, made an eminent attempt to upset the Judge's prejudice, draw any but the most impressionable to his side. He spoke, for his own, as apart from the Unionist, cause. The fate of these four men was surely sealed before their mouths opened in impotent self-defence. Now in very truth the die is cast. By oppression upon oppression the Kemalists must continue to exist, for unless Turkey has ceased to contain men who are men and harbours only those who may more justly be called "cabbages," these trials and executions must provoke reaction after reaction. The date of a *coup* by the Turkish Army against the futile rigidity of the Kemalist régime is unforetellable, but History will most remarkably fail to repeat itself if those who during the last few weeks have sent to the gallows this strange assortment of reputable and disreputable defendants, do not in the future find themselves pleading at their own Bar.

The Clay of Ottomanism.

The Angora revolutionaries know a little history; and that is perhaps their undoing. You cannot, though Paris and Moscow at times may have asserted it, conduct a revolution by merely killing off your opponents; nor can you cut the past and present from under your feet with the use of the same bloody tools which Abdul Hamid and the C.U.P. itself employed for a similar purpose. Inevitably the coil of repression will snap; stretch the elastic of tyranny too far and it flies back in the Kemalists' face. Admit, for the sake of argument, that the condemned men were, or provided, a constant threat to Kemalism: yet was there need to hang them? Admit that Oriental methods must, in extreme cases, be used in Oriental countries: then what becomes of Turkey's vaunted Westernism? No: the Nationalist Turk, or rather, the Kemalist Turk, is still an Ottoman Turk. His voice may be the voice of the West, but his hands are the hands of the unchanged East. In time, perhaps, Anatolia may come to see that the cause of a cabal is not identical with the cause of a country; but that time is not yet. The clay of Ottomanism needs far more deeply to be irrigated with European ideas before it can be prevented from clogging the wheels of every progressive harrow that starts in that pseudo-Western land. That there are abundant virtues in the Kemalist movement is a fact to which we have constantly borne witness, but one act of crass folly such as was perpetuated last week is likely to outbalance the hundred and one beneficial things that the Kemalists have done for Turkey. It will, unless we are completely mistaken, be for other hands than the Kemalists' to fulfil the work of redemp-

Digitized by Google

tion on which the Ghazi and his followers once showed signs of concentrating, and from which, Marat-like, they have now turned in order to confuse private vengeance with national salvation. Their own existence, not their country's, was at stake, and not the completest explanation that the leaders of the C.U.P., whose careers were ignominiously commorient with the Unionist cause, were undesirables, can save them from reproach and ultimate avenging by the real Progressives of Turkey.

The Greek Coup.

The suggestion made in these Notes three weeks ago that General Pangalos might still have some months of power left him proved to be too optimistic. It was clear that the Dictator was working his own undoing; but the end came more swiftly than could be foreseen at this distance from Greece. General Pangalos left Athens for a holiday on the island of Spetsae; and in his absence from the capital General Kondylis overthrew his régime with almost as much ease as General Pangalos had overthrown the Government of M. Michalokopoulos on June 25, 1925. The Dictator, it is true, put up more of a fight; at least, he persuaded the commander of the destroyer on which he had been placed under arrest to ignore instructions and to make a dash for liberty. The attempt failed; General Pangalos was rearrested and is now awaiting trial for his unconstitutional actions. It will not be easy for any Greek to adopt the view that a dictatorship in itself might be a good thing for the country. General Pangalos has several salutary measures to his credit, and many very foolish measures. His diagnosis that the wranglings and self-seeking of politicians were crying evils was entirely correct, but he substituted for party government a régime at which it was possible to throw almost as many stones as he himself threw at the politicians. When he faces the Court that is to try him, his first anxiety will be to discover whether there are to be any echoes in it of that other trial, whose harsh verdict he confirmed as Minister of War, that sent six of Greece's prominent men to their death for errors of judgment. General Pangalos in the opinion of his opponents will have been guilty of many errors of judgment during fourteen months of arbitrary power; but no one who wishes Greece well will desire to see the blood-feud of a few years ago revived. Those who now have power will the more easily convince Greece and the world at large that they are more worthy to rule than was General Pangalos by avoiding the mistakes which led to his fall. The dividing line between vindictiveness and petty-minded intolerance is very thin.

THE ESSENCE OF INSURANCE IS SECURITY.

The New Order in Athens.

Officially the Greek Dictatorship is at an end. Admiral Kondourcotis is once more provisional President of the Greek Republic, and General Kondylis has made himself Prime Minister and has formed a Cabinet. The situation in Greece, however, is more concerned over the details of good government than over the name by which the particular form of government adopted is known. Parliamentary elections are to be held on October 24, and if the return to constitutionalism is complete, any Ministry formed now must necessarily be tentative until it is seen how the elections go. The attempt to form a Coalition Government appears to have been wrecked over a difference of opinion between General Kondylis and the politicians regarding the suitability of the organiser of the latest revolution, a military man, to take political control. General Kondylis, it is not surprising to find, has stuck to his ground. At the same time, there seems to be a general movement, to which the Army is not altogether a stranger, to put an end to these military pronunciamientos which have shaped Greece's destinies of recent years. In this connexion it will be recalled that the way for General Pangalos's *coup d'état* was prepared by General Kondylis's resignation from the Michalokopoulos Cabinet—a step generally supposed to have been taken in sympathy with, if not at the orders of, an organisation of politically-minded military officers. If the new Prime Minister now appreciates the dangers of interference in politics by the Army, there will be the more ground for expecting that Greece's return to constitutionalism will be the more sincere the more chastened it is.

Towards Balkan Peace.

Thanks to the friendly overtures of Great Britain, France and Italy, the exchange of Notes between Yugoslavia, Roumania and Greece acting collectively and Bulgaria bids fair to pass off without untoward effect on the Balkan situation. The Collective Note called upon the Bulgarian Government to dissolve the Macedonian organisations existing in Bulgaria; the reply from Sofia refers to the steps that are being taken to this end, but contrives to connect, in unprovocative language, the revolutionary activities of the Macedonians or Dobrujans with the attitude of Bulgaria's neighbours towards the minorities in their midst. In deference to the Great Powers' wishes, Bulgaria has decided not to submit the controversy at this stage to the League of Nations; but her Government is clearly of opinion that the whole matter ought to be threshed out by the League. The fact remains that the existence of the Macedonian organisations in Bulgaria is an anomaly and is gravely prejudicial to Bulgarian interests, although the Sofia Government's difficulties in dealing with the organisations are recognised by all impartial observers. The upshot of the whole incident, it is to be hoped, will be that the hands of the Bulgarian authorities will be strengthened and that a more generous attitude towards minorities in the different countries will be noticeable—not so much on the part of the Central Government, whose policy is usually quite correct; but on the part of the local officials, who have it in their power to make the lot of the individual under their jurisdiction pleasant or the reverse.

Italy and Egypt.

Not the least persistent of the difficulties which arose out of the granting, justified but ill-considered, of independence to the Egyptians in 1922, has been that pertaining to Italian interests on Egypt's Western border. The agreements in connexion with the Senussi and their territory which were reached between Great Britain and Italy soon after the War could, and would have been, loyally and unobtrusively carried out had the Protectorate endured. In those years, however, Italy had no Duce to insist on the prompt fulfilment of obligations. So the question dragged on, until it finally became one of Egyptian national *amour propre*. The present *impasse*

HESITANCY IN PERSIA.

The Persian people has many shining and many latent virtues, but not even its most effusive admirer could reckon constancy in political adherence among them. It may be admitted that causes for change of allegiance are seldom lacking in Persia, yet the fluidity of thought therein in so remarkable that it may be said to be almost independent of any snags which unwary or inert leaders may place or leave in the course of personal loyalty. Proof of this fact may be found in abundance in the recent history of Persia. We may take, for example, the individual prestige of Reza Shah Pahlavi. Unless we entirely misread the events of the last few weeks, the Shah has failed to maintain his position since his accession. While he was striving for power and had yet to break the Qajar spell, he commanded very wide support indeed. His energy was the hope of his nation. Since the Pahlavi dynasty was substituted for the Qajar, however, a kind of satisfaction, or at least a mood of hesitancy, of bewilderment, or of mere negative jealousy, appears to have dominated Teheran's supreme counsels. The result has been inevitable: darkly and offensively the hand of reaction is preferring itself, corruption exercises freely, self-interest becomes the informing motive of many officials, Army pay (over which the American Financial Mission has so far fought in vain to get control) is failing to stay the full course from Shah to private soldier, the military chiefs are oppressed, and so on. It may be a coincidence that revolts on the borders of Kurdistan and of Baluchistan break out—we will deal with them in a minute—but there can be little doubt that unless the Shah takes his recent journey to Khorassan to heart and quickly applies the lessons to be learned from it, there will be more serious complications to meet. As another symptom of all this hesitancy we may take the uncertainty of the present Teheran Cabinet's position. It will be remembered that this Cabinet was formed at the beginning of last June, with Mustofi el Mamalik as Prime Minister. Included in his Administration were, notably, the charming conversationalist, Vossough ed Dowleh as Minister of Finance, and the Russophil Taghizadeh as Foreign Minister. It looked like a stop-gap at the time of its formation; and it is having in fact a poor time with the Teheran Mejliss. Although there is little in the actual condition of Persian affairs to warrant changes of Cabinet (unless it be the return of the old intrigue), he would be a rash prophet who foretold a long life for the present Teheran Administration.

We do not wish to exaggerate the gloom which exists in Persia. There is sufficient evidence, however, in the messages recently published from our Tabriz Correspondent, in the rebellion of the Salar ed Dowleh, in the escapade of Dost Mohammed, and in the revival of brigandage in Western Persia, to prove that the optimistic quarterly Reports of the American Financial Mission do not represent the whole picture. The question of Azerbaijan, admittedly, must always be a problem; its proximity to a Bolshevist Russia which vocally tears up the line of Tsarist policy and then as resolutely relays it makes almost certain in the Azerbaijanis a doubtful circumspection in paying homage to a centralising Shah. But the condition of Western Persia generally would seem to imply that the Shah might bestir himself betimes. No one can prophesy what the Qajar fanatic, the evasive Salar, might do were he to get some of the discontented tribes on his side. If he has won over the Turkomans, for instance, the troops from Teheran may be faced with an expensive campaign. From the financial point of view, the American Advisers to the Shah will be looking at the present activities of the brother and uncle respectively of the last two Shahs of the Qajar dynasty with no less apprehensive an eye than Mr. Morgan Shuster concentrated upon him in the years before the War. Undoubtedly he yet has a hold upon the tribes in Western Persia, with many of the chiefs of whom he is said to have plentiful (and increasing) family ties, and if he represents to them that his one aim is the elimination of the present oppressive centralisation of Teheran he may cause very considerable local disturbance. It is not yet known, however, precisely by whom he is supported, and without this knowledge comment upon his rebellion is to a certain extent premature. The swashbuckling of Dost Mohammed in the region of Kwash is probably in a different category from the rising east of Rowanduz, but border troubles can be very annoying to the Teheran Government.

Upon this state of things it is impossible for at least two Powers, Great Britain and Russia, to look with equanimity. Soviet Moscow, indeed, has long since made up her mind how to treat the new order of affairs in Nationalist Persia—and that is, to turn it into the old. The embargo which she placed last February upon the import of Persian goods into Russia was a piece of transparent bluff, which, moreover, cannot yet be said to have failed, determined though the Mejliss has been in its opposition to the Soviet proposals for the Caspian fisheries. The present visit to Moscow of Mirza Khan Timurtash is rather a mysterious proceeding, but it will be surprising if it has for effect the keeping of Russia more distant from internal Persian affairs. It is thought, indeed, to herald a yet closer *rapprochement* between the Soviet and Teheran. Now this tendency can hardly be tasteful to Great Britain, who in regard to Persia is still in the unprivileged position of having her debts unsettled and of having to pay a larger trade tariff than Russia. In these circumstances it may be permissible to ask whether into the excellent relations which Sir Percy Loraine fostered between Persians and British there could not be introduced a stiffer and more positive courtesy. The Shah is rightly and strongly supported by Great Britain; is it so certain that his friendship for this country would be completely lost were it pointed out to him that to rely on Soviet good-will is to live in a fool's Paradise? Legitimate British interests in Persia in no wise clash with the Shah's interests, but in our point of view the necessity of stating the one is as frequent and as urgent as of the other. This, obviously, is a delicate matter, but so close is the danger of Russia's stepping in to clear up the mess into which a policy of mere admiration, on our part, of Reza Shah Pahlavi may lead his country, that the time is ripe for explaining to the powers that be at Teheran, and, just as important, to the heads of the tribes, the exact position into which the disappointing inactivity of the Shah in face of the old Russian methods and of the old Persian corruption is placing Persia. We might even suggest a "slogan" (adapted from a poet whom the Persians have always under-estimated) for the new British Minister, Mr. Robert Clive, in his advisory dealings with the Shah:—

"Awake! for Russia in the Goal of Might
Has flung the stone that puts the Shahs to Flight."

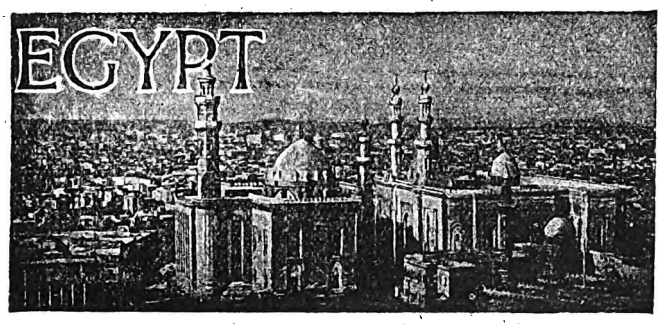
The Near and Middle East*

From Our Own Correspondents.



Cairo, August 22.

Restrained Zaghloulist Criticism.

The Chamber of Deputies has concluded examination of the budget of the Ministry for Foreign Affairs and has reduced the total credits by approximately £E21,000. It had been feared that discussion of this Ministry's financial estimates might have led to incidents of an unpleasant nature. For, in truth, there were features of the estimates which seemed to call for much explanation, and it would have been quite understandable had Zaghloulist or Nationalist deputies taken the opportunity to make observations the results of which could only have been unfortunate. But, thanks mainly to the directing influence of Zaghloul Pasha, whose attitude in this question has been commendably forbearing, the estimates were passed with no worse "incident" than a violent attack upon Ziwar Pasha.

Buté House.

The purchase of Bute House, London, and the enormous expenditure (£E165,000) incurred by the Egyptian Government in acquiring and re-decorating that property, were the subject on which the Chamber was most likely to break out into violent criticism. And even if the property had been acquired to house the Legation it would seem that there was room for explanation of why such a huge amount of money had been spent upon it. But it was clear, from a report made by the Egyptian Minister in London, that Bute House was not bought for use as a Legation and that the repairs and alterations undertaken after its purchase were likely to render the building quite unsuitable for the use of the Egyptian Minister in London and his staff. Aziz Izzet Pasha, it appeared, was consulted when the purchase of Bute House was under consideration. He then strongly advised that the property should not be bought, being quite unsuitable for the purpose in view. The next he heard of the matter was when, while in Switzerland, he read in the London newspapers that the Egyptian Government had purchased Bute House. He immediately cabled a protest to the Ministry for Foreign Affairs, reiterating the views which he had formerly expressed.

Returning to London, Izzet Pasha found that Bute House was being refitted in a way which would make it quite unsuitable for use as a Legation. He drew the attention of the contractors to this fact and was informed that they had received their instrucions direct from the Egyptian Government. Further protests to Cairo by Izzet Pasha had no result.

This is obviously a remarkable business. The Chamber of Deputies had its own opinion on the purpose for which Bute House was bought and is being redecorated in such lavish style. It would not have been surprising if some deputy had given expression to this opinion. In fact, the Chamber had some very hard things to say regarding the transaction. But it kept off really dangerous ground, and the fact that it did so must be credited to Zaghloul Pasha as another instance of the political wisdom which he has exhibited on numerous occasions during the present session.

Although Ziwar Pasha had played a prominent part in the purchase of Bute House (being, at the time, Minister for Foreign Affairs), it was not in this connexion that the deputies subjected him to censure. The fact that he was at one period both Minister for Foreign Affairs and Acting Minister of Finance placed him in a peculiar position when there arose a question regarding allowances to be paid to members of the Diplomatic Service. Dr. Hafez Afifi Bey, who, as a member of the Chamber's Finance Commission, had been delegated to examine the budget of the Ministry for Foreign Affairs, informed the Chamber of his discovery that Ziwar Pasha, as Acting Minister of Finance, had made a new ruling regarding the allowances (previously limited to actual expense incurred) to be paid to Ministers taking up their posts abroad. Ziwar Pasha, as Minister for Foreign Affairs, had then inquired whether the new scale of allowances would be made retroactive and had received an affirmative reply from Ziwar Pasha, Acting Minister of Finance. Ziwar Pasha, Minister for Foreign Affairs, had then caused to be paid to Ziwar Pasha, ex-Minister at Rome, the sum of £E814, being allowances due under the new, retroactive regulations.

Ziwar Pasha.

The majority of the deputies in the present Chamber do not regard Ziwar Pasha in the same light as does the British Government and most of the British Press. Indeed, Ziwar Pasha is heartily detested by Zaghloulists, Nationalists and Liberal Constitutionals alike. It may be imagined, then, what sort of discussion followed on Dr. Hafez Afifi Bey's statement. There was much talk of criminal proceedings and of articles of the Penal Code, particularly as another deputy disclosed that, when on leave, in Europe, Ziwar Pasha had caused to be paid to himself, from secret service funds, two sums of several hundred pounds each. In the end the Chamber contented itself by voting that Ziwar Pasha should be called upon to refund the £E814. On that decision and on the debate which preceded it comment is at present impossible, because Ziwar Pasha, the person principally concerned, has been given no opportunity for stating his version of the affair.

Egypt, and discussion have been resumed at Alexandria. The principal matter outstanding is the question of the nationality of inhabitants of the districts affected by the agreement. The thorny problem of what is a "nomad" and what a "semi-nomad" has been practically settled and a common point of views has been reached regarding the rules of nationality to be applied to each class of Bedouin. The most difficult question still outstanding concerns members of the Senussi family, which is reported to be determined to adopt Egyptian citizenship, though the Italian Government is equally determined that such Senussis as live in Jaghbub must become Italian subjects. The question is important for the Egyptian Government chiefly because of the religious influence exerted by the Senussi leaders. In yielding to the Italian claim, the Egyptian Government incurs the risk of being accused of having "let down" Moslem interests. Otherwise, it might be quite glad to allow such potentially troublesome people as the Senussis to be turned into the subjects of no matter what Power, so long as it should not be Egypt.

Typhoid in Alexandria.

Alexandria, according to the Director-General of the Municipal Sanitary Department, is threatened by a typhoid epidemic. The number of cases during July and the first three weeks of August has been considerably greater than in 1925, which was a bad year for typhoid in Alexandria. The cause of the high incidence of the disease has not yet been established. One expert has declared the city's water supply to be the source of danger, but another expert has expressed an opposite view. The Department of Public Health has carried out an inquiry, but has not yet issued its report. Until it does, Alexandrians must live in doubt—and apprehension.

IRAQ.

Baghdad, August 19.

Iraq's Coolth.

Weather statistics of the last forty years, whose preservation was due to the British residents in Baghdad before the War, show that Iraq is gradually becoming a cooler country. Experience seems to confirm this, for we have not had really hot weather since 1921. This year, in spite of floods and their inheritance of insect-pests, has been more than ordinarily mild and tolerable: only a short burst of five days' duration in the early part of this month has shown that the old hot weather which one remembers in 1917 and 1921 can still be reproduced. In Baghdad we hovered for that period about 120 degrees, and this with an unusual humidity; in Basrah it was said to be a degree or two higher, and even Mosul and Kirkuk were heard to complain. This was followed by a sudden drop, and at the time of writing the daily shade temperature hardly exceeds 105, and cool and fresh nights are more suggestive of September than of August.

Crops Good and Bad.

North-east of Baghdad on the left bank thick crops of grass cover a wide area which is in normal years a grey-yellow desert without vegetation, and sheep and buffaloes find sustenance where normally a camel could not live. The rivers too are running at a discharge above the normal, and by many "cusecs" above the exceptionally low levels of last year. Indeed, had the Diyalah last year produced its present flow of water, it may be that the Iraq Government would not have been compelled to make its confession of *non possumus* to the Asfar concessionaires, and the course of history might have been very different. But it is no doubt all for the best that the very first year of the Concession revealed one at least of its fatal weaknesses, and led (although through cold and turbid channels) to the far wiser and more hopeful proposition which now holds the field as between Eastern Irrigations, Ltd., and the Government, and is likely shortly to be confirmed. The Tigris and Euphrates, which in the early summer were running at higher levels than suits rice cultivation, fell rapidly and after all permitted the emergence of the silt-lands upon which the later (or transplanted) rice is grown. There is every indication that this important crop will be this year above the average. It is, however, unhappily even more certain that the 1926 dates are a sad failure. The palms which bore generously last year after an exceptionally severe winter were, it is said, exhausted by the effort, and now give a grudging crop during the period of recuperation.

Perils of a Persian Holiday.

So the summer wears through. King Faisal has left Vichy for London and will return to his country—in far better health, everyone hopes, than he left it—probably not sooner than late October. Of other visitors to Europe, none has yet reappeared, but one hears frequent plan-making, by those who have stayed the summer in Iraq, for a short holiday in Persia or Syria, or Iraq itself, as soon as September opens. Persia has been mentioned on a previous occasion in the letters as the most likely hill-refuge for tired Iraqis; but at the moment one is deterred from looking eastward, not only by the vague rumours of restlessness and impending trouble there which have been previously mentioned, but now in particular by the border uneasiness caused by yet another attempt by Salar ed Dowleh to create a rising in his favour. It is difficult to see who in Persia can really be prepared to risk life and fortune for this inveterate pretender who stands for nothing but himself and an effete dynasty: but personality and promises avail much with the wild and ever-malcontent tribes of the western provinces, where Kurd and Lur blend with Persian, and the next few weeks may indeed show such disturbed conditions and unsafety of routes as may deter jaded Baghdad officialdom from seeking change in Hamadan or Teheran.

The Assault on the Prime Minister.

In Baghdad the excitement of the month has been the assault upon the very popular Prime Minister, Abdul Muhsin Beg al Saadun. It has fortunately no public or political significance whatever, but has rather united all parties in indignation and sympathy. His assailant, who chose the moment when the Prime Minister had descended from his car and was climbing the steps to his office, was armed with a short razor, probably incapable of inflicting

a mortal wound: he confessed afterwards that he would have bought a revolver if he could have afforded it. The actual wounds, which were immediately and successfully treated, were in the scalp and right arm, and Abdul Muhsin Beg is already back to work. His assailant, to whom it may be hoped the full rigour of the law will be shown, is a native of Dair al Zor, a man of middle age and a temperament soured and excitable to the point of eccentricity, a minor official of the Customs and Excise Department who had formerly been dismissed for irregular behaviour, reinstated at the Prime Minister's personal instance, and subsequently dismissed again after a campaign of absurd invective against his superior officers. Since that dismissal he was treated with remarkable and wholly undeserved kindness by his present victim.

ROUMANIA.

Bucharest, August 25.

The Franco-Roumanian Treaty.

The most important political event of the last week, as far as Roumania is concerned, has been the official announcement that a treaty of mutual peace and friendship was signed between Roumania and France on June 10, 1926. This Treaty is said to be of a defensive character, and by it France appears to stand committed to protect Roumania in case of aggression on the part of any other State. The announcement regarding the Treaty carefully emphasizes the fact that it is entirely a general one and not directed against any State in particular. The Treaty also invites neighbouring States to conclude similar non-aggression treaties, having as their main object the maintenance of peace and the political and territorial *status quo*, in accordance with the provisions of Art. 10 of the Treaty of Geneva. The duration of the Treaty is ten years.

Great satisfaction is expressed by the Press at the conclusion of this friendly pact with a Great Power and especially with France, who has always been regarded by the Roumanians somewhat in the light of an elder sister. The hostile attitude of the Soviet Government towards this new agreement has aroused some bitter comment, and it is argued that the hostility of the Soviets shows how necessary the Treaty was in the interest of European Peace.

TURKEY AND ARABIA.

The following account of Turkey's relations with the recent Grand Mecca Conference is taken from the *Aksham* of July 26 and 27:—

The Turkish delegate, Edib Bey, at the Mecca Conference said:—"I shall have difficulty in following the discussions as I was unable to be present at the beginning. I saw that many points proposed by the Congress will be opposed to Turkish policy. The Almighty in order to pacify this country and to exact punishment on those who despoiled the Turk, sent King Ibn Saoud here. In the name of all Turks I thank him. The Turkish delegates did not wish to come to this country, but accepted the invitation. As we are assured of our lives and property we came unarmed. We pray that Sultan Ibn Saoud will be as successful in defending the Holy Cities as we were. I pray that your committee will succeed in assuring the welfare of pilgrims."

The Afghan delegate congratulated the country on being freed from the former Hejaz Government, and referred to the necessity of again considering the matters under discussion.

The Russian Muslim delegate said he was happy to have accompanied the delegate of Turkey, the greatest of Islamic Powers.

The Indian delegate, Maulana Shauket Ali, then welcomed the delegates of the independent Muslim Powers, on behalf of the many Muslim Communities living under the yoke of the foreigner. He said: "Though we live under foreign Government, we follow the doings of the independent Muslim Powers with interest, and pray for their success. The protection of the interests of Muslims and the religion is an honour to be undertaken by all Muslims, whether free or not. We assure independent Muslim States, that in spite of our feebleness, we shall do all we can to help them. We must, therefore, devote some of our activity towards this waterless, comfortless, and roadless Islamic country."

The Congress decided that Maan and Aqaba should be returned to the Hejaz, but the Turk and Afghan delegates did not agree to this.

Sheikh Arslan Bey was elected General Secretary.

On his return from Mecca, Edib Bey, the Turkish delegate, said in an interview:—"All the proposals put forward by us were agreed to. We were accorded a very warm welcome. There were many lying rumours spread by foreigners about the Turks severing themselves from Islam. Even King Ibn Saoud asked if this was true, and my denial caused great satisfaction. Ibn Saoud said that the Ghazi Pasha had won the respect and love of the whole Muslim world. King Ibn Saoud presented me with a very valuable gold sword, and my assistant with a gold watch.

"In the Conference, many resolutions were passed regarding the freedom of the religion (doctrine) of the Indians. Everyone wished to be free to follow his own doctrine and not to be left exposed to the opposition of the Wahhabis. It was agreed to hold an annual conference during the season of the pilgrimage, and an invitation is to be sent to each Muslim State."

The Afghan delegate proposed that railways should be constructed between Jeddah, Mecca and Medina, for the benefit of the health of the pilgrims. This was agreed to, and the various Muslim States are to be asked to help.

KING FAISAL'S DEPARTURE.

King Faisal of Iraq left London for Switzerland on August 25. With his Majesty were his Secretary, Rustam Bey Haidar, and Captain T. Kadri, and also Yasin Pasha al Hashimi, leader of the Opposition in Baghdad, and Naji Beg al Suwaidi, Minister of Justice. At Victoria Station to bid farewell to King Faisal were Major-General Sir John Hanbury-Williams, representing King George, the Emir Ghazi, Crown Prince of Iraq, the Emir Talal, son of the Emir Abdullah of Transjordan, Jaafar Pasha el Askeri, Iraq Diplomatic Agent in London, Nouri Pasha Said, Commander in Chief of Iraq, and Colonel de Satgé and Major H. W. Young, of the Colonial Office. Others present included Muzahim Beg Pachachi Zada, Atta Bey Amin (Secretary of the Iraq Agency), Mr. Dojaily, Arabic tutor of Prince Ghazi, Hajji Abdur Rahman Bassam, Selim Beg Ali Bassam, Saib Beg Salam, Mr. Korkis, and Mr. David Levi.

ALBANIA AND ITS IMMIGRANTS.

By R. V. PENNINGTON.

Tout passe, tout casse, say the French; and certainly that is what is gradually happening in Albania to-day.

I knew it first in the year 1924, when Fan Noli was head of the Government. The immigration question in those days had begun, and the League of Nations had sent maize that year to feed the starving refugees up in the mountains; now, in 1926, the Albanian Government has withdrawn its request for help from the League in dealing with immigrants, and is shouldering its own burdens. In 1924 it was owing to the interest and influence of the Dowager Countess of Carnarvon that the immigrants received grants of land, and material for their houses; now there is a Central Government Commission to deal with the question and to carry out the law made in 1925 under the Government of Ahmed Zogu, the present able ruler.

The immigrants are all from the plains of Kossovo, which was given to Yugoslavia by the Land Commission when Europe was re-divided after the War. These people are all Albanian-speaking Moslems, and the Yugoslav authorities are quite content to let them return to Albanian rule.

In the years 1920 and 1921 there was a great exodus of them from Yugoslavia, the figures given being 20,000. Some passed over the frontiers directly into Albania and settled in the mountainous districts in the North. The majority moved southwards into Turkey, after selling their goods and rights of inheritance. In the course of the next few months nearly 10,000 returned to Yugoslavia, and were largely exterminated by their own brothers, who, having paid a good sum to the departing thousands, did not wish to share or divide their gains. The remaining 10,000 went on into Turkey to be dealt with by Turkish laws. These arrange that all alien families wishing to settle should be broken up into small groups, and only a few families allowed to settle in any given area, so as to ensure that the families became Turks in the course of a generation. Some of the immigrants settled down and took land in Anatolia. The rest drifted about for two years and longer.

It was in 1924 that they began to find their way to Albania, where the Government gave promises of installing them on land and in houses. This year the Turkish Government has ordered all remaining Albanians to leave the country or else become Turkish subjects. The date for quitting Turkey has now been extended to June 1927. The Albanian Government in the last year has settled 700 families, and at the moment of writing is expecting another 300 direct from Yugoslavia, and between 800 to 1200 families from Turkey in the following months. This does not include a large number of Albanians who during the Greek invasion in 1913-14 of Albania were burned out of their villages and are only now able to return, and need monetary assistance to build their ruined homes.

None of these numbers seems immense, but in Albania money is extremely scarce, and the country has to face this year its first Foreign Debt to Italy, besides this extraordinary expenditure involved in settling the immigrants. The country suffers from the feudal system, and the large land-owners are the firm majority, who will yield neither their wealth nor their land to the common cause. As it is the peasant and the shopkeeper who pay the taxes, the peasant who works the land and serves in the Army, so it is the peasant and merchant who have to pay for all the immigrants, while the land-owner Bey class remain rich and keep intact their hundreds and thousands of untilled acres.

When Ahmed Zogu became President in January 1925, definite laws were made for immigrants, each family was entitled to five acres of land, a grant of money for cattle and land implements, and materials for the construction of their houses, but owing to the influence of the Bey class in the Senate, the law became sufficiently obscure to allow all sorts of claims and claimants, and much money was wasted. In January 1926 the Minister of the Interior appointed a Central Commission in Tirana to deal with all monies and to control all the local Commissions, who up to that time had acted as they liked. The Commission consisted of three paid officials, the chairman and two ex-immigrants, and I was invited as an honorary member to work with them. It was very useful to be a woman, as the immigrants are all Moslems and very fanatical, and will not allow a man to enter their homes and control numbers. For instance, in one small settlement of ten families, 28 persons who were non-existent had been drawing food rations for five months. I also knew all the immigrants in all the districts personally, and was able to trace a good many persons who were claiming land and money for people who had either changed their districts or had never existed.

The Commission had great difficulty in raising funds, and it took three months settling the immigrants and working out a satisfactory system of registration. It substituted a money allowance in place of a food ration, it made a survey of land for future installations of families, and it is now making a control of the crops in the various districts with a view to making food depots for those who have not had time to reap a sufficient harvest.

On looking back it is possible to see that there is progress, and the people who in January last said: "Do not cure our bodies—it is better to die," are now self-supporting units with a distinct desire to live.

Charitable help is badly needed for another winter, in the shape of work for the women, who in return for spinning and weaving can earn a little money, but unless England, the Mother Hubbard of Albania, can help, "the poor dog will get none."

TURKEY AND AFGHANISTAN.

In the *Aksham* of July 27, the Afghan Chargé d'Affaires in Constantinople gave an interview to the Press on Afghanistan. He said:—

"Our relations with England are very good, and they are also good with Russia. A mixed Turkish and Russian Commission has been inquiring into the "Wurkd" incident. I cannot refrain from mentioning the invaluable aid given by Tewfik Rushdi Bey.

The names of the members of the Commission are:—*Afghan*, Hafig Alla Khan, Akbar Ali Khan; *Russian*, Raskalykoff (chief); Pepisnykoff and Telkofsky.

Though the chief Russian delegate has returned to Moscow, the Commission is still at work.

Our relations with Persia, always good when Reza Khan was in power, have been improved since he became Shah.

Regarding Turkey, we (Afghans) cannot imagine such a thing as external relations with her. We count ourselves as Turks, and the Turks as ourselves. To appreciate this feeling you should send some newspaper correspondents to Afghanistan, and this would benefit the two brother States. Every Afghan would sacrifice himself for Turkey. You cannot imagine how we venerate the Ghazi Pasha, and regard him with that respect which we give to our beloved Padishah Amanulla Khan.

The concord manifested between our delegates at the Mecca Conference shows a strong bond of union between the two nations.

A new city is being built outside Kabul, by German engineers, on the model of Berlin."

THE PERSIA SOCIETY.

NOTES OF THE WEEK.

(Continued from page 238.)

has arisen over the refusal by the Zaghloulist Administration to accept the Italian proposal that the problem of nationality of the border tribes should be settled through the usual diplomatic channels. Apparently there has been a certain amount of loose conduct in the interpretation of the Egyptian-Italian Treaty, for, whereas the Egyptians insist that the questions of the nationality of the Senussi family (reported to have opted in favour of the Moslem Power) should be settled by arbitration, as provided by the Treaty, the Italians point out that if arbitration has ubiquitously to be resorted to, concessions which Egypt has already gained—as in the matter of Customs, the Ramleh Wells, and so on—may be endangered. To this dispute, in which the Egyptians seem to be employing their well-known delaying tactics, there can be but one end. Fascist Italy has not been ungenerous to Egypt in this affair, which is really one of minor importance to the children of the Nile. It were better for the prestige of King Fuad's Cabinet, therefore, for it to forgo its present inelastic attitude.

Egypt and the Wahhabis.

It is difficult at this distance to estimate whether more is due to the remarkable charm of King Ibn Saoud's son, the Emir Saoud, whom he sent to Egypt first to cure his eyesight and secondly to correct the notions of the inhabitants upon Wahhabi policy, or to the immemorial rapidity of thought which enables the people of the land of the Pharoahs to swerve round from an attitude of depreciation to one of esteem. But a few weeks back the Egyptian journals were breathing fire and slaughter upon the nefarious Wahhabis who had dared to molest their irreproachable *mahmal*, but now, either through judicious flattery on the part of the young Emir or through his direct narration of a few home-truths, they are all honey and helpfulness. Egypt now appears to want to assist the Hejaz, and certainly it, perhaps more than any other Moslem nation, is in a position to do so. It is interesting to read the naive, yet not unjustified, comment of *Al Balagh* upon the possibility of the Hejaz' being uplifted by Egyptian support: "It is not false presumption or empty pride on our part to say that Egypt figures most prominently among Near Eastern countries in science and civilisation, and that she has surpassed them all in Governmental systems, education, and economic affairs." If health and prosperity can indeed be brought to the lands over which the Wahhabis rule through such a Moslem agency, so much the better for the world. It may even be true that Egypt's immediate task lies with a more easy prospect of accomplishment rather in the assisting of other Moslem countries than in setting her own house in a Western notion of order. The interdependence of Islamic countries is assuredly capable of greater manifestation than exists at present. One notices, for instance, that on the question of the retrocession to the Hejaz of Maan and Aqaba—a question, which, incidentally, the Emir Saoud is reported not to have cared to discuss with an English newspaper correspondent in Cairo—Turkey and Afghanistan are said to have destroyed the consensus of opinion at the great Mecca Conference last June.

The French and Syria.

The appointment of M. Auguste Henri Ponsot, Assistant Director of the African and Levant section of the Ministry of Foreign Affairs in Paris, to be High Commissioner in Syria in succession to M. Henri de Jouvenel, appears to have caused scarcely a ripple of interest in France itself; to the Syrians themselves it will probably be of still less interest. Had it been possible for French political opinion to allow the apointment of some "big" man, such as General Weygand, the matter would have taken a different aspect; in the circumstances, however, there is little reason to suppose that M. Ponsot will succeed where M. de Jouvenel may, without harshness, be said to have failed. The immediate future of Syria lies in the hands of French Generals; until their task is completed, no politician, be he ever so versed in the ways of the Orient, can hope to inaugurate a new era. Verbal promises to so resolute a people as the Druses have no meaning now; and the tragedy must, it seems, drag on until superior military force can claim its incontestable terms.

NEWS IN BRIEF.

The Maharaja of Mysore declared the Chamarajanger-Nanjangud railway line open on August 27.

The Indian Legislative Assembly has passed the Government Bill providing for the constitution of Bar Councils in the various provinces of India.

Owing to the political and economic situation emigration from Syria has acquired large proportions. Between July 1 and August 1 no fewer than 12,000 people left the country.

An official denial is issued in Roumania to the report that Roumania has proposed a Pact of non-aggression with Russia before obtaining the recognition of the Dniester frontier.

His Britannic Majesty's Consul-General, Galatz, reports that the Roumanian Government has imposed quarantine restrictions on vessels arriving from Marseilles, which has been declared infected with plague.

The Back Bay Committee of Inquiry having finished hearing evidence in Bombay, sailed for England on August 28, where it is expected that Lord Lloyd, Sir George Buchanan, and Mr. L. W. Lewis, a former Chief Engineer, will be examined.

According to a Teheran dispatch the Persian Cabinet appears to be in a critical position, says Reuter. Mustofi el Mamalik, the Prime Minister, has submitted his resignation to the Shah for the third time owing to his failure to secure a majority in the Mejliss.

It is reported in the Angora *Aksham* that the Turkification of schools proceeds apace. The Armenian Community has decided that the instruction of primary schools shall be in Turkish; and the Jewish primary schools are to be similarly instructed.

PERSONAL AND GENERAL

TO-DAY

September 2, 1926 (New Style).
August 20, 1926 (Old Style).
Saphar 24, 1345 A.H., of the Moslem Calendar.
Ellul 23, 5685, of the Jewish Calendar.

The Maharaja of Nawanagar left London on August 24 for Dublin.

Field-Marshal Viscount Allenby left London on August 27 for Perthshire.

The Master of Elibank returned to London on August 24 from Galashiels.

Sir Milne Cheetham, British Minister to Greece, arrived last week in London, and is staying at Claridge's Hotel.

The ex-King and Queen of Greece left Cromer last week for Oxfordshire, where they have been the guests of the Earl and Countess of Birkenhead

Admiral of the Fleet Earl Beatty and Countess Beatty have been cruising among the Greek islands on their way to Constantinople.

Princess Victor Duleep Singh has arrived in London from Tendring Hall, Stoke-by-Nayland, Suffolk, and is staying at Claridge's Hotel.

Viscountess Goschen left Marseilles on August 27 for Madras, accompanied by Miss Charlotte Portal, daughter of Brigadier-General and the Hon. Mrs. Portal.

The Marquess and Marchioness of Reading last week left Glenapp Castle, where they have been on a visit to Viscount and Viscountess Inchcape, and are staying in the country.

Major-General Sir Herbert Holman, Sir Charles Alston, and Sir Rajendra and Lady Mookerjee were among the passengers who sailed from Marseilles on August 27 for India in the Rajputana.

The Greek Minister in London, appointed as the head of the Greek Delegation to the forthcoming General Assembly of the League of Nations, has left Geneva, and he will be away until October.

The Earl of Ronaldshay, who has been staying with the Marquess and Marchioness of Zetland at Aske, Richmond, Yorkshire, left there at the end of last week for his place in Scotland, Letterewe, Loch Maree, Ross-shire.

Major-General Sir John Hanbury-Williams, Marshal of the Diplomatic Corps, called on the Roumanian Chargé d'Affaires on August 24 and offered the King's congratulations on the occasion of the birthday of the King of Roumania.

Sir Kay and Lady Muir have been entertaining for the shooting at Blair Drummond this week: Lord Douro, Major-General Lord Edward Gleichen and Lady Edward Gleichen, Sir Ian and Lady Hamilton, Prince Galitzine, Mr. and Mrs. Ivan Stancioff, Mr. and Mrs. Leland Buxton and Miss Walter.

We regret to have to record the death, on August 18 at Ingarsby, Wimbledon, at the age of 83, of Mrs. Louisa Moberly Carver, widow of the late Edmund Drinkwater Carver, formerly of Alexandria, Egypt. The funeral, which took place on August 21 at Kingston Cemetery, was attended by Mr. and Mrs. H. H. Carver, Mr. and Mrs. W. M. Carver, Mr. and Mrs. Bruce and Hiss Hester Bruce, the Misses Ethel, Gertrude and Dorothy Carver, Dr. Norman Carver (members of the family), Messrs. Percy Carver and Ralph Carver (of Alexandria), Mrs. Moberly Bell, Colonel Edmund Creswell, Messrs. H. T. M. Bell and C. M. Bell, and many others.

M. Mitilineu, the Roumanian Minister for Foreign Affairs, will leave Bucharest for Geneva on September 3.

Sir Arthur Peel, who was formerly British Minister in Sofia, met with an accident in France on August 26 while motoring from Alençon to Le Mans.

Field-Marshal von Mackensen, who commanded the German armies which overran Roumania during the Great War, arrived in Amsterdam on August 25 on his way to visit the Emperor William.

It is understood that the French Government has decided on the appointment of M. Emile Daeschner, formerly Ambassador to the United States, to be Ambassador in Constantinople, in place of M. Albert Sarraut.

The death is announced of the Rev. Joseph Segall, late Vicar of Alderton, Wiltshire, at the age of 70. He had served as a Missionary of the Society for Promoting Christianity among the Jews at Jerusalem, Damascus and Manchester. He was the author of "Travels Through Northern Syria."

The death is announced from Allahabad of Mr. Robert Oswald Douglas, Collector of Ghazipur, of cholera. Mr. Douglas was educated at Tonbridge and Christ's College, Cambridge. He joined the Indian Civil Service in 1920, and served in the United Provinces as Assistant Magistrate and Collector.

Major-General John Gathorne-Hardy, C.B., C.M.G., D.S.O., lately Director of Military Training at the War Office, will take over the Poona District on Christmas Day. Colonel C. Kirkpatrick, C.B., C.B.E., will take over the 13th Indian Infantry Brigade at Jhelum in November. Brevet Lieutenant-Colonel E. Hewlett, C.M.G., D.S.O., O.B.E., 2nd Devonshire Regiment, is temporarily commanding the brigade at Aden.

It is stated that a new headdress for the Turkish ulema is being designed.

The Turkish Ministry for Foreign Affairs reports that there are still 807 Turkish prisoners of war in Russia.

Nearly 300 British tourists embarked at Marseilles for Salonika on August 26 on the pilgrimage to the graves of the British soldiers who fell on the Near East front during the Great War.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

A LOAN FOR PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The correspondent who disagrees with my views on the above subject and signs himself "Balbus" in your issue of August 26 unconsciously revives the memory of a childish triumph when, as a very small boy and to the astonishment of a kindly but critical schoolmaster, I correctly rendered into Latin the absurd sentence: "That is that house that that Balbus built." It is pleasant to meet an old enemy in a new dress—and that dress the Roman toga donned in defence of the Zion which Rome destroyed. The arguments of the new Balbus are certainly not more difficult to demolish than the house that the old Balbus built.

I must perhaps plead guilty to having—quite innocently and in good faith—beguiled him to the brink of a morass into which he has plunged blindly. I did not go into it myself as I suspected the existence of a snag, and I did hold out such danger signals as I could for the benefit of unwary travellers in the financial deserts of Palestine. When I wrote my letter I had not been able to secure a copy of the official administration report on the country for 1925—I was in fact told by the Stationery Office in Kingsway that it had not been published—but I have since seen it and found my danger signals fully justified. I can therefore easily dispose of your correspondent's first criticism. He asks why, if the objection to the loan in 1924 was that Palestine was not paying its way and therefore could not be expected to meet the charges involved, we should now object to the loan when "the country shows a surplus of revenue over expenditure of £1,200,000." His argument falls to the ground because his major premise is incorrect and I warned him that the so-called "surplus of £1,200,000" was *purely nominal*. Such a surplus is *non-existent*, as he will find by studying the 1925 report, where we are told that the money treated as a surplus has in fact already been spent *in anticipation of the raising of the loan* to which I object. The fact that it has been spent on services classed as "capital" makes no difference to the fact that it has been spent. What has actually happened is that Palestine, instead of using its savings to pay back its debts, has actually spent them in increasing the capital amount of its debt, to repay a part of which it now seeks an increased loan, which of course no one will underwrite except at the risk of the British taxpayer. I am afraid I must withdraw my initial commendation of the increased financial efficiency of the Palestine administration, which has merely devised an ingenious method of circumventing the control of the British Treasury.

The objection, therefore, to a loan now is, as it was in 1924, that it is only required partly to regularise the irregular transactions of the past (e.g., the advances made without Parliamentary sanction by the Crown Agents to the tune of 1½ millions) and partly to release the nominal but actually expended surplus of £1,200,000 for re-expenditure on further development schemes (e.g., the Haifa harbours) of doubtful value. In other word, Palestine has already had the money and spent it. The money it owed for the most part to the British Government and the British Government's only interest in the matter now is to transfer the responsibility for its irresponsible financial policy in Palestine to the broad and patient shoulders of the British Parliament and taxpayer. "Balbus" has somewhat crude ideas of the process of "funding" a loan. Palestine already has a large debt in the shape of an overdraft on its banking account and my suggestion, which "Balbus" seems to have overlooked, was that that debt should be funded for repayment by reasonable instalments out of the savings of the administration. That would be a simpler process than raising a loan for the purpose of paying off part of the overdraft and incidentally securing fresh money for further expenditure against a subsidiary funding arrangement which would have the advantage of deferring the evil day of reckoning and facilitating further extravagance all at the ultimate risk of the British taxpayer. After all if Palestine, desirous of independence as she may become hereafter, can treat Great Britain's claim for a paltry £4,000,000 with levity, why should it worry about getting the money now? Let me repeat: *Palestine has had the money*—and obviously does not care how the position is regularised, but the British Treasury is presumably—and not without justification—after the Colonial Office.

For my iniquitous suggestion of the possibility of the "inefficient or disgraceful" administration of a Mandate I cannot be too apologetic, but I a mat a loss to find how otherwise to describe the French administration of the Syrian Mandate. Of ourselves, of course, we do not or should not use terms so harsh, but "Balbus" seems to have gathered a strange impression of pessimism from my letter. Let me assure him that I am not pessimistic. It would be difficult to be that in face of the Renascence of the Middle East under the vigorous guidance of Riza Shah, Mustapha Kemal and—last but by no means least—Ibn Saoud. But "folks in office at the mention fret" and, with due respect for your space, I am, etc.,

THE INDIAN CURRENCY BILL.

The decision to postpone consideration of the Indian Currency Bill till the next meeting of the Legislative Assembly in January is probably a wise one. It does not affect the financial position, since the Government has already announced its intention of keeping exchange within the "gold points" of a 1s. 6d. rupee until the necessary legislation is undertaken. If this were not so, there would have been an overwhelming case for immediate action, in order to avoid the possibility referred to by Sir Basil Blackett when introducing the Bill—of the market being left indefinitely with a threat hanging over it that the rate might suddenly be altered to 1s. 4d. As it is, the postponement of consideration cannot affect the final decision as to stabilisation; for it is quite obvious that effect will be given to the Commission's recommendation of the 1s. 6d. rate, even if this result has to be achieved by certification over the head of the Legislative Assembly. It seems, however, most unlikely that recourse to that expedient will be necessary, for there is good reason to suppose that the great majority of intelligent Indians who have any clear ideas on the subject at all—not, perhaps, a large number—approve of stabilisation at 1s. 6d. The opposition is practically confined to Bombay, where a great effort is being made to create the impression that this is not the case, but that it is general throughout India. The extreme champion of this view is the noted Swarajist newspaper the *Bombay Chronicle*, whose denunciation of the Commission has all along been violent, and is now hysterical. It greeted the publication of the Report under the caption "The Legalised Loot," declaring that the "packed Commission's" recommendation of the 1s. 6d. rate was made "in defiance of the united demand of India" and in pursuance of an "official plot" which has been completely though unavailingly exposed in the dissenting minute of Sir Purshottamdas Thakurdas. As for the other three Indian members of the Commission, "they have grossly betrayed the interests of India's dumb millions. The shameful thing is that three Indian members have abetted in the execution of this plot against their country's prosperity." The Report itself is described as "the most definitely retrograde and positively unacceptable document that has been inflicted upon the people of India during the last few years, particularly during the blasting financial régime of Sir Basil Blackett." Besides the recommendation of the 1s. 6d. rate, as to which "it is impossible to do justice to the reasoning or the travesty of argument adduced in support of this extraordinary proposition," the special wrath of the *Bombay Chronicle* is directed at the proposal, which the Commission "has the effrontery to recommend," that the legal tender quality in India of the sovereign and half sovereign should be removed. "Words fail us literally to express our horror and indignation at this definitely retrograde measure, should this atrocious recommendation ever materialise itself." Finally, the paper abuses the Government of India for the "indecent but, in view of their pre-determined plan, not surprising haste" with which, without consulting public opinion, they have issued orders accepting the 1s. 6d. ratio.

Against an attack of this kind the Government's decision to postpone consideration of the Bill offers no defence; not even against the charge of indecent haste. The best defence against the latter is to be found in the proceedings of the Legislative Assembly, where Sir Basil Blackett's statement, that "many quarters usually hostile to the Government had congratulated it on giving the Assembly so early an opportunity of considering the question," was sympathetically received. But the charge is, of course, not against the hasty introduction of the Bill, but against the declared intention of the Government of India to pass it: the champions of the 1s. 4d. rupee would rather see a further period of four or five months' uncertainty than accept stabilisation at 1s. 6d. One may be certain that, if the Commission had recommended the lower rate, and Government had immediately declared their intention of giving effect to it, there would have been no talk of indecent haste—its is only the acceptance of the unpalatable rate that is indecent. One wonders whether, in the cold light of reflection, even the *Bombay Chronicle* will not find something to be ashamed of in the form of its denunciation of an obnoxious decision. It is an unfortunate and disconcerting habit of Indian extremist journalism consistently to impute base motives to all who do not agree with its own views. In a case like the present, there is room for strong differences of opinion; but the use of the word "indecent" surely comes badly from a writer who finds it decent to accuse a number of perfectly honest and honourable men, including distinguished members of his own nation, of shameful pandering to an official plot deliberately engineered against the interests of India, when all that they have done is to arrive at a conclusion of which he disapproves. One can sympathise with the man who complains of a wrong decision by the umpire; but there is, and can be, no sympathy for him who suggests that it was deliberately given dishonestly. It is lamentable to think of the number of "Nationalist" newspapers, even important and responsible guides of public opinion, who insist on pretending to believe that every official decision is given in the spirit of the village umpire who cried: "Hout and I wins my five bob." It is only pretence, of course: the writers themselves do not really believe it: but the persistent charge of bad faith and foul play, brought not only against British officials but also against every Indian who dares to support them, is productive of incalculable harm and is one of the most disquieting symptoms of present-day politics in India.

By the time that the Indian Currency Bill comes up before the Legislative Assembly in January, the general election will have taken place: and, if present indications are a reliable guide, the members of the next Assembly, though they may be experts on communal questions, are not likely to have much financial knowledge. It will be interesting to see whether any of the members who pleaded for "more time for studying this difficult pro-

Digitized by Google

blem" will be back in their places next January. If not, those who replace them may reasonably put forward a similar plea for further delay. So long as this is not excessive, it does not seem that any particular harm will result; but one cannot help feeling that the Government of India will be wise if they decide to get the Bill through before the arrival of the monsoon. India has now been favoured with six good monsoons in succession: and if it should unfortunately happen that the luck does not hold, the position may be sensibly altered. There is every reason to suppose that, six months from now, the Government will be able to point to a prolonged period of naturally stable exchange; which is, of course, what is really wanted—its actual figure is of very minor moment. But this might not be the case if they had to wait three or four months longer.

CURRENT TOPICS.

A Gold Currency.

One of the most interesting items in the report of the Currency Commission is its revelation of the fact that the Indian Finance Department had recommended the adoption of a gold currency for India. This fact is of special interest because the proposal had the expert support of Sir Basil Blackett, and its advocacy was not confined to the "brilliant amateurs" of the Department. In the course of his speech when introducing the Indian Currency Bill, Sir Basil plainly showed that he retains full faith in his proposal, while admitting that the Commission was probably right to refuse their assent to it at the present moment. He is reported as saying that "the question whether the rupee was to be 18d. or 16d. was a matter of vital importance to India"; though, from the context, one can but suppose that the word "not" has been omitted in transmission; for he went on to say that "the Bill was purely a transitional matter for a short period of years." His obvious meaning was that the transition would be towards a gold currency; for, after saying that the future would be left to decide whether it was desirable to attempt a further advance to a gold currency later, he declared his own conviction that the adoption of the Commission's report "would lead them in some five years to a real standard of gold as the basis for their legal tender currency."

It may be concluded that Sir Basil Blackett has a robust belief in the efficacy of the recommendations of the Commission for the discouragement of the hoarding of gold: and that he expects that their acceptance will result in a wide-spread return of hoarded gold into the Treasuries, which will enable the Government of India to introduce an effective gold currency from their own resources, without the necessity for asking assistance from America or elsewhere. He even goes so far as to suggest that this may be expected to occur within five years. It appears to be pretty generally held, however, that the reintroduction of a gold currency is unlikely, even in the gold standard countries: people have got so used to paper during and since the War, that it is expected that they will remain content with it. The circumstances of India are, of course, peculiar; for her currency has always been, and largely remains, a metal one—the Commission's recommendation that the one-rupee note should be reintroduced was mainly directed towards bringing about a change in this respect. But, of its recommendations, the two that are, perhaps, least likely to be accepted are that one and the abolition of the legal obligation to convert notes into silver: and it would seem that Sir Basil Blackett is also of this opinion.

There has all along been a strong Indian demand for an effective gold currency: and, though extremist opinion, especially in Bombay, persists in regarding Sir Basil Blackett as the villain of the piece in the matter of the 18d. rupee, it ought at least to count to him for righteousness his advocacy of a gold currency, even after the Commission has pronounced against it. So far as one is aware, the matter has not even been mentioned by the extremist Press; which is but another example of its persistent attitude towards the British official, whom it seems determined to paint entirely black, without any relieving white patches whatever.

Silver Prices.

Messrs. Samuel Montagu and Co.'s Weekly Bullion letter of August 25 includes the following interesting comments on the sharp rise in the price of silver that occurred on the two previous days. They form an expert confirmation of one's own remarks on the currency question.

"The only apparent reason for this sudden rise was the postponement of the Indian Currency Bill until the next Session of the Indian Legislature in January next. This arrangement, in a matter not requiring haste, is perfectly reasonable since it will afford public opinion in India ample time to form a judgment on the proposed new scheme, and will also prepare an atmosphere suitable for its initiation with a minimum of disturbance.

"The temperament of the Indian Bazaars is always sensitive. Bear raids set in after the publication of the Report, even though the menace to silver was a sentimental rather than an immediate factor in the silver market. This week, on the other hand, bears hastened to cover when the passing of the Bill was deferred to the next Session, although this natural step cannot alter in any way whatever the relation of the Bill to the future of silver.

Hence, these speculative spasms do not affect the general trend of prices, which, not necessarily in the near future, must in the long run be influenced by the extension of demonetisation—or a reduced use of silver for coinage—to Asia as well as Europe."

The Indian Electorate.

Recent comments by leading English newspapers on the political situation in India reveal what, to the writer of these notes, appears to be a serious misapprehension regarding the Indian electorate. *The Times* remarks that, in view of the impending General Election, "in the present confused state of Indian politics the elected legislator has every reason for wishing to return as soon as possible to his constituency": and doubts whether the Swarajists have not "discovered, during their self-imposed exile in their constituences, that the majority of the Indian electorate is no longer impressed" by their proceedings. The *Manchester Guardian* says that "the Indian electorate cannot yet have understood the real issues": that the electors are likely to be influenced chiefly by personal and communal considerations; but that "at least it seems certain that they will oppose no serious obstacle to the will of the politicians if these decide in favour of coming to terms with the bureaucracy."

The truth is that, to all intents and purposes, the Indian elector has no conception of any issues except personal and communal ones, which to him are the real issues: and that the elected legislator understands this so well that he makes no practical attempt to nurse his constituency, and treats his electors with undisguised contempt. With negligible exceptions, the Indian voter has no opinions of his own, so that it is certainly true that Indian politicians need expect no obstacle, from this source, to any policy, of whatever colour, they may desire to follow. But it is certainly incorrect to suggest that the electors "are no longer impressed" by the proceedings of their elected representatives. Those proceedings have never made any impression upon them whatever: having once surmounted the technical difficulty of voting, ninety per cent. at least of the electors have never troubled themselves in the slightest about the actions of their members, and only remember their existence when the time comes to record their votes again. It is true that canvassing is carried out, after a fashion; but not by argument or persuasion. The voter is merely given the name—or, more often, the badge or colour of the voting

Digitized by Google

urn—of the particular "patriot" whom it is his duty to support, and follows orders obediently and blindly.

There may come a time when it will be necessary for a candidate for Indian votes to cultivate his constituency and to appeal to the intelligence of his constituents; but the time is not yet, and there are no signs of its early arrival. Indian politicians constantly assert that "the nation" or "the people of India" demand so-and-so. At present the voters who are supposed to represent these two non-existent entities demand nothing except to be excused from the nuisance of voting at all: and, if that is not possible, to receive orders as to whom they are to vote for, and to get an incomprehensible and troublesome form over and done with at the least possible expense of time and discomfort to themselves. Indian political leaders talk glibly of the necessity for educating the electorate, but their efforts in this direction have so far been confined to enlisting capable canvassers who are able to issue orders with apparent authority. Real education of the electorate is the last thing they desire; for, if once the voter begins to think for himself, their tenure of power will be short. The attempt at education, if it is to be made at all, must be made by persons entirely different from the professional politician; probably through a drastic alteration of the existing method of voting, which still remains what it was at its inception —altogether farcical.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 12.

A Weak-kneed Order.

Government have badly bungled things in regard to their order prohibiting Pandit M. M. Malaviya and Dr. Moonje from entering Calcutta. Both publicly announced their intention of defying the order; both came to Calcutta and refused to accept the pleasantly-worded official invitations to alight *en route;* both had enormous receptions; both have left with no interference. And now it is announced that both are to be summoned to appear before the Chief Presidency Magistrate for disobeying the order. As an opportunity for the local naughty boys of politics, it could not have been bettered; and the *Pioneer* bluntly calls it a colossal and almost unprecedented blunder.

Political Perversity.

The Political Correspondent of the *Statesman*, a "Moderate" Indian of independent views, comments on the incident in a particularly ingenuous column, the burden of which is that the non-official European should inquire why it is generally thought in Indian that Government can do nothing right. He goes on to show that it is not only a general impression, but it is the fact that whatever Government does is opposed to the wishes of "the people," and he takes as a further and vivid example the recommendations of the Currency Commission. He sets out the principal ones, and shows conclusively to his own satisfaction that they are each and all the exact opposite of what is required by "the people of the country." This is the explantion that he offers. "The administrators of this country have not yet been able to realise that the opinions and sentiments of those whose affairs they administer should be taken into consideration." When a Moderate Indian politician can write this, one may well despair; for this is no question of misunderstanding—it is blind perversion. Well may he wonder if unity of outlook will ever be possible without a miracle.

Currency and Politics.

The Report of the Currency Commission has been taken up unanimously by the Indian Press as a political challenge, and the Swarajists are even going to "walk in" again to oppose any of the legislation recommended. If they did not, there would be no more financial support from Bombay industrial magnates who want a 1s. 4d. rupee and a gold currency. The Parsee rules Bombay, and so rapidly has he appreciated the connexion between politics and trade that he has now little left to learn. So the whole of the report is attacked politically as the product of an alien bureaucracy, out to do everything possible to thwart the aspirations of India, and the lawyer politician and the Bombay millowner join hands agin' the Government. The agitation is an obvious and an empty one, and it will achieve nothing: it will certainly not modify the mutual contempt of its leaders for each other or their equal indifference to the well-being of the mainstay of the country, the badgered, worried, bunnia-oppressed, poor but pathetically contented agriculturist.

Hyderabad.

Wild rumours have been buzzing around and, in the case of a Bombay paper, were printed as to the action which the Government of India were reported to be taking in regard to the administration of the Nizam's territory. His State has issued a categorical denial of the whole story, and it will probably die the usual death; but it has been made the occasion of two types of violent attack by various Indian papers. All shades of opinion became hysterical at the suggestion that certain Indian officials were to be replaced by Europeans; and an up-country Muslim organ pealed a solemn warning of a Mohammedan rising if Government persisted in its alleged protest against the expenditure of State moneys in Muslim propaganda outside India. A Native State is all that is backward to the Extremist until Government says the same thing; then it is a haven of peaceful progress untrammelled by foreign bloodsuckers. Neither is exactly the case.

A Traveller's Tale.

A post-War world tourist was much impressed with the apparent calm and content in a Native Indian State where the only European was the Resident. He was seeking information of an official—"British India is seething; your people are more highly taxed, the poor man never wastes his money seeking justice, I have yet to see any sign of popular government, yet you have no trouble and no agitators. Don't they ever trouble you?" Yes, there had been a certain amount, it appeared. Recently for instance half a dozen had arrived and were asked by the police to leave that night, and most went. Who stayed? Oh, one did for a short time, but he left after an accident. And after a watchful pause, it appeared that one result of the accident was that he bit his tongue off, which made him useless as a public speaker. True? What matter? Everyone knows that such accidents are possible, and that is enough.

Men and Things.

The Tariff Board have been listening to another tune on the steel guitar. Bird and Co. ask for ten years' protection to enable Cammell Laird and themselves to get

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

going with a bigger Tata's; they stated, in reply to the President, that Cammells were still interested in their scheme, and that they hoped the public might put up the money.

Mr. J. M. Sen Gupta is getting into hot water again; he was seen at a football match when an annual memorial meeting was being held for Sir Surendranath Banerjea. Wearers of triple crowns must recognise that three sets of subjects watch to see that kings do no wrong; but what a life!

There has been a rebellion in India—Portuguese India, which still exists, and supplies a large proportion of table-servants to the other side of the country. It reads like one of W. H. Berry's efforts; and now that the three revolting leaders have been dismissed by the displaced President and sent back to Portugal, we can breathe again. Fiery fellows these rebels!

Dining out this week, one heard from an ex-A.D.C. of War days a difficulty which faced him at a base port on a big night. Does an unfrocked bishop go in in front of a colonel under open arrest? Left guessing.

Indian papers this week have three themes, the folly of the Pundit's "Order," the Currency Report, and the usual personal squabbles. But the Order has been the boon of the silly season.

Communal differences are under the weather at the moment; there has been an inch or more of rain every day this week.

Glowing tributes were paid to Sir Ewart Greaves at the Senate on Saturday. He is taking long leave from the High Court, and a new Vice-Chancellor has been appointed to succeed him in the University. He has been equally efficient and popular, no easy achievement; his blessings on Prof. J. N. Sarkar, his successor, will help to quieten the semi-political attacks upon him.

Calcutta is watching the Back Bay Inquiry in Bombay closely, and the Bengali is congratulating himself on his slowness. The reports will not be pleasant reading in many quarters.

The Trivial Round.

For once in a way backers left the course on Saturday with smiling faces; everything that came home was carrying money, and so we shall go on again and see what happens next week. The "Griffin" scheme, under which the Club are importing each year batches of horses for which the subscribers draw, is turning out well, and quite a promising batch of newcomers accepted for the closed events; this should revive the small owner, who was finding the game too much for him at post-War prices.

There has been plenty of splendid Rugger this week, and there is no question of its quality, in spite of the fact that the ground is a sea of mud. This has shown what fine forwards are available, and Calcutta could put up at least three first-class packs. The 82nd Regt. lead the results, but they were lucky to beat the Griffins this week. Incidentally, the European crowd is beginning to watch Rugger again; over two hundred cars were outside the enclosure on Tuesday evening.

The Rowing Club is already showing promise of a renewed youth when the new water is opened: it held a unit season regatta on Saturday, and the Merchants' Cup was in competition after a lapse of several years: George Hendersons won. We shall want a Sailing Section as soon as the club house is ready on the Lake.

Swimming is also looking up. Apart from the old Club Baths, Tollygunge is just completing one, and the new Saturday Club is to have one with open sides on the lines of a covered Italian garden. It will be interesting to have a dip after No. 6; it should help down the sausage and mashed—and the black beer.

Sport your end is noted. A wonderful record of the girl in the Channel; she must be a phenomenon. Our sympathy goes out to Carr in the last Test, but a young man's country has great hopes from Chapman; a fine bit of luck for him. Lastly, steady please with the team for India; cricket is only a game here.

The Amateurs have maintained their reputation at the Empire. "The Boy" was a real show, and bright as a rainbow. The C.A.T.S. are below their standard, but everyone welcomes the *piano* pedal which has been due for a long time; they make a pleasant evening of it, even if ideas are somewhat obviously lacking. The A.D.C. promise well for "The Dover Road."

Markets.

A waiting policy has been adopted by operators in the jute market during the past week; rumours of excessive blight, and a consequent possibility of a shorter crop than anticipated, have mainly been responsible for this. Prices remained more or less unchanged until the close, when a slightly steadier tendency is noticeable. Gunnies have followed in sympathy, but business continues to be of small dimensions. In the piece-goods market, the approach of the Pujahs is just beginning to be felt, and this has helped to revive the dullness to which the market had been subjected for many months. Dealers are sanguine that, so long as there are no further communal disturbances, business will increase in the course of the ensuing months. Tea sales both here and in London show no signs of slackening; prices have advanced further for almost all descriptions: and, with the outturn figures for July recording a decrease compared with last year of about four and three-quarter million pounds, the immediate future of the market may be awaited with optimism.

In the Stock markets, business has not been as brisk as of late. Government Securities, especially the short dated issues, are quickly taken up, except 3½ per cent. Paper and the New Loan, which have been little dealt in: and any transactions recorded are at slightly easier rates. Sellers of jute shares have appeared and, with less support from buyers, prices have closed below the best; the dullness of the hessian market has no doubt been reflected in the share market, and caused an amount of unloading by operators. A moderate activity continues in the coal shares which have come into the limelight during the last month, but the demand at present shows no sign of becoming general; nor in fact does the position of the industry warrant any such immediate improvement. Rubbers have been neglected and easier; but for teas there has been a better inquiry, as a result of the satisfactory sale here.

The Exchange market has been steady: bills have been showing in greater quantity, and banks have been reluctant buyers. Money has been practically unlendable at 1 per cent.

EUROPEAN SCHOOLS IN INDIA.

The annual report for 1925 of the European Schools in India Improvement Association gives a succinct account of the activities of what, in spite of its rather unfortunately cumbrous designation, is a Society doing a great deal of valuable and much-needed work. Its object is to promote the education in British India of students or children of European or Anglo-Indian parentage, in schools of a distinctively European character. The report points out the strong claim that the domiciled European and Anglo-Indian community in India has upon the people of Britain for service and sympathy: for its members are mainly descended from the British administrators, traders and soldiers who, from the time of the foundation of the East India Company, served their country in India and made possible the India trade and our Indian Empire. A portion of the community, which is estimated to number about 200,000 all told, is of pure European descent, though the majority is of mixed parentage, but the faith, ideals and manner of life of all, though living and, in most cases, born and bred in the East, are of the West. The maintenance of schools of a distinctively European character is much more costly than that of ordinary

Digitized by Google

Indian schools: and, though the former now number nearly 450, with an enrolment of roughly 42,000 pupils, few of them have endowments, and the majority need considerable and continued financial help, in addition to the Government grants, if they are to remain efficient for the very important purpose for which they were founded. The community is notoriously a poor one; yet its contributions, with the help of private subscriptions, have hitherto covered 65 per cent. of the total cost of maintenance.

When the Association started life, under the title of the European and Eurasian Education Fund, an attempt was made to raise £250,000 in Great Britain; but the sum actually raised amounted only to about £90,000. It is chiefly from the income from this capital that the Association has been enabled to make grants, since it started work in 1914, amounting in all to nearly eight lakhs of rupees; but the urgent demands upon its funds have been much greater than they have been able to meet, and a good deal of leeway remains to be made up. The period of its existence has coincided with an unprecedentedly difficult time for all charitable associations, especially such as are unable to make a popular appeal; but it may be hoped that the increasing interest in India now shown by the average Englishman will help him to realise the really vital importance for the Empire, in these days of rapid Indianisation, of a serious attempt to preserve the essentially British characteristics of the European and Anglo-Indian "statutory natives of India."

No more complete guarantee of the status and aims of the Association can be offered than the fact that its Patron is H.R.H. the Prince of Wales; while so distinguished and sympathetic an Indian administrator as Lord Willingdon was Chairman of the Executive Board in 1924 and 1925. Though his appointment to Canada has obliged him to resign this post, he still remains a Life Member of the Association, whose appeal for generous assistance in continuing and enlarging its activities deserves the fullest response, directed as they are towards a work of national importance with specially urgent claims at the present juncture. Everyone with knowledge of existing conditions in India will agree in this estimate: and it is of happy augury that the number of people in Great Britain to whom this description applies is daily continuing to increase. The report is issued from the Headquarters of the Association, at 92, Fleet Street, E.C.4.

CORRESPONDENCE.

COMMUNAL AMENITIES.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The attention of the Government of Bengal has been drawn to a paragraph headed "Communal amenities" in the letter of your Calcutta correspondent dated the 3rd June 1926, which appeared in your paper of the 24th idem, in which he states: "The (Raj Rajeswari) procession is an annual one from a temple in the centre of the city to the river, where images are immersed, and it was licensed this year for 75 persons, with 40 musicians, on Tuesday last. For the first time the promoters issued general invitations to all sections of Hindus—Marwaris and Sikhs included—to join in, with the result that, hours before the starting time, thousands had gathered for the procession. The Mohammedans were not to be outdone. The processional route passes a mosque: and thousands of the faithful gathered and, putting down their mats, filled the roadway for some distance on either side and proceeded to pray without ceasing, thus completely holding up all traffic. The Commissioner of Police cancelled the licence and issued another for an alternative route; but the promoters refused this in high dudgeon, and left their images in the road. Excitement grew, and shortly all traffic outside the temple was held up, while shopkeepers began to get panicky and closed their shops. The situation was no better yesterday; and eventually the drivers of three motor lorries on which the images had been mounted, were arrested for refusing to move the vehicles."

I am to say that the allegation made above that the Mohammedans stopped the procession by praying on the roadway is not correct, and as it is likely to have misled your readers, I am to request that you will be so good as to publish the facts as stated below.

"On the 24th May, 1926, an application was made and granted for a licence for a procession to take place on the 1st June consisting of 75 persons with 40 musicians with no vehicles but three stalls of Gods and Goddesses. On the morning of the 1st June it came to the notice of the Commissioner of Police that, in disregard of the terms of the licence, preparations were being made for a very large procession and that notices had been issued in the Press and otherwise calling upon Hindus to muster in large numbers and join the procession. The applicant for the licence was sent for and came to the Commissioner of Police at 3.30 p.m. He admitted that the procession would consist of more than 75 men and asked to be allowed to take 500 men with three lorries. In these altered circumstances it rested with the Commissioner of Police to use his discretion in licensing a procession by the original route, and in the exercise of this discretion he altered the route. It is not a fact that the modification of the route was due to the objection of Mohammedans and to avert their threatened violence. The Mohammedans made no demonstration for several hours after the Commissioner of Police had passed his orders. The procession was due to start at 5 p.m. A crowd of Mohammedans collected at that hour, but were not aggressive. It was not until 7.30 p.m. that any Mohammedans began to pray on the roadway outside Dina Mian's mosque, which was not on the newly sanctioned route of the procession. The number at prayer outside the mosque did not exceed 150 and at no time was the traffic blocked in the road opposite the mosque.—I am, etc.,

A. N. MOBERLY,
Officiating Chief Secretary to the Government of Bengal.

Calcutta, August 11.

"THE EUROPEAN ON THE PICTURES."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The thanks of every decent person should be given to THE NEAR EAST AND INDIA for the paragraph under the above heading in the Calcutta letter printed in the issue dated August 19. May I call your attention to another scandal? Films are frequently shown depicting Oriental scenes, woefully betraying the ignorance of author and producer, the wording and sub-titles often offensive to our Indian fellow-subjects of the Empire. The religion of Islam seems often to be singled out for such attacks, and such phrases as "Woman has no soul in Islam" (a manifest lie, but often repeated) and "The penalty for a woman to enter a mosque" (only existing in the mind of the author), arouse feelings of anger when seen by all our Moslem fellow-subjects. These films are American *not* British, and it is to be regretted that the film censor does not prohibit such films from being exhibited. Either it is deliberate propaganda, or extreme ignorance on the part of author and producer; and the manner in which Islamic prayer is portrayed is sufficient to arouse the contempt of every person who has seen such prayer, and the anger of every Moslem who beholds this acted blasphemy. It is to be hoped that the Oriental mind will not take such rubbish as the true facts of Western life, nor the Westerner accept it as a proper presentation of religion and life in the Orient.—I am, etc.,

THE INDIAN MAIL.

The Wheat Trade of Karachi.

The minutes of the meetings of the Committee of the Karachi Chamber of Commerce reveal the fact that the Indian Railway Administration has drawn up a questionnaire on the subject of grain elevators and the bulk handling of grain, "in view of the matter being taken up by the Royal Commission on Agriculture." The large increase in Karachi's export trade in grain, that may be expected to follow from the opening of the great irrigation works now in process of construction in Sind and the Punjab, invests this inquiry with special importance; for, high as is the standing of Karachi at present as a grain distributing centre, there can be no reasonable doubt that, in the course of the next few years, it will be increased to an enormously greater extent. From what one has read on the subject, however, one gathers that the solution is not as easy as it looks. At first sight, it would seem that the erection of grain elevators is so obvious a necessity of the near future as to require no discussion; but it appears that there are difficulties that are not confined to considerations of climate, but extend to the grading of a large number of different varieties of wheat which consigners not infrequently mix indiscriminately together, as well as to other technical matters. Whatever the result of the discussions, it is certainly a good thing that the appointment of the Royal Commission on Agriculture should have called attention to the necessity for entering upon them at once, as they might otherwise have shared the tendency to delay in the consideration of important matters that sometimes seems so prevalent in India.

Trade Returns for June.

The returns of India's sea-borne trade for June show that, while exports remained practically steady, there was a heavy decline in imports compared with the preceding month. The value of the imports of private merchandise fell from 1991 to 1634 lakhs, and that of exports of produce and manufactures from 2448 to 2416 lakhs. The net imports of treasure amounted to 372 lakhs and the visible balance of trade in India's favour to 483 lakhs.

Under the main heads in imports, the value of food drink and tobacco fell from 223 lakhs in May to 168 lakhs in June, and of manufactured articles from 1555 to 1245 lakhs; while that of raw materials rose from 161 to 180 lakhs. There was an encouraging increase in imports of cotton piece-goods, which rose from 130 to 145 million yards. In exports, the value of raw materials and produce remained the same as in May—1127 lakhs—while that of food drink and tobacco fell from 660 to 539 lakhs, and that of manufactured goods rose from 644 to 719 lakhs. The export of raw cotton was 50,000 tons in June, and of this total Japan and China took 35,000 tons between them. The exports of raw jute amounted to 25,600 tons valued at 134 lakhs.

The United Kingdom's share in India's imports continues to fall, having been 46 per cent. in June against 50 in May; but her share in exports, which had fallen as low as 11 per cent. in April, and had risen to 16 per cent. in May, improved to 18 per cent in June. The share of the United States remained steady and that of Japan practically so; but that of Germany shows a marked rise over the figures for May: the percentages of the three countries named being, in that order, imports 8, 8 and 10, and exports 12, 15 and 7. In May they were 8, 8, and 8; and 12, 14 and 5.

INDIAN EXCHANGE.

London, August 30.

The rumours in India, to which we referred last week, to the effect that the Indian Currency Bill would be postponed, had no more than a passing influence on Exchange. The temporary flutter gave speculators an opportunity to depress the market, but it recovered quickly. A more unsettling effect has been experienced in the silver market inducing operators to be bullish on the possible prospect of the abandonment of the proposals to realise gradually the huge stocks of rupee coin.

A perusal of the Currency Report would have removed any grounds for supporting rumours of this nature, as in paragraph 166 and Schedule 5 certain measures are suggested to provide for the transition period, until the Currency Bill is passed.

Calcutta exchange keeps a shade firmer than Bombay at 1s. 6d. T.T. and 1s. 6 5-16d. for three months merchants bills.

In Bombay it has been difficult to buy T.T. over 1s. 5 31-32d. all the week, but bills have been easily placed at 1s. 6 9-32d.

Reports from India show that the progress of the monsoon continues favourable, so that another year of plenty lies ahead. Both markets are closed to-day owing to a native holiday—coconut day, which is supposed to mark the end of the monsoon.

Forward rates remain unaffected by the fluctuations in the spot price and are inclined to be firm. We hear that both in Calcutta and Bombay T.T. has been done at 1s. 6⅛d. for November and December. In this market remitters have had to accept 1s. 6 1-32d. T.T. which is the prevailing rate for ready delivery, although we hear that 1-64th lower has been off and on available.

Some nibbling has taken place in forward exchange for delivery in December and January, but little business has been done.

In our last week's report, we commented upon the amount of cheap money available in India, and it may be worth while recording that the cash balances of the Imperial Bank of India, according to their usual statement last week, show that they amount to a total of 5763 lakhs of rupees, which is the highest figure on record.

NOTES AND NEWS.

170, Strand, London, W.C.2,
London, Tuesday Morning.

The Bulgarian Advance.

M. Molloff's visit here has evidently fulfilled the hopes based on it in Bulgaria. He has been able to conclude a provisional arrangement with the Bank of England for an advance of £400,000 to the National Bank of Bulgaria. The obstacle that has had to be overcome has been the question of an arrangement over the question of Bulgaria's pre-War debts. The provisional arrangement now reached does not actually mean that an agreement has been made with the bondholders, but it may be stated that their interests will be fully safeguarded. In other words, an undertaking has been given on the subject by the Bulgarian Finance Minister which means that to all intents and purposes a settlement has been reached.

Near East Crops.

Once again the harvests in the Near East promise to be abundant, and it may be hoped that the result generally will be a very marked improvement in the economic conditions in that region. Unfortunately it does not seem probable at present that all the countries concerned will profit to an equal extent by the kindness of the soil. The American wheat crop is particularly good this year, and it may be noted that our Bucharest Correspondent states that as the Roumanian wheat has not been marketed before the arrival of shipments from across the Atlantic it is feared that Roumania may miss the market. This would be most regrettable, for Roumania of all the Balkan countries, with the exception of Bulgaria, needs the stimulus that would be derived from a really profitable harvest.

Palestine Tobacco.

Some samples of tobacco from Palestine were sent to the Imperial Institute in 1924 and 1925 for examination, and the current issue of the *Bulletin* of that organisation contains the detailed results of the tests. The samples submited in the first year consisted of seven leaf tobaccos and one of Latakia. Two of the samples were too small for commercial valution, but the remainder were submitted to manufacturers specialising in Turkish tobacco who reported that the products were lacking in character and aroma and were somewhat harsh, but that they burnt well and should be saleable at 1s. 3d. to 1s. 6d. per lb. The samples submitted in 1925 represented bulk quantities of the 1924-25 crop and were divided into the products of the northern and southern villages. The tobaccos were submitted to merchants and brokers. The merchants did not consider that under present conditions this Palestine tobacco would be of much interest, while the brokers described the tobaccos as rather coarse and bitter in smoking, of a weedy character, and lacking in toughness, and gave it as their opinion that such leaf could only be marketed here at a low price. It is pointed out in the report that the low percentage of potash shown in the analysis of certain samples and the high amounts of sulphates and chlorides, the combined result of which is to effect the burning quality of the leaf, could be counteracted by appropriate manuring, while the pungency and coarseness of the tobaccos could be considerably reduced by adopting bulk fermentation. There is not the slightest need for tobacco growers in Palestine to be discouraged by these reports. It is known that in certain parts of the country the soil is suitable for tobacco cultivation, while the climate is satisfactory for the purpose, and it is now necessary for the tobacco growers to concentrate their attention on the production of better tobaccos than they have done hitherto. They will then be assured of their market and of a remunerative return on their crop.

British Mediterranean Lighterage Company.

I am informed that at a general meeting of this company, the formation of which was recorded in a recent issue of THE NEAR EAST AND INDIA, it was decided to increase the capital from £5,000 to £100,000. A confirmatory meeting is being held to-morrow (September 1). Salonika is to be the company's sphere of operations.

British Films Needed.

The article on the cinematograph in Egypt which appears on another page in this issue simply adds point to what I have said on many occasions as to the need for the development of a strong British film industry. The writer of the article states that during a four months visit to Egypt she never once saw a British film advertised or mentioned—all the films were from America or other foreign countries. Unfortunately this state of things is not peculiar to Egypt; it obtains more or less everywhere. It cannot even be regarded as surprising in view of the fact that we have not so far been able to gain the home market in this very important industry. The pity is that the absence of a really strong British film industry results in the most deplorable views of our ideas and conduct being published to the world. When the cinematograph was in its infancy it did not seem remotely possible that it would ever develop into an instrument of great influence; we know better now, and with the knowledge has come the realisation that it is essential that the films shown abroad should be tempered by a goodly proportion of British films so that so far as we are able we may endeavour to correct the impressions derived from some of the productions that now pass muster. I have said that we have been unable to gain the home market, but it is satisfactory to know that really excellent British films are now forthcoming in ever increasing volume, and given that the present rate of progress is maintained it is possible to look forward to a not too far distant future when British films will play the part they should in foreign countries. I have not referred so far to the financial aspect of the industry, but that alone would make a supreme effort on our part worth while. At the same time that we are paying laboriously the American debt we are

EGYPTIAN PICTURE-GOERS.

By Estelle Blyth.

One of the oddest by-products of the War is the stimulus that it has given to the film industry. Films are made, exhibited, and attended with a kind of frenzy which is understandable only as a form of reaction from the stark realities and the bitter consequences of war; we have been too near to greatness, and, being human, our wings are the wings of Icarus. We fall. Every country is vying with its neighbours to produce more, and larger, and better films; France and Germany, both too poor to pay their debts, spend large sums upon masterpieces and super-masterpieces. We can hardly open our eyes to a new day without opening them upon some new and magnificent building, in which the latest films depict life exactly as it should not be and, as we hope, it is not. They carry us, breathless, from one excitement to another, from thrill to thrill, from horror to horror, from superlative to superlative. I suppose there is hardly a corner of Europe so remote that its rustics cannot learn from the films how to burgle and to murder ("continuous performance from 2 to 11 p.m.") at the lowest possible price.

The fashion of picture-going prevails with equal ardour in the East, where for the most part the people are illiterate and must be taught by pictures; and there is probably no more fruitful Eastern field for American films than Egypt. Palestine is still a long way behind, being a poor country and still comparatively free from the craving for excitement and unreality. Egypt is in very different case. Its wealth suffocates one. The houses the rich Egyptians build for themselves are like institutions or Government offices, with miles of corridors, vast reception-rooms, endless suites of apartments, acres of gardens. One Egyptian princess I am thinking of adds a fresh wing to her already ample and astonishing abode from time to time, because she really does not know how else to employ her superfluous cash; last year she had the bright thought of putting stained glass windows in the corridors, a very strange medley of semi-religious, classical, and fancy subjects being her choice.

This fancy for pomp and circumstances is reflected in the Egyptian picture-houses, which are all of great height and wide extent, and capable of seating several hundreds of persons. The part that corresponds to the upper circle extends round three sides of the house, and is divided into "harem-boxes," for the convenience of the Egyptian Moslem ladies. These boxes are really small rooms, high partitions ensuring their privacy; each holds from six to eight persons, and is fitted with comfortable armchairs, plush curtains, hanging mirrors, and coat-pegs. In these, together with as many of their families and friends as can be packed into so many cubic feet of space and air, and with ample provision of sweets and cigarettes, the Egyptians settle down to enjoy life for some hours on end.

The films shown are all American or foreign; during a four months' visit to Egypt I never once saw a British film advertised or mentioned. Some of the most important films are shown simultaneously in Egypt and in Europe. A glance through a sheaf of old programmes gives one "The Child of Flanders," "The Sheikh," "The White Sister," "Miracle of the Wolves," "Lucrezia Borgia," "The Ten Commandments," "Rosita," "Moon of Israel," "The Bright Shawl," "Lilies of the Field," "The Four Horsemen," and various comic films by Charlie Chaplin: a varied list indeed. Stacks of programmes are printed and distributed free: in fact, they are forced upon the audience at intervals during the performance: they are all printed in English, French, Arabic, and Greek or Italian. The captions to each scene are thrown on to the screen in English, Arabic, and French. The English of the programmes is often as interesting as the film itself, and far more original.

"The greatest safe in the world The highest wrelers transmission station etc." "Lucrezia Borgia. Istoric great reconstitution drama of the 15th century in 7 parts. To give perfect the realisation of this master piece they have demobilised an army of artists Luxeurins (luxurious?) reconstitution plenty of orgies. of that mesterius century of Bargia," There were indeed "plenty of orgies" in this excellent Italian film, but to me one of the most "mesterius" scenes was that showing the "Bargia" Pope ill in bed, his pillows and bedroom-slippers being heavily embroidered with swastikas! The same programme entered a French film, "Le Prince Charmant," as "The Nice Prince," which was rather a come-down.

The films are very well exhibited in all the Egyptian cinemas known to me, but in some cases the stories have been so much cut down that they are incoherent. The film trade in Egypt is mainly in Jewish hands, but many of the largest cinemas belong to wealthy Greeks and Italians. It is not surprising, therefore, that the stories should be rather mutilated by those who do not really understand them. The crass folly and the danger too, of showing films of "The Sheikh" type to Eastern audiences is apparent to all; but films dealing with phases of life in Paris or New York are no less unfortunately chosen. What, for instance, can be the effect upon an Eastern mind of "A Searching Portrayal of the Truth in Lives of an ultra-fashionable New-York Society Set. The Romance of a Woman who Through Neglect is Driven to the Brink of Folly, but who is saved bv a Great Love"? Films showing women in evening dress, in bedrooms, in love scenes, and so on, are utterly alien to the Eastern habit of mind; they give the Eastern picture-goer the impression that all Western women are shameless. He is unable to distinguish between the manners and morals of the West and those portrayed by so many American picture-makers for a public so blasé that only the wildest excitement (the technical film-word is, I believe, "tense," or "dramatic,") can stir its anæmic emotions; and unhappily, to him all white women are Englishwomen. Every time the Eastern man and woman sees an American film of the "tense" or "dramatic" type, a little bit more is whittled off his respect for Western people, and especially for Western women. I do not know who censors films for Egypt. If he is a European, he is curiously indifferent to the working of Eastern minds. If he is an Egyptian, he ought to be more drastic.

When the films have been the round of the various picture palaces in Cairo, Alexandria, Port Said, and the other big towns, and are rather the worse for much use, they are bought up cheap by enterprising Greeks for exhibition in the villages. They are conveyed from place to place throughout Egypt on a cart, the managing director being the purchaser and the company his family. A big sheet hung between two trees or poles suffices for the screen, and the lighting effects are of the most elementary description. The audience sit on the ground and watch with rapt attention the intricate convolutions of Mr. Charlie Chaplin's legs, or the varied "orgies of the mesterius century of Bargia." They can pay only a few metalliks for the show, but by moving from one remote village to another these travelling cinemas make quite a thriving business out of dilapidated old films, and as the whole concern is a family one, wages are nil and expenses light. The cinema travels where the railway is almost unknown, initiating the unsophisticated Egyptian peasantry into the strange tale of how the smart set misbehaves itself in London, Paris, and New York. The results are bound to be increasingly prejudicial to Western and Christian influence, in proportion as the meaning of such films is appreciated by these remote village audiences. Sooner or later this aspect of film-propaganda ought to be faced.

The net profits of the Bank of Larnaca, Ltd., for the half-year ended June 30 last amounted to £1,992.

Mr. Bernard Baron, Chairman and managing director of Carreras, has subscribed for 100,000 £1 shares in the Palestine Electric Corporation.

THE ZAGREB SAMPLES FAIR.

(From Our Own Correspondent.)

Zagreb, August 24.

The Zagreb Summer Samples Fair (August 15 to 23) had nothing out of the common to show, but it was workmanlike and was much more successful than had been expected. The best business was done in textiles, leather, chemical dyes, machinery for working up timber and agricultural machinery. At the end of the Fair a public demonstration of the use of modern agricultural machinery was given in the Maksimir, the beautiful rambling park at the east end of Zagreb, where there was ample room even for a ploughing test. The record number of visitors on one day was 40,000, considerably greater than last year. The next Samples Fair will be in the spring and the prospects for it are encouraging. Liubliana is going to have a local Exhibition Fair next month, which promises to be interesting.

On the last day of the Fair a peal of bronze bells exhibited at the Fair was conveyed with pomp and rejoicing from the Fair grounds to its destination in a neighbouring village church. The ceremony of bringing home and blessing a new bell or peal of bells is a very pretty one in this country. The peasants turn out in their most gorgeous national dress, the men on horseback, the women and girls in decorated carts and carriages. The bells themselves are brought along, each on its own lorry, each lorry decorated profusely with green wreaths and branches and coloured paper. It is apparently *de rigueur* that each vehicle should represent one colour only, and the effect is most picturesque. And of course there is a band, or bands—as many as can be raised—and dancing and rejoicing and bell-ringing is continued until far into the night .

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, August 25.

The Harvest.

The harvest this year is reported to have been a very good average one, but unfortunately for Roumania the American and Canadian harvests have also been excellent, and as the reaping season has been rather late this year it is feared that Roumanian grain, not having found a market in Europe before the arrival of trans-Atlantic shipments, will be ousted by them. This is the more to be feared as the quality of the American grains is usually higher and the abundance of crops this year will bring down prices, while Roumanian exporters have to reckon with high export taxes, which make it hard for them to compete on the world market. Moreover, there is also the competition of Russia to be taken into consideration. According to the weekly report of Messrs. Watson and Youell of Galatz, however, considerable quantities of grain, more especially of barley have already reached the ports, and await shipment and it is hoped that the grain trade will become more active as soon as the recent stormy weather abates.

Rising Petroleum Production.

According to the *Argus*, the quantity of crude oil which has passed through the Roumanian refineries during the first six months of this year totals 1,346,652 metric tons, producing (in metric tons) 324,072 benzine, 224,736 distilled petroleum, 131,186 mineral oils, and 655,615 residues. Of the latter, 135 tons of mineral oils and 120,824 tons of residues were used as fuel in the country, and the following products were exported (in metric tons):- 151,088 benzine, 6,627 distilled petroleum, 208,570 refined petroleum, and 105,514 mineral oils. The stocks on June 30 amounted to (in metric tons):- 97,617 benzine, 35,184 distilled petroleum, 51,473 refined petroleum, 69,459 mineral oils, and 112,590 residues. The balance was distributed on the home market. Complaints are still heard that the export taxes hinder the natural development of the petroleum production, which nevertheless continues to increase year by year. The national maximum prices for benzine and motorine have recently been abolished by the Government. It is reported that the Ministry of Communications is about to form a commercial company with State participation, for the exploitation of the pipe lines, carrying petroleum products to the ports of Constantza and Giurgiu, and the statutes of the company have been submitted to the relative government committee for approval.

New Pipe Line.

A proposal is on foot to lay a new pipe line, of greater capacity than the present one, from Baicoi where the pumping station is situated, to Constantza. This should prove a great benefit to the industry as the transport facilities are at present totally inadequate to cope with the needs of the export trade.

Miscellaneous.

As from August 15, four places will be reserved in sleeping cars on the Simplon and Orient Express for second-class passengers. Hitherto no second-class sleeping cars have been available in Roumania.

A samples fair of Bessarabian products, chiefly cereals and cattle, is to be opened at Chisinau on Semptember 15.

NEWS FROM TURKEY.

The following item of news is extracted from a recent issue of the Angora *Ashkam*:—

The Russian aviator, who flew to Angora and in whose honour a banquet was given, said he considered himself lucky in being chosen to convey the greetings of the Soviet Air Confederation to the Turkish Air League. He wound up his speech with "Long live Turkish-Russian progress and friendship." Yevad Bey, the chief of the Turkish Air League, said that while the Turks were trying to free themselves from the fetters of European oppression, the Soviet were their only friends. The editor of the *Pravda*, who was present, brought the greetings of the Russian Press.

NOTES AND NEWS.

(Continued from page 253.)

also paying for huge quantities of American films, the quality of many of which is beyond my powers to satirise. That the public generally has begun to realise that they are not receiving their money's worth is becoming very evident, and therin lies the hope of a great fillip to the British film industry. I was present the other night when a particularly bad film was shown, and I noted with satisfaction that its termination was received in absolute silence.

Near East Markets.

PROMISING BULGARIAN HARVEST.

The following extracts are taken from the current issue of the monthly report of the Bulgarska Banka.

According to information received from the Bulgarian Ministry of Agriculture the harvest this year will be better as regards the quality of the grain that that of last year. The harvest in the North of Bulgaria will be at least as good as regards quality as that of last year. In the South, especially where there has been a shortage of rain this summer, e.g., in the districts of Bourgas and Stara-Zagora, the harvest will be, as far as quantity is concerned, slightly inferior to that of last year. Particularly in regard to maize, thanks to the late rains, there is promise everywhere in Bulgaria of an excellent crop. But the late rains have caused floods in certain parts of the country, resulting in rather severe damage, as on the banks of the Danube (at Ostrow, Lom, etc., in the Struma Valley, whose waters have overflowed the banks and heavily damaged the crops). Without entering into details of these losses it is sufficient to say that, altogether, the cereal harvest this year will be decreased by about 7 to 8 per cent.

The vines are practically everywhere in excellent condition.

The rose gardens have not blossomed as much this year as last, but the quality of the roses, as regards the yield of essence, is this year infinitely superior to that of last year. This year about 2,600 kgs of red roses produce one kg. of essence, whereas last year from 4,500 to 5,000 kgs. had to be used to produce the same quantity of essence.

Almost everywhere the fruit trees give promise of an excellent crop. However at Kustendil the yield of the famous prunes of the country, as well as that of apples, will be less abundant than it was last year. In the north of Bulgaria the first collection of honey has been made, resulting in 30 kgs. per hive. In the south the collection is later. The pasture land has everywhere in Bulgaria this year offered sufficient nourishment for the cattle.

During 1925 Bulgaria brewed 21,654,700 litres of beer, of a value of about 230 million leva. These figures show a decrease on the 1925 figures of 65,720 litres. The excise on this drink produced for the Bulgarian treasury in 1924 and 1925 a total of about 127 million leva.

In 1925 Bulgaria produced 2,472,172 litres of alcohol of which 917,975 litres were consumed in the form of various drinks in the country, 397,427 litres were transformed into vinegar and 324,427 litres were used in the form of denaturalised spirit. In addition 114,020 litres of alcohol were exported abroad in 1925. If these figures are compared with those for the year 1924 it will be seen that an additional 74,212 litres of denaturalised alcohol were used as fuel. This increase is the outcome of the large decrease in the tax on this product in 1925.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended August 21:—

The estimated arrivals of sultanas on the market since the opening of the season amounted to 1,880 tons, and the sales to date are put at 1,750 tons.

Closing prices Smyrna per cwt. c.i.f. London/Liverpool:—Type 12, 45s.; type 13, 48s.; type 14, 50s.; type 15, 53s.; type 16, 56s.

The market is quietly steady. Prices yesterday and to-day have reacted from the declining tendency so marked over last week and which extended into the beginning of this week. Arrivals over the next month will be at their heaviest stage and unless support comes in the way of a materially increased demand the position is likely to continue heavy over the near future.

The crop is estimated as about equal to the 1924 yield, but this is not borne out by the arrivals which over the past three years figure as under up to August 21:—1924, 4,460 tons; 1925, 790 tons; 1926, 1,880 tons. In some opinions it is believed that the crop is over-estimated whereas others attribute the restricted arrivals to opposition on the part of farmers to market their produce at present level of prices.

It will be observed that purchases to date total 1,750 tons, whereas shipments effected only amount to 650 tons. This is due to some shippers covering in and stocking fruit against their September engagements.

The first arrivals of figs came down to-day, but have not yet appeared on the market. The quantity is about 1,000 tons. The opening price will probably be fixed to-morrow. The quality is reported good.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Metal Cabinets and Safes.—The Department of the Survey of Egypt invites tenders for the supply of 80 metal filing cabinets and 12 safes for storing deeds. November 3. (D.O.T.)

Masonry Work, Etc.—The Inspector of Irrigation, Third Circle, 53, Boul. Ramleh, Alexandria, invites tenders for work at Kafr Bulin, on the Rayah Behera, Behera Province:—(a) Construction of masonry work for a lock, regulator, and subsidiary works. (b) Steelwork and ironwork for the lock gates, sluices, swing bridge and accessories. November 1. (D.O.T.)

Internal Combustion Engine.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection of one internal combustion engine directly coupled to a D.C. generator at Helwan les Bains Electric Sub-station. October 11.

Bagouria Canal Bridge.—Tenders are invited for the construction of the Bagouria Canal Bridge. September 11. (D.O.T.)

Steel Bridge.—Tenders are invited for the construction of a steel bridge over the Ibrahimieh Canal at Beni-Suef, under the lines of the Egyptian State Railways. October 11.

Safes.—The Surveyor-General of Egypt, Giza (Mudirieh), invites tenders for the supply of 12 metal safes and 80 metal cabinets for binders. November 3.

TURKEY.

Washed Cotton.—The General Administration of the Military Factories invites tenders for the supply of 50,000 kilos of washed cotton for use in the military powder factory at Bakirkeuy, Constantinople. September 15. (D.O.T.)

Oleum.—The Military Powder Factory at Bakirkeuy, Constantinople, invites tenders for the supply and delivery of 50,000 kilos of oleum. September 15. (D.O.T.)

YUGOSLAVIA.

Boat.—The Directorate of Coastal Traffic, Split (Spalato) invites tenders for a boat for lighting and signalling services and buoys. October 31. (D.O.T.)

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August 31.

The Stock Exchange is taking the various developments in the coal dispute quietly and the undertone of optimism persists. The gilt-edged market remains very quiet, but there is evidence of the speculative investor in several directions. In Argentine rails, for example, there has been a good deal of activity with advancing prices, based on the idea that the dividends to be declared next month will be on a satisfactory scale, as was suggested in this column a short time ago. The rubber share market, also, is experiencing a little more activity than of late, but movements are still uncertain. Oil shares are inclined to improve and there are signs of a recrudescence of activity in the tea share market, but tin shares are quieter after their recent spurt. On the whole, however, markets are as quiet as is normally the case in August, and a re-awakening of public interest can hardly be expected unless some satisfactory solution of the coal deadlock is arrived at.

How far the effect of the prolongation of the coal stoppage upon the foreign exchanges has already made itself felt it is difficult to say. The full effects have, however, probably yet to be felt, for when a settlement is effected a stimulus will at once be given to the import of raw materials, and while the export of coal will again be resumed, payment therefore will probably not begin to come in for some three months. There is thus likely to be more than the usual autumnal pressure upon the exchanges, and more particularly the American exchange on London, and it is, therefore, just as well that the position of the Bank of England in the matter of gold supplies is a strong one.

Austin Motors.

The details of the latest scheme of reconstruction of Austin Motors, Ltd., have been circulated to shareholders and it will, we imagine, be accepted. Previous schemes have contained proposals which did not appear fair to all classes of shareholders, but the latest plan apears to be equitable all round. The A. and B. shareholders are to get their arrears of dividend so soon as the funds of the company permit, and while the preferred ordinary capital is written down by 10s. in the £ the preferred dividend is doubled, thus giving them the yield they were entitled to expect. Their capital rights are preserved intact, for in the event of liquidation the preferred ordinary shares are to receive £1 for every £1 originally subscribed before the ordinary shares get anything. Until the arrears of preference dividend are paid, the preference shareholders will dominate the situation in the matter of voting; thereafter the preferred ordinary shareholders will have considerable voting strength, which will preclude the acquisition of control by any outside firm by purchase of the ordinary shares. The scheme, indeed, appears to safeguard the interests of all parties while at the same time strengthening the financial position of the company.

Progressive Australian Banking.

The recently published report of the Commercial Bank of Australia, indicates the favourable circumstances in which the Australian banks are operating. An all-round expansion of business and profits and a further increase in the total assets are recorded. The gross profits were nearly double those of six years ago. Indeed, since 1920 there has been such an expansion of business that it has been necessary to make a fresh issue of capital every year. Despite this increase of capital, the dividend has been maintained at 15 per cent., while a very powerful reserve has been built up. At the present price the ordinary shares give a return of approximately £4 18s. per cent. this somewhat low figure being doubtless accounted for in part by expectations of further progress. The Bank of New South Wales may be expected to participate in the profitable business offering in Australia and this bank also has consolidated its financial position. The present return on the ordinary shares is about £5 12s. per cent. The foregoing shares are fully paid. In the case of the Union Bank of Australia the ordinary shares are in denominations of £15, with £5 paid, and yield approximately £4 18s. per cent free of income tax.

"The City" Explained.

A recent book on "Modern Finance and Industry" by Mr. A. S. Wade, City Editor of the *Daily News* and the *Star* has attracted some attention because, in the main, it addresses itself to the reader who has no special contact with the technical side of the subject. Of the many reviews that have already appeared, every one speaks of the volume as readable, which is no small compliment to a book dealing with such apparently complex matters as the Money Market, the financing of trade, the interplay of money and trade, and so forth. Perhaps the readable character of the book is due in a measure to the author's frequent criticisms, which are stimulating if sometimes irritating. For instance, we note his reiterated contention that we returned to gold too soon and also by methods which caused an undue amount of dislocation of trade. Here Mr. Wade breaks a lance with the majority of City and orthodox economic opinion. Those who are on the side of the big battalions will deem him to be wrong. In any case, is the subject more capable of useful discussion? However, Mr. Wade's views lend spice to a book which is acknowledged to be a good outline of the City's purpose and activities. It is published by Sir I. Pitman, at 5s. net.

H.M. Representative at Sofia reports that quarantine restrictions have been imposed on vessels arriving in Bulgaria from Constantinople.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended August 10 amounted to £E8,717, making the total from April 1 £E107,433.

His Majesty's Consul-General at Galatz reports that the Roumanian Government have imposed quarantine restrictions on vessels arriving from Marseilles, which has been declared infected with plague.

The number of merchant ships entering Port Sudan harbour in June amounted to 65 of a net tonnage of 233,637. This compares with 62 vessels of 201,086 tons in June, 1925, and 56 vessels of 172,756 tons in June, 1924.

GREEK REVENUES.

The report of the International Financial Commission of Athens for the year 1925 states that the gross yield of the revenues assigned to the loans under the control of the Commission amounted to 2,534,911,390 drachmæ, of which total 707,872,718 drachmæ represents the additional resources allocated to the service of the Refugee Loan, the collection of which only commenced in 1925. The balance, or 1,827,038,672 drachmæ, represents the yield of the old assigned revenues, as compared with 1,459,207,711 drachmae and £19,547 in 1924. There is thus an increase of 367,830,955 drachmæ less £19,547, or a net increase of nearly 25 per cent.

This increase is partly due to an increase in consumption which shows a satisfactory development. Thus the consumption of salt has increased by 5 per cent., that of playing cards by 15 per cent., that of tobacco and cigarette paper by 20 per cent. and that of Naxos emery by 6 per cent. The total yield of these increases can be estimated at about 111 millions of drachmæ. But the greater part of the increase in the receipts is due either to the depreciation of the drachma during the year or to the increases in taxes and the prices of the monopolised articles which have resulted from this depreciation. Thus the increase in the Customs receipts, which total 178,793,216 drachmæ, is due to the increase from 10 to 14 of the co-efficient of conversion of the metallic drachmæ for the collection of the import duties The receipts from the stamp duty, which show an increase of 12,806,825 drachmæ have risen because of the increase in the monetary value of the transactions. The tax on the consumption of tobacco has been increased twice, which has added a sum of about 55 millions to the receipts under this head. The price of salt has also undergone two increases, giving an increase in the receipts of about 10 millions. The only article the receipts from which have not shown an increase is Naxos emery, and the reason for this is the decrease in the price which was lowered in March.

Shipping Intelligence.

SHIPPING AT KARACHI.

The Collector of Customs, Karachi, in his report for 1925-26 states that only, 516 steamers flying the British flag called at the port as against 639 in the previous year, the decrease of 123 vessels being due mainly to the slump in the export trade in wheat. The considerable falling off in the shipments of wheat and rapeseed also accounted for the decline in the number of Italian ships from 71 to 49. There was, on the other hand, an increase in the number of American vessels from 11 to 21, which was mainly due to an expansion in the import trade with the United States and partly to larger receipts of kerosene oil. It is noteworthy that 11 Japanese vessels visited the port as against three last year, the larger number being required to deal with the heavy export of cotton.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, September 5). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Port Said, Colombo, Madras, and Calcutta (London, September 4).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (London, September 8).

British India Line.—S.s. Dumana for Colombo, Madras, and Calcutta (London, September 11); s.s. Manora for Bombay and Karachi (London, September 18).

Cunard Line.—S.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, Fiume, also Corfu and Gruz, and Ancona if inducement (Liverpool September 18, Swansea September 21); s.s Brescia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Glasgow, Liverpool, Swansea, September 18).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 18); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 2).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, September 3); s.s. Nagoya for Colombo, Madras, and Calcutta (London, October 2).

Motors and Motoring.

By G. B. B.

Those readers who have the fortune or misfortune, whichever they may regard it, to live in London, and who at times have to leave their cars in such quiet backwaters of traffic as they may be lucky enough to come across, may find a small padlock a good investment. There have been, of late, an exceptionally large number of petty robberies from cars left unattended. These are not of the old-fashioned kind where some light-fingered person or other would saunter up to a car, snatch up anything he could and make off. Modern car thefts are far more carefully worked, and the chief object appears to be the acquisition of small tools, which find a ready sale in the cheap open-air markets. The thief must spend some minutes at the work, and probably poses as the owner, opening the lockers or tool wallets at his leisure. Of course any passer-by would take him for someone who had legitimate business with the car. Magnetos, carburetors, and also sparking plugs have been taken before to-day, but for some reason second-hand sparking plugs do not sell well and so are generally left alone. Years ago, first-class thieves were characterised as people who could take anything that was not too hot nor too heavy. The modern car-accessory and tool thief seems to enter that category.

Brooklands.

Almost from its inception I have known that desolate-looking site near Weybridge that, it was once hoped, would become a popular resort of the British public. I have watched it in what, speaking retrospectively, one might call its palmy days; and I shall never be satisfied with Brooklands until the entire track is remodelled and rebuilt.

That is the whole thing in a nutshell. I have inspected the track, have interviewed riders and drivers who use it and taken the opinions of experts in motor racing. I have taken an engineering view of the condition of the track, and I have no hesitation in expressing my honest opinion, which is that Brooklands is unsafe for really high speeds on the part of both motor cyclists and motorists. The condition of the concrete is such that racing motor cycles are largely off the ground, the "ripples" on the track are now so pronounced that a racing motor cycle really proceeds in a series of bounces. The strain imposed on the already strained drivers by this bumping, wheel spin and consequent shock is more than they should be asked to bear, and is a strain, moreover, which they would not be called upon to bear were the track as it might be. Let me give an instance. A competitor recently was about to fit a 3-ribbed, good, stout cover on his back wheel, a cover that would last easily for about 3,000 miles on the road. He was dissuaded; expert riders assuring him that the cover would not last 15 laps at Brooklands. Why? Simply because the wheel spin, resulting from the continuous series of bumps, would have been such that every time the wheel came back on the track so much rubber would be ground off that the tread would be gone in a few minutes. I say nothing about the banking being insufficient or unsafe for motor cycle racing, but I do say that the track should be in such a condition that a competitor may be able to give his entire attention to his driving and his machine and not have to be confused and bewildered by being subjected all the time to a series of rapid and unnecessary shocks that in time, I should imagine, must have the effect of deadening and tending to stun the brain. As for Brooklands for car racing, one of our most famous racing drivers told me emphatically that he did not consider Brooklands safe for really high speeds: that he would never let a car all out at Brooklands and that he did not think it would be wise for him or anyone else to do so.

As a matter of fact Brooklands was built before the days of high speeds, and now that those days are here it should be rebuilt to meet modern conditions. And in the meantime the Brooklands executive should fix a maximum speed for their events which should not be exceeded by any competitor!

The Clyno.

I have not had experience with the Clyno car and so can say nothing regarding it at first hand, but a friend of mine is highly enthusiastic about it, saying that it meets his needs in every way and is all that he could desire. I gather it is a good hill climber, maintains a high average speed, is light on tyres and economical of petrol. And, as he says, what can a man want more than that? And so, although I speak without any personal knowledge of the car, I thought I would pass on his opinion to my readers.

The Industry.

My recent remarks as to the present condition of the British motor industry, particularly as regards the manufacturers of light cars, have received considerable approval and have received attention in some unexpected quarters. I did not overstate the facts in any way, nor did I place undue emphasis on the seriousness of the state in which the industry may find itself if it does not bestir itself in the direction of capturing foreign markets. As I have shown, not once nor twice, but dozens of times, the markets we need are awaiting us in the Near, Middle and Far Easts. All that our makers have to do is to make their goods known in those markets, but, for some inexplicable reason, that appears to be just the one thing they will not do.

Two hundred and thirty-eight tons of senna were exported from the Sudan in the first six months of 1926 as compared with 468 tons for the same period of 1925.

The report of the Central Economic Board of the Sudan Government states that the final yield of the Gezira Irrigation scheme amounted to 4.79 kantars per feddan. At least three-quarters of the cotton is estimated to be better than "fully good fair" standard.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended August 19 state:—

Since our last report the futures market has been quiet but barely steady. The week's summary of price movements is as follows:—Sakellaridis: November, 28.68 dollars, 0.40 dollars up; January, 28.25 dollars, 0.28 dollars up; March, 28.05 dollars, 0.28 dollars up. Ashmouni:—August, 21.15 dollars, 0.15 dollars up; October 20.39 dollars, 0.34 dollars up; December, 20.53 dollars, 0.27 dollars up; February, 20.73 dollars, 0.27 dollars up.

There is very little to report on the market during the past week. The demand from abroad continues to be poor, spinners apparently buying only their immediate requirements. We hear of depleted stocks everywhere, but with the demand as it is for yarn and cloth it is not astonishing that spinners should hesitate to buy ahead. The better prospects for a settlement of the coal strike in England have made people somewhat more optimistic, but even the settlement of the unfortunate trade dispute will not help things much while the demand for the finished article remains so poor—and indications of any early improvement in that section are scarce and hard to find.

The November premium over January has increased to 43 points on the fact that the recent cool weather has slowed down the maturity of the crop, but we cannot think that the demand for early cotton will be sufficient to maintain November at that premium.

The week's receipts amount to 12,363 krs. against exports 62,844 krs.; the stock stands at 1,342,364 krs.

Spot:—The demand mentioned in our last report still continues and but for the fact that suitable cotton is in such poor supply, the week's turnover would have been larger. Spot sales amount to about 7,100 bales, of which we estimate 3,500 bales Sakellaridis, 3,000 bales Ashmouni, 500 bales Zagora, 50 bales Pilion and 50 bales White.

Sakellaridis.—All grades have been dealt in and there has been a fair business done in low grade cotton. Good style cotton in any grade gets daily more difficult to find, and it is this fact which has to some extent restricted business. Spot differences remain about the same as last week.

Ashmouni and Zagora.—There is still a good demand for these varieties and business has been done in all grades with the exception of Good and above which are rather neglected. Spot differences are more or less unchanged.

Pilion.—A few lots of Good have changed hands at about last week's premiums.

Brown.—No transactions have been recorded.

White.—A retail business has been done in Good Fair and Good Fair/Fully Good Fair with much change in differences.

Crop 1926.—The reports from our up-country branches and agencies show that the recent cool weather has had some effect on the crop, and the maturity has been put back by about a week. Apart from this delay, nothing of an unfavourable nature has happened to the crop during the past week, but it is well to remember that the longer the crop is in the fields the longer it is subject to pink boll worm attack. The attack up to the present is normal, 20 to 30 per cent. in the South Delta and 10 to 20 per cent. in the Central and North districts; the Sakel plantations are attacked, as usual, more than the Zagora and Pilion. Temperature has been higher and more regular during the past week with an increase in humidity—which is about normal August weather. No new cotton has arrived at Alexandria during the week, but some of the ginning factories of Upper Egypt are now getting to work, and the arrival of new crop Uppers is now a matter of days.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended August 25:—

Egyptian Futures.—Sakel Contract.—Following on our last report and just prior to last Monday's Bureau a series of quiet, rather featureless markets occurred. There was the customary evening-up by the smaller operators (in this case mostly shorts), but this was more than offset by Continental selling orders, and, apart from this, the trading was mainly of a professional character and the market showed a sagging tendency. On Monday evening, at Liverpool's first close, Egyptian futures showed a decline of from 23 to 33 points, and there is no doubt that a considerable short interest existed at this time. The Bureau figure came as a complete surprise to the majority and resulted in a sharp advance of some 30 points, which was carried still further on the following day under the influence of the "bullish" American markets and cables from Egypt announcing crop damage and the Egyptian Government's proposal to limit the cultivable acreage for next season's crop to a third. As we write, however, the first "bullish "effects of the Bureau report show signs of wearing off, and although it is recognised that as far as the Egyptian crop is concerned there are still two or three rather vital weeks to get over before full success can be assured we doubt if anyone on this side really believes that a shortage of cotton of any kind can be seriously considered this year. At to-night's close, values show an advance since our last report of from 25 to 17 points.

Upper Contract.—Quiet and featureless, following closely the course of the American market. To-night's close shows an advance of 25 to 22 points since our last report.

Egyptian Spot.—Prior to the Bureau report buyers of spot cotton had shown rather more activity, although it was noticeable that the quantities purchased were still of small dimensions. A slight increase of interest in forward cotton was also noticeable. On the appearance of the

Bureau report on Monday evening, however, consumers were taken by surprise but, far from rushing in to purchase, as might have been expected, from a trade whose "shelves were swept clean of cotton," the following morning there were very few inquiries for actual.

The Sakel inquiry has been chiefly concerned with F.G.F. cotton at from 15½d. to 16d., and interest in the better grades of Sakel continues to increase slowly. Quite a brisk little trade has taken place this week in cotton from 17¾d. to 18¼d. Uppers at from 11¾d. to 12d. have continued in good request, and some indications of the demand turning towards the higher grades has lately been apparent. Interest in Sudan cotton has fallen off, and what little business there has been was concerned chiefly with the White variety at from 50 to 350 on. A small business has been done in Pilion cotton at improved rates, and some inquiry has been received from time to time for White Egyptian at 15.00d. to 16.00d. Interest in the low and inferior grades of cotton has not been quite so marked recently.

Forwardings to spinners for the week ending 20th inst. were returned as 6,149 bales. Quotations of Sakel have been advanced 35 points, except Extra Fine, which remains unchanged. Quotations of Upper have been advanced 25 points. F.G.F. Sakel to-day, 16.05d. F.G.F. Upper today, 12.35d.

COMPANY NOTES AND REPORTS.

CENTRAL BANK OF INDIA.

The report of the Central Bank of India shows a net profit for the half-year ended June 30, 1926, including Rs. 3,79,506 brought forward, of Rs. 16,45,017. The ad-interim dividend at 10 per cent. per annum, free of income tax, for the half-year absorbed Rs. 8,40, 660, leaving to carry forward Rs. 8,04,357. Though the general trade conditions continued depressed during the half-year, the directors are glad to be able to say that the business of the bank has shown satisfactory progress, as will be seen from the following figures:—Current, savings, fixed deposits, etc., June 30, 1925, Rs. 14,82,57,000; do. December 31, 1925, Rs. 14,15,67,000; do. June 30, 1926, Rs. 15,93,33,000.

Between July 1 and August 1 12,000 people have emigrated from Syria.

A commercial agreement between Turkey and Bulgaria comes into force this month.

The exports of gum from the Sudan in June via Port Sudan amounted to 10 tons of bleached, 1,844 tons of hashab and 157 tons of talh of a total value of £69,633.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The New Regime in Greece.

The situation in Greece appears to be developing on satisfactory lines. General Kondylis refused to stand on one side, leaving the politicians in sole control; but beyond this insistence upon his privileged position as maker of the revolution that ended the Pangalos dictatorship, he has shown a proper appreciation of the advantages of constitutionalism. A difference of opinion has arisen among the politicians over the advisability of the introduction of proportional representation into the electoral system. General Kondylis's Government, however, favours it, and is able to carry its point by refusing to tamper with the Constitution as prepared by the Parliamentary Commission appointed by the last Constituent Assembly. The circumstances in which that Constitution was evolved and was finally promulgated do not bespeak much sacrosanctity for it, and the new Government has not hesitated to remove the emendations inserted by General Pangalos, before publishing it for the benefit of the electorate. As, therefore, the system has to be tried this time, it is to be hoped that it will be given a fair and full trial, in order that the Greek people may have an object lesson as to its merits or demerits. Behind the controversy over proportional representation lurks the question of Greece's status as a republic or a monarchy. The elimination of the dictatorship seems to have destroyed the obligation which General Pangalos was at pains to enforce upon the Greek people, that, whatever their views on the subject, they must honourably refrain from all agitation, whether in favour of a change or on the ground that the republic was in danger.

Politician or Soldier?

General Kondylis's position, it is to be feared, has not been strengthened by the impression that his views on social reform are in advance of those of the majority of the nation. He has already found himself obliged to demolish the assertion that he is a Bolshevist at heart; but he does not disguise the fact that he is anxious to remove some of the anomalies that make for social discontent. His experiment will be watched with greater interest, as he finds himself called upon to decide whether the politician or the soldier in him shall predominate. If the former, then he must prove himself a match for the politicians, or be prepared to accept all the ups and downs of a politician's life. Greek history since the War is not conspicuous for the political stability usually necessary for political achievement, until the unconstitutional régime introduced by General Pangalos. The nation, however, is so unanimous in condemning the dictatorship, that it may be that under the guidance of General Kondylis the politicians will begin to work less for their own hand and their party's interests, and more for the country's advantage. An early test of the Prime Minister's moral courage will, perhaps, be his ability to keep the inquiry into the dictatorship within the strict limits of unexceptionable judicial procedure. It was inevitable that with the overthrow of General Pangalos, General Plastiras should be allowed to return to Greece. His first move was to proclaim his intention of seeing that the ex-dictator is brought to book, and he appears to make his attitude towards General Kondylis's Government conditional on the manner in which the latter falls in with his views of the proper way of ending once and for all the Plastiras-Pangalos vendetta. Greece, it is to be feared, will yet be troubled by this stormy petrel, in spite of his promise to hold himself aloof from politics.

On Foreign Service.

One of the first acts of the new Greek Government has been to apply to Great Britain for the loan of British officers for instructional purposes in the Greek Navy and Air Force. As it is not many months since the British Naval Mission was abruptly dismissed on grounds of economy, the action of the new régime, which has naturally created a good impression in this country, has given rise to the idea that Greece may be contemplating an invitation for a fresh Mission. It may be that the former Mission was held by ambitious officers in the Greek Navy to restrict their liberty of action; but there was nothing to suggest that its departure was regretted by the Greek

Digitized by Google

people at large or that the British Legation on behalf of the British Government pressed energetically for its retention. The experience of other countries at the present moment raises the question of the relative advantages of the employment of individuals and the appointment of a Mission. It is not difficult to understand that employment "on his own" for a period with a foreign Government may appeal to the keenest officer in any of the three Services. When, on the other hand, he goes out as a unit in a Mission, he runs the risk of being regarded as a "misfit" at home, and cannot be quite sure that his colleagues will have the same devotion as he has for team-work. He will reflect that the domestic regulations imposed on the Australian Test Team this year are not enforced in the case of Service Missions, with the result that team-work assumes often a dual gender. A grave prejudice is done to British prestige when it becomes known in a foreign country that the representatives of Great Britain in any official capacity are either divided into two hostile camps or are at cross-purposes with the British Legation. Therefore, whenever a formal Mission is under contemplation it cannot be too strongly stressed, especially in regard to the East, where personality counts for so much and the foreigner in the land is always conspicuous, that appointments should be made only after the most careful selection, having regard to personal as well as technical qualifications.

Bulgaria and Her Neighbours.

The Governments of Roumania, Yugoslavia and Greece were not well advised to interfere in the loan that has been offered to Bulgaria by the League of Nations. In the first place, there could be no question of the three States' being called upon to provide any part of the loan. The League could be relied upon to look after the interests of the lenders, and it would have been an easy matter for the three Governments to prime any supervisory body with the points in regard to which they might exercise an especially close scrutiny. On the other hand Western Europe, and particularly financial interests in the West, are inclined still to regard the Balkans as a whole, and not to draw any marked distinctions between the component parts. A manifestation of sweeping distrust as between one country and another soon loses for the West its distinctive details, and is apt to be remembered merely as a generality to the effect that the countries in question do not trust one another, and, therefore, they cannot expect to be trusted by others. The net result is that a fresh obstacle may be put in the way of a loan to Yugoslavia, Roumania or Greece as to Bulgaria herself. As for the exchange of Notes between the three Governments on the one hand and the Bulgarian Government on the other, it must have been evident to the former that, as soon as their Note was whittled down from an ultimatum to an admonition, the honours of the verbal duel would rest with the party that had the last say.

The Next Move?

As a rejoinder in debate the Bulgarian Note to the three Governments commands intellectual respect, and it will be of interest to see whether any reply is attempted. Again, the refusal of M. Liaptcheff's Government to accept the Refugee Loan, if States which are neighbours of Bulgaria are permitted to exercise control, is an awkward move for those neighbours. No less, indeed much more, than the League itself they are concerned to see Communism deprived of its forcing ground in Bulgaria by the settlement of the refugees on the land and their conversion from dissatisfied unemployed to hard-working producers. The League, having appreciated the necessity of doing something for Bulgaria, is not likely to be deterred by a desire to introduce further friction into the Balkans. For those who hold that the Bulgarians cannot be trusted even to act in their own interests, there should be only one policy; it is to wait until the tortoise puts out its head and then to strike it off, if they can. So long as the tortoise refrains from showing its head, the rest of the world is too busy to pay much attention to harrowing tales about its being a ferocious beast, feeding exclusively on innocent lions and tigers.

Albania's Thorny Path.

Albania is causing grave offence in certain quarters. The country has not had a revolution for nearly two years, in spite of regular announcements every few months that a revolution has broken out and serious fighting taken place. Italian discontent with any progress made by the Albanians themselves was exemplified by a communication from the Italian Minister, which was interpreted as an ultimatum demanding the establishment of an Italian Mandate over the country. But the incident was, happily, explained away, on the ground that it had arisen either through a mistake in the Tirana dictionaries or in the Minister's cypher. Some allowance has to be made for the Italian Minister to Tirana, because Signor Mussolini does not believe in standing still. For some time after Ahmed Bey Zogu's accession to the Presidency Italian economic penetration made such headway in Albania that an Italian Mandate or protectorate seemed an inevitable corollary. The Albanians, however, appear to have pulled themselves together in time, and Italian penetration had to record very much slower progress. Little wonder, therefore that Signor Mussolini's representative became anxious for his own position. It is unfortunate that Albania cannot be given a fair opportunity to trying to make good on her own account. There is reason to suppose that, if they were left to themselves, the political opponents of Ahmed Bey Zogu who have taken refuge in Italy would contrive—at least, most of them—to make their peace with the President. They have had one or more notable defections from their number, and everybody with the interests of Albania at heart would urge them to come to terms with Ahmed Bey Zogu and so to pool the ability that they possess for the general good of Albania. There can be no doubt that Mgr. Fan Noli would be of more use to his country, if he had been more of a prelate and less of a politician. He is now reported to be undertaking a mission to the United States, presumably to explain how badly the President is behaving and how well the Archbishop would conduct himself in his place. Yet Mgr. Fan Noli had his innings and proved himself full of shortcomings as an administrator. Zogu Bey has at least to his credit that the country has been freed from brigandage and is progressing. If the oil now located by the Anglo-Persian Company justifies expectations, Albania may secure a very necessary addition to her annual revenue, for development on modern lines is a costly enterprise; but we would appeal to all her sons to sink their differences and to work for the common cause.

DANGER SIGNALS FOR GREECE.

Quite in the approved style of the President of the Turkish Tribunal of Independence the new Greek Minister of Justice, before any trial can be instituted, has passed judgment on the whole of the previous Cabinet and indicated the penalties that are likely to be imposed on individual Ministers. If his threatenings, which sound very strange to Western conceptions of justice, should be carried into effect, it is clear that Greece is once more going to allow political blood-lust to run riot and to reopen the cleavage in the nation which has wrought such harm in the recent past. The intentions attributed to the Government are to bring to immediate trial all the late Ministers, to deprive those Ministers of their political rights, to prosecute them for infractions of the Constitution committed by them during their term of office, and to hold them responsible in their private fortunes. The mere enunciation of such a policy, prejudging as it does a whole body of men unheard in their own defence, is calculated to diminish the sympathy instinctively felt in Europe for the régime in Greece. The rule of General Pngalos was, admittedly, a dictatorship. In the course of his tenure of office he may have committed many foolish and arbitrary acts, and the interests of the country may require that the salutary among those acts should be distinguished from the harmful by the dispassionate investigation of a court of law. It is in keeping with the exigencies of a mass meeting in Constitution Square, Athens, that one speaker should vie with another in denouncing the fallen dictator; from the new Government, and in particular from the man who is responsible for the administration of justice the country has the right to expect a more judicial attitude. To the outside world the lives and fortunes of individual politicians or soldiers in Greece may seem matters of no moment; but in Great Britain at least there is a personal attachment to Greece as a country, and it comes as a shock to find the Greek nation slipping back into Oriental methods and practices, and content with political or judicial procedure that is almost primitive in its savagery and vindictiveness.

General Pangalos, it is possible, may not be known to half a dozen Englishmen outside his own country; there has certainly been nothing in the published reports of his dictatorship to catch the popular fancy in Great Britain. Yet it is recalled that for fourteen months he was the actual representative, for the world at large, of the Greek people. His seizure of power was acquiesced in by the nation as a whole, and there was nothing to suggest that a considerable feeling of relief was not experienced in Greece when he embarked on a régime of freedom from the curse of excessive politics and allowed the nation more time to attend to its business. The promise of the early days of his rule, it is true, was by no means fulfilled. His acts were not always conspicuous for wisdom; the hostility between him and the political leaders was unedifying and derogatory to both sides. But the dictatorship had some signal achievements to its credit, for which Greece has reason to be grateful. Its foreign policy was conspicuously successful in that it established good relations between the Greeks and their neighbours, and relieved them to the great extent of the burden of anxiety from which they had not been wholly free at any time since the Armistice. The masterful methods of the dictator also enabled certain public works to be undertaken which had been delayed for many decades, mainly as a result of political jealousies. It is not our purpose, however, to weigh in detail the merits and demerits of General Pangalos. These may well form the subject of inquiry in Greece and the ex-dictator, no doubt, will be given an opportunity to make out his own case. What we would impress on the new Government and on the Greek people as a whole is that at that investigation not merely one or more Greeks, including the one-time Head of the Nation, will be on trial, but also Greece herself. The new Minister of Justice is prepared to model its procedure on that of Angora in its dealings with its political opponents. If he should do so, he will inflict on Greece a blow from which she will take some time to recover in the eyes of the world, even should the Greek people prove craven or supine enough to look on while different groups wage war on one another and bring the name of Greece into disrepute.

The whole idea of a dictatorship is abhorrent to the British mind, and for this reason the régime of General Pangalos was regarded from the first with misgiving, even if there was a tendency to give the dictator full credit for the acts which seemed to be prompted by a genuine desire to promote his country's good. For a dictatorship, however, responsibility obviously attaches to the dictator. It is the alleged intention of the Government of General Kondylis, who has done exactly what General Pangalos did at the outset, and whose every act, until his exceptional position is terminated, is liable to be challenged in its turn as unconstitutional, to hold responsible with their lives and—more ominous still—their "fortunes" those other Greeks, who, confronted with the *fait accompli* of the dictatorship, may merely have sought to temper it, as best they could, to the country's needs. If the new Minister of Justice carries out his threats, the late Minister for Foreign Affairs—to take one concrete example—whose short tenure of office was marked by the few successes in foreign policy that Greece has had for many decades, stands to be outlawed and pauperised to slake an oriental thirst for political blood. Every friend of Greece abroad will denounce such procedure. Let General Pangalos be required to render an account of his stewardship, in order that a balance may be struck between any harm and any good that he may have done; but if the Tribunal is to pass sentence on those who made themselves responsible for the routine administration, it may as well include in its holocaust of spite and tyranny all those who recorded their vote in favour of General Pangalos at the Presidential Election.

Liubliana, September 1.

Elections in Serbia and Montenegro.

On August 15, communal elections took place throughout Serbian and Montenegrin territory, the three years' term of office of the Communal Councils elected in 1923 having expired.

The outcome of these elections was looked forward to with the keenest interest. They were taking place in regions considered the strongholds of the ruling Radical party, and the question at issue was whether the Radical Party still enjoys the full confidence of the population there. This problem was all the more important as the regions in question are also the chief province of the strongest of the opposition parties, to wit, the Democrats under the leadership of M. Liuba Davidovitch. One reason why every one interested in internal politics (and who is not, in Yugoslavia?) was anxious to know, how far, if at all, the proportion of strength between the two parties had changed, is, that of late one has again been hearing of possibilities that the existing "R.R." Government, which consists of the coalition of the Radical and Raditch parties, might be replaced by a coalition of Radicals and Democrats.

Furthermore, the communal elections in Serbia and Montenegro were considered important as a trial of strength for the various groups within the Radical Party. It is known that there are differences between the Liuba Jovanovitch, the Pashitch and the Central groups, the last-named of which is headed by the chief members of the present Government, notably the Minister for Internal Affairs, M. Maksimovitch, and the Prime Minister, M. Uzunovitch. Truth to tell, communal elections do not afford the best criterion for clearing up internal party relations, because the determining factors in them are in the first place of an economic nature, and above all local interest and even local personal considerations.

The outcome of the communal elections in Serbia on August 15 brought one great surprise. The town of Belgrade, the capital of the Kingdom of Serbs, Croats, and Slovenes, whose Communal Representation has hitherto always been preponderantly Radical, was lost to the Radical Party, captured by the Davidovitch Democrats—and Dr. Kosta Kumanudi, who headed their list, the former Minister of Finance, is now Mayor of Belgrade. Yet, on closer consideration, this victory reveals itself as due, in the main, to chance, as appears from the following figures. The Democrat list obtained 6578 votes; the official Radical list 6226; the Radical dissenters' list (Bobitch) 2571, and the Independent Democrats obtained 718, the Communists 744, the Socialists 348 votes—total 17, 215 votes.

As at communal elections the party which scores a relative majority is allotted two-thirds of the mandates, the Commune of Belgrade went to the Democrats. But it is obvious that the Radicals owe their defeat solely to their dissensions. On the whole, position as between the two parties has not greatly altered, since in 1923 the Democrats obtained 4979 votes, and the Radicals 6405.

For the rest, the outcome of the elections has left the Democrats rather stronger in the towns, whereas the Radicals have absolutely held their own with the peasantry; so that one cannot speak of their having lost ground in general. Also their internal dissensions did them less harm than was anticipated—except in Belgrade. There were elections in 2242 communes, and the Radicals scored a majority of about 75 per cent. of the total. The remainder has fallen mostly to the Davidovitch Democrats.

The political situation in Yugoslavia has, therefore, suffered no change by the communal elections in Serbia and Montenegro. The Radical Party, now as before, may safely rely upon its constituencies.

ALBANIA.

Tirana, August 26.

Commercial Treaty.

Commercial conventions have just been concluded between Albania and Germany, and between Albania and Czecho-Slovakia. These conventions are of a provisional nature, pending the conclusion of definitive treaties. They were signed at Tirana between the respective representatives of Germany and Czecho-Slovakia and the Albanian Minister for Foreign Affairs, and sanctioned by presidential decree. They stipulate that the goods imported from these two countries into Albania, or exported from Albania to Germany or Czecho-Slovakia shall, on entry to each country, be subjected to the customs tax of the most favoured nation.

The mission, referred to in my letter of July 3, which went to Athens, signed there a treaty with the Hellenic Government concerning the nationality of the inhabitants of the two countries. The commercial, consular, and other treaties were in progress when the political crisis in Greece interrupted the negotiations.

Petroleum.

These last few weeks the announcement of the discovery of petroleum in Albania has caused some stir. Every day

news concerning this find has been broadcasted to the four corners of the earth. Actually on July 20 a borehole of the Anglo-Persian Oil Co. gave positive results. It was located at Patos, to the extreme north-east of Valona, where operations began on June 2, 1925, and the boring reached a depth of 272.50 metres, with a tube at first 508 mm. in diameter, next 457 and lastly 405 mm. At first the petroleum appeared at 60, and after 4 days at 40 metres below the surface of the soil, denoting a rise of 232.50 metres in the tube, without, however, issuing from the ground.

The oil has proved identical with Roumanian petroleum and, according to certain calculations, should yield 40 tons per day.

However the quality not having been found satisfactory (the petroleum containing too much bitumen and water) the engineers have decided to continue the boring until they reach a depth of 500 m. in order to examine the bed which, in all probability, will contain a better liquid, metres. Apart from these two wells there are four others, three belonging to the Italian State Railway concession, and the fourth to the Societa Italiana Miniere Selenitza, The three first borings are at Mifol, Selenitza and Pishkat, and that of the latter at Penkova. The boreholes have not yet given any positive results.

The Standard Oil Co., the French Company and the Rushton concession have not yet taken any soundings.

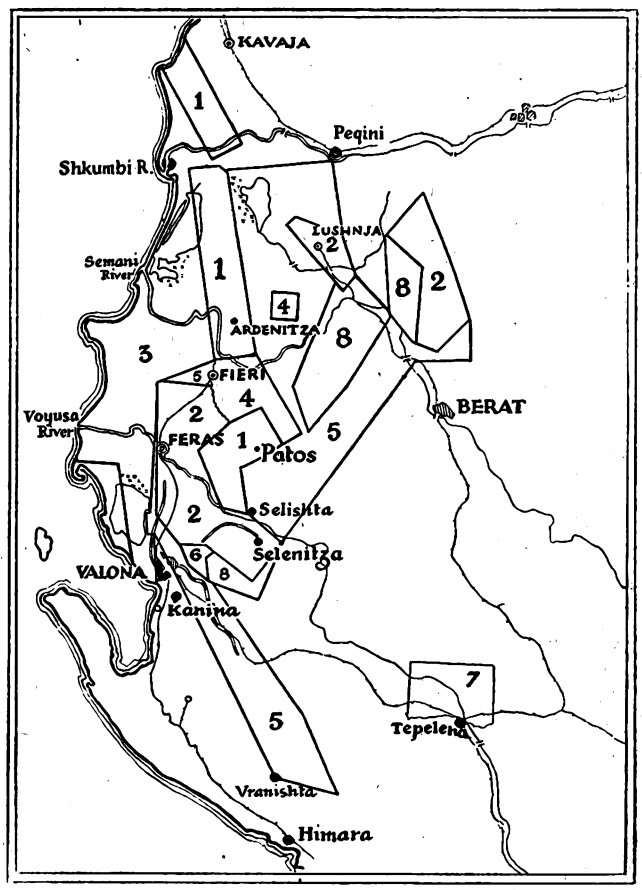
Our readers will notice on the map, besides the petroliferous concessions, those at Puka (east of Scutari), copper and arsenic mines and silver-bearing lead; the Tepeleni concession (given to an Italian company) which is rich in coal; the forest concession given to a German company (Inag) where the oak trees in particular are being worked.

In the Korcha (Koritza) region the reader will first note a spot marked 5 representing a French concession for petroleum. Beyond this zone there are 3 circles indicating the situation of the lignite concessions. This fuel exists in abundance as an outcrop in the vicinity of Koritza, but, unfortunately, is very crudely worked.

MAP OF ALBANIA,
showing concession areas (shaded).
For explanation of figures see next column.

since traces of a better oil have been found at ground level at Visok, not far from Patos.

I thought it might be useful to include a map of Albania on which are marked the different concessions. It is an unpublished map, so that the readers of THE NEAR EAST AND INDIA will be the first to see it. This map shows, to the north of Patos and beyond Fieri, Ardenitza, where the Anglo-Persian Oil Co. have made their second bore hole, reaching a depth, at the present moment of 920



MAIN AREA OF OIL CONCESSIONS.

Cairo, August 29.

The Business of the Chamber.

In order to expedite business, the Chamber of Deputies has decided to sit on six evenings a week. Four will be devoted to the Budget and two to other business. In this way it is hoped that the Budget may be finished with by September 10, when Parliament will rise and the Government make a belated move to Alexandria. At the most their seaside stay this year will not exceed two months, for Parliament will reassemble in the middle of November.

Business in the Chamber during the past week has consisted of clearing off the arrears of a large number of questions to various Ministers, disposing of the remaining chapters of the budget of the Ministry of Public Works, passing the budget of the Ministry of Agriculture in a single evening (this was a "record"), and dealing with the greater part of the budget of the Ministry of Communications.

The Gebel Aulia Dam Project.

The most interesting features of the Public Works' budget were the exactly opposite statements, within a few minutes of each other, by the Minister (Osman Moharrem Bey) and the Premier, on the Government's policy in regard to the Gebel Aulia dam project, and the disclosure of plans for extensive improvement schemes in Cairo.

The Minister of Public Works was reported as stating, quite definitely, that the Government had abandoned the Gebel Aulia project. This declaration led to something approaching an uproar, in which Ismail Sidky Pasha was heard to protest loudly that Moharrem Bey, when explaining Government policy to the Chamber's Finance Commission, had stated that the Gebel Aulia plan was only suspended, pending examination of the alternative proposal for the further heightening of the Assuan Dam. The Finance Commission's report, said Sidky Pasha, had been based upon the Minister of Public Works' explanations, and it was disconcerting, to say the least, to hear him now tell the Chamber exactly the opposite to what he had told the Commission. At this point Adly Pasha Yeglen intervened in the debate to declare, in categorical fashion, as head of the Government, that the Gebel Aulia project had not been given up, but merely postponed until the Government had had an opportunity to examine thoroughly the suggested alternative of heightening Assuan Dam.

Oseman Moharrem Bey has since explained, in an interview given to *Al Siyassa*, that he was misunderstood in the Chamber. When he said that the Government had abandoned the projects now before the Ministry he had not meant to refer to Gebel Aulia, but only to proposals for the reclamation of lands at present uncultivated in the northern Delta. It may have been so, but the Chamber was unanimous in thinking that the Minister *had* referred to Gebel Aulia. Moharrem Bey has not been very fortunate in his appearances in the Chamber, and there has been some talk of his resigning his portfolio. Were he to do so, he would be repeating his action when a member of Ziwar Pasha's first Cabinet, from which he resigned within a few weeks of its formation.

Improving Cairo's Streets.

A million and a half pounds are to be spent within the next three years on widening and improving streets in the purely Egyptian quarters of Cairo. Shareh Khalig el Masri, a thoroughfare connecting old Cairo with the Midan Bab el Khalk, just below the Citadel, a remarkable street, down which few visitors to Egypt ever venture, is to absorb a large part of the projected expenditure. Shareh Khalig el Masri is distinctly a link with the past. It is so narrow that its single tramway-line seems to occupy nearly the whole width of the street and even the almost vertical Egyptian summer sun penetrates the narrow crevice only for a few hours each dav. It must be one of the most unhealthy streets in Cairo, and its widening is certainly long overdue. But, when so large a sum of money is to be spent on this work, it is regrettable to have to record that not a piastre is being allocated for public parks or gardens in the current budget. During the last few years the enormous rise in land values has resulted in the disappearance of practically every private garden in the centre of Cairo, while the Government has built law courts and other official premises on several tracts which were formerly used as public gardens. The result is that Cairo, with the exception of Esbekia Gardens, is without a single "lung." The inconvenience, to put it no more strongly, to poorer-class families is very great. Well-to-do folk are usually members of one of the sporting clubs, or can afford to send their children daily to the public gardens at Giza or Gezira. But a working-class woman can neither afford the daily expenditure of even the sixpenny return 'bus fare to Giza (if she has several children it is impossible for her to take them by 'bus), nor can she push her perambulator the two miles or more to the gardens. With the dense motor traffic, the centre of Cairo is now wrapped in a pall of dust all day long, and in this insanitary fog the children of poorer families must spend all their time, thanks to the lack of parks or public playgrounds within reach. The Tanzim Administration has entirely neglected this matter in the past and, as the present Budget shows, is still not alive to the pressing need for open spaces in Cairo, which is rapidly becoming a depressing wilderness of bricks and mortar.

Mudirs, Omdas, and Sheikhs.

Some alarm has been caused by reports of the provisions of the draft law changing the system of appointment of omdas and sheikhs of haras (districts) which the Interior Affairs Commission of the Chamber of Deputies is to lay before the Chamber this week. Omdas and sheikhs of haras occupy peculiar positions. Although not really Government officials, since they receive no salaries, they form a most important link in the present system of administration, being, indeed, the channel through which the Government maintains contact with the population. Hitherto mudirs of provinces have been given very wide disciplinary powers over omdas and sheikhs, and although the mudirs have at times certainly abused their powers, it has never been disputed that the control which they have exerted over their subordinates has been necessary and, in the main, salutary. Now it is proposed that the mudirs shall have no voice in the appointment and practically none in the dismissal of omdas and sheikhs. Elected by their districts, which in practice would mean by the local committees of the political parties dominant in their districts, omdas and sheikhs, if accused of malpractices, would be dealt with, not by their mudirs, but by disciplinary councils on which the mudirs would have one vote out of nine. It is not surprising that provincial officials feel that the enactment of the proposed law would make their positions impossible and reduce the administration to a chaotic state, in which all real authority would rest with the central committee, in Cairo, of the temporarily dominant poliitcal party.

The gradual introduction of a system of local government giving the fellaheen a voice in the control of local administration is sympathetically regarded by almost everyone. But it is felt that the present proposal goes a great deal too far.

SOME IMPRESSIONS OF IRAQ.—II.*

(From a Correspondent.)

Early in the New Year I was invited to go, as a spectator, to a pigsticking meet which, as things turned out, gave me the chance of comparing the desert in wet weather with Baghdad under the same conditions. On the whole, the city is decidedly worse. The sky was threatening when we started, but our party decided to risk it, so off we went, packed into four cars, to the rendezvous, forty miles away, where we found our horses (sent out the day before) and the local Sheikh to welcome us. A drizzle had begun when we drew the first cover—of dead burdock as high as one's knees in the saddle. The whole field, strung out in a line, walked it and only put up a wild cat and a jackal. The horses' tails were matted with burrs, and some got in under the saddle, which made my mount rather lively until I discovered the cause. The next cover consisted of bushes of camel thorn, huge tussocks of grass, as tall as the Pampas kind, and juniper scrub. This one also proved blank.

Then we turned for home, as it was beginning to rain in real earnest, and the hard brown desert became greasy and slippery, so that the horses could hardly keep their feet. I got off and walked, only to find that my horse was more sure-footed than I was. One of the riders came down at a walk, before we reached the cars—and then the fun began. I was a passenger in a car which had chains on the back wheels; we were fortunate, for the others were skidding about in all directions—travelling sideways as often as not!

The so-called roads are merely beaten tracks across the desert, often lower than the surrounding country, and full of holes and inequalities. Now, under dripping skies, they were covered with a sheet of yellow water. The flat desert on either side is just as treacherous, for the ground is soft, and the mud cakes on the wheels so that great clods form under the mudguards until they drop off—to be replaced immediately by others. Added to this, the underground burrows made by the jerboa cave in under the weight of the car, making a broken wheel, axle or springs no remote risk.
